NOTES OF THE WEEK.

All doubts whether Germany would at the eleventh hour decline to sign the Treaty of Peace were set at rest on Saturday afternoon, when her representatives attached their signatures to the document, which was afterwards duly signed by the delegates of all the Allied and Associated Powers, with the exception of China. From the spectacular point of view the ceremony would appear to have been somewhat disappointing, but the importance of the event has been, perhaps, more justly appraised throughout the world than was the case with regard to the Armistice, and this country at least has hailed it with a sober satisfaction in marked contrast to the ebullition of last November. It is satisfactory to be able to add that Herr Muller and his fellow Delegates, so far from attempting any imitation of Count Brockdorff-Rantzau's truculence and ill-manners, were studiously correct in their bearing; that they put forward no protest during the ceremony; and that they subsequently stated that they had signed the Treaty without any reservations, and that Germany would do her best to fulfil its terms.

The full text of the historic document, now available to the public, adds little or nothing to what was already known regarding the effects of the Treaty on the Near East. It may be noted, however, in passing, that the stipulation that only representatives of Great Britain, France, Italy, and Roumania shall constitute the European Commission of the Danube is expressly stated to be "a provisional measure." For the rest, the arrangements regarding Egypt, Morocco, and other parts of the regions with which THE NEAR EAST is solely concerned, call for no further detailed examination at present. Now that the Treaty is signed it is to be hoped that it will speedily be ratified; and that the work of completing the Treaty with Austria and settling the terms to be offered to Bulgaria and to Turkey will proceed more rapidly than has been the case with the first, and by far the most important of the series. Not till then shall we be in a position to judge how the Balkans, Arabia, and other parts of the Near East will regard the new map of the world that is now being drawn: not till then shall we know how far certain States will allow themselves to be carried by disappointment of their hopes, or whether certain contingent threats that have been made are to be translated into action.

In view of the past record of South-Eastern Europe, it would no doubt have been almost impossible for the Paris Conference to give even approximate satisfaction to all the States of that region; and it is not surprising, therefore, that there is a good deal of soreness already over decisions taken. Neither, perhaps, is it surprising that the proposed distribution of mandates for portions of the Turkish empire should be regarded with undisguised hostility by those who consider themselves able to dispense with the advice of any mandatory Power, and who declare that if they must have a tutor at all they would prefer one of their own choice. What is important in regard to such points is that the Council of Ten should make up its mind once and for all to avoid any ostrich-like policy of pretending that such unpleasantness does not exist, and that they should grapple with the difficulties courageously. By this time they should surely be in a position to know what remedies to apply to disease with such clearly marked symptoms: if the knife is called for it should be used; but if the surgeon is the only person likely to benefit by attendance on the patient, it would seem to be a good opportunity for the exercise of that self-sacrifice of which the world has heard so much of late. In any case it is to be hoped that nothing will be done that may leave a rankling sense of injustice behind, and that if sacrifices have to be made they will not all be asked from the smaller States.

In the House of Commons on Tuesday, Mr. Ronald McNeill elicited from the Under Secretary for Foreign Affairs a statement regarding Montenegro, which is reported on another page. It throws no blinding light upon the situation, but it serves the useful purpose of making it clear that the fate of Montenegro has not yet been definitely decided. The selection of Count de Salis to conduct the inquiry would appear to be a happy one, for he was formerly British Minister at Cettinje, and his knowledge of the country and its people should enable him to collect really trustworthy information.

The Turkish Delegates in Paris have been politely informed by M. Clemenceau, on behalf of the Allied and Associated Powers, that nothing could be gained by their longer stay at the present time in the French capital; and they have accordingly taken their departure. Their visit has not been in vain, since it has served to show that the Allies draw a very clear distinction between the Turk and the German. A cynic might be tempted to add that it may even have served to enlighten the Conference regarding the situation

Digitized by Google

in Turkey. Be that as it may, Damad Ferid Pasha and his companions succeeded in obtaining a hearing, in setting out the Turkish case at some length, and in obtaining a reply from the Allies. If the latter appears to allow itself a little mild irony, the Turks, who are shrewd diplomatists, are not likely to display any resentment at the presence of a phrase or two that will have served to put their authors in good humour with themselves.

The text of the statement read on June 17 by Damad Ferid Pasha to the Council of Ten has now been published, and shows that the Turk has not lost his old skill in putting forward his defence—in which, to be sure, he has had plenty of practice. In effect, it puts all the responsibility for Turkey's joining in the war upon the inner ring of the Committee of Union and Progress, hinting that since the secret agreements between the Committee and the Kaiser's Government were unknown to the French and British Ministers at Constantinople, the Turks can hardly be blamed for not knowing of their existence. It points out that the Committee condemned 3,000,000 Moslems to death, besides massacring the Armenians; and it sums up the situation by likening the condition of the Turks under the Committee to that of the Russians under the Terrorists. It also refers to "the most deplorable excesses which have been committed to the hurt of the defenceless Moslem population" of Smyrna in the course of the Greek occupation. And it concludes with a strong plea that "a fresh parcelling out of the Ottoman Empire" may be avoided, as it "would entirely upset the balance in the East."

The most interesting portions of the Allies' reply to this memorandum are those in which they express their goodwill towards the Turkish people and their regret that considerations based on supposed religious rivalries should be introduced into the question of the fate of the various populations of the Ottoman Empire. The Council declares that it admires the excellent qualities of the Turkish people, but "it cannot admit that among those qualities are to be counted capacity to rule over alien races. The experiment has been tried too long and too often for there to be the least doubt of its result." This at least is definite, and it would seem that here we have a case of one coming event casting a very clear-cut shadow before. The Council's deprecation of the introduction of religious sentiment into discussions upon what are in essence purely temporal concerns will be widely shared. Unfortunately, however, the harm has been done, and the factor, having been introduced into the calculation, cannot be ignored.

Yet another seizure of seditious literature in Cairo is reported by *The Times* correspondent. It took place at a "secret" printing press, and incidentally it resulted in the destruction of a quantity of similar stuff at Azhar University. In the latter case, the destruction appears to have been the work of the plotters themselves, who desired to prevent its seizure. It is unfortunate indeed that El Azhar should have been mentioned so frequently in connection with these disturbances, and that its students cannot employ their time better than in the production of such "literature" as that of which our Cairo Letter this week contains a specimen.

India may fairly be said to have been "out of the bill" last week so far as this country is concerned, and the information which reached the public was limited to a few items concerning Afghanistan, and to those official telegrams regarding the progress of the monsoon which enlighten the expert meteorologist but leave the ordinary reader cold. In regard to Afghan matters we are prepared to be patient: Oriental diplomacy has canons of its own, and the *coup manqué* must be followed by the tedious procedure designed to save the faces of its authors. Meanwhile, the numerous political deputations from India are busily engaged on spade-work, but so far they have secured little recognition in the Press: the country agrees that a new Constitution is wanted, but at present we can detect no signs that it is interested in the details of the reforms.

This attitude is reflected in the small amount of attention devoted by the Press to Lord Curzon's speech on Monday, when he moved the resolution required to enable the Joint Committee to be set up. We could wish that more people had been given an opportunity of reading what the ex-Viceroy had to say, for he has undoubtedly a right to be heard. It is, of course, the fashion just now for Indian politicians to abuse him and all his works, but by and by when the peasants come to their own it will be remembered that he gave the impetus to that development of agriculture and co-operation which in the eyes of the future historian will bulk even more largely than the achievements of Lord Morley or Mr. Montagu. He still thinks of the peasants first, and his contention that they must not be disappointed or deserted will, we hope, be kept prominently before the Joint Committee throughout its strenuous labours.

Apart from that point, Lord Curzon presented the case of India very fairly. He stood firmly by the principle of progressive realisation of responsible government: he did not stultify the Joint Committee by binding his colleagues in advance to any particular machinery for bringing that principle into action; and he recognised fully that India is on the move, and that his experience gained fourteen years ago is not directly applicable to the present situation. We welcome in particular his warning against vain hopes of an immediate advent of the millennium: a period of unrest and fermentation may well, as he said, lie before India, and indeed before most of Asia, but that is a reason for acting wisely, not for sitting still. The problem of the moment is to provide institutions by means of which the new and powerful forces may be exerted for the benefit of the country; we cannot hope for perfection, but we are bound to seek for something which will work for the time being, and lead the way to a rather brighter future.

In an interlude of Lord Curzon's speech the Marquess of Crewe mentioned that the report of his Committee on the India Office is now complete. The Committee was appointed in January last, and its members have thus devoted approximately as much time to a single institution as Lord Southborough and his colleagues spent on the constitution of electorates for the whole of India; let us hope that the time has been well spent, and that the result will be to provide an India Office of the type required by the new conditions. It is improbable that any office in this country could do much to help forward the work which Lord Chelmsford will shortly take in hand, but it might well make his task altogether impossible, and from this point of view the report is at least as important as those which have already seen the light.

The letter from Sir Valentine Chirol which we published last week may serve as a warning of the dangers of speaking in parables. We entirely accept the truth of the view urged by him that the powers granted to Indian Ministers must be closely correlated with the capacities of the electorate to which Ministers will ultimately be responsible: the protest to which he takes exception was not aimed at this correlation in itself, but rather at what seems to us the excessive insistence on administrative convenience in the settlement of its details, which bulks so largely in the constitutional discussion. The Dyarchy, if and when it comes, is bound in any case to be much less convenient than the system now in force; some formidable critics hold that it will prove to be unworkable in practice, and while we dissent from this view, we are bound to admit that its working will call for a certain amount of good-will on the part of all concerned. We want this to be clearly recognised from the start: no one can hope to be quite comfortable under the temporary constitution, and in our judgment it is a mistake to insist unduly on all the possible discomforts of the future. Let us all start on the journey determined to make the best of it, and perhaps we shall find that the discomforts will not be so great as some of us anticipate.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 9.

Nationalist Propaganda.

The extremists of the Nationalist Party have been far busier during the past week with their pens than with any open acts of aggression or defiance, and with the exception of an occasional futile attempt at getting up a demonstration, consisting of, perhaps a hundred young students and vagabonds, who hastened to disappear at the faintest alarm of a police patrol, there has been no disturbance of the public peace to speak of in Cairo, or, indeed, anywhere else. It is true that the Azhar still remains a centre for the meeting of the disaffected, and principally for the distribution of the leaflets daily issued by the Party.

The question has several times been mooted either of shutting the Azhar for the summer, or of making a raid and arresting the leaders of the various committees that hold their sessions there, as well as some of the most notorious of the regular speakers; but various considerations have led to what seems to many a mistaken toleration of undisguised seditious propaganda. Whether there is a mistake or not, a European can, perhaps, scarcely judge as well as an Egyptian. There can be little doubt that, if called upon by the Ministry, the British authorities would not hesitate to back it up with severe measures against the Azharist camarilla. The conclusion that we must come to, therefore, is that Mohammed Pasha Said is not disposed to employ force at present, but believes that he can defeat the revolutionaries by other means. And if the Premier is of this opinion, it would be presumptuous to criticise such an experienced, strong, and skilful fighter until we have seen the situation develop more distinctly. At first the committees were extremely insolent and threatening, and published death sentences even on the Sultan and the whole Ministry, if there was not a resignation within forty-eight hours. The following may be taken as a specimen of the fly-sheets disseminated every day from the Azhar. It is only of medium vigour, and others are more pungent and scathing in abuse:—

A "Literary Gem."

You howling wolves! You slaves of the stick! You likenesses of human beings! You traitors! You pillars of trouble! Have you forgotten that Egypt has smothered you with its blessings, has brought you up upon its soil and under its sky, and has given you the water of its Nile to drink? Have you no heart that feels, or eye that waters, or ear that hears? Fear God for yourselves' sake and for the sake of your children and country, and remember that a day will come when you will go back to God (to render your account). Do not make a bargaining market of this world. Vanities will not last long. Fear God, and know that the nation is watching you, and will expose and make public your deeds, so that everyone should know them. He, therefore, who does one atom of good or of evil will be compensated proportionately.

And you, children of Egypt! Call upon them to account for every little or big matter. Demand of them that which you demanded of the Rushdi Ministry, so that their Cabinet may fall and end where its predecessors ended. Do not be deceived by its declarations, for its promises are like a mirage which a thirsty man mistakes for water until he approaches it and finds it nothing.

And here we are, expecting what the future will bring in its train and what it is holding for us in store:

"Are they not timed for the morning,
And is not the morning near at hand?"

If, therefore, the Ministry atones for its past faults, upholds our efforts, strives for our interests, and stands firm against our enemies, we will testify to its patriotism and forget the past. But if that past is repeated and things made worse, we will fight the Ministry with sharp weapons and black hands, and it will become an example for others and a lesson to its like, for the Egyptian nation to-day is not the same as yesterday; events have waked it up. It will not allow the Ministry to go on erring for ever. Watch it, therefore, very strictly; dog its steps, and demand of it everything which you think is in the interests of the nation. Unite to protect your country and save it from the abyss into which it has fallen. Let there be no distinction between an employee and an agriculturer, for you are all the children of Egypt and the happy Nile. Remember that Egypt is now in a most critical situation, and you must save her. Egypt is in a deep abyss; pick her out. Egypt is in very narrow straits; give her larger room. Egypt is in a great calamity; dispel her griefs. Egypt is in a great sorrow; sympathise with her. Egypt is weighed down under a heavy burden; lift up her weight. Egypt is fighting a great fight; stand by her. Egypt is is in the grasp of the enemy; save her. Egypt is demanding independence; support her. Egypt wants freedom; back her up. Egypt is appealing to you; help her. Egypt turns to you; aid her. Egypt seeks shelter with you; show her hospitality. Egypt is proud of you; do not humiliate her. Egypt is happy in you; do not make her miserable. Egypt hates slavery; liberate her. Egypt now loves demonstrations; revive them. Egypt rejoices in strikes; do not make her sad. Egypt refuses to recognise the spies; kill them. Egypt hates the present (Anglophil) Ministry; make it fall. Egypt refuses the Protectorate; refuse it you too. Egypt suffers at the mere mention of the English (Inquiry) Commission; do not receive it. Egypt conjures you, in the name of God, not to betray her. Egypt prays for those interned, for they are her children, who have sacrificed themselves and their property for her, and have immortalised a good name which will last for ever.

Up, therefore, you Egyptians! Support Egypt, and respond to her call. This is the time for thinking heads and wise advisers. This is the grave hour, the critical time:

"This is the time of hard pulling:
Be severer, O hardships!"

Do not sleep, for your enemy sleeps not. Watch him, and do not hesitate to demand independence, and frustrate the efforts of the English. Fight against them until you drive them out, and Egypt will be given to the Egyptians.

The style of these leaflets is very varying. Some of them are written in the purest and most scholarly Arabic, and, side by side with these, is often, from a literary standpoint, very poor stuff. But, generally speaking, they are very much to the point, and easy for those who run to read. The authors are probably practised penmen, such as lawyers and journalists, or theologians and pundits from the Azhar.

This form of propaganda is comparatively new, although it was tried by Mustapha Kamel and Sheikh Abdul Aziz Shawish. In the last decade, however, the Press Law has placed an iron heel on every species of anti-Governmental literature, and the diurnal volley of abuse levelled at the Ministry, the British, and all the "spawn of Satan" that hinder Egypt from achieving sudden independence is supposed to be "secret," although it is distributed wholesale, or bought and sold in the streets and the big *cafés* and *patisseries* with very little attempt at concealment.

Counter Propaganda.

A certain number of other fly-sheets has also recently been noticed about Cairo which look like Governmental counter-propaganda, as they are mostly devoted to telling the Nationalists real home truths concerning Turks and Germans, and the benefits Egypt has received from the British Occupation. At least, such are rumoured to be circulated, though in proportion to the Committee fly-sheets the numbers of these seen are comparatively small. It is David with a sling and a stone against the Goliath of the Nationalists, gorged with money and applause, and rampant over the whole of Egypt. David, however, was the ultimate winner, and though it may or may not be with fly-sheet propaganda that he is wounded, there are pretty clear signs that the enemy is by no means so strong and confident as he would like to have the world believe. Mohammed Pasha Said and his colleagues are not at all boycotted,

but, on the contrary, are being more and more assiduously waited upon, and their Court is steadily increasing at the Ministries, and especially at their own houses during the Ramadan nights. There is no longer ferocious talk of murdering anybody, and the foreign encouragement that was more than suspected of being always forthcoming in support of "independence" has grown suspiciously cold of late.

A More Hopeful Outlook.

It is too soon yet to predict complete victory for the new Cabinet, but it seems to have passed successfully through the first and the most difficult stage. A good start goes a long way in Egypt, where the tide turns quickly, where the herding instinct prevails, and where the power of the seated strong is worshipped by the muddled millions of the weak. It is because hitherto the strength has appeared to be on the other side, that there was not sufficient show of it in the policy or action adopted against the movement, that the masses so rapidly gathered round its reckless, neck-or-nothing leaders and swamped the country. If, however, a better man arises and proves himself to be such, the brief day of the new "independence Nationalism" will soon draw to a close. The return one by one of members of the Said Pasha delegation, and particularly of the foreign secretaries and the special correspondents of the Cairo Press, from Paris augurs anything but well for the high hopes with which it deluded the people.

ATHENS NOTES.

(From Our Own Correspondent.)

Athens, June 13.

Echo of 1916.

The trial of those responsible for the 1916 outrages is still proceeding, and a host of witnesses continues to be examined daily. Up to the present only the witnesses for the prosecution have been heard. Some of these could only speak from hearsay or by common report, while others—those who were actually imprisoned in December, 1916, have given a mass of damning detail and facts. These have proved up to the hilt the fact that the Venizelists were attacked on December 2 without the slightest provocation, and in many cases brutally treated while in confinement. The Prosecutor for the Crown has made one or two speeches in which he used phrases that have given rise to a storm of criticism; in fact, one of the accused dared to rebuke him for these speeches, as also for the supposed discourtesy of addressing the prisoners in the singular. The prisoner in question is to be indicted afresh, as his rebuke is taken to mean that he is ill-disposed to the existing Government. The trial promises to be a long one, in spite of the fact that the Court sits until late every night.

The Visit of the Deputy Patriarch.

The Deputy Patriarch, his Grace M. Dorotheus, the highest dignitary in the Eastern Church and whose post has at all times exercised considerable influence in the politics of the Near East, arrived in Athens, coming from Paris, on June 7. He was given a splendid welcome by the representatives of the Government and the Church of Greece. A grand doxology was chanted on the day following his Grace's arrival at the Metropolis or Cathedral of Athens. His Grace has been entertained by both the Metropolitan and Holy Synod of Athens and by the Government. On Sunday last his Grace attended a review in the Stadium of the Public Schools of Athens. His Grace blessed the boys and girls, and also addressed a few words to them. The visit of his Grace ended yesterday, when he left on board the Greek cruiser Elli. He was attended on board by M. Dingas, Minister of Education and Public Worship, as representing the Government, and by the Metropolitan of Athens, with his Bishops, and was welcomed with a royal salute of twenty-one guns.

The Anniversary of the Fall of Constantinople.

On May 29-June 11, the anniversary of the taking of Constantinople by the Turks in 1453, a solemn Requiem Mass was chanted in the Church of Saint Constantine at Athens, in memory of the last Christian Emperor of Constantinople, Constantine Paleologos XI. His Grace the Metropolitan of Athens officiated, and afterwards addressed the congregation, comprised of representatives of the Government, the Municipality, and of the Associations of Greeks under Turkish rule, saying that this anniversary was not to be considered a day of ill-omen, but rather as a most holy one, since the last Christian Emperor of Constantinople had on that day preferred, like his predecessors, to die in defence of his faith and country.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, June 19.

The Question of the Minorities.

The Austrian Peace Terms contain clauses which the Roumanians are not inclined to accept with a good grace. The first of these refers to the parental solicitude of the League of Nations for the minorities. It should be remembered that the minorities accepted their incorporation in the State without any sign of reluctance. The full text of the proclamations of adhesion, of the Saxons of Transylvania, for example, has been accessible to readers of The Near East. These proclamations proffered the loyal collaboration of the minorities subject to certain terms and stipulations being respected, terms and stipulations already foreseen and recognised in the Acts of Union of the newly united provinces, by which equality of rights are assured to all without distinction of race or creed. They therefore provide for the satisfaction of the rightful claims of the minorities. Indeed, equality of political and civic rights was the dominant note of all these acts of union, and it is only natural that this thought should have been uppermost in the minds of the Roumanians beyond the boundaries of the old kingdom, who, in Transylvania, for example, suffered too much from inequality of treatment in the past to desire a persistence of the old conditions. They are not a Balkan people, nor are they endowed with a Balkan mentality.

At the present time, when reorganisation is proceeding throughout Transylvania, the rights of the minorities have been strictly respected. A great part of the wealth of Transylvania is in the hands of the Saxons, who enjoyed special privileges under the Hungarian Government. None the less, not one of these has been made to feel that circumstances have changed. The same applies to the Magyars, not one of whom has been deprived of his office or functions, provided that he has taken the oath of fealty.

It is unlikely that any clauses providing for the extension of a special protection of the minorities on the part of a League of Nations can improve existing conditions. The principle, as such, is considered offensive in Roumania, and derogatory to the sovereign rights of the nation. Much would, of course, depend upon its form and manner of application. Meanwhile it is certain that no good can come from uncalled-for meddlesomeness. It is, further, most undesirable that the foreigner should enjoy special privileges conferred by the League of Nations, such as the right of appeal to its tribunals or representatives, in addition to the rights which he shares equally with every Roumanian citizen. Any measure calculated to emphasise or create differences or distinctions between any of the citizens or groups of citizens of the New Roumania, or of any State, for the matter of that, can only be characterised as odious. And the minorities would not be the last to subscribe to this opinion.

BULGARIAN NOTES.

(From Our Own Correspondent.)

Sofia, June 18.

Present Condition of Bulgaria.

After the two catastrophes that overtook her—the first when, at the close of the Turco-Balkan War, she had to fight her former allies, Serbia and Greece, and subsequently Roumania and Turkey, losing, as a result, the fruits of her former victory over the Turks; and the second when she joined in the Great War—and especially at the end of last year, Bulgaria could not have a stable Government. The Cabinet of the three Liberal groups, headed by Dr. Radoslavoff, followed a policy of servility towards the Central Powers. Their extreme corruption and degeneration after the separate peace of Brest-Litovsk, when Germany, intoxicated by her apparent success, began to neglect Bulgaria, and to withdraw all favours granted to her as the price of her alliance with the Central Powers, suddenly alarmed the nation, which began to realise that it was to be treacherously treated by its Allies. The insolent Turkish claims, which were backed by Germany, to the restitution of territory along the Maritza valley, exasperated the Bulgarians to such an extent that revolts took place not only in the rear of the Army, but also at the front.

These demonstrations greatly alarmed King Ferdinand, and in order to appease the wrath of the people he had to part with his favourite, M. Radoslavoff, and M. Malinoff was called upon to form a Cabinet. This the leader of the Democratic party succeeded in doing, drawing only on his own party and on the Radicals. Notwithstanding M. Malinoff's discretion and the excellence of his intentions, he was not able to cope with the treachery of Bulgaria's Allies and the policy of King Ferdinand; and consequently he was unable to satisfy the hopes of the nation and to save it by an immediate break with the Central Powers and the conclusion of a peace with the Entente. He was, indeed, obliged at the end of September (last year) to sue for a separate peace; but it was too late—the Macedonian front was smashed. His delegates, however, accompanied by Mr. Murphy, the American Minister at Sofia, succeeded in concluding an armistice with the Allied commander on comparatively good terms—the inviolability of the old territories of the kingdom and the administration of the Dobruja until its final fate should be decided by the Paris Conference.

What was regarded by the Bulgarians as the violation of the last-named stipulation compelled M. Malinoff to resign. He was succeeded by the famous and very able leader of the Narodniak party, M. Theodor Theodoroff, who became Prime and Foreign Minister, co-operating with two Democrats, one Zankovist, one Radical, two Moderate Socalists, and three Agrarians, to form a Cabinet. This Cabinet continued in office till April of this year; then a crisis broke out, which resulted in some uncertainty for about a fortnight; and finally M. Theodoroff succeeded in forming another Coalition Cabinet, which is still in existence. It does not include the Democratic Ministers, and the Left parties preponderate, with two Moderate Socialists, two Radicals, and three Agrarians. The last-named cannot, perhaps, be classed with the parties of the Left, being more akin to the *bourgeois* parties, the majority being well-to-do, and all of them possessing land. The new Government declared its foreign policy to be a *rapprochement* with the Great Entente Powers, and its internal policy to be the dissolution of the old Radoslavoff Chamber, the holding of fresh Parliamentary elections, and the punishment of those responsible for the war.

The Party Congress.

Almost all the political parties held their congresses at the beginning of this month, the majority being held in this city. The Liberals, M. Radoslavoff's party, adopted a resolution approving the Germanophil policy, which they have hitherto pursued; the Young Liberals, under the leadership of M. Toncheff, former Finance Minister under M. Radoslavoff, likewise endorsed their former Germanophil policy, and had the hardihood to add that they left to their successors a big and united Bulgaria! The Radicals pronounced in favour of a republic; while the Democratic congress adopted a resolution in favour of the present constitutional monarchic rule. The Moderate Socialists declared themselves in favour of democratic, republican rule; and the Extreme Socialists are conducting a propaganda in favour of a Soviet Republic on Russian lines. The Agrarians are ready to support the rule that responds to the wish of the majority of the nation, a general stabilisation of both the country's foreign and internal policy, and reparation of its ruined economic and financial conditions.

The activity of the congresses came to a close last Sunday, with the sitting of the congress of a new, small group, detached from the Extreme Socialists, and calling themselves Communists, or Anarchists, under the leadership of Harlakoff. This mysterious group held its sittings behind closed doors, and nobody is acquainted with the decisions reached.

Election Prospects.

Although the old Radoslavist Chamber has not yet been dissolved, and the date of the elections for the new Parliament has not yet been fixed, preparations for the first stages of the electoral campaign have already been begun. The leaders of the various parties are busily delivering orations to large gatherings of their supporters, and the party struggles are already very keen. In some places discreditable scenes have taken place, and meetings have been broken up by Extreme Socialists; but generally the campaign is going smoothly, and throughout the country order and tranquillity are preserved by the civil administrative authorities, and also by the local military garrisons.

Bulgaria and Peace Prospects.

General feeling here regarding the prospective Peace is very depressed. All sorts of rumours are being spread by unscrupulous Germanophils and *agents provocateurs*, specially sent by Bulgaria's neighbours; and the result is that everybody is nervous, and feeling is excited. Public opinion follows the proceedings of the Paris Peace Conference with the liveliest interest; and awaits with extraordinary impatience the decisions regarding Balkan problems, and especially, of course, the delimitation of the frontiers of the future Bulgaria. The bulk of the people, however, confidently expect that the sentence of the Paris areopagus will be clement and render justice to the national aspirations for the union of the whole Bulgarian race.

King Boris and the Nation.

The new and youthful occupant of the Bulgarian throne is very popular with his subjects. His purely Bulgarian upbringing and education, his attractive personality, his democratic sympathies, and the great interest he is displaying in the good government of the country have already made him a national favourite. On various occasions the masses have spontaneously manifested their good feeling for, and their admiration of, him, and the relations between King and people could not be more harmonious than they are.

GIFT OF THE KING OF THE HEJAZ.

The thoroughbred Arab horses which the King of the Hejaz presented to the King and the Prince of Wales have arrived in this country and been sent to the stables at Windsor, where they will be kept until they become accustomed to the climate. The animals, both with pedigrees of indisputable merit, bear the names of Soueidan and Soueidan-el-Saghir. The first is presented to the King and the other to the Prince of Wales. His Majesty's horse is between seven and eight years old, and stands about fifteen hands, while the Prince's horse, about four years of age, is slightly smaller.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, June 17.

Restoration of Order.

Thanks to the prompt and stern action of the new Governor, General Plumer, coupled with the efficiency and moral effect on the agitators of the presence of armed naval forces, matters have settled down somewhat. There is, however, a smouldering feeling of discontent, bordering on danger point. The city of Valletta, usually gay from the presence of the naval and military, is now guarded and glum.

Immediately on his arrival the Governor issued a proclamation, detailing the seriousness of the deeds which had been done, the lawlessness which had been exhibited, and all this without any sign of a national protest. Amongst these specific offences he laid special stress on the hauling down of the British flag from the top of the Meteorological Station and the unwonted attack on the Military and Naval Union Club.

The ample provision of armed troops, pickets stationed at all the important points of vantage (which troops, by their very appearance, show that they are ready for the worst possible commotions or revolts), and a full enforcement of military law have cowed those who would so dearly desire to go on with their juvenile efforts of a species of undisciplined local "Bolshevism."

It is now possible to give further details of the damage which was done in the short time allowed the vandals when the trouble first broke out. As we have stated before, the offices and plant of the Daily *Malta Chronicle* were converted into a perfect wreck. Malta is in the unique and unfortunate position of possessing no complete English daily newspaper; its temple of learning, the Lyceum, is damaged and closed, as also are the Courts of Justice! Perhaps the greatest local loss of all has been the destruction of the fine flour mills belonging to Farrugea and Sons. These were first looted by the mob and then fired. Attempts are being made to secure some of the personal belongings stolen from other places, but up to the present time they have met with only slight success.

Dame Rumour has no fairer field to practice in than the island of Malta, and she naturally has been very busy during the past few days. It is common talk here that when a proper inquiry is instituted into the cause of the present discontent there will be some startling revelations. This remains to be seen. Several of the local notabilities, whose names are said to have figured on a hastily drawn-up "black list," have either fled or are in close local hiding. One thing is patent: no lasting political good can come of such disturbances, and this is being recognised by the various factions here, who are all attempting to saddle the blame on each other. To a certain extent the island is being chastised for its own folly. Commercial conditions locally have been critical for some time, but now, with hundreds thrown out of work owing to the late destruction, and with the leave of both the Army and Navy stopped, the shoe is pinching tighter all round.

The Turkish Prisoners.

H.M.S. Princess Ena has arrived from Constantinople, having on board two officers, twenty-four military escort, and 100 naval ratings, all British. She also carried sixty-six Turkish prisoners for detention in the island. Among these sixty-six Turkish prisoners were included several well-known political personages and high officials arrested by the British and Ottoman Governments. It is reported that among them are practically all the Ministers under the old regime, responsible for the Armenian massacres and other crimes and intrigues when the Young Turks reigned supreme.

Shipping Movements.

Despite local squabbles, the harbour is approaching its normal state, and the old liveliness and noise of the "Marina" is daily more in evidence. Among the chief movements is the arrival of the Benbow with relief crews for ten motor launches on the Danube. The Senator is expected at any moment, and so is the 20th Sweeping Flotilla, which is proceeding here from Harwich. The Rowan has left for Marseilles.

Russian Refugees.

The Russian refugees are still here, although a few have been enabled to leave for England and some Continental ports. At present there does not seem to have been any decision as to the matter of exchange, with the consequence that many of the refugees are poor in pocket though in reality rich.

CYPRUS NOTES.

(From a Correspondent.)

The Proposed Incorporation.

The party for "union with Greece" has begun to realise "with regret" that there is some opposition to the cry for incorporation in the Hellenic Kingdom, and that all "Greek" Cypriots do not by any means share in the view that Greek administration, in exchange for British, would be for the material advantage of the people. That this is so is indicated by recent articles in the Press, which, while still expressing confidence in the success of Greek aspirations, show a distinct and nervous modification in the tone of exultation which letters from the Deputation in London have done so much to encourage. Readers are warned to give no heed to such dissentient views, as they emanate from members of alien communities, or are due to the sinister influence of unpatriotic individuals. The writers proceed to impress upon all Greek Cypriots the need of a studied moderation in speech and demeanour, and of an attitude which will show how worthy the Hellenic nation everywhere is to rule alien communities, as has been proved by the example of Greek administration in Crete, in Thessaly, Macedonia, and Thrace, where Greek impartiality and justice have been welcomed. Let them, therefore, be prepared to act as worthily as their compatriots in those regions when put to the test And let the Moslem community in Cyprus be assured that they would have no cause to regret a change which they still continue so strenuously to oppose.

AMERICAN COMMISSION AT JAFFA.

(From Our Own Correspondent.)

Jaffa, June 15.

The American Commission, under the presidency of Mr. Charles Crane, arrived at Jaffa on June 10, with the purpose of ascertaining the wishes of the inhabitants of Jaffa respecting the future Government. It has learnt that all Christian communities at Jaffa have unanimously asked that not only Palestine but Syria also should be under the British administration. The Mayor of Jaffa, Assem Bey El-Said, and members of his Municipal Council, together with the president and members of the Moslem-Christian Committee, have submitted to the said American Commission written statements containing their demands, the principal of which are the following:—1. Annexation of Palestine to Syria. 2. Restriction of Jewish emigration into Palestine. 3. That Great Britain should be the mandatory power to administer both Syria and Palestine.

The Commission left for Jerusalem yesterday to continue their work. They have left a good impression on the place.

A Lloyd's telegram dated Corfu, June 21, says:—On the occasion of the Allies' early departure from Corfu, their respective flags were hauled down last evening and the Greek hoisted this morning with military honours. There was tremendous enthusiasm and repeated cheers were raised for the British and Allied representatives who were present. The Greek flag was saluted by the French flagship.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

An officer who was with our Salonika forces during the war, and who, now that the war is ended or ending, has returned to Greece, writes to me from Athens in a doleful strain. He says that the outskirts of Salonika, where once he was wont every morning to take a walk out of the city, are now infested with bandits, and that it is quite impossible to move outside the precincts of the town. Well, well! things are changing, and I confess that my old brigand blood is stirred not unpleasantly by this news. Was not the world growing too respectable? The ordered security of life was robbing it of its picturesqueness, and this modern echo of the pirates' call awakens coloured fancies which I had thought long dead. We must, I suppose, endure for a time those who cry loudly for nationalisms and internationalisms, but long live those, say I, who give not a fig for either!

***

It is pleasing news indeed to know that the famous tramp steamer, the River Clyde, is coming home, and that soon it will be open to public view. Of all Dardanelles relics this surely is the most precious. For was it not this old collier which landed the Dublins, Munsters, and Hampshires of the 29th Division at "V" Beach? All the world knows of these men, and how they fought at Sedd-el-Bahr. The River Clyde grounded on April 25, 1915, and was left on January 9, 1916. Those battalions who left Cape Helles at the evacuation thought never to see her again; for them she would be but a memory of splendid sadness. . . . But events proved otherwise. It was found by our Admiralty last June that the battered vessel could be refloated, and she was taken into Mudros Harbour, whence four years before she had set out for the Gallipoli operations. And it appears that, despite holes made by shells and removal by the Turks of everything valuable, she still is seaworthy. In all the war there have been few ships more full of magnificent memories than the River Clyde, and to all of the British race she will always be a priceless relic.

***

In the course of unveiling a memorial tablet to Lord Kitchener recently, at Debenham, in Suffolk, whence the great soldier's mother came, General Sir H. Rawlinson said the public had regarded "K." as a hard, stern man; but he was not. This statement will assuredly be supported by all who were privileged to know the big man, who hid a very tender heart under an appearance of coldness and sternness, as shy men so often do. I remember a lady who knew him very well telling me of a pretty incident which she herself witnessed. It was at a garden party, which Lord Kitchener had been induced to attend, and he was talking to one or two ladies, when suddenly there was a child's cry; and through a hedge close by came running a very little girl, followed by a dog, of which she was obviously much frightened. She swept the company with one terrified glance; then dashed straight up to Lord Kitchener—whom she did not know—and clung to him for protection. The soldier threw an arm round her at once, and then glancing at the ladies, and, perhaps fancying that he detected some amusement in their eyes, reddened. One of the ladies suggested, prettily, that the little girl had not taken long in choosing her defender, and Lord Kitchener, with a smile, replied: "I think she has paid me one of the prettiest compliments I have ever received." And afterwards he confessed that the little incident had afforded him extraordinary pleasure.

CORSAIR.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman—SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Smyrna Massacres. June 26.

Lieut.-Colonel AUBREY HERBERT asked the Secretary of State for Foreign Affairs whether he had any official information to the effect that the Greeks massacred their prisoners in Smyrna in full sight of the Allied warships; and, if not, would he consider the advisability of investigating the actual facts?

Mr. CECIL HARMSWORTH (Under-Secretary of State for Foreign Affairs): I regret to say that, in view of official information that has reached us, there can be no doubt that a number of Turkish officers and men lost their lives in the circumstances indicated in the question. The matter is engaging the earnest attention of the British Delegation in Paris. I have every reason to believe that the Greek Government deplore these excesses, and are taking all steps to prevent a recurrence.

Lieut.-Colonel A. HERBERT: Is it not the fact that the policy of the Allies in having sent the Greeks to Smyrna is a direct blow to the elements favourable to us in Turkey, and a direct encouragement to our enemies, who are the Committee of Union and Progress?

Colonel BURN: Is it not the fact that part of our Navy was at Smyrna at that time, and could it not have done something towards preventing this occurrence?

Mr. HARMSWORTH: As I said, the whole matter is being investigated; I should not like to venture an opinion of what the Navy should do in this or that circumstance.

Lady Interned in France. June 30.

Lieut.-Colonel MALONE asked the Secretary of State for Foreign Affairs whether he was aware that Miss May Kathleen Ydlibi, British subject, is interned by the French authorities at 82, Rue des Tisons, Alençon (Orne), France, whether he was aware of the circumstances; whether he would state the charge under which she is interned; whether he is aware that solicitors have been obstructed from proceeding to France by the French authorities, although they have received passports from the British Foreign Office; and whether he will take steps to have the matter inquired into immediately, with a view to the speedy release of this woman?

Mr. HARMSWORTH: The lady referred to in the question is interned in France, but I am not aware of her present address. Inquiries were made of the French Government in December last, and his Majesty's Government have been informed that Kassib Ydlibi, father of this lady, was arrested by the French authorities at Jibouti as an Ottoman subject, and sent to France in order to undergo punishment for an offence against the common law in having assisted the enemies of the Allied Powers. The French Government stated that after his condemnation, being considered an enemy, he was interned with his wife and daughter in a concentration camp, and that he has never furnished to the French authorities proof that he is an Egyptian or a Cypriot under British protection. Miss Ydlibi, it was added, was associated with her father in the activities for which he was convicted. I have no evidence to the effect that solicitors have been obstructed by the French authorities from proceeding to France, although passports have been issued to them. In answer to the last part of the question, the French Government have announced that the question of the liberation and deportation of interned Ottoman subjects in France was receiving their consideration, and that they proposed to permit Ydlibi and his family to benefit by any arrangement which might be made in that direction.

Great Britain and Montenegro. July 1.

Mr. CECIL HARMSWORTH, in reply to Mr. R. McNeil, said: Since the time of King Nicholas's departure from Montenegro, a movement has spread among important and numerous sections of the population which favours the union of their country with the new State in a form which would be incompatible with the maintenance of the present Montenegrin dynasty. In the eyes of this party, King Nicholas and those Ministers whom he has himself nominated from among his personal adherents do not represent the wishes and feelings of the Montenegrin people. His Majesty's Government have for some time past had grounds for thinking that this is the case, and it was in order to arrive at a clear understanding of the situation that they dispatched a special Commissioner to Montenegro in the hope that he would be able to ascertain the real desire of the Montenegrin people as to their own future. His Majesty's Government have the most sincere sympathy for and confidence in the Montenegrin people, and their action in sending Count de Salis to Cettinje was dictated solely by the desire to obtain a popular rather than a merely dynastic appreciation of the Montenegrin desiderata. Up to the present, only telegraphic summaries of his conclusions have been received from Count de Salis, but I shall be prepared to consider the suggestion that the final report when received should be laid before the House.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE PARLOUS STATE OF EGYPT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The condition into which Egypt has lapsed, after a generation of British influence, requires more explanation than the authorities have vouchsafed. Time was—and that within my own memory—when the fellaheen were cruelly fleeced, and kept to heel by the *Kurbash*. Why are they now the most prosperous of peasant communities? Because we have given them a reign of law and sound finance; because our engineers have restricted the vagaries of the Nile, which used to make the Delta:

"A land which either drowns or burns,
A desert and a swamp by turns."

In the teeth of these undoubted facts the recent upheaval seems quite inexplicable. Its origin must be sought in that world force which we vaguely style "Nationalism," meaning the realisation by subject peoples that they have developed a collective soul; and the resulting demand for self-government. This movement is active in countries as far apart as Ireland and India. Nay, the Javanese, after enduring a paternal yoke for more than a century, have compelled their Dutch masters to concede the elements of popular representation. The geographical position of Egypt renders its people peculiarly susceptible to a mysterious impulse, which the study of collective psychology may one day enable us to forecast. A train of causation led up to the crisis of May, 1919. The self-styled "National Party" has been active since Arabi Pasha's insurrection in 1882; and the unrest created by its wire-pullers was kept alive by the vacillations of the British Government. Lord Dufferin's Constitution, promulgated in the spring of 1883, and Sir H. Drummond Wolff's Convention with Turkey in 1885 were rendered nugatory by foreign intrigue. Lord Cromer's regime strengthened the ex-Khedive's inveterate hostility to his protectors. The great Proconsul believed the Egyptians to be quite incapable of conducting their own affairs—not without reason, for no "intelligentsia" in the world is so abysmally ignorant of practical politics as the product of the Azhar University and of so-called "English education." It is at least arguable that Lord Cromer ought to have given a trial to native statesmen. One cannot learn to swim without taking to the water. However this may be, the fact remains that his masterful control rendered the British protection absolutely indispensable; while foreign influences were working to sap its foundations. The exotic element in Egypt's heterogeneous population has consistently fanned the flames of revolt, and used the Nationalists as a catspaw to secure their aim—the withdrawal of British troops from the Delta. There is ample evidence that the recent upheaval was, in large measure, engineered by European advisers. They flooded the country with incendiary literature, organised secret societies, planned a simultaneous outburst of blind hatred, which was attended by unmentionable horrors. Their hand was seen in the systematic destruction of railways and other public works, which could never have been compassed by the ignorant and inflammable fellaheen. It may well be asked why anarchy descended on Egypt as a bolt from the blue? Because the police force had been denuded of its British stiffening by the exigencies of war. Thus the Protectorate lost touch with popular feeling and with the sinister efforts of wirepullers to force it into anti-British channels.—I am, etc.,

June 30.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The "Cyprus Deputation" are valiant and persevering advocates of their cause, but do not meet the main arguments against the handing over of Cyprus to the Government of Greece.

The contention that about 230,000 "Greeks" (214,000 at the last census)—less than the population of some large towns in the Levant—constitutes a "nation" is hardly admissible. Malta, with a population of over 212,000 (though the island is only about one-fortieth the size of Cyprus), might equally claim to be a nation.

My reference to Cyprus as a sanatorium was merely thrown in as an additional, but not important, reason. The allusion to Switzerland and Davos is hardly to the point. As regards Heligoland, it was not handed over, as the Deputation thinks, in the midst of a quarrel with Germany. When the Government of Lord Salisbury bartered it most persons in England did not anticipate a conflict with that country.

Several other statements are incorrect: (1) Cyprus *does* possess strategic value, and *was* useful during the late war. The allusion to Napoleon is unfortunate, for that militarist held Cyprus to be of strategic value, and a stepping-stone to Egypt; (2) No suggestion was made that Greece might be a "rival" to Great Britain, but it was hinted that the island might be used for hostile purposes, as Greece was very nearly used under King Constantine, who also allowed Corfu to be carefully prepared to help Hun submarines. It is true that Cyprus has been sometimes described as a "white elephant" by a few British politicians, but this description has not been approved by the general public.

I deny emphatically that the maintenance for the present of British rule would be an injustice, or that it would be "a breach of Britain's plighted word." I would repeat that, much as Europe admires M. Venizelos, Greece is not yet in a position to rule Cyprus for the benefit of its inhabitants. I concur in the view of your correspondent "Cypriot." The sole argument for union is that a majority of the people are Greek in language and religion; whereas there are many weighty arguments against it. Let Greece set her own house in order and win a place which may in the future justify further expansion in the Eastern Mediterranean. For the present, in these troublous times, the island should remain in the hands of a strong naval power.—I am, etc.,

June 30.

FORESIGHT.

A PLEA FOR ALBANIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In September, 1914, Mr. Asquith declared that England entered into the war for the defence of small nationalities, and in the following year Sir Edward Grey said that the reason for which England was at war was the liberty of all states, great and *small*. Since then the two great liberal nations of Europe, Great Britain and France, have repeated that they were fighting for right, justice, and the respect of Treaties. The United States of America and their President, Mr. Wilson, entered into the gigantic struggle only for the defence of the same principles.

Albania was recognised as independent in 1913 in London by the representatives of all the Great Powers. Since then it has been recognised that two-thirds of the soil and the population of Albania (Kossovo, South Epirus, and the regions of Uskub and Monastir) have been detached from Albania by the said Conference of London, and subjected to a foreign domination (Serb and Greek).

It has been further shown (and the British Parliament has been often made aware, and the Albanian Society of London has pointed out) that this foreign domination for Albania means, in fact, systematic extermination and annihilation.

The Peace Conference at Paris will soon have to pronounce upon our country. But not only is there as yet no question of the reparation of the territorial losses sustained by Albania, but a further enormity comes to light. Italy has put forth demands upon Valona, and so forth. This is an attack upon the independence of Albania. Albania is the object of persecution, and is surrounded by silence and darkness. If, after four and a-half years of struggle, men who have trembled in trench and town for their own lives and for the lives of their children, mothers, wives—if after all this, I say, these men do not understand, or pretend they do not understand, the agonies and sufferings of Albania, they must be entirely heartless, they must be cynics and hypocrites to whom nothing in the world is sacred.

If justice be not done this time to Albania, one is forced to confess that "justice" and "equity" are words which are meaningless in the eyes of our contemporaries.—I am, etc.,

PRESS ON THE NEAR EAST.

The Future of Constantinople.

In the *Times* of June 26 is an article on "Some Turkish Problems," which seems to get near the root of the matter. The writer, who is obviously acquainted with the facts of the case, declares:—

It is quite true, as M. Venizelos has pointed out to the Peace Conference, that a considerable proportion of the Turkish population is composed of parasitic elements—the hangers-on and poor relations of officials, wealthy landlords, and Court functionaries. These hangers-on are mostly idlers who intrigue furiously for the sinecures which are at the disposal of every Turkish notable who is in favour with the powers that be. With these are to be reckoned a swarm of redundant officials of the class whom the French term "budgetiveres." But there are other Turks who work, even though they often belong to the official class, and who are not so obsessed by religious or national prejudices that their views do not deserve some consideration. Such Turks admit that since the Talaats and Envers have completely demoralised the public services a long period of Western control will be necessary in every Department of State in whatever Turkey is left by the coming Treaty of Peace, if the Turkish State is to survive at all. But they urge that, given such control, the Turkish State should retain Constantinople as its capital, even if its sovereignty there be but nominal. They argue that such a solution would be an act of political wisdom and of justice on the part of the Entente Powers.

He then gives his partial support to the following argument of enlightened Turks:—

Leave us under any form of control you will at Constantinople, and we shall at least have a chance of development. Banish our Court, our Government, and a large proportion of our educated classes to Konia or some other Anatolian city, and you make of Turkey a poor peasant State peopled largely by semi-barbarians, whose progress will be intolerably slow.

The article is concluded with an ingenious argument:—

There is another argument in favour of the retention of some form of Turkish sovereignty at Constantinople, which Turks for obvious reasons do not adduce. So long as a Turkish Government remains at Constantinople the West can always henceforth bring the maximum of political pressure upon a city which will have lost its two bulwarks—the forts of the Dardanelles and those that guard the Bosphorus. But if Turkey be reduced to an Anatolian peasant State governed by resentful *effendi* with little to lose there is always the risk that the Talaats, or those like unto them, may return and continue to promote Near Eastern disorder. It is one thing for the League of Nations or the mandatory Power to send a few warships to lie off Seraglio Point; it is quite another to have to send a military expedition to the interior of Asia Minor.

Greek and Turk.

In the *Times* of June 27 the same writer continues his examination of some Turkish problems. Some incidents of the constant feud between Greek and Turk throw a curious light on the extreme difficulty of fixing a settlement for these people:—

Press polemics often lead to race hostilities, and the Aidin Province, of which Smyrna is the capital, has consequently been the scene of several political crimes. Two typical instances which have occurred may be cited. The inhabitants of a Greek village near Sokia, south of Smyrna, indignant at the marriage of one of the women of their community to a Turk who was, moreover, a tax-collector, beat the Turk soundly, stripped the woman naked, and rode her round the village upon an ass to the accompaniment of stone-throwing and mockery. Gendarmes sent to arrest the criminals found that the villagers had been reinforced by refugees who had returned to their homes after service in the Greek Army, and were compelled to retire with loss. Later a Turkish band attacked some Greek labourers and peasants near Burnova, almost a suburb of Smyrna, shot eight of them dead, and decamped unmolested by the gendarmerie. The victims of this outrage were all unarmed and mostly old men.

On the future of Smyrna the writer puts forward views that are worth careful attention:—

A solution by which Greece obtained the Smyrna Sanjak, that is Smyrna itself and the region immediately north and south of the Gulf of Smyrna, where the Greeks are certainly in a majority, would be opposed by the Turks, and not only by the large number of Turkish ground landlords in Smyrna, but by Turkish exporters throughout the great part of Western Anatolia, for whose produce Smyrna is practically the sole outlet. They argue that the cession of Smyrna would put Greece in a position to strangle the export trade of Anatolia at any moment. On the other hand, the Greeks of the purely Greek town of Aivali and other centres of Hellenism on the coast north of the Smyrna district would be justly aggrieved at being left under Turkish rule, and would not cease agitating for annexation to Greece. At present there can be no doubt that the annexation of the Smyrna-Aidin region or any part of it except a few useless headlands to Greece would be forcibly opposed by the Moslem population. Even if the Turkish Government could hold the Turkish troops now in this area it could not prevent the bulk of the population from rising in revolt against the decision of Europe. There could, of course, be but one end to the struggle. Greece, in the writer's opinion, is militarily far stronger than partially disarmed and totally exhausted Turkey. But such a war waged in the one area in Turkey which has not suffered overmuch during the last four years would be accompanied by wholesale devastation and massacre and after the conquest the Greek Government, which still lacks a sufficient number of capable provincial administrators, would be compelled to devote large sums, which it could ill afford, to repairing the ruin wrought, and would have the utmost difficulty in rapidly creating an efficient administration. On the other hand, to leave the Ottoman Greeks as they are under uncontrolled Turkish administration would inevitably lead to a series of conflicts and to a persecution of the surviving Greek population which would invite and justify Greek military intervention.

NEAR EAST BOOKSHELF.

THE Y.M.C.A. IN EGYPT AND ELSEWHERE.*

"Sir James Barrett tells how the Young Men's Christian Association originated, and he describes its organisation, objects, and methods—especially with regard to its work in Egypt. His book is of absorbing interest, and the reader is filled with admiration and gratitude towards the organisers and administrators of this vast undertaking." So writes Sir Edmund Allenby in his short preface, and readers of this volume will endorse his opinions. The author gives first of all a terse account of what the Y.M.C.A. is, and the account of the American developments in the direction of training its workers will be new to many English readers. At the Y.M.C.A. College at Springfield, Massachusetts, young men who are preparing to become Y.M.C.A. secretaries receive a four years' course of specialised instruction, after a previous four years' training at a high school. The details of the course as given here show how thoroughly the training for this special work is undertaken.

In later chapters the author graphically narrates how the Egyptian Y.M.C.A., suddenly confronted with enormous possibilities for extended usefulness with the development of the war, rose to its opportunities. The Y.M.C.A. in Cairo before 1914 consisted of a "fairly extensive flat," which provided residential quarters for about thirty men, a small billiard room, a library, and a small lounge. The Association also had procured the lease of a fine piece of land at Gezireh as a recreation ground. From this small local beginning there budded off, as it were, dozens of branches all over the delta, out in the desert of Sinai, and, as our armies advanced, in Palestine and Syria. The illustrations of Y.M.C.A. centres in various places, including "dug-outs," from the Sudan and Jerusalem, show better than writing how varied and widespread are its activities. There is a chapter on "Physical Exercises" and another on "Finance," while two appendices give the names of all the helpers of the Y.M.C.A. in Egypt during the war. The volume is a most interesting appreciation of most excellent work, by one who writes from intimate outside knowledge.

BENGALI VERSE.†

"The verse collected in this volume represents about one hundred years of poetical effort; and has its origin in England's introduction into India of western education." With these words the compiler of this anthology commences his Introduction. He has done a very useful service in thus making public the mental connection between India (or rather Bengal) and England, even if he has not discovered to us much than can accurately be called poetry. It is scarcely fair to suppose that the manacles on thought, which a foreign language imposes can be broken but after many years' practice; but the progress towards freedom of ideas and expression as shown in this book is quite obvious. The best poets of this anthology are Toru Dutt (1856-1877), and Sarojini Naidu and Manmohan Ghose, who are both still living. It is curious how, in imitating English metre, all these poets have succumbed to the tendency to imitate English thought; and their failure to preserve identity is the thing which has robbed the book of real poetic interest. However, once or twice this veil of impersonation is rent, as in "The Pardah Nashin" (by Sarojini Naidu); and it is such occasions as these which give bright promise to the future of English in Bengal.

BOOKS RECEIVED.

"The Hohenzollerns in America," by Stephen Leacock. (London: The Bodley Head. 5s. net.)

"Histoire des Roumains de la Peninsule des Balcans," by N. Iorga. (Bucharest: 4 francs.)

"Temporary Crusaders," by Cecil Sommers. (London: The Bodley Head. 4s. net.)

"La Serbie et L'Europe (1914-1918)," par des Publicistes Serbes. (Geneva: 8 francs.)

We are frequently asked by our readers for the best means of learning the languages of the Near East. We think, therefore, that a list of books dealing with the subject will be found useful. The "Self-Taught" Series, published by Messrs. E. Marlborough and Co., 51, Old Bailey, E.C.4, provide a simple and direct method of acquiring a practical knowledge of the desired language. The following books are published with Naval and Military Terms:—Egyptian, French, German, Hindustani, Italian, and Russian. The Modern Greek book has photographic and Archæological Terms. The Persian book is published with Commercial and Trading Terms, the Tamil with Planting and Commercial Terms, and the Turkish with an English and Turkish Dictionary. Others are the Arabic (Syrian) and the Spanish books. All the above-mentioned volumes are within the reach of the humblest linguist, as their prices vary from 1s. 9d. to 4s.

* "The War Work of the Y.M.C.A. in Egypt" By Sir James W. Barrett. (London: H. H. Lewis and Co.)

† "The Bengali Book of English Verse." Selected by T. D. Dunn. (Longmans, Green and Co. 7s. 6d. net.)

DISTRESS IN INDIA.

The following telegrams from the Viceroy (Revenue and Agricultural Department), dated June 20, have been received by the India Office:—

Our telegram dated June 13. Famine has been declared in part of Bankura and Bhagalpur Districts of Bengal and Bihar and Orissa respectively. Distress prevails in Ranadha Estate Ganjam District, Madras Presidency, and apprehended in part of Murshidabad in Bengal. Scarcity reported from one circle in Chittagong Hill Tracts. Numbers on relief decreasing owing to rainfall in Angul District of Bihar and Orissa and in Bombay Presidency, and owing to agricultural operations in some districts of Central Provinces and in Bankura District of Bengal. Recent rain has improved water supply in many places in Bombay Presidency. Prospects of standing crops are hopeful in United Provinces where distress slight except in Etawah. Numbers relieved:—

Bengal.—Relief works, 7,077; test works, 2,650; gratuitous relief, 18,074. Bihar and Orissa.—Relief works, 1,885; test works, 6,395; gratuitous relief, 13,953. Feudatory States, Orissa.—Test works, 2,617; gratuitous relief, 20,618. United Provinces.—Test works, 20,423; gratuitous relief, 17,441. Rajputana, last week revised figures.—Relief works, 2,910; test works, 5,582; gratuitous relief, 2,451. This week's figures.—Relief works, 1,718; test works, 4,647; gratuitous relief, 2,400. Ajmer-Merwara (incomplete figures).—Gratuitous relief, 37. Central India, Bundelkhand.—Relief works, 14,200; gratuitous relief, 9,500. Baghelkhand report not received. Central Provinces.—Relief works, 18,438; test works, 18,232; gratuitous relief, 47,206. Bombay.—Relief works, 31,610; dependents, 18,939; village works, 5,860; test works, 929; gratuitous relief, 94,189. Madras.—Relief works, 46,278; test works, 1,495; gratuitous relief, 85,518.

Our telegram dated June 6. Distress spreading in Bankura District, Bengal. Scarcity operations closed in Garhwal District, United Provinces, owing to recent rains. Emigrants returning to their homes to undertake agricultural operations in the Poona and Satara Districts, and water supply has improved in some districts of Bombay Presidency. People also reverting to agricultural operations in Central India. Numbers relieved:—

Bengal.—Test works, 9,725; gratuitous relief, 17,331. Bihar and Orissa.—Relief works, 2,927; test works, 7,684; gratuitous relief, 10,106. Feudatory States of Orissa.—Test works, 24,000; gratuitous relief, 18,809. United Provinces.—Test works, 18,641; gratuitous relief, 16,147. Rajputana.—Relief works, 20,964; test works, 5,582; gratuitous relief, 24,000. Ajmer-Merwara.—Test works, 194; gratuitous relief, 369. Central India, Bundelkhand.—Relief works, 14,000; gratuitous relief, 9,200. Baghelkhand.—Relief works, 546; gratuitous relief, 59. Central Provinces.—Relief works, 17,553; test works, 22,569; gratuitous relief, 59,459. Bombay.—Relief works, 45,876; dependents, 28,336; village works, 8,369; test works, 1,153; gratuitous relief, 94,345. Madras.—Relief works, 20,021; test works, 1,641; gratuitous relief, 65,742. Damages by flood to stock of foodstuffs reported from Travancore.

INDIAN CIVIL SERVICE.

The decisions of a Selection Board held under the authority of the Civil Service Commissioners on May 27 and following days for positions in the Indian Civil Service have been published. The following are recommended by the Civil Service Commissioners to the Secretary of State for India for acceptance as selected candidates for the Indian Civil Service, subject to their being found eligible in point of health, and on the result of any other inquiries he may desire to make. The names are given in order of merit, a proportion of the younger candidates having been given preference in this competition:—Kindersley, J. B.; Dodd, R. J. S.; Wood, E. R.; Hutchings, R. H.; Lander, A. J. M.; Beevor, R. B.; Tennant, W. R.; Clee, C. B. B.; Wilkie, H.G.; Walker, R. L.; Mullan, C. S.; Lee, D. J. N.; Smith, F. J. K.; Ardagh, L. V.; Weightman, H.; Shoobert, W. H.; Warren, D. D.

INDIAN MEDICAL SERVICE.

Under a Royal Warrant notified in the *Gazette* of July 1 the ages at which officers of the Indian Medical Service holding administrative appointments with the undermentioned ranks shall be placed on the retired list are altered as follows:—The director-general shall be placed on the retired list at sixty instead of sixty-two as hitherto; colonels, brevet-colonels, and general officers at fifty-seven instead of sixty. In special cases the Governor-General of India may retain a general officer in his employment "for not more than one year" after the age limit. The retiring age of lieutenant-colonels and majors remains unaltered at fifty-five.

The Postmaster-General announces that parcels may now be sent to places in Syria as far north as Alexandretta, but not east of Aleppo. The principal places included in the service are: Alexandretta, Aleppo, Beyrout, Damascus, Hama, Homs, Latakia, Rayak, and Tripoli. The postage is: 3 lb., 2s. 4d.; 7 lb., 3s.; 11 lb., 3s. 8d. The postage on parcels for Palestine has been reduced to: 3 lb., 1s. 11d.; 7 lb., 2s. 7d.; 11 lb., 3s. 3d.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. July	1919. June		1337. Shawal	5679. Tamuz
4	21	Friday	6	6
5	22	Saturday.....	7	7
6	23	Sunday	8	8
7	24	Monday	9	9
8	25	Tuesday	10	10
9	26	Wednesday	11	11
10	27	Thursday	12	12

Mr. and Mrs. Charles Rey sailed on June 27 for Abyssinia.

Prince Nicolas of Roumania left Brighton on July 2 for Eton.

The Thakore Sahib of Limbdi left London on June 29 to return to India.

M. Protitch, the Serbian Premier, and three other Ministers have left Belgrade for Paris.

Among the delegates in the Galérie des Glaces at Versailles on June 28 was the Maharaja of Kapurthala.

M. Diamantidi, Greek Under-Secretary of State and President of the Commission for Transport, has come to London from Paris.

Count de Salis, the British Minister at the Vatican, has left Rome (temporarily) for Cettinje and Albania on a special mission.

Alexander, Prince Regent of Serbia, left Belgrade on June 21 and proceeded, with Voivode Mishitch and other officers, to visit the French Army of Hungary.

Mr. Morgenthau, former United States Ambassador to Turkey, has been placed in charge of the American Mission to investigate pogroms in Poland.

General Bonnier, Director-General of the Greek Ministry of War, accompanied by Colonel Nicolas Broumais, Paymaster-General to the Greek Army, has arrived in London.

The Indian Empire Club will hold an "At Home" at the Royal Botanic Gardens, Regent's Park, on Thursday, July 10, 4-7 p.m. Applications for tickets should be sent to the hon. secretary, 5, Nevern Square, S.W.5.

The marriage was celebrated on June 25, at Lymington Parish Church, by the Rev. C. Bostock, between John Norman Wilson, late 8th Hussars, and Ethel Charlotte, daughter of the late Alfred Brasher, India Office.

The Mission from Abyssinia left London on June 28 for America. Sir Robert F. Synge and Major Dods, who has been in attendance on the emissaries during their visit, were at the station to bid them farewell.

A marriage has been arranged between Captain H. W. Goldfrap, M.C., Indian Army, third son of Frederick Goldfrap, and Edith, second daughter of Major C. R. B. Thorne and Mrs. Thorne, of Beggearnhuish Manor, Washford, Somerset.

The marriage was celebrated on June 25, at Little Marcle, Ledbury, by Rev. J. M. Philpott, assisted by Rev. T. Holland, of Captain Francis Other Philpott, M.C., 4th S.W.B., to Marion Edythe Phillips, widow of Robert Phillips, of Bombay.

The marriage was celebrated on July 1, at St. Paul's, Knightsbridge, between Clifford Carver, Lieutenant, U.S.N.R.F., son of Amos Carver, of Locust Valley, Long Island, New York, and Helena Philae, only daughter of Lieut.-General Sir John Maxwell, formerly G.O.C. in Egypt.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, entertained at luncheon on June 26 M. Titulesco, Roumanian Minister of Finance, and Mme. Titulesco, Colonel Capitaneano, Chief of the Roumanian Military Mission in Paris, Mr. and Mrs. Madge, and M. George Boncesco.

The marriage was celebrated on June 26, at Christ Church, Chorley Wood, by the Rev. C. Hughes and the Rev. R. C. B. Clarke between Robert, son of Mr. Robert Hamilton, of Halberton, and Nora, daughter of Mr. B. P. Standen, I.C.S., of the Central Provinces Commission, India.

At a meeting of the Indian Church Aid Association on June 24, at the Church House, Westminster, the Bishops of London and of Bombay, both urged our great responsibility in India, and pleaded for more freedom and faith in dealing with the great problem of Christianising India.

Sir Walter Townley, who has just returned to England, is understood to be about to resign his post as Minister to Holland, and to retire from the Diplomatic Service. Before he went to Holland he was British Minister at Teheran, and before that held a similar position at Bucharest.

An engagement is announced between Owen Meredith Rees, Indian Civil Service, son of the Rev. George Edward and Mrs. Rees, of Harwood Vicarage, Bolton, and Laura Fernanda Morison, daughter of the late Alexander Joseph Morison, of Havana, and of Mrs. Morison, of 67, Queen's Gate, S.W.

Sir William Jameson Soulsby, C.B., C.I.E., private secretary to the Lord Mayor of London, has received the Royal licence to wear the Cross of Commander of the Order of the Crown of Italy, conferred upon him by the King of Italy in recognition of valuable services rendered by him during the war.

The marriage was celebrated on June 28, at the Church of the Holy Trinity, Paddington, by the Right Rev. the Bishop of Grantham, assisted by the Rev. Cecil White, between F. P. G. De Smidt, Surveyor-General, Cape Colony, and Pearl, elder daughter of Major Hugh Hiddingle Jephcoat, Indian Army.

The engagement is announced between Leonard William Reynolds, C.I.E., M.C., fourth son of the late Thomas Reynolds and of Mrs. Reynolds, of Totteridge House, High Wycombe, and Blanche Mortlock, daughter of the Rev. Chancellor and Mrs. Lias, of Broomfield, Haywards Heath, Sussex.

The marriage was celebrated on June 28 at the Church of the Holy Trinity, Kensington Gore, by the Rev. H. B. Coward, M.A., between Jack St. Aubyn, only son of the late F. St. Aubyn King, of Calcutta, and Jeanne, only daughter of Mr. and Mrs. Walter Demuth, of 74, Kensington Gardens Square, W.

The marriage of Lieut. James Charles Powell, M.C., Royal Artillery, only son of Mr. James Charles Powell, Amballa Cantonment, India, and Violet Eileen Anning, second daughter of Mr. and Mrs. Richard Anning, Temple Dinsley, Bournemouth, W., took place on Wednesday, June 25, at St. George's, Hanover Square.

The marriage was celebrated on May 10, at Beyrout, Syria, by Major the Rev. R. E. Young, between Captain Sir Robert J. Paul, Bart., Ballyglan, Waterford, and Eveline, daughter of the late Count Gorkiewicz de Habdank, and great-niece and adopted daughter of the late Edgar Whitaker and Mrs. Whitaker, of Constantinople.

The marriage was celebrated on June 25, at Meole Brace Church, Shrewsbury, by the Rev. W. H. Bather, Vicar, between Arthur Herbert Conway Jackson, I.C.S., I.A.R.O., only son of Mr. and Mrs. Arthur Jackson, College Hill, Shrewsbury, and Margery Ruth Heitland, only child of Mr. J. R. Carless, Colkirk, Kingsland, Shrewsbury.

A Reuter message from Belgrade states that Prince Alexander received Sir Charles des Graz (the British Minister to Serbia under the old regime) in special audience on June 25. Sir Charles presented his credentials and letters of appointment as Minister Plenipotentiary to the Prince Regent of the Kingdom of Serbs, Croats, and Slovenes.

At Westminster Cathedral at 11.30 a.m. on Monday, July 7, will be held a celebration of the Feast of SS. Cyril and Methodius. A Mass of Thanksgiving and Intercession for the reunion of the Serbs, Croats, and Slovenes will be given in the presence of H.E. the Cardinal Archbishop of Westminster; and a sermon will be preached by the Rev. Adrian Fortiscue, Ph.D., D.D.

The Crown Prince of Roumania, who was accompanied by Sir Henry and Lady Mainwaring, visited the Handley Page aeroplane works at Cricklewood on July 1, and was shown over the establishment by Mr. Handley Page. The Crown Prince and Lady Mainwaring afterwards had a trip in a two-engine Handley Page Rolls-Royce aeroplane.

The Serbian Minister and Madame Yovan Yovanovitch and the Chairman and Council of the Serbian Red Cross Society in Great Britain held a reception on June 28 at 9, Ennismore Gardens, South Kensington, in memory of Kossovo Day. The speakers included the Serbian Minister, Sir Edward Carson, Mr. F. Hastings, Chairman of the Society, and M. Popovic.

M. Gennadius, formerly Greek Minister in London, received last week from the Greek community an address expressing regret at his retirement and admiration for his services to Greece during nearly fifty years. The address, enclosed in a silver casket, was presented at his house, 14, De Vere Gardens, by a deputation headed by Sir Lucas Ralli and the Wardens of the Greek Church.

The marriage was celebrated on May 15 at Bombay Cathedral, by the Rev. F. W. M. Hamerton, M.A., Senior Chaplain, between Seymour Mowbray, younger son of the late Mowbray Gray and Mrs. Gray, "Wongalee," Surbiton, and Dorothea Isabel Emily, only daughter of Mr. William Exhall Tempest Bennett, C.S.I., late P.W.D., India, and Mrs. Bennett, and great-granddaughter of the late Colonel Hugh Gore-Edwards, Raveagh, County Tyrone.

Our Cyprus Correspondent writes:—

Lieut.-Colonel Gallagher, Chief Commandant of Police, who has been absent from Cyprus from September 12, 1915, to April 30 last on active service, has been granted three months' leave from May 1.

The Anglican Bishop in Jerusalem, Dr. R. McInnes, now in Cyprus, has exchanged visits with the Greek Bishop of Papho, who acts as archbishop.

The office of the Chief Secretary to the Cyprus Government moved to summer quarters on Mount Troodos on June 6.

Mr. C. D. Fenn acts as Chief Secretary, as he has done during several previous periods.

Mr. E. Heidenstam has been appointed assistant to the Chief Secretary. He is a son of the late Dr. Heidenstam, C.M.G., who was long Chief Medical Officer in Cyprus.

APPOINTMENTS, PROMOTIONS, &c.

Our Cyprus Correspondent writes:—Mr. W. Francis, Government Analyst, has been appointed to act as Island Postmaster.

Mr. A. L. Stuart, Puisne Judge, has been appointed a member of the Executive Council.

Mr. T. Greenwood, Local Commandant of Police, has been appointed Commissioner of Pappo. This officer has had long service in Cyprus, and has on many occasions acted as Commissioner.

Retired Indian Army officers, preferably residents in London, who have served in the present war, and are interested in the amelioration of the Pensions scale, are invited to communicate with the General Secretary, Comrades of the Great War, 8, Grosvenor Crescent.

OBITUARY.

The death occurred on June 2, at Aden, of malaria, of Lieut.-Colonel Jay Gould, C.B.E., I.M.S.

Mr. Joseph Clayton, who has died at Quendon, Essex, aged 93, held the Mutiny Medal, with bar for the Battle of Banda.

The death is announced in a Reuter message from Jassy, Moldavia, of M. Carp, a former Roumanian Premier. He was eighty-two years of age.

The death occurred on June 30 at the Moat House, Sharnbrook, Beds, of George Herbert Weller, Colonel Indian Army (retired), late 14th (Jat) Lancers, in his sixtieth year.

The death occurred on June 24 at Frant, Sussex, of Lieut.-Colonel Carles Herbert, C.S.I., (late) Indian Political Department, eldest son of the late Major-General Charles Herbert.

The death occurred on June 9, at Bombay, of Captain Gerald Maltby, on the Staff, Indian Army, Bombay, the youngest son of John Briggs Maltby, Calton Road, Dulwich, London.

The death occurred on June 22 of Colonel Sydenham Clarke. He was appointed to the Madras Engineers in 1862, serving as Executive Engineer at Mysore till 1867, and subsequently, under the Government of India, in Beluchistan during Sir Frederick Roberts's campaign in Afghanistan.

The death occurred on June 24 at Rowley, Lansdowne Road, Torquay, the residence of his father-in-law, Mr. William Gilhespy, of Horace George Barwell, O.B.E., Superintendent of the Eastern Telegraph Co., Malta, son of the late Major-General C. Barwell, C.B., Indian Army, aged 54.

The death occurred at Cairo on June 15 of Mr. Henry Kastner, for many years editor of the Cairo edition of the *Bourse Egyptienne*. He was an Alsatian by birth, and had been a University professor before taking up journalism. He used to write a great deal for the Parisian newspapers before he came to Egypt.

The announcement is made of the death, at Minehead, Somerset, of Colonel Suene Grant, late R.E. Colonel Grant saw service in the Afghan War from 1878 till 1880, when he was twice mentioned in despatches, and in 1888 he was with the Hazara Expedition, when he received a further "mention" and was awarded the brevet of major; while in 1896 he accompanied the expedition to Dongola, and was field engineer with the force at Suakin.

Our Cyprus Correspondent writes:—Great regret is felt in all communities on account of the death, at Larnaca, on June 9, of Mr. E. H. Hore, the Island Postmaster. Mr. Hore has been a loyal servant of the Government for forty years, during the greater part of the time as head of the Department. He was married to a Greek Cypriot lady, and was a keen and successful purchaser of objects of antiquity discovered in Cyprus, of which he formed a fine collection.

NEWS IN BRIEF.

Belgium has formally resognised Yugoslavia.

An additional division of Greek troops has been sent from Macedonia to Smyrna.

The *Basrah Times* states that post offices have been opened at Tel Kaif (Mosul Division), Belid, and Dair-ez-Zor.

General Milne has sent a letter to Greek Boy Scouts expressing his satisfaction with their services to British troops during the war.

Skoplie (Uskub), the ancient capital of Serbia, has celebrated, with great solemnity, the anniversary of the publication of the Emperor Dushan's Code, promulgated 570 years ago.

A deputation has reached Paris to plead the cause of the Syrian Christians, 20,000 of whom had to flee to Tiflis and Transcaucasia, where they are being terribly ill-treated by the Bolshevists.

By virtue of the powers conferred on Greece by the Greco-Turkish Peace Treaty of 1913 Moslems in Greek territory are to be given every possible facility to renounce their Turkish nationality.

A wireless message from Petrograd reports that the two British airmen who were forced to make a landing at Astrakhan, and were made prisoners, are the aeronautical officers Lieut. Ingram and Lieut. Mantle.

The Montenegrin Government has addressed to the Great Powers a protest against their refusal to give Montenegro representation at the Peace negotiations, although she was among the first to declare war on Germany.

Parcels can now be accepted for transmission by post to Trentino, Istria, and Dalmatia at the rates of postage and under the general conditions applicable to parcels addressed to Italy. Insurance is, however, limited to £12 per parcel (300 francs).

Some of the Russian States, which are endeavouring to free themselves from Bolshevism, have issued some new varieties of postage-stamps. One specimen from the trans-Caucasian Government of Georgia bears a rough representation of the national arms, surmounted by the inscription, "La Georgie." Another series is from the Republic of the Cossacks of the Don, where the former Imperial stamps of Russia are in use, surcharged with new local values. A similar stamp is issued by the Soviet Government of Kherson in South Russia.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

FRIDAY, JULY 4, 1919.

PEACE.

Peace has been signed, and the end of the war has been celebrated with appropriate rejoicings in the Allied capitals. The German delegates have stated that they signed without *arrière-pensée*, and there is no particular reason to disbelieve them; the real opposition to the Treaty in Germany comes from other quarters, who are already proclaiming their desire to work and watch for the day of revenge. If this party gains the upper hand, there will be no alternative but to prepare for a renewal of the conflict on our side, but for the time at least we need cherish no such pessimistic forebodings, which would imply the end of the hopes of a new order in Europe. Those hopes may indeed have no very solid foundation, not merely on account of the social unrest and economic unsettlement which are the inevitable outcome of so long a war, but on account of a certain seemingly ineradicable pugnacity in human nature itself; but at least there are recognisable factors which make for Peace for some years ahead. All the European combatants are more or less exhausted, not so much by the loss of man-power, grave though that has been, as by the diminution of strength among the survivors. All have long awaited internal reforms to attend to, which simply cannot be postponed any longer, unless the world is willing to pay the price of accepting Bolshevism, which seems a singularly unpleasant but thoroughly effective way of committing suicide. In the case of Germany the reasons for keeping the hotheads in check who would renew preparations for war at the very moment when the Treaty of Peace is being signed are still more pressing. Her losses have been greater than ours; if they have not been greater than those of gallant France, our neighbours at least have the consciousness of victory and a restoration of their lost provinces, which will help to restore the balance of Continental Power. Further than this, the French political system, which every German derided as the very type of instability, has weathered the five years' storm, whereas the German Empire, which was vaunted from Königsberg to Köln as the type of immutability, lies trodden in the dust. The collapse of authority in Germany seems to have shaken the popular nerve at least as much as those sacrifices of war which are now seen to have been made in vain; nor is this surprising when we remember that the German character relies on authority, and that it trusted in weapons which it thought invincible, but which have broken in its hand. So complete and absolute a catastrophe to the material faith in which a whole people trusted implicitly cannot have occurred without grave psychological reactions. From these reactions may result, as some of our more optimistic statesmen profess to hope, the desired "change of heart"; we shall be satisfied if it results in a change of head, an admission that war does not pay, and the further recognition that the treaty between Britain, France, and America for defence in the event of a renewal of the German desire for world-dominion will make it less likely than ever to pay in the future.

The Peace Treaty has been attacked, sometimes by those who have not read it, as imperfect. The same criticism could be applied to every work of man since the Creation; what is more to the point is that it is incomplete. The departure of Mr. Lloyd George and President Wilson from Paris has been taken as a signal that the Conference is over; but in fact its work is only begun. Certain of the details of the German settlement have yet to be adjusted; the Austrian terms are still no more than a draft; Bulgaria has apparently been forgotten at Versailles; and the Turkish delegates, who calmly suggested a restoration to the *status quo* during their brief sojourn at Paris, have returned home after an exchange of civilities that appears to have accomplished next to nothing. It cannot be pretended that these results are satisfactory. It has taken precisely six months to arrange the terms with Germany; yet the difficulties to be surmounted in this case were certainly not greater than those which surround the construction of new States out of what once was the Austrian Empire, or the disposition of the Turkish Empire—the latter a problem which raises grave questions both European and Asiatic, and which may even have some repercussion on Islam in Africa. With the best will in the world, it will prove impossible to secure these settlements before the opening of 1920; and meanwhile anarchy and disorder spread in the Balkans, the national rivalries of Italy, Greece, and the Yugoslavs are inflamed still further in the Adriatic and the Levant by delay, and the work of reconstruction which is so urgently required in Asia Minor cannot be begun, since nobody can risk capital or time when there is no assurance for even a few weeks ahead. It must unfortunately be recognised that the forces of disorder are likely to take advantage of the delay, to the further harm of such civilisation as has survived east of Vienna.

Despite some of the criticism of the Treaty with Germany and the draft Treaty with Austria these documents do in fact recognise the broad results of the war, in limiting Germany's power of offensive against her neighbours, in setting up the new States of Poland, Czechoslovakia, and Yugoslavia, whose claim to national sovereignty could not be denied. It is true that there is room for dissatisfaction in the boundaries devised for Poland, which not only cut Germany in half—that could hardly be avoided in view of the position of East Prussia—but do not secure Poland an adequate corridor to the sea. This is certain to be one of the storm-centres of future politics, and the League of Nations, which is to act as a kind of benevolent guardian to Danzig, is likely to have its attention frequently directed from Geneva to the Vistula. Of the neighbouring new State of Lithuania, which also cuts off part of Germany by the inclusion of the seaport of Memel, little can as yet be said, since it scarcely has an independent existence at the moment; but its influence in Baltic politics will not be negligible. To the south of Germany, the new Republic of Bohemia, which is fortunate in possessing a statesman of the calibre of Professor Masaryk at its head, is naturally more wealthy and its people are more experienced in modern industry; their prospects are in some ways the brightest of the new States. Yugoslavia has never been united before, it is notoriously subject at the moment to internal differences of opinion which may, we hope, be composed by moderate politicians intent in their country's good; and it is likely to enter into an unfortunate and probably prolonged controversy with Italy over Adriatic issues. These difficulties are not merely the legacies of the past war, but of past centuries, and it would perhaps be unreasonable to expect the Peace Conference to have settled them, since no possible settlement could have satisfied everyone, and it has unfortunately been discovered that Chauvinism is not confined to the Great Powers. In the meantime the new States and the old have to make the best of the peace, if civilisation is to be rebuilt; and in some ways the most unfortunate provision is not in the document itself, but in the appendix which declares that its conditions are subject to revision. Theoretically this may be good to redress possible injustice; in practice we fear it will be used, as it is already being used by Germany and by her faithful echoes, the pacifists everywhere, to emasculate the terms which have been arrived at, and to keep alive an atmosphere of agitation and contention during the very years when the first necessity for all is certainty, security, and stability.

THE BALKANS AND AN ANALOGY.

By JANUS.

The Balkan situation is no particular concern of mine, but as I have never set foot in the Peninsula I can at least lay claim to the impartiality which visitors to those regions are apparently compelled to discard, and I feel it may be worth while at the present juncture to draw attention to a rather striking analogy which is very commonly overlooked. To an outside observer the position in the Balkans to-day resembles very closely the situation which existed in India a century or two ago, and the mechanism of the change which has been brought about in India may possibly have some interest for the statesmen by whom the modern problem must be solved. In the eighteenth century most of India was divided up into independent States, differing in race, language, religion, and civilisation, and harmonised only by universal discontent. No single State was ever satisfied for long; the lust for territory was a powerful factor of unrest, but old grievances and the point of honour counted for still more. Stable policy there was none; open and secret alliances changed like the pictures in a kaleidoscope; to be peacefully disposed was merely to invite aggression; the drain of blood and money was steadily bringing the country to the verge of ruin; the aid of foreign powers was eagerly sought; and the adventurers of half the world found happy hunting-grounds among the Courts of Hindostan. Such were the States of India in the old days, and I cannot see that the recent position in the Balkans has been materially different. How do the States stand to-day? Many of the old animosities have disappeared, and those which survive are kept in check. An open breach of the peace is unthinkable. Armies have been greatly reduced in size, and serve only for ceremonial display, or on occasion for the protection of common interests. Disputes are adjusted by reasonable methods, and populations aggregating more than 70 millions, say three times the numbers who inhabited the Balkans before 1914, live without fear of war, and are free to devote their energies to economic and intellectual pursuits. That is a condition one would like to see realised in the Balkans. How has it come to pass in India?

Every schoolboy is ready to answer with the catchword *Pax Britannica*, but few people understand the details of the mechanism covered by the phrase. External pressure has, of course, to be taken into consideration, but the important thing has been the regulation of diplomatic intercourse and the practical elimination of intrigue. The nations learned that they could live at peace only when the disturbers of peace were excluded from their councils. The way in which this was done can best be stated in the unimpassioned language of the *Imperial Gazetteer*. At the outset, we read, "an obligation was imposed, and accepted by even the largest States, which prevented their rulers from entering into relations with foreign nations or other States." The employment of foreigners was prohibited; the reception of even commercial agents of foreign powers was stopped; and the States "submitted to the obligation of referring to the British" every question or dispute which might arise. In a word, diplomacy was centralised, and the game had to be played with the cards on the table and in the presence of an impartial referee. For a quarter of a century or more there has been no room for the man with an axe to grind, or a gun to sell, and India has learned by experience that the activities of such individuals can be dispensed with entirely. Is there not here a lesson which the statesmen of the Balkans might take to heart? I am not, of course, suggesting a fantastic transfer of concrete institutions, or an extension of the *Pax Britannica* to the south-east of Europe; my point is that the centralisation of diplomacy is a pregnant idea, and that if the Balkan peoples would consent to try it they would very quickly find that it was almost indispensable to the stability of whatever settlement is now introduced. The trial could not have been made in the past because of the impossibility of finding the impartial referee, but with a League of Nations in existence that difficulty will disappear; and if each State would bind itself to negotiate with its neighbours only through a representative appointed by the League the result would almost certainly be to minimise injurious friction and promote international harmony to an extent which might make all the difference between peace and war.

The hard-shell diplomatist will object that any such arrangement would be derogatory to the sovereignty of the independent nations concerned. The objection is valid but not fatal, for the world has now come to the point where sovereignty must be limited in the interests of a large integration. For a good many centuries the nations of Europe fought to find out what sovereignty really was; they have at last reached the point where the idea has become capable of precise juridical expression, and now it is time to take the next forward step. The Covenant of the League represents in this respect the aspirations of the future. If statesmen used plain language, it would be described as a Covenant for the Limitation of Sovereignty, and though well-meaning advocates may try to disguise the powder in enormous quantities of rather sticky jam the powder is nevertheless there, and if once swallowed it will quickly get to work. For the Balkan nations, as for England or France or America, the question is not whether sovereignty shall be limited, but what limitations of sovereignty will most effectively conduce to the ideals of the modern world; and the main advantage to be obtained by the concentration of diplomacy is that the States would thereby be enabled to do for themselves what must otherwise be done for them by the pressure of more powerful forces acting from without.

THE INDO-BRITISH ASSOCIATION.

The annual meeting of the Indo-British Association was held on June 20 at the Cannon Street Hotel. Lord Sydenham was re-elected as President. He said that during the year the Association had issued eighteen pamphlets dealing with Indian affairs, and had kept in touch with all loyal Indian organisations, making their views known as far as possible in this country. The policy had been to disseminate facts about the life and conditions of India very little known among the masses of English-speaking countries. Especially the Association had tried to get a hearing for the non-Brahmins and the classes not politically-minded. In India it was said that the Association had vilified the educated classes. No one more than the Association knew the value of the educated classes, but it had been obliged to criticise the actions and attitude of a small minority which seized on the opportunity offered by the war, and had already succeeded in creating disturbances, with serious loss of life, among the ignorant and credulous masses. The educated classes were not confined to the 1,700,000 sometimes returned as being literate in English. Speaking of the Montagu-Chelmsford Report, he said it mingled shallow judgments with maxims of undoubted excellence. Mr. Montagu's main idea was not the uplifting of the great masses of the Indian people, but the conciliation of the small minority of agitators. The Bill now before Parliament would, if made law, weaken the supreme Government of India by setting up two Chambers, would create interminable conflicts by giving a dual Government to every province, and would give the British Parliament responsibility without power.

THE NEAR EAST.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The issue of a 5 per cent. loan at 95, free of Indian income-tax, is announced by the Government of India. The loan is repayable at par not earlier than October 15, 1945, and not later than October 15, 1955. Subscriptions in India opened on July 2, and applications will be received until August 30. Indian war bonds of all issues will be accepted at par in subscriptions to the loan, and Indian Treasury bills will also be accepted subject to a discount of 4 per cent. on the unexpired portion of the currency of the bills. To provide against depreciation in market value 1½ per cent. of the amount of the loan will be set aside annually as a fund to be used for its purchase and cancellation when the market value falls below the issue price.

***

The first annual report of the British-Roumanian Chamber of Commerce, which has just been issued, states that the efforts of the Chamber during the past year have been directed to paving the way, as far as might be possible under difficult conditions, for such developments. Reference is made to a conference which took place early this year between representatives of the Chamber and the Department of Overseas Trade with the object of considering plans for the advancement of the trade interests of the two countries, and it is stated that "although there were, and are, many obstacles in the way of a complete resumption of business between the two countries, the Council have every hope of material developments in the near future." The general meeting of the Chamber will be held at the London Chamber of Commerce on July 8, when no doubt some interesting information will be forthcoming regarding the prospects for the development of trade between this country and Roumania.

***

The report of the Burmah Oil Company shows that 1918 was an extremely prosperous year for that undertaking. There was once again a great increase in the trading profit, which amounted to £2,849,000, as against £2,306,000 in 1917. The dividend of 30 per cent., free of tax, falls short of the previous declaration of 32½, but the distribution is on a capital which has been increased since 1917 by the share bonus of last July, when shareholders received one new share for every two shares they held, so that the dividend on the old basis would actually work out at something like 45 per cent. The allocations to depreciation and reserves amount to £778,000, or slightly higher than the previous year, and £1,776,000 is left to be carried forward, subject to excess profits duty, which is estimated at £1,500,000.

***

Continued improvements and economies in refining provide one reason for the greatly increased profits of the Burmah Oil Company; another factor is the advance that took place during the year in the prices of petroleum products. Since the conclusion of hostilities prices have begun to fall, while expenses have risen, but, on the other hand, there is the decrease in the excess profits tax, and as the amount at which the tax is estimated for the past year is equivalent to 55 per cent. on the ordinary capital, the prospects cannot be regarded as unfavourable. The current rate of the tax is now only 40 per cent., as against 80 per cent., and the difference that would make should compensate for very considerable shortcomings in other directions.

***

Before leaving this subject, I must say something with regard to another aspect of the company's position. It is proverbial that figures talk, and the results of the past year, following on a long series of increasingly prosperous years, speaks volumes, but even so the price of about £11 7-16 for the company's £1 shares would hardly seem justified prima facie. At this price, allowing for income-tax at 6s. in the £, the yield is about 4 per cent. There is, however, the prospect of much higher dividends in future, particularly in view of the company's substantial holding of the ordinary shares of the Anglo-Persian Oil Company. That this company has before it almost unlimited prospects, there is little doubt, for the Anglo-Persian Oilfields are barely at the commencement of their development, while the company has been so fortunate as to secure valuable concessions in what may prove an important oilfield in Canada.

***

Shareholders in the Anglo-Egyptian Oilfields have every reason to feel extremely pleased with the report for the past year, which shows a net balance of £582,213, after meeting £78,602 in respect of six years' interest on income bonds, as against £348,555 last year, which, after the deduction of the loss to December 31, 1916, was reduced to a little over £6,000. The arrears on the preference shares, amounting to £56,230, have been paid out of last year's profits, together with the dividend for 1918, making an additional £15,000, and an interim dividend on the ordinary shares of 15 per cent. on the B shares and on the others their due proportion, absorbed £244,716, leaving an available balance of £266,267. Out of this it is proposed to pay a further dividend at the rate of 10 per cent. per annum on the B shares, making 25 per cent. for the year, and the due proportions on the other classes of shares, while the 20 per cent. of surplus profits which goes to the preference shares amounts to £75,888. For the rest, the allowance for depreciation is £55,000, and the preliminary expenses are reduced by 10 per cent., leaving, subject to the payment of taxes, £76,551.

***

The half-yearly balance-sheet of Messrs. Cox and Company, the Army bankers, for the six months ended April 5 shows that up to that date demobilisation had had no effect on the development of the business handled by this bank. Deposits and current accounts then amounted to £20,318,600, as against £18,775,200 at the corresponding date in 1918, and slightly over £4,000,000 at the beginning of the war. The growth of this business during the war has been very remarkable, and as the increase has been due to the development of the Services it naturally follows that the process of demobilisation is bound in due course to have its effect. To what extent will depend on how far business which was temporary becomes permanent through officers continuing to bank at Cox's.

***

A notable improvement took place in the earnings of the Great Indian Peninsula Railway for the half year ended March 31, though there was a decline in net revenue due to the still higher advance in expenditure. The gross receipts amounted to Rs.6,49,85,800 as against Rs.6,04,54,800, and the net revenue was Rs. 2,63,20,800 as against Rs.2,80,20,200. Passenger traffic contributed more to the increase than freight traffic. Coasting business was higher because of larger bookings for fairs and congresses. The main increases in goods traffic were in coal and coke, raw cotton, piece fabrics, rice, oil seeds, and salt. The surplus available is £82,300, as against £70,900, and the dividend remains at 35s. per cent., in addition to the guaranteed interest, leaving £37,200.

***

My readers will have noticed that the addition of a few Japanese, Chinese, and Argentine securities has been made to the list of stocks and shares of the Near East and India that are quoted in these columns. This has been done at the express wish of some readers in Smyrna who are interested in the shares. In this connection I would point out that requests from readers for occasional quotations of shares are welcomed, and will be complied with so far as is consistent with space limitations.

COMMENTATOR.

GERMAN FINANCE AND THE NEAR EAST.

Influence of the Banks.

Before 1914 Germany dreamed of two empires, one on land secured by rail and economic power, the other overseas and secured by sea-power. The origin of the first idea stretches far back in her history, when companies of German emigrants went east to found colonies in Muscovy and Hungary; the origin of the second is entirely modern. Germany's colonies date from 1885, and her navy from 1900. Both have vanished. Germany acquiesced in the loss of her fleet without a protest—an acquiescence almost more amazing than the surrender—and she has acquiesced in the loss of her colonies with only a formal protest. Her overseas expansion is therefore definitely ended.

It is significant of the real importance she attaches to things that she should have been more insistent over Upper Silesia than German East Africa, that she should take more interest in Danzig than Kiaochau, and that rumours should come of a German army preparing to invade Poland. German policy suffered in the days of her arrogant strength from being too discursive, and there was a constant see-saw between the colonial and maritime interests of Hamburg and the railway and financial interests of Berlin, even so late as 1918. The suicide of Herr Ballin last autumn marked the end of that era; German policy in the hour of her weakness is to concentrate in one direction. That direction can only be eastwards.

The German banks have definitely seconded German Imperial policy in the past; they were the tools of the old State, and they served the Hohenzollern policy well. There is some possibility that they may be the masters of the new State. One indication has indeed already been given. The suggestion of a capital levy was made a few months ago in Germany. The Government was too feeble to oppose it root-and-branch as a disastrous expedient, even for a defeated State overburdened with debt; but the project disappeared. The German banks had apparently intervened decisively.

From 1916 to 1918, the German banks followed in the footsteps of the armies. New branches were opened in Poland, Russia, and in the Balkans and Asia Minor. Few details of their transactions have reached England, but large commitments were apparently entered into. The defeat of the German Army has automatically ended some of those financial adventures; others, probably, are no longer profitable or advisable, and will be quietly dropped; but others stand.

The German banks participated in the loans to Bulgaria and Turkey. The advances to the former were not very large, as loans to Allies go in this war; to Turkey they were considerable. It may be assumed that in both cases they will be written off, since neither Bulgaria nor Turkey is in any condition to pay, or Germany to make them pay. This will involve both the banks and the German Treasury in some loss; a more serious matter is the loss of the Baghdad Railway. That railway, indeed, was constructed at a profit for Germany and a loss for Turkey by the ingenious kilometric guarantee. Its future is assured, and its expansion is inevitable, but the German concessionaire will be less popular in Turkey for some few years than he was before.

At the same time, certain facts to offset the ruin of German political schemes must be mentioned. The German exchange is low, from unavoidable causes, and low exchange facilitates exports automatically. The figures as to the cost of living in Germany are not well known, but labour costs do not appear to be high; at all events, a German engineering firm has secured a Dutch contract in competition with an English firm, at a price less than that which the English firm has to pay for the raw material. The explanation of the mystery is probably that the German firm is executing the contract at a heavy loss, on the principle that if it gets its foot inside the door again its whole body will follow in time. Our British merchants naturally object to that way of doing business, and seldom conduct their own affairs on these lines; but Germany has done so, and often successfully.

Germany and the Ukraine.

Now the whole of the Near East and Russia wants goods. A recent German paper noted that Lenin, arch-enemy of capital, had deferred the war on German capital for ten years, because he wanted German locomotives. No doubt he wants other things as well, and he will get them from Germany. Here is the opportunity of the German bank. Russia cannot pay for the goods, but the German bank can, in return for Russian concessions, which may be in land or timber—Bolshevist principles would not stand in the way if the necessity were urgent. In the South of Russia, in the still independent Ukraine, the German position remains very strong, and is likely to continue so. The one indubitable success of Germany in the war was stirring up the Ukraine to revolt, and she has her reward. The Ukraine is ready to trade with Germany—she has agricultural produce, and Germany manufactures and machinery, the ideal exchange—and she is equally ready to ally herself with Germany against Poland. Both countries hate the Poles; the Ukraine because the Poles conquered them, and Germany because the Poles have rebelled against Germany; and it happens that the only real industrial competitor of Germany in Eastern Europe is Poland. The so-called industrial advance of Russia during the last twenty years was really the advance of the Polish provinces—it centred in Warsaw and Lodz. New Poland will easily beat Russia in business, and she will put up a good fight against Germany if she is allowed a free hand at Danzig.

The possibilities of German trade in the Near East run on similar lines. The Balkans want goods and machinery badly. Britain, France, and America have every chance of supplying them, but Germany is nearest the market. Now, space is, philosophically, unreal, but in commerce it counts all the time. Probably the competition will narrow down a little, for America seems to be mainly occupied with the Yugoslavs as a business outlet for her exports—a fact which may explain the particular facts of idealism rendered visible in President Wilson's political spectroscope—while France is naturally engaged in the development of her own empire in Africa and in the work of reconstruction at home. The German, having lost the world, can concentrate on that part of it which is nearest to him with the prospect of getting back some, at least, of what he has lost in battle.

Something *Quite* Different

from All other Paints—

"Riversea" Paint

Is Elastic, Waterproof, and is Impervious to Heat, Cold, and Atmospheric Conditions.

Is a Perfect Preservative for Iron, Wood, Stone, etc. Salt Water has no effect, and the Paint is a positive cure for damp, and resists the action of strong Acids. Can be submerged under water.

Is supplied in any Ordinary Colour.

Indents through Merchants.

MOROCCO TO-DAY.

To the Editor of THE NEAR EAST.

Sir,—I am sending you a copy of "Modern Morocco," this being a report on the prospects for British trade in that country, compiled for the Bank of British West Africa by Mr. W. B. Harris, of Tangier, and the Hon. W. Cozens-Hardy, K.C., M.P.

Morocco is, from the point of view of extensive commercial development, a new country—only in recent years have law and order been definitely established—but the progress which is now taking place is notable, and there are great opportunities for the British merchant and manufacturer, who enjoys equality of treatment in both the French and Spanish zones. The tourist will find a country yet unspoiled, offering attractions which rival those of the East, and enjoying an excellent climate, within a few days' journey from England.

Morocco, it is said, can easily provide for 30 millions of people, or about four times its present population, and it is politically and geographically almost part of Europe.

The number of copies published is limited, and the Bank cannot undertake to supply all applicants, but a certain number of copies of the book will be available for those of your readers who are willing and able to consider, seriously the establishment of a business connection with Morocco.

The expense incurred by the Bank of British West Africa, in publishing "Modern Morocco," will be well spent if it serves to draw the attention of the British public to a country so full of possibilities and interest. Enquiries will be answered most willingly, and the Moroccan branches of the bank are entirely at the disposal of those desirous of making use of their services.—Your faithfully,

L. COUPER,
General Manager.

Bank of British West Africa, 17 and 18, Leadenhall Street, E.C.3. June 25.

BRITISH RIGHTS IN TUNIS.

In the House of Lords on June 25, the Earl of Mayo asked if it were true that the Tunisian Government, by the decree of February 22, 1919, had imposed a tax on the resale of all property in the Regency of Tunis to foreigners by Tunisian or French subjects and that this tax would not be imposed on any sale of property as between French subjects and French subjects, or Tunisian and Tunisian subjects, or French and Tunisian subjects, therefore placing all British subjects who might wish for business or commercial reasons to acquire any property in the Regency of Tunis in a disadvantageous position as compared with French and Tunisian subjects. The principal owners of the land in Tunis were Arabs and Mohammedans, who were surprised to find that, in spite of the cordial relations which they had been led to believe existed between England and France, the latter was imposing what they looked on as a fine on them if they sold any property to a British subject.

Lord Newton said it was extremely doubtful whether we had any real ground for protest, because, although we enjoyed theoretically and technically most-favoured-nation treatment in Tunis, that did not comprise the treatment enjoyed by France. Moreover, as the tax was imposed upon the French or Tunisian vendors, and not on foreign purchasers, the French might very well contend that we could not prevent their taxing their own nationals. Italian interests in Tunis were extremely more important than British interests. The British Government had been in communication with the Italian Government, and it appeared that the Italian Government did not contemplate taking any action.

A CYPRUS TOBACCO COMPANY

(FROM A CORRESPONDENT.)

The Acting High Commissioner has sanctioned the incorporation of a company under the style of the "Pancyprion Tobacco anonyme Trading and Manufacturing Company." He has similarly sanctioned the incorporation of a "Limassol Light Anonyme Company."

GERMAN EXPORTS FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, May 30.

At a time when, on the one hand, little is made in certain Allied circles of the sacrifices borne by Roumania in the course of the war (and indemnities seem very far distant), and, on the other hand, German voices are raised in protest against the inhuman terms dictated by the Allies, it may not be inappropriate to attempt to clear up any doubts that may exist as to the full meaning of a *German* occupation by publishing a few figures. Though for obvious reasons, they fail to represent the whole truth, yet such as they are they are genuine, for they have been taken from the German official papers and registers relating to materials exported from Roumania during the course of the German military occupation. They were captured by the Roumanian troops during their advance through Transylvania. Of course, they represent only official "exports." As the *Indépendance Roumaine* justly remarks, they do not include the enormous material sent home by enemy officers and men in 5 kilogram parcels. Motor lorries piled up with these were to be seen daily driving through the streets of Bucharest. Nor do these tables include the victuals actually consumed by the army of occupation.

CROP PROSPECTS IN BULGARIA.

The Rose Harvest.

(From Our Own Correspondent.)

Sofia, June 18.

The prospects of the forthcoming harvest, which in some places has already begun, are not very promising, owing to the very unfavourable weather. If the present rainy weather continues, the harvest will be half the average amount, and there will be a shortage of supplies; but if there is a change to warm and sunny conditions there is every prospect that the late autumn sowings will yield very rich and excellent crops.

Owing to the unusually cold and rainy weather, the rose harvest has been delayed by two or three weeks. The crops are not abundant, and the quantity of the attar of roses is less than half the usual amount, but the quality is excellent.

Last week the heads of the military missions of the Allied Powers made a tour through the famous Valley of the Roses in Southern Bulgaria. Everywhere they received a warm and cordial welcome from the population.

An address will be delivered to the members of the London Chamber of Commerce on July 9, at 2.30 p.m., by Mr. E. F. Crowe, C.M.G., Commercial Counsellor of Embassy, Tokio, on "Recent Developments in Japanese Trade." Mr. Stanley Machin, J.P., President of the Chamber, will preside.

FOREIGN PAPER MONEY IN EGYPT.

(From Our Own Correspondent.)

Cairo, June 6.

The trade in foreign paper money has assumed very considerable proportions since all restrictions have been taken off. The mass of the notes are imported from Syria, which, to judge from the enormous quantities of paper she is sending out, must have been the dumping ground for all the forced currency of the Central Powers. The *Ahram* states that the extent of this new business can only be estimated by those who are in immediate contact with it. The money is in manifold denominations—Turkish pounds, German marks, Austrian kronen, Bulgarian leva, etc., etc.

"The first impression produced by seeing such quantities of banknotes," says the *Ahram*, "is that the Germans and their allies had embarked on printing currency on a large scale in order to facilitate their military work and fill their urgent needs when gold and silver were beyond their reach. It is not out of place to fear that a portion of the great consignments of foreign banknotes is doubtful money . . . As a result of the arrival of those consignments, the prices of the same printed money have fallen to a lower degree than that already reached in consequence of the crushing defeat sustained by the Governments which had issued the notes. The Austrian crown, the original value of which is P.T. 4, is now worth 7 milliemes; the German mark, which had the value of fr.1.25, is now being taken for 15 milliemes; the Russian rouble, originally P.T. 10, has fallen to 16 milliemes; the Bulgarian franc is not worth more than 10 milliemes. . . . and the Turkish pound, which has the nominal value of 100 Turkish piastres, is now being sold at the rate of P.T. 22 a piece. The stuff is being offered for sale in thousands; and it is worth noting that the Austrian banknotes dealt in here are all big pieces of 1,000 crowns each, and all appear to have been issued in 1902. Where were those thousands of crowns collected, and how could they be used by people in Syria in lump sums during the war? Money changers think that the Austrian "Thousands" must have been brought to the East purposely for the financial market and not for individual use. One must think twice before purchasing such foreign banknotes in these days."

GREEK TRADE NOTES.

Prohibition of Cotton Imports.

(From Our Own Correspondent.)

Athens, June 13.

A Royal Decree, dated May 10 23, was published in the Government *Gazette* of May 13/26, prohibiting the import into Greece from that day of any of the following articles bought or shipped after April 20/May 3 of this year:—(a) cotton, ginned or unginned (coming under category 150 of the Greek Customs); (b) cotton yarns and threads up to the English No. 24 (these come in under categories 152a, 153a, and 154a); (c) coloured cotton drills and ginghams (Greek Customs tariff category 159b). The Minister of National Economy is authorised by the decree to issue special permits for the import of any or all of the above, after applications have been approved by a committee composed of three higher officials, one from each of the Ministries of National Economy, Finance and Provisions, and of the President of the Association of Threadspinners.

This step is authorised by a law passed at the last sitting of the Chamber, giving the Government power to prohibit the import of any articles they may think fit on the proposal of one of the three Ministers of National Economy, Finance, or Provisions. This is the first prohibition of import to come into force, and is understood to be in order to allow of the disposal of certain cotton goods made locally with raw material imported from Egypt. A certain quantity of raw cotton is produced in the district round Livadia, but this, unless mixed with imported cotton, is almost useless owing to the shortness of the fibre. The raw material imported from abroad arrived some time ago, and was bought by the Government, and amounted to a considerable quantity. It was made up into khaki drills and ginghams at a time when these materials were very badly needed, but the products are, of course, not on a par with the British-made goods. Owing to the arrival of cheaper Spanish-made dry goods and the termination of hostilities, which allowed of goods bought in England and stored there for some considerable time to come into Greece, the local product has become unsaleable. The Government is now anxious to allow of the disposal of these stocks before any further drop in local prices takes place and before further supplies from the rapidly falling cotton market abroad arrive. The result of this step, the effects of which are already being felt, is that retailers have commenced to raise the prices of foreign and local made products indiscriminately. In view of the fact that the dry goods dealers have now almost completely replenished their stocks from abroad, it will be some considerable time before the local made drills and ginghams have been consumed, so that it is anticipated that the prohibition of import must remain in force for some time.

ENGINEERING NOTES.

Trade Prospects in Crete.

According to American reports the island of Crete is attracting increased attention from manufacturers and capitalists abroad, and it is stated that American merchandise is welcomed in Crete and that American capital would be equally welcomed if offered. In view of the fact that since the Armistice numerous American business experts have been carefully studying the various markets of the Near East, the report is noteworthy. Crete stands on the highroad along which the commerce between East and West is carried on, and in a position which places her within from a few hours' to two or three days' sail of any market on the Mediterranean coast. The soil is very rich, but on account of frequent disturbances while the island was under Turkey it has not been cultivated as it might have been. Of late years, however, and since the union with Greece, considerable progress has been made, and the journey from the Piræus to Heracleon (Candia) and Canea or Rettimo, the three principal seaports of the island, can be made in a few hours; and it is hoped that British manufacturers or their representatives and engineers, who happen to be at the forthcoming British Exhibition in Athens, will avail themselves of the opportunity to visit the island. In recent years the agricultural population has shown a remarkable desire to increase the use of modern machinery and implements which, in the absence of British representatives, were being supplied by German, Austrian, French and American manufacturers. The kinds of machinery most needed are light ploughs, harrows, sowing machines, harvesting and threshing machines of light construction, small-power flour mills, olive oil presses and crushers, oil motors, tractors, industrial hand tools and implements, etc. And in view of the fact that the population is over 300,000—i.e., more than the population of Cyprus—and that the majority are farmers and landowners, British manufacturers should not omit coming in touch with them.

Crete is rich in mines. In the Canea district iron-ore deposits are to be found at Ravdoucha, Melissourgio, Fourné, Skinó, Kakopetro, Keramia and Koqygra. The only one of these, however, which has been at all seriously looked into is that of Ravdoucha (province of Kissamo, situated one mile from the sea-coast, and some twelve miles to the north-west of Canea.) In the Rethymo district there are also several iron-ore deposits, the most important being at Agiropoli, and another at Fodeles (Mylopotamo.) That so little interest has been shown in mining enterprises in Crete may be traced to the fact that the deposits are almost always at a distance from the coast, and as there are no railways and hardly any good roads in the island one is faced with the difficulty of lack of communications, and transport facilities. In the Rethymo district there are three coal (lignite) mines in the province of St. Basile.

Crete is in need of improvements, such as the enlarging of Candia and Canea harbours, a railway to join the principal towns, a telephone service, electric tramways, etc. Many European firms have applied for permission to undertake these works, but, as far as it is known, have not met with success. Before the war an Anglo-American Telephone Company applied for permission to establish a telephone service, but for some reason the Government has not decided on the question.

The chief articles of export are olive oil, citrons in brine, honey, almonds, chestnuts, raisins, soap, olive oil foods, oak, silk, and wine. The exports for the year before the war amounted to about £2,000,000, while the value of the imports amounted to £1,200,000.

Utility of Tractors.

The growing employment of tractors in the Near East is an improvement in land cultivation which must be ascribed to the war. Scarcity of labour, and to a certain extent of animals, compelled land owners to adopt this means of modern cultivation. The use of steam or oil-engine power for ploughing is not, of course, new in the Near East. The system of working the plough between two steam traction engines, as well as the single-engine system with a winding drum, having a sufficient length of cable and an automatic locking device, by which the plough is hauled across the field, has been in use some twenty-five years, and is probably still in use in some places, though too expensive for the average landowner, and not quite suitable for small inclined or irregular fields. It may be mentioned here that the first steam engines and ploughing sets, as above described, were of British construction, and have been in use for many years, giving entire satisfaction. The modern steam, or oil, tractor, which is a direct hauler with a balance plough attached to it, has proved more suitable throughout the Near East, and such machines are supplied generally by American and French firms. British firms, however, do not do as much as they could in order to secure orders. In our view, they do not bring their machines sufficiently before the notice of the buyers, or they offer machines which may be excellent in construction and suitable for the English soil, but quite unsuitable for the Near East. In England, of course, ploughing is done at a greater depth than is needed in the East, where shallow ploughing is essential, and is adopted as a defence against the frequently recurring droughts, the idea being that the supply of moisture which may have accumulated in the subsoil during the winter months is retained and utilised in the spring, when the rainfall is uncertain. Therefore, for such work a lighter machine is needed than the one used in England. This question has been studied by American makers with satisfactory results.

Openings for Motor Boats.

In previous notes reference has been made to the great possibilities for British motor boats in the Near East. The Ægean Archipelagos, with their numerous picturesque fertile islands and islets, the Sea of Marmora, the Bosphorus, the Trebizond coast, the Azov and Caspian Seas, etc., are ideal waters for the modern motor boat. Smyrna, to mention only one town, offers great opportunities to British motor boat builders, if the latter act promptly and energetically. There were very few such craft in Smyrna before the outbreak of the war, although the large and beautiful harbour is ideal for motor-boats. A small English motor-boat had been making the round trip to Mitylene, which is eight hours from Smyrna by steamer, and others were following its example when the war broke out and conditions changed. Steel boats are not suitable for Smyrna's harbour, the dory whale boat being the style which should be used. Such boats should be at least 23ft. long. Some frail lake-boats have been sent to Smyrna, only to lie around useless. It is advisable that British motor-boat builders who may wish to secure permanent trade in that promising market, should take the necessary steps to investigate the particular needs of that district. Smyrna is the principal seaport in the Ægean Sea, and the residence of many wealthy men, who, as a rule, love yachting and sea trips.

MAISELS PETROLEUM TRUST

Maisels Petroleum Trust, Limited, have received through the Lucey Manufacturing Corporation a report on the position of ten of the company's wells in Bordeni, Roumania, from which it appears that five of these were damaged or plugged at the time of the evacuation, but can be cleaned or repaired, and the others can be deepened without difficulty to reach productive levels. The wells reported on, and the depths given in the report are as follows:—No 1, depth 385 metres, 14in. casing, damage can be repaired. No. 2, depth 427 metres, 8in. casing, stopped, level of production 500 metres; 300 metres of casing are available. No. 4, depth 404 metres, 10in. casing, stopped at evacuation, level of production 472 metres. No. 5, depth 333 metres, 12in. casing, stopped, level of production 354 metres. No. 6, depth 474 metres, 6¼in. casing, water to be shut off and deepened. No. 7, depth 347 metres, 12in. casing, stopped, level of production 386 metres. No. 8, depth 412 metres, 12-14in. casing, clean well; the oil is not stopped; level of production 450 metres. No. 10, depth 54 metres. No. 11, depth 170 metres, 450-millimetre pipes. No. 12, depth 140 metres, 450-millimetre pipes, clean boring.

There is not a derrick left standing, but it is stated that there is sufficient material on the spot to put in working order two of the wells without delay, and that a large quantity of plant and material belonging to the company can be recovered from the neighbourhood. The report states that these wells, of which five were producing before the war, are some of the best in Bordeni, being situated amidst the most productive wells in this field. Further reports on properties and wells owned by Maisels Petroleum Trust, Limited, on the other oilfields at Badiceni, Chiciura, Tautesti, Copaceni, Schiulesti, and Moreni are following.

COMPANY MEETINGS.

EGYPTIAN MARKETS.

Damage during the Disturbances.

The annual general meeting of the Egyptian Markets, Ltd., was held at Winchester House, Old Broad Street, London, E.C., on June 26, Major W. I. Le Breton (chairman of the company) presiding. The managing director (Mr. F. J. Horne) read the notice convening the meeting and the auditor's report.

The Chairman said: Gentlemen, I doubt whether I am wrong in believing that your principal desire on this occasion is to learn such particulars as we can give you of the consequences to us of the recent disturbances in Egypt. I believe, therefore, that I shall best meet your wishes by giving to this matter the first place, though it be not the primary object of the meeting, and it is indeed one that does not in any way affect the operations of the year 1918, which we have met to consider. I fear you may be somewhat disappointed, as we are, that even at this date we have not complete particulars of the losses and damage sustained by us. This applies more particularly to Upper Egypt, and is due to the fact that there are many places which our responsible officers have until quite recently been prevented from visiting. The rioting commenced in Cairo on March 10 last, and spread immediately and rapidly to the districts. The fact that we were caught entirely unprepared for anything of the sort is not surprising when, as is generally known, the Government of Egypt had no suspicion of any such impending danger, and all around us seemed to be enjoying exceptional prosperity and the prospects of a return to peaceful conditions. As a consequence our markets and warehouses were entirely at the mercy of the rioters, and in many cases at once became so completely isolated, owing to the destruction of the railways and telegraphs, that for weeks we had no means of communicating with them, and did not even know how far they continued to exist.

The injury done to our markets, so far as we know, consists of what approaches total destruction in the case of eight markets, and as many more were less seriously damaged, whilst in many cases stocks of goods consigned to us for sale were looted or damaged, as were also stocks and stands of merchants who conduct business in our general markets. On such information as we possess, we estimate that our loss may comprise some £15,000 on account of revenue or earnings, and about £20,000 for renewals of and repairs to our property, whilst goods stolen will represent at least another £1,000. Notice has been given to the Government that we claim compensation accordingly, and, as you may imagine, a number of others have done the same. Our latest reports are to the effect that all markets are working except one in lower and three in upper Egypt.

Turning now to the business of the past year, any of you gentlemen who have followed the published weekly returns of our market earnings may well have had feelings of some uncertainty as to the result of the year's working. In the middle of that year our takings had fallen nearly £7,500 below those of the previous corresponding period. Our markets were suffering from a variety of disabilities, and were being kept closed to horned cattle for other reasons as well as for cattle plague. It was thus almost impossible to form any idea as to how long conditions might continue thus adverse to us, or become increasingly so. Although this was very much the position at the end of July, when I last had the privilege of addressing you, my colleagues on this board readily shared the responsibility of my then saying: "On the other hand, if any important number of our markets be reopened, we should recover, I believe, by leaps and bounds."

The accounts and report, which it has been our satisfaction to supply you with, will have shown you that we have no reason to regret this encouraging assurance, for we have since made up nearly the whole of that comparative loss.

For the eighth consecutive year we are able to recommend that the dividend on our ordinary shares be made up to 10 per cent., also that our deferred shareholders receive £6 2s. 4d. per share. We pay to the Government of Egypt approximately £4,000 as their participation. We can place £1,500 to the credit of our general reserve, bringing this latter up to £10,000, and then carry forward £10,483, against £10,307 brought into the accounts from the previous year. That these results should have been secured in the interests of the company, in spite of the considerable falling off of our miscellaneous business, is due to the fact that we have to provide for correspondingly smaller payments from our profits, both to the Government of Egypt and to the Government here.

The Outlook.

In the current year Egypt is bound to suffer from the destruction of crops and other property, the waste of water from an agricultural point of view, damage to much needed means of communication and the like, in all of which this company must share, both in its markets business proper and in its miscellaneous trading. An additional misfortune is the reappearance of the cattle plague, and its rapid and serious increase must be greatly attributed to the enforced absence of the Government inspectors from the districts owing to the existing state of the country.

No questions being asked, the chairman moved:—"That the report of the directors dated June 13, 1919, together with the audited statement of accounts and balance-sheet for the year ended December 31, 1918, be and they are hereby approved, confirmed and adopted."

Lieut.-Colonel A. St. John Cooke seconded the resolution, and it was carried unanimously.

A motion that a dividend of 5 per cent., declared on ordinary share capital, be confirmed, (was moved by the chairman, seconded by Mr. W. Home, C.I.E., and unanimously agreed to. The chairman then moved that £6 2s. 4-59.300d. per share be declared as dividend on the deferred share capital. This motion was seconded by Mr. G. H. Redwood, and carried unanimously. After a vote of thanks to the chairman the proceedings terminated.

GREAT INDIAN PENINSULA RAILWAY COMPANY.

Increased Gross Receipts.

The one hundred and thirty-ninth half-yearly general meeting of the Great Indian Peninsula Railway Company was held on June 27, at the company's office, 48, Copthall Avenue, Sir Charles H. Armstrong (the chairman of the company) presiding.

The secretary (Mr. R. H. Walpole) read the notice convening the meeting.

The chairman, in moving the adoption of the report and accounts, said that so far as gross receipts were concerned, the six months' working had been very satisfactory, the total for the half-year having been a few rupees under 650 lacs, and this compared with a little over 600 lacs in the corresponding period of last year. The excess this half-year was over 45 lacs of rupees, which was equivalent to an increase of 7.49 per cent. For the whole year they had reached a record figure of 1,283 lacs, against 1,135 lacs in the previous 12 months, an increase of just over 13 per cent. The line had carried, and was still carrying a very heavy traffic, and as regarded the current year he was glad to be able to report that their gross receipts were already in excess of those of the corresponding period of last year by more than 40 lacs of rupees. Their weekly receipts lately had been in the neighbourhood of 30 lacs, which was a large and very satisfactory figure. Although their train mileage during the half-year under review had decreased, their expenditure had increased considerably, and from the figure he had just mentioned of gross receipts, 387 lacs must be deducted as working expenses, against 324 lacs in the corresponding period of last year, an increase of 62¼ lacs, or 19.21 per cent. For the whole year the comparison was 736, against 605 lacs, an excess of 130 lacs, or 21½ per cent. Their net revenue for the half-year was, therefore, less by 17 lacs, or 6 per cent., but for the 12 months the figures showed an increase of 17¾ lacs, or 3 1-3 per cent. The total net earnings for the two half years was 506 lacs, from which interest charges of 297 lacs had to be deducted. This left a net amount of 208¼ lacs, of which the company's share, after deduction of Indian income-tax, was Rs9,76,293. This amount, remitted at 1s. 8d. exchange, had realised £81,357 15s., out of which they were distributing 1¾ per cent.—the same as last year—in addition to the guaranteed interest for the half-year of 1½ per cent.

Large Increase in Traffic.

During the half-year they had carried nearly two million more ordinary passengers, and their receipts under this head had increased by over 17 lacs of rupees. In public merchandise they had carried in the six months nearly four million tons, and their receipts under this head had increased by over 10 lacs. The increase in goods traffic was due to large supplies of coal, to increased bookings of raw cotton, and to larger dispatches up country of India-made piece goods. As regarded the future, the directors had many big schemes in contemplation for which money would be required, and its provision was likely, he feared, to be a difficulty for some time to come unless some departure from the present method of financing railways could be devised. In India itself money was likely to be diverted into Indian enterprises, from which in many cases a good return might be anticipated, and if so, it was probable that railways would have to look to the home market for funds, but so far as could be seen at present, they would have to pay a higher rate of interest than had been customary in the past.

The managing director (Mr. J. E. Dallas) seconded the motion, which was carried unanimously.

A dividend of 35s. per cent. upon the 3 per cent. Guaranteed stock of the company was declared, in addition to the guaranteed interest of 30s. per cent. for the current half-year.

The subscription of the North British and Mercantile Insurance Company to the new Loan is announced as £1,000,000.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to April 31, 1919. (New Style, January 14 to May 13, 1919):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piraeus Customs.
		Drachmes.	Drachmes.
Gross Receipts, Apr.	1919	3,709,915	2,857,812
Do. do. do	1918	2,121,879	1,856,000
Estimated receipts for 3 months (Law of Control)		9,633,333	3,566,666
Actual do. do	1919	14,304,256	13.265.228
" "	1918	12,714,345	10,622,000
Difference between estimated and actual receipts for 4 months	1919	+ 4,670,923	+ 9,698,561
	1918	+ 3,081,012	+ 7,055,333

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893.

TRADE ENQUIRIES.

EGYPT.—ALBERT J. HALFON.—P.O. Box No. 1182.—ALEXANDRIA, British Agent, in touch for twenty years with the best clients of Egypt. Complete and unique organisation (also for visiting the provinces). Highest references. Would like to secure serious REPRESENTATIONS. Correspondence invited.

COMPANY NOTES & REPORTS

Bank of Madras.

The report of the Bank of Madras for the half-year ended December 31, 1918, states that the balance brought forward from June 30, 1918, less bonus to staff, is Rs2,96,776; the profit for the half-year, after making provision for all bad and doubtful debts, amounts to Rs6,10,774, making a total of Rs9,07,550. This sum the directors have dealt with as follows:—In payment of dividend for the half-year at the rate of 10 per cent. per annum, Rs3,75,000; bonus at the rate of 2 per cent. per annum, Rs75,000; transfer to reserve fund, Rs2,00,000; carried forward, Rs2,57,550.

Woodland.

The report of the Woodland (Kelani Valley Ceylon) Rubber and Tea Company for 1918, states that the net profit, after writing off buildings and machinery account, is £712, to which has to be added the balance brought forward of £13,706, less excess profits duty 1917 account £7,167, making a balance of £7,252, which the directors propose to deal with as follows.—Dividend of 10 per cent., less income-tax, £2,500; directors' fees £250, leaving to be carried forward £4,502. The interest on the debenture issue has been paid to December 31, 1918.

Noyapara Tea.

The report of the Noyapara Tea Company for 1918 states that the balance from last year is £11,865; profit for the year, interest, etc., is £5,872; deduct income-tax balance £733, leaving £17,004. It is proposed to pay a dividend of 15 per cent., less tax, of which 7½ per cent. interim was paid on March 20, £3,750, leaving to carry forward, subject to excess profits duty, £13,254.

Lungla Sylhet.

The report for 1918 of the Lungla (Sylhet) Tea Company states that the revenue account shows a profit of £27,475, to which has to be added £765 for interest on investments. £18,493 was received on account of refund of excess profits duty paid in previous years, and including this and sundry adjustments the balance brought forward from 1917 is £31,636. After payment of income-tax, amounting to £13,062, there is a balance at credit of profit and loss account of £46,813, which the directors recommend should be dealt with as follows:—Preference dividend, £4,275; interim dividend of 5 per cent., less tax, on the Ordinary shares, already paid, £3,562; final dividend of 15 per cent., less tax, on the Ordinary shares, making 20 per cent. for the year, payable at once, £10,687; suspense account for damage by earthquake, £3,000; reserve, £5,000; additional remuneration to directors, £1,200; carry forward, £19,088. The investments account remains the same as last year—namely, £15,300 of Five per Cent. War stock, 1929-1947, at a net cost of £14,519 16s. 3d.

Jhanzie Tea.

The report of the Jhanzie Tea Association for 1918 states that the profit amounted to £30,575; £7,338 was brought in, which with sundry adjustments gives £38,095. Deducting income-tax (£4,512), interim dividend (£4,000), transfer to staff provident fund (£800), there is left £28,783. It is proposed to pay a final dividend of 9 per cent., less income-tax, making 13 per cent. for the year, and to carry forward £19,783, subject to payment of excess profits duty estimated at £8,200.

Neboda (Ceylon).

The report of the Neboda (Ceylon) Rubber and Tea Estates for 1918 states that gross revenue amounted to £44,553, of which cultivation, Ceylon and shipping charges absorb £23,224, leaving a gross profit of £21,329, which with interest, transfer fees, etc., £3,535, makes £24,864. Deducting depreciation (£1,113), income-tax, directors' fees, donations to war charities and other London charges (£1,829), debenture interest (£3,600), there is left £18,322; £16,820 was brought forward, making £35,142. The directors recommend a final dividend of 10 per cent. for the year, and to carry forward £15,142. Owing to the difficulties of obtaining freight the company was unable to deal with a large quantity of 1918 rubber crop until 1919, and consequently the usual interim dividend was not paid. Estimated crops for 1919 are:—Rubber, 525,000 lb.; tea, 250,000 lb

Central Travancore.

The report of the Central Travancore Rubber Company for the year ended December 31, 1918, states that the acreage of the estate is now 2,164.11 acres. The amount expended to December 31, 1918, on capital account in respect of this acreage was £75,393. The loss on exchange in 1918 represented 1.43d. per lb. of rubber crop. A sum of £414 has been recovered in respect of the profits for year 1917 having fallen below the pre-war standard. No excess profits duty is payable for 1918, but on the other hand £602 is expected to be recovered. The sum at credit of profit and loss account (including the balance brought forward) is £13,476. The directors recommend a dividend at the rate of 5 per cent., less tax, for the year, to write off against depreciation of buildings and machinery £1,200, and to carry forward £9,881.

Amalgamated Tea Estates.

The report of the Amalgamated Tea Estates Company for the year ended November 30, 1918, states that the credit balance from last year was £83,854, less excess profits duty, paid on account of liability to November 30, 1917, £10,000. The profit for the year was £88,852, making £162,706 available. Deduct amount written off for block expenditure incurred during the year, £4,475, and half-year's dividend on the preference shares, £10,500, leaving £147,731. There was paid on December 21, 1918, half-year's dividend on the preference shares, £10,500. The directors have decided to transfer to general reserve account £20,000, and they propose to pay on June 30 a dividend of 10 per cent. on the ordinary shares, £47,835, leaving, exclusive of adjustment of excess profits duty, £69,396.

Ceylon Proprietary Tea.

The report of Ceylon Proprietary Tea Estates for 1918 states that the net amount at credit of profit and loss, including balance brought forward, after providing for 1917 excess profits tax, general expenses, directors' fees, etc., is £11,152. It is proposed to pay a final dividend of 2½ per cent. on the Ordinary shares (making 5 per cent.), to place to income-tax account £1,500, to staff pension fund £200, and to carry forward £3,645.

Tara Tea.

The report of the Tara Tea Company for 1918 states that after carrying to the cost of the property the expenditure upon new cultivation during the year, namely, £1,132, the crop account shows a profit of £13,251, and to this must be added the sum brought forward, after payment of 1917 dividend, bonus, excess profits duty, etc., £14,041, making £27,292. From this must be deducted directors' fees, etc., £201; balance of income-tax on account of 1918, £1,736; dividend on Six per Cent. Preference shares, £600; leaving available £24,754; less interim dividend of 6 per cent., less tax, on the Ordinary shares, £855; income-tax thereon at 5s. 9d., £345. The directors recommend a further dividend of 14 per cent., less tax, on the Ordinary shares, making 20 per cent. for the year, £1,995; income-tax at 5s. 9d., £805; and a bonus of 5 per cent., less tax, on the Ordinary shares, £713; income-tax thereon at 5s. 9d., £288, together £5,000. They also propose to carry to the reserve fund £3,000, leaving to be carried forward £16,754, subject to excess profits duty.

Anglo-Portuguese Telephone.

The report of the Anglo-Portuguese Telephone Company for 1918 states that the capital expenditure for the year amounted to £28,927. An issue of £50,000 extension Debenture stock was made in April last at the price of 101. The profit and loss account shows a gross income of £103,957, of which operating, management and general charges absorbed £73,779 and royalties to the Portuguese Government £3,107, leaving a gross profit of £27,071. After payment of income-tax, £3,357, providing for Debenture interest, £1,663, and sinking fund, £1,937, and adding £10,000 to the renewals fund, the amount for disposal (including £7,092 15s. brought forward) is £17,207. In November the company paid an interim dividend of 3 per cent., amounting to £4,500, and the directors recommend a further dividend of 3 per cent., less tax, making 6 per cent. for the year. This will absorb £4,500 and leave £8,207 to be carried forward. Meeting, Worcester House, E.C., July 9, noon.

Anglo-Egyptian Oilfields.

The report of the Anglo-Egyptian Oilfields for 1918 states that the total production of crude oil amounted to 277,300 tons as compared with 134,500 tons in 1917. The increase in production has necessitated the creation of more storage and refining facilities on the Hurghada Fields and at Suez. Some of these have been completed and others are still in course of erection. Towards the end of 1918 it was found that the profits resulting from the increased output of the fields warranted the payment of the arrears of interest on the Income bonds, which form a first charge upon the profits of the company. The total interest accrued to November 1, 1918, amounted to £76,352, and this was paid on December 4, 1918. In April this year the financial position had improved to such an extent that the directors decided to pay off the arrears of the 6 per cent. dividend on the Cumulative Preference shares, amounting to £56,230, and to distribute an interim dividend on the whole of the Ordinary shares, the amount on the "B" shares being at the rate of 15 per cent. per annum and the others in their due proportion. The profits amount to £654,416, to which has to be added the balance brought forward of £6,399, making a total of £660,816. From this has to be deducted interest on Income bonds paid and accrued to December 31 last, amounting to £78,602, dividend on Preference shares from June 26, 1913, to December 31 last, amounting to £71,230, and interim dividends of £244,716, amounting together to £394,548, leaving an available balance of £266,267. The directors now recommend that final dividends be paid on the respective classes of shares. Upon the "B" shares this amounts to a further dividend at the rate of 10 per cent. per annum, making a total of 25 per cent. for the year 1918 upon the Ordinary "B" shares. With the sums which will be payable in respect of profits this will bring the total payment in respect of the final dividends upon all the shares to £189,716, leaving a balance to be carried forward (subject to the payment of taxes) of £76,551. Meeting, Winchester House, E.C., July 9, noon.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

Trading in the market has been exceedingly difficult as a result of the labour dispute and the continuance of the strike. The operative spinners have refused to confirm the provisional settlement of last week. The spirning mills therefore are still idle. Most weaving firms restarted on Monday, but since then manufacturers have decided to close down until a definite settlement of the dispute has been arranged. Very little change can be recorded in regard to Egyptian cotton. Prices keep steady and no news of importance is coming through relating to the crop. Nominally, Egyptian yarn prices have been advanced, but business has been quiet and must remain so until the industrial situation is clearer. In cloth for Egypt, inquiry continues on a healthy scale, and some fair lines have been put through, but manufacturers are now refusing to accept fresh contracts on any terms whatever. A fair amount of business has been offering for Persia and the Levant. Shippers to India have met with plenty of inquiry from the other side. Some makers have booked substantial lines in grey and white shirtings and have taken the risk of being able to deliver in due course. The undercurrent of demand for China remains encouraging. There is no possibility of business flowing freely until production is resumed on ordinary lines. American yarns for home use have been dearer in quotation, but buying has been of a limited character, and most sellers have now withdrawn quotations. Very little has been done in export numbers.

AGRICULTURAL BANK OF EGYPT FOUR per CENT. CUMULATIVE PREFERRED SHARES. —The National Bank of Egypt announces that COUPON No. 30 of the Agricultural Bank of Egypt Four per Cent. Cumulative Preferred Shares due 1st July, 1919, will be PAID at its Offices in Cairo, Alexandria, and London, 6 and 7, King William Street, E.C.4

Digitized by Google

COMPANY RESULTS, Etc.

Woodend (Kelani Valley, Ceylon) Rubber and Tea.—The transfer books have been closed from July 1 to July 14, inclusive.

The directors of Anglo-Ceylon and General Estates recommend a final dividend of 20 per cent., less income-tax, making 30 per cent. for the year.

City of Alexandria.—The National Bank of Egypt announces that coupon No. 35 of the 4 per cent. loan, due July 1, will be paid at 6 and 7, King William Street, E.C.4.

Curtis's and Harvey.—The ordinary general meeting will be held at 110, Cannon Street, E.C., on July 15, at 12.30 p.m. Transfer books are closed from June 30 to July 14, inclusive.

Rohilkund and Kumaon Railway.—Ordinary stock transfer books closed July 12 to 26, inclusive, for preparing dividend warrants for six months ending March 31, payable to shareholders registered at time of closing the books.

Bengal and North-Western Railway.—Ordinary stock transfer books closed from July 5 to 18, inclusive, for preparing dividend warrants for six months ended March 31, payable to shareholders registered at time of closing books.

Royal Dutch Petroleum.—Messrs. N. M. Rothschild and Sons announce that they are prepared to receive the provisional receipts of the 1916 issue to be exchanged for the definitive share or sub-share certificates, which will be issued with coupon No. 43 and following.

The directors of the East Indian Railway announce a dividend from surplus profits account of £2 4s. per cent. on the deferred annuity capital and the deferred annuity capital, Class "D," in addition to the guaranteed interest of £2 per cent. for the half-year ending July 31. This will give a total return for the year of £7 9s. per cent., against £6 16s. per cent. for preceding year.

The directors of the Assam Company announce that profit on 1918 crop was £73,799, against £100,615. Commission and bonus to managers and assistants, £11,441, against £16,746; planting and upkeep of new, and as yet unproductive, cultivation, £4,971, against £6,745; balance dividend of 7½ per cent., and a bonus of 10 per cent., payable on July 1, making 25 per cent. for the year, less tax, the same as a year ago. It is proposed to transfer to the hail risks insurance fund £2,000, and to carry forward £11,566, against £7,926.

The report of the Nuwara Eliya Tea Estates for 1918 states that the net profit, after providing for income-tax, debenture interest, and general expenses, amounts to £25,487. There has been written off for depreciation of buildings, machinery, etc., £3,000, and transferred to general reserve account £2,000, leaving £20,487; £5,807 was brought in, making £26,295. The directors propose a final dividend of 5 per cent. and a bonus of 1 per cent., both less income-tax, at 5s. 9d., making 10 per cent. for the year, and to carry forward £4,295.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated June 19:—

Rainfall nearly general throughout, except north-west.

Prospects of cotton picking in South India improved.

Bombay Cotton Market irregular. Fully good broach, Rs.552. Prices continue to advance in piece goods market; demand very fair. Calcutta Jute Market quiet; prices unchanged. Hessians steady; if anything slightly easier. Heavy goods, strong demand, advancing prices.

DISTRESS IN INDIA.

The India Office has issued the following telegram, received from the Viceroy, dated June 27:—

"Famine has been declared in the Deoghar sub-division of Sonthal Parganas, in Bihar, and Orissa. Numbers on works are decreasing in Bombay Presidency and in Bundelkhand Agency of Central India, but break in rains is causing anxiety in some Bombay districts. Numbers relieved:—Bengal: relief works, 7,874; test works, 2,602; gratuitous relief, 18,918. Bihar and Orissa: relief works, 7,388; test works, 1,693; gratuitous relief, 18,411. Feudatory States, Orissa: test works, 28,963; gratuitous relief, 25,000. United Provinces: test works, 18,807; gratuitous relief, 18,631. Rajputana: relief works, 1,410; test works, 5,287; gratuitous relief, 2,400. Ajmer-Merwara: test work, 275; gratuitous relief, 371. Central India: relief works, 14; gratuitous relief, 9,459. Central Provinces: relief works, 9,716; test works, 12,366; gratuitous relief, 48,902. Bombay: relief works, 27,019; dependants, 24,651; village works, 5,000; test works, 740; gratuitous relief, 95,686. Madras: relief works, 4,793; test works, 2,726; gratuitous relief (incomplete figures), 67,613. Owing to large arrivals of Burma rice in the past six weeks, the food position in Bombay Presidency has materially improved. The food position in Bihar and Orissa is serious, but it is hoped to provide sufficient supplies to avoid a crisis before the end of August, when the Bhadoi crop should be ready. Early rice crops in Bihar are reported to be doing well."

INDIAN CURRENCY COMMITTEE.

Mr. Montagu, Secretary of State for India, replying to a question by Mr. Stewart on July 2, suggesting the extension of the terms of reference of the Indian Currency Committee so that they might be permitted to inquire into the silver question in its entirety with a view to finding out whether more use could be made of silver as a circulating medium, and whether its position, which was destroyed by the German legislation of 1873, could in any way be restored, said:—The Indian currency Committee has been appointed to consider certain questions relating to India on which an early decision is needed. The members chosen are specially qualified to deal with these questions. The committee has already taken an appreciable amount of evidence. It is not practicable to enlarge the subject of inquiry, as this would involve the reconstitution of the present committee, would require the new body to begin work again, and would seriously postpone the date of report.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

This has again been rather a short week, our Stock Exchange having been closed yesterday owing to the closing of the banks. On the whole prices have again been firm for Government stocks and bank shares, but easier for land and other descriptions. Egypt has again been in the market, as a buyer of Egyptian Unifieds, which, after receding to 85½, are closing firm again at 86. Some business was done in the 3½ per cent. Prefs. at 73.

In Bank shares National Banks, after being up to 21 3-16 close ¼ higher at 21, whilst Agriculturals, on further buying from Egypt and also on local support, are closing 5-32 higher at 6 3-32. There has been some small business in the Preference shares in the neighbourhood of 7½ x.d. Anglo-Egyptian Banks have again been a feature, and are ¾ higher at 16¾. Land Banks of Egypt are also in demand; but business does not result, as there are no sellers.

In Railways, Delta Lights are ⅛ easier at 7¼.

In Land shares Aboukirs are slightly lower at 23s. 3d., and Behèras, after some business done at 12, close unchanged at 12⅛ bid and 12½ offered. Egyptian Consolidated Lands have been subject to realisations this week, and are closing somewhat easier at 2s. 9d. Delta Lands are 3d. down at 14s. Foreign Trusts have receded 6d. to 14s. 3d., and New Egyptians are 9d. lower at 24s. There has also been a decline of ⅛ in Sudan Plantations to 7. Union Foncières are unchanged, after having come to business round 3½, at which price there are further buyers but no sellers under 3½.

In Miscellaneous descriptions Alexandria Waters are 6-16 down at 12½. On the other hand, Egyptian Markets are 1s. firmer at 23s. 6d. Khedivial Mail shares are about 1s. 6d. lower at £6 x.d.

In Oil shares Anglo-Egyptian B are closing 3-16 down at 5 31-32 on some disappointment with the report, while Roumanians are 6d. firmer at 22s.

Amongst Greek securities prices, where altered, have again advanced. A large business has been done in Monopoly in the neighbourhood of 58½ x.d., which represents a rise of nearly one point. The 1881 and 1884 Loans have both recovered the whole of the dividend deducted to-day, and are both bid for at 74½, without, however, any business resulting, as there are no sellers. Fundings are nominally a point higher at 65 x.d. The 1902 Loan is also firmer at 66 x.d.

BUSINESS TRAVELLING IN THE EAST

Replying to Mr. G. Murray on July 2, Sir A. Geddes, President of the Board of Trade, said:—The military authorities at Constantinople have already agreed to give full facilities to British subjects travelling in Roumania on business. In the case of the Balkans and the East, the names of accredited British subjects wishing to proceed to these zones for business purposes are forwarded to the general officers commanding, with the recommendation that, so far as the exigencies of the military situation permit, full facilities shall be accorded to them. Any British firm desirous of availing themselves of these facilities should communicate with the Department of Overseas Trade, which will give them the fullest information in its power and take the necessary steps to put them in touch with the War Office.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

As the time has approached for the Paris Conference to get to grips with the settlement of the Balkans there has been little indication of any readiness on the part of the States directly concerned to facilitate the task of the Council of Ten by the display of a more accommodating spirit. It was, perhaps, inevitable that the Roumanian Delegation, in urging its claims upon an undivided Banat, should wish to be able to point to emphatic backing at home, and the cue thus given to the Roumanian Press was taken up with vigour. The result has been that a considerable number of Roumanians who previously would have been well content that Roumania should receive any portion of the Banat are now persuaded that the loss of the Torontal section would be equivalent to a deliberate amputation of the Roumanian kingdom. Forces, however, are at work in the country itself to bring about a more dispassionate attitude, and in the end the commonsense of the people of the Old Kingdom, and especially of Transylvania may be relied upon to assert itself. One result of the possible disappointment in regard to the Torontal is the abandonment of the willingness that once prevailed in certain quarters to lead the way in a movement for a Balkan understanding by the restoration to Bulgaria of the territory taken from her in 1913, and by this means to remove the possibility of friction on the south.

In the meantime the political situation in Roumania remains obscure. Some weeks have passed since M. Bratiano sent in his resignation from Paris. At first King Ferdinand took no action in the matter, but on June 21 it was confidently reported in Bucharest that his Majesty had decided to accept the resignation, although there could be no official acceptance until someone had been called upon to form a new Cabinet. For the moment we are without information as to the progress of the steps, if any, that have been taken to approach other politicians. The question of the Torontal was then uppermost in Roumania and attention centred on the possibility of bringing further pressure to bear on the Paris Conference for a reconsideration of the Roumanian claims. According to reports that command credence there is a very strong desire in the country for a national government that can count on the general support of the people in the important work of welding Greater Roumania into a harmonious whole, and of making more rapid headway in regard to reconstruction.

There is little likelihood that all the decisions of the Paris Conference in regard to South-Eastern Europe will be equitable or even politic. If some of the forecasts that have been given of the Balkan Settlement are in the main correct, it is certain that the seed of future trouble is being very widely sown. But the difficulties of the "Four" or of the "Ten" can be easily appreciated. They have been confronted with far more than their match in self-will; they have not understood the mentality of the people with whom they have had to deal, and they have not had the knowledge to enforce a settlement which might be proof against national idiosyncracies. For the Paris arbiters the Balkans have remained a "side-show," and the importance of peace terms that shall be just and wise in every single particular has never been realised. The details of the settlement have had to be arranged after the exacting ordeal of attaining unanimity over the conditions of peace to be imposed upon Germany, and the case for the line of least resistance will have appeared overwhelming. If the Balkan Governments could have subordinated present animosities to the future interests of the Peninsula as a whole, they would have preferred to see every controversial point committed to the provisional charge of a mandatory for subsequent settlement when passions were less inflamed, rather than that an arbitrary decision should leave a sense of injustice rankling in a neighbour.

For the moment Yugoslavia, confident in the strength of her own right hand, is more concerned with the financial terms of the Balkan settlement, as far as they affect her, than with the political terms. The suggestion that the liberated portions of Austria-Hungary may have to bear the charge of Austria-Hungary's war debt and indemnity caused M. Pashitch and other members of his Government to hurry from Belgrade to Paris in order to prove to the Conference what a fatal blow such a decision must have on the future prospects of the new kingdom of the Serbs, Croats and Slovenes. In common with most countries Yugoslavia is confronted with a heavy programme of reconstruction, and the situation has not been improved by the policy which has kept the Serbian Army mobilised for nine months after the Armistice. Of all the countries in the Balkans Serbia, ruthlessly visited as she was, was in need of the most vigorous measures to repair the ravages of war. A variety of causes have led to her remaining behind in the task of rehabilitation. The country would have been much better off, if the troops that have been engaged on a number of

Digitized by Google

fronts could have been available for work at home. As things are, therefore, a substantial cash payment by way of indemnity, as well as complete release from any liability in regard to Austria-Hungary's indebtedness, has come to be regarded as an essential condition of the peace terms.

The settlement of the dispute over Fiume appears to be almost, if not quite, as far off in the future as ever, and the prolongation of the state of uncertainty has led to highly regrettable disturbances in the much disputed port. A few French soldiers are reported to have shown what can only be described as a very provocative spirit, and a number of unpleasant "incidents" occurred, culminating on Sunday in a fight in which French and Italian soldiers and marines took part, and in which ten people were killed and many wounded. The incident will have to be investigated, for the sake of the Allies' reputation, and an inter-Allied commission has been appointed to conduct an inquiry; but, however its rights and wrongs may lie, it is to be hoped that it may induce the Paris Conference to take more energetic steps in the direction of finding a solution of the Italo-Yugoslav dispute, which clearly threatens the peace of the world so long as it remains unsettled. It is unthinkable that no solution can be found by the Conference, and that the sore must be left open for subsequent treatment by the League of Nations, as is suggested in some quarters. Therefore there is some encouragement in the report that the problem has been again under discussion in Paris. According to this report, Italy is prepared to consider compensations in Africa for the modification of her claims in the Adriatic, her desires lying in the direction of Jibouti and of the region south of Tripoli.

According to the *Hestia*, the Greek Government has decided to send a special mission to Cyprus to study the administrative system of the island, which it regards as an excellent model for reforms that it contemplates introducing into Greece itself. This is a feather in the cap of the Cyprus Administration; and it is at the same time an indication that under the inspiration of M. Venizelos, Greece is determined not to show any of that false pride which prevents nations, as well as individuals, from learning from their friends. There is, of course, a certain piquancy about the idea, and we need hardly be surprised if some of the correspondents who, in the columns of THE NEAR EAST, have been opposing the cession of Cyprus to Greece should now suggest that, in view of this glowing testimonial to the state of the island, Greece should cede itself to Cyprus.

A *communiqué* issued by the War Office last Saturday gives further particulars of the creditable piece of work that led to the release of the British prisoners at Suliemania. It fully bears out the opinion we expressed a fortnight ago, that the conduct of the punitive operations must have been an unpleasant surprise to the Kurds, accustomed as they were to dealing with nothing more efficient than a Turkish force, usually totally inadequate for the task set it. It is true that a first dash to the rescue of the captives had to be abandoned owing to the force proving insufficient; but as soon as the enemy's true strength was discovered steps were taken to concentrate sufficient troops to give him his lesson. It consisted of two infantry brigades, three batteries R.F.A., and four squadrons of Indian cavalry; and it did its work swiftly and well, inflicting severe losses on the Kurds, "unaccustomed to the tactics of troops trained in hill warfare" as the *communiqué* observes, and capturing Sheikh Mahmoud himself.

The real importance of this Suliemania incident lies in the fact that "there seems but little doubt that Sheikh Mahmoud was induced to act as he did by the activities of Turkish and Kurdish agitators, whose aim is the independence of Kurdistan under Turkish suzerainty." The agitators referred to have very favourable soil to work on in Kurdistan, and in spite of the inglorious end of his adventure, Sheikh Mahmoud is likely to have not a few imitators before the Kurds fully grasp the difference between Turkish methods and British. For the time being, however, the situation is satisfactory, probably because "small columns are engaged in visiting the whole area" of South Kurdistan. Even Halabja, that picturesque little place whose proud *Begs* and prouder Lady Adda paid scant respect to the Turkish valis and pashas, has received a visit, and yielded up "the interned Indian *personnel*."

Indications are not wanting that events of considerable interest have been occurring in Persia recently, but for some time a veil of secrecy has cut that country off from the outside world, which gets only occasional peeps of what is going on when the veil is lifted, accidentally or intentionally, for a brief moment. One such glimpse, and the most recent, shows us the ex-Shah, returned from exile, and established at Kazvin, with what intentions it is not difficult to guess. Whether his presence is to be connected in any way with the recent trouble with the Jangalis it is impossible to say, but he was much at Constantinople during the war, and if he should prove to be working with the Committee of Union and Progress and such German agents as Herr Wustrow, the world will not be greatly surprised.

The position of the Turkish Government, already none too secure, will not have been strengthened by the developments at Smyrna, by the dismissal of the Turkish Delegation from Paris, or by the prolonging of the uncertainty regarding the dismemberment of the Turkish Empire. The state of affairs in Asia Minor is naturally particularly galling to the military, and a week ago the three generals commanding at Amasia, Konia, and Bali Kesri, respectively, were reported to have declared their independence of the Porte. So far no report of their having taken action aganist the Greeks is forthcoming, but it is hardly to be expected that they will long withstand the temptation to do so, if only they can be sure that they will have to face only Greeks.

Apart from these troubles for the Porte, brigandage is on the increase throughout Turkey, and—what is much worse—the Committee of Union and Progress is undoubtedly making a fresh bid for power, and appears to be regaining much of its lost influence. In the circumstances it is not at all astonishing that the Government has been palpably in difficulties, or that a state of chaos should have supervened in many districts. The Minister of the Interior issued a circular charging all officials to use every means in their power to maintain order, and to deal severely with fomenters of troubles; but shortly afterwards apparently lost heart and resigned, and it is very doubtful how long the Cabinet will be able to hold together. Should the Government find itself unable to make its authority felt, it would seem that the Allies would have a good opportunity of demonstrating that goodwill towards the Turkish peoples on which they laid stress in their reply to the statement read to the Council of Ten by Damad Ferid Pasha. Perhaps the dispatch of a British regiment to the Amisos district may be regarded as the first steps in this direction.

The selection of the House of Commons portion of the Joint Committee on Indian Reform was not effected without contention, and on paper there are tolerably good grounds for the protest made by Colonel Yate that the Committee was being "packed" in favour of the Dyarchy, and that supporters of alternative measures could hardly expect a fair hearing. All the seven members who were chosen spoke in the debate on the second reading of the Government of India Bill, and six of them expressed opinions favourable to its specific provisions, so that it cannot be argued that the other side is adequately represented, but at the same time it is open to question whether this other side exists inside the House, and the fact that Colonel Yate found only twenty-three supporters indicates the prevailing opinion that the composition of the Committee

Digitized by Google

is on the whole satisfactory. We wish that the Colonel himself had been chosen, but apart from him it is not easy to suggest the name of any individual member as likely to render material service to India at this juncture.

The truth appears to be that informed opposition to the Dyarchy is to be found rather in the House of Lords, and representatives of the "other side" must come from that quarter. Lord Sydenham, for instance, will be one of the strongest personalities on the Committee, and we gather from the list of the chosen Peers that he will not be without support; even single-handed, however, he might be trusted to bring out the weak points of the official scheme, and to make the best possible case for whatever alternative commends itself to his judgment. For ourselves, we regret the tradition which places declared partisans on such quasi-judicial bodies as a Joint Committee, and would prefer to see Lord Sydenham matched against Mr. Montagu before impartial referees.

In speaking of the "other side" we are not, of course, suggesting that there is any tangible opposition to the principle of reform; there are sharp differences of opinion as to the wisdom of particular methods, but neither inside Parliament nor outside do we see any sign of hostility to the main object, the gradual introduction of responsible government. This practical unanimity must, we think, be attributed to the common political sense of the country, rather than to any conscious logical process. The man in the street holds that in a general way people should look after their own affairs, and he thinks one Ireland is enough; that being so, he accepts the proposition of the Government that the status of India should be gradually raised from Dependency to Dominion, and he leaves the details to be settled by people who understand them. He displays no interest in the Dyarchy, and to all appearance is unconscious of the magnitude of the issues now at stake.

A noteworthy statement of those issues was contributed by Sir Theodore Morison to last Sunday's *Observer*. The real danger of the future does not lie in the extension of Nationalist sentiment hostile to the administration, inconvenient as that development would undoubtedly be; according to Sir Theodore, it is to be found rather in the growth of class-consciousness among the uneducated, ill-nourished, and "depressed" masses of the people. If the Indian proletariat should ever take matters into their own hands, their methods would be drastic, and their victims would be not the British Government, but the exploiters and oppressors against whom, to tell the truth, they have a rather heavy bill —the Brahmins, the landholders, the money-lenders, and the rest. Among thinking men that view is somewhat widely held, though we do not recollect having met it before in print, and the possibility, however remote, of a Jacquerie on an unexampled scale is perhaps the most powerful argument in favour of constitutional change.

The only possible precaution against such an upheaval is to bring the political outcastes within the constitution before their class-consciousness rises to the danger-point, and enable them to face their former oppressors inside the council-chamber rather than outside. Even so, however, the period of transition will be anxious and difficult, and Sir Theodore is entirely justified in his plea that there should be no weakening of the power of the central government while the new and untried forces are coming into play throughout the various provinces. It is on the central government that some of the Indian deputations now in this country are concentrating their attention, and we are not sure that there may not be some risk of "graceful concessions" in this direction. We trust, however, that in this matter Mr. Montagu will harden his heart; the provinces can go forward with confidence only if they know that the central government is standing by, liberal in spirit, but equipped and determined to prevent the possibility of a breakdown.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 15.

"Nationalist" Woes.

The half-month of Ramadan, which was looked forward to with some apprehension by timid folk, as a general massacre had been loudly prophesied for that date, has already passed without anything more serious than a few abortive attempts at street demonstrations, and a rising flood of abusive literature. This was addressed principally to the new Said Pasha Cabinet, but overflowed into side torrents against Lord Curzon, the British Advisers and officials in Egypt, the British Government and nation, and, inferentially, the whole world that does not recognise the rights and woes of the Nationalists as set forth by themselves.

The Position of the Parties.

The only substantial complaint really made is that nobody will take Saad Pasha Zaghloul and his party at their valuation. Neither the Ministry nor the British are now being attacked for any misdeeds except continuing to uphold the existing administration. Occasional allusions are made to past incidents, but the unpardonable offence is the maintenance of order under the Protectorate. All the benefits that have accrued to the country since the paternal care of Great Britain has been bestowed upon it, are not denied, and not even forgotten, but the subtle poison of a hope of freedom from all restraint is stronger than anything else. The miserable example of premature release from old-established authority afforded by Russia should be sufficient warning to any but those whom the gods have driven mad, and the present condition of several countries and races much nearer home, is scarcely one for Egyptians with any common sense to envy.

Unfortunately, for the time being, sense is very rare in the land, and nine out of every ten Egyptians will confess that they would rather be ruined by themselves than prosper under foreign guidance. If it were not for the large foreign interests involved, no better lesson could be given, perhaps, than a temporary withdrawal of the British guiding hand. This, however, cannot be done for the present. The position was very pithily put by Lord Cromer in a speech made on May 7, 1907, in the Cairo Theatre, in which he said:—"The differences which divide us are not so much differences of principle as of degree. They (the Nationalists) wish to gallop. I consider that a steady jog-trot is the pace best suited to advance the interests of this country. It is a pace which has done us good service in the past. I say it should be continued, never relaxing into a walk, or breaking into a gallop, and my strong conviction is that if the pace be greatly mended, a serious risk will be incurred that the horse will come down and break his knees." Saad Zaghloul and his followers are bent, not on galloping, but on running clean away. Mohammed Pasha Said and his Cabinet are for a slight increase perhaps in the jog-trot, which many think is now allowable. The Royal Commission is likely to be the final judge of the best pace for the Egyptian racer.

Meanwhile, the Independentists, as they may be called, are growing more furious day by day as they are having the conviction forced upon them that nothing is to be expected from the Peace Conference. They now preach openly that their only hope is in themselves, and apparently their besetting idea is to provoke the Said Cabinet to appeal to the military to employ severe measures against sedition-mongers.

The Means of Restoring Order.

There are now two principal offences being continually perpetrated with impunity: First, the use of the mosques all over Egypt, and particularly the Azhar, for political speeches (in other words for exhortations to revolution and murder), and secondly, the daily printing and circulation by hand in public places of treasonable newspapers and flysheets. Evidently the

Digitized by Google

Cabinet has not sufficient confidence in the Egyptian instruments at its disposal resolutely to put a stop to either of these most objectionable practices. If it appealed for troops to close the Azhar and arrest everybody found in possession of pernicious papers, it would, of course, lay itself open to all manner of accusations and insinuations; and if any bloodshed resulted, as would be only too probable, it would be accused of encouraging the lawless and brutal British in murdering innocent patriots. Its continuation in office would in fact become almost impossible. On the other hand the perpetual stream of abuse, if allowed to continue unchecked, can scarcely flood Egypt without influencing the entire public mind. General Allenby is naturally loth to employ British troops to do what is distinctly police work, and Mohammed Said Pasha is reluctant to admit that he cannot govern without outside assistance.

The question seems to be gradually resolving itself into this: whether any Egyptian Minister can restore order with the ordinary administrative means at his disposal, or whether it is only by the exhibition of military force that Nationalism can be reduced within due proportions. The Zaghloul Extremists are straining every nerve to prove that not only the population but the Government servants are with them, and that therefore it is impossible to carry on administration without coming to terms, their terms being evacuation and complete liberty to establish a rule of their own. The Said Cabinet is really making a tremendous effort to win over the moderate and respectable employees to its side without acting harshly towards the pack of rabid students and nondescripts yelping at its heels. It is, in fact, trying to effect what Rushdi Pasha promised without attempting to do. When Rushdi took office the second time, however, it would have been much easier to establish Ministerial and bureaucratic authority than it is now, after the lapse of many weeks, which have been used to the utmost by the Nationalists to work up such public opinion as exists against any opposition to their ideas.

Notwithstanding all these difficulties, the Said Cabinet is issuing its orders and decrees, and has already carried out a certain number of minor reforms. The Extremists never cease from proclaiming their determination to die in the last ditch rather than submit to any government under British control, and are threatening dire vengeance and extermination for their enemies "to-morrow." This "morrow," however, has now been looked forward to for several weeks, and though it would be rash to say that nothing more is to be feared from the Nationalists, and that all their talk of revolution and murder is mere "hot air," the odds at the time of writing seem to be rather against any materialisation of their threats. There is, nevertheless, a large leaven of revolutionary spirit left amongst the students, certain religious classes, and the habitual criminal and disreputable population of the towns and villages. Until this danger be dealt with we can scarcely consider that all prospect of trouble is overpast.

As at present arranged the Ministers will change their residence to Alexandria in about a week or ten days, the High Commissioner and Residency Staff preceding them by about a week.

JERUSALEM. — JAFFA.

Appointments.

Mr. Ward-Boys has been appointed Adviser to the new Ministry of Communications, whose offices are temporarily established in the Semiramis Hotel, on the banks of the Nile, and Mr. Ross-Taylor, who has practically been Food Controller for Egypt lately, has been given to the Ministry of Public Works in the same capacity. Both of these appointments leave no handle for reproach, as the new Advisers are well known to the Egyptians as exceptionally able and energetic officials, who have done excellent work throughout the war period.

Fight Against Disease.

Owing to the alarming increase in infectious diseases, especially typhus, which is officially stated to be communicated by the body louse, Sheikh Mohammed Bakhit, the learned and enlightened Mufti of Cairo, has issued a *Fetwa* laying down the Sheri Law concerning the imperative need of cleanliness, and precautions to be taken by all good Moslems against infectious maladies. The *Fetwa* quotes from the *Koran* and the *Hadith* such warnings as: "Shun the leper even as you would shun the lion," "He who hears that plague exists in a place must avoid that place," etc., etc. It also states that the Ulema once decided that lepers and others tainted with infectious diseases should not be allowed to come in contact with healthy persons in mosques, or elsewhere. Consequently, Sheikh Bakhit exhorts to greater cleanliness in public and private places and in the person, above all to the destruction of all vermin found on the person, which are responsible for the propagation of these horrible and deadly diseases. This *Fetwa* is being circulated by the Ministry of Wakfs.

CYPRUS NOTES.

(From a Correspondent.)

Public Rejoicings.

The King's birthday was duly celebrated, a *Te Deum* being sung in the churches, and the anniversary honoured in various ways in the chief towns. The "Festival of Venus," or *Cataclysm*, was also observed with great rejoicing. Vast numbers of villagers in all the districts flocked to the ports. At Larnaca there were great celebrations on a more than usually liberal scale, and at Kyrenia well organised arrangements for a regatta, an agricultural show, sports and musical entertainments were carried out with great spirit.

Nicosia Summer Races.

The summer races at Nicosia were carried through during two days with success, but with nothing like the excitement or the large attendance which marked the spring meeting. The interval between the two gatherings is far too short; but the great heat and the departure of many families to the hills render a later fixture impossible. The fewness of race meetings and of sports in general in the island is the only justification of the committee in holding the second gathering at all.

Austrian Steamers.

It is announced that the Austrian steamers will resume their connection with Cyprus shortly touching at Larnaca and Limassol. Before the war the Austrian Lloyd liners called with the greatest regularity at the chief ports for cargo and passengers, and afforded a pleasant and reliable means of reaching ports on the Syrian coast, Jaffa, Egypt, Smyrna, and Constantinople.

Union With Greece.

A telegram has been despatched to the Acting Greek Archbishop to the Metropolitan of Smyrna warmly congratulating him on the "liberation" of this "most Hellenic city" of Ephesus and the vicinity. Every endeavour is being made by the Greek Press to stimulate the now rather flagging interest of readers over the cry for union with Greece. Translations of articles, letters, etc., from all sources in English papers are zealously reproduced week by week, and, needless to say, all those which are unfavourable to the cause are completely ignored.

Miscellaneous Notes.

It is now clear that there will be a large influx of visitors during the summer season. Many persons in Egypt have written to secure rooms in the Troodos and Platres hotels, and all other resorts—now so largely multiplied—will be well filled. A fair number of English visitors are expected.

A few Cypriots who have served in the British Army as volunteers—one of them for a full four years—and who have been discharged, are being warmly welcomed home.

THE INDIVISIBILITY OF THE BANAT.

(From Our Own Correspondent.)

Bucharest.

If there is one point on which the diverse ethnical elements populating the Banat are all agreed, with one exception, it is the impossibility of dividing the Banat without gravely compromising the welfare of the province. The grounds underlying this unanimity of opinion may be classed as geographical, economic, and ethnical.

Geographical.

The province of Banat comprises three departments, named respectively Torontal, Timesh, and Carash-Severin, which form a geographical whole, having the form of a square. Three sides of this square are constituted by natural frontiers, namely, the River Muresh on the north, the Teiss on the west, and the Danube on the south, all of which are navigable, whereas the fourth or eastern side of the square opens on to Transylvania. The western half of the province is flat, the eastern mountainous. Each part is rich in produce peculiar to its geographical structure, and each forms a complement to the other.

Economic Unity.

The flat land forming the western half (claimed by the Serbs) possesses great agricultural wealth. In 1910 the Torontal alone produced 23,000 car-loads of wheat, whereas the total wheat harvest of the fifteen departments of Transylvania fell short of this figure. It has, further, many factories producing machinery, locomotives, agricultural implements, nails, sugar, textiles, etc., deriving the bulk of the raw materials used from the eastern half of the Banat and adjacent parts of Transylvania.

The eastern part of the Banat (over which Roumania's claims are not contested) is very mountainous and rich in mineral produce: coals, iron, lignite, lime, marble, stone, cement, basalt—in a word, all the raw material on which the Torontal is dependent for the normal development of its industrial activity. The inhabitants of the mountainous regions in their turn depend upon those of the plains for the supply of their daily bread.

How would the division of the Banat into two separate parts, one Serbian, the other Roumanian, affect the material well-being of the province, which has up to the present been developed as an economic unity? The answer is that the country as a whole would suffer in so far as each of its component parts would be subject to a depreciation of its wealth, from the fact of their being interdependent. On the one hand, the factories of the plains would be largely deprived of the raw material produced by the mines and quarries of the mountains; on the other, the produce of the latter would be difficult to dispose of, and the population of these districts would be cut off from the main source of its food supply.

Let us glance at the distribution of the railways. These nearly all run towards the waterways, and possess, especially in Torontal, very numerous branch lines. With the exception of the Temishoara-Biserica Alba line, which runs north and south, and might come to form the boundary, they mostly tend towards the Teiss. The two lines which would remain in the western half of the Banat, of which one runs from Temishoara over Lugos and Caransebesh towards Orshova, and the other from Temishoara to Maroshilie, do not possess a single branch towards the rich mineral-producing districts of Oravitza, Reshitza, Anina, etc., which are connected exclusively with the Temishoara-Biserica Alba line. It will easily be judged how great a loss these mineral regions would suffer in the case of this latter line being conceded to Yugoslavia. New communications would have to be established, making great demands both as regards expense and time.

The fact of a large part of the system of waterways connecting Transylvania, Crissiana, and the Banat on the one hand, with Valachia on the other, passing through Yugoslav territory, constitutes a further argument against the division of the Banat. Whether the objection could be obviated by their internationalisation, I leave wiser heads to judge.

Ethnical Considerations.

The Banat is populated by Roumanians, Swabians (Germans), Magyars, and Serbs. Hungarian statistics are, as is well known, most favourable to the Magyars and least favourable to the Roumanians; for it was the latter who, in virtue of their numbers and national organisation, constituted the only serious menace to the Hungarian State. According to the census returns of 1910, the Banat had at that time a total population of 1½ millions, distributed as follows:—Roumanians, 600,000; Swabians, 340,000; Magyars, 260,000; Serbs, 240,000; others, 70,000. These figures are corroborated by the figures given in the Serbian *mémoire* on the Banat. They, too, refer to the year 1910, and are probably derived from the same source, and are open to the same objection:—

—	Roumanians.	Germans.	Magyars.	Serbs.
Torontal.....	87,000	169,000	128,000	200,000
Timesh	170,000	167,000	80,000	69,000
Carash-Severin	336,000	56,000	34,000	14,500
	593,000	392,000	242,000	283,500

The preceding table shows that the Roumanians possess the absolute majority in Carash-Severin, and a relative majority in Timesh, while the Serbs have a relative majority in Torontal. But (it is urged here) any claim put forward by them on this ground is invalidated by the fact that the Swabians, who run them very close, wish to be incorporated in the same State organisation as their Saxon co-nationals in Transylvania. It follows that the Swabians and Roumanians of Torontal, having identical interests, are entitled to be heard collectively, and together they form an emphatic majority in this department.

THE BALKAN COMMITTEE.

At a largely attended meeting of the Balkan Committtee, held on July 3, at which were present, among others, Sir Arthur Evans, F.R.S., Archdeacon Beresford Potter, Mr. H. R. Nevinson, Mr. G. P. Gooch, Mr. Noel Buxton (Chairman), and Sir Edward Boyle (Hon. Sec.), the following resolution was passed unanimously:—"The Balkan Committee, consisting of travellers in the Balkans and students of Balkan questions, views with profound alarm the tendency to base the settlement in the Balkans on the policy of rewarding friends and punishing enemies. It urges that in the settlement the principle of self-determining should be applied by means of plebiscite or other impartial methods of inquiry, conducted by neutrals. It records in particular its profound conviction that any proposal to divide the Macedonian provinces between Greece and Serbia without previously ascertaining the wishes of the population would conflict with the deep-rooted desires of the majority of the people, and would render insurrection, leading to war, inevitable. The Committee further condemns those provisions of existing treaties which violate the principle of self-determination to the Balkans (*e.g.*, such as are contained in the Treaty of Bucharest of 1913 and the secret Treaty with Italy of 1915), and any proposals based on those provisions."

MR. BRITLING & THE BALKANS

WITH APOLOGIES TO MR. H. G. WELLS.

Little or nothing has been heard of the Balkan question of late, but that is not to say that we shall never hear of it again. Indeed, the indications are that unless the Big Four make haste in arranging the details of the millenium, we shall hear of it very soon. The *Komitaji*, we are told, is already sharpening up his knife and cleaning his rifle in readiness to resume his artless recreation once more; and we may expect the Balkan Committee to reconstitute itself again, to hold meetings, public and private, and to take itself very, very seriously. That will be extremely tedious, but never again will the Question cause me so much uneasiness as it used to cause me before the war. For I have discovered Britling—the "Mr. Britling" who "sees it through" in Mr. H. G. Wells's book—and in case of any fresh trouble in the Balkans I shall expect the Foreign Office to turn to him for advice. For by that time, we may hope, the F.O.—which, I gather from an earnest study of Mr. Wells, is, like most British institutions, a poor thing—will have been reorganised; and will be staffed by earnest and efficient young democrats. These clever young men, being imbued with the Modern Spirit, will know the beauties of the card indexing system, and will, therefore, when the fatal hour comes, at once look up "Balkans," and be referred straight away to Britling the omniscient.

That Britling will be ready to advise them I have no manner of doubt. I have been reading all about him and his thoughts—there is really very little else to read about in Mr. Wells's book—and I feel tolerably certain that he would be prepared to hold forth on any subject, in any place, at any time, and for any length of time. I am less certain that his advice, if followed, would lead to perfect peace in the Balkans. But in any case it could hardly make confusion worse confounded in that troublous region, and it would keep him off some topics, on which he is inclined to talk (if only to himself) in a way that suggests the near approach of insanity. Moreover, his advice could hardly be more mischievous than much that was offered to our Government—and the French—before the war by those who ought to have known better.

Before the war, Mr. Britling did not believe that a "decent" country like Germany would fight. He said so (p 75) more than once; and probably he was one of those people who looked upon Lord Roberts as a dotard for holding the opposite opinion. But he was sound enough on the Balkans even then, for he recognised that the Dove of Peace was unlikely to take to nest building there at that time. ("They may fight in the Balkans still," says he—p. 75). It has to be confessed, however, that when requested to "suppose this Balkan trouble becomes acute," he replied, positively: "It hasn't; it won't. Even if it did we should keep out of it" (p. 76). Prophesy is always a bit risky. Not very long after this we find him less confident. Asked by his son's Prussian tutor whether the Serajevo assassination may not lead to a war, he answers: "I don't think so. Austria may threaten Serbia, but she doesn't want to provoke a conflict with Russia," etc.

A good deal later—in September, 1915—he is prepared to admit that his former estimate of the Balkans was not entirely right, as, indeed, seems to have been the case with quite a number of his pre-war estimates and opinions. He remarks to his friend, Captain Lawrence Carmine: "I thought the Balkan States were capable of a reasonable give and take, of a common care for their common freedom," and adds, with an irritation that characterises a good many of his observations: "I see now three German Royalties trading in peasants, and no men in their lands to gainsay them." To a red-hot Republican that is, doubtless, sufficient to account for the folly of the Balkans; and we can only conclude that Mr. Britling originally overlooked this factor in the case because the "three Royalties" *were* German. He has quite a weakness for the gentle Germans, it seems, preferring them greatly to such Englishmen as Sir Edward Grey—for whom he disclaims all responsibility in a letter he writes to the parents of his son's former Prussian tutor. If only we had had somebody of the calibre of Mr. H. G. Wells at the Foreign Office in 1914!

Towards the end of the book we are provided with a clear pronouncement of the Britling policy regarding one portion of the Balkan Peninsula—Albania. Mr. Wells, impressed, perhaps, by its importance, mentions that it was "one of the most amazing and unexpected things" that the young woman to whom it was addressed "had ever heard in her life." Bearing in mind that Mr. Britling was the speaker, we are inclined to doubt the applicability of the second adjective. On that point, however, each reader must judge for himself. Here is the passage referred to: "The only possible government in Albania . . . is a group of republican cantons, after the Swiss pattern. I can see no other solution that is not offensive to God. It does not matter in the least what we owe to Serbia, or what we owe to Italy." Amazing, indeed! And, like most strokes of genius, *so* simple. It is unfortunate, however, that Mr. Britling said nothing about the little difficulty over Epirus.

The tremendous decision just recorded was followed, "after a pause," by another, scarcely less tremendous: "The Treaty of Bucharest was an evil treaty. It must be undone. Whatever this German King of Bulgaria does, that treaty must be undone and the Bulgarians united again into one people. They must have themselves, whatever punishment they deserve; they must have nothing more, whatever reward they win." This is very beautiful, very brilliant, very Britling-esque. But one wonders whether Mr. Britling had ever seen any of the large scale ethnological maps of the Balkans. There are several of them, and they are very interesting, but——. And historians of the Balkans—". . . .," as Mr. Wells is so fond of remarking.

I have taken an interest in Balkan affairs for several years, but never had I realised how simple are the problems presented by South-eastern Europe until I received enlightenment from the sage of Matching's Easy. Ah, what a man is there! "A writer of thoughtful third leaders in the London *Times*" (p. 10). . . "He loved to write and talk." So, of course, he is just the person to solve the secular Balkan Problem. He knows how to cure all the world's ills, and on page 395 he tells us his remedy—a "federal world-republic." He adds: "It needs only that sufficient men should say it, and that republic would be here now." So there you are! But—horrible thought—can Mr. Britling be confusing things? Is talking, or writing, about things *quite* the same as doing them? "He loved to write and talk." Quite so! If the Balkan Committee is reconstituted it should secure Mr. Britling as a member. As to the Foreign Office, on second thoughts, ". . . ."

MUHANDIS.

A BULGARIAN PROPOSAL.

The Bulgarian Government has transmitted a Note to the general commanding the Allied troops in Bulgaria and to the representatives of the Entente Powers and America, in which, referring to the declarations of the heads of the Allied Governments and President Wilson in regard to the principle of nationalities, it suggests that the populations of those regions which are now the object of rivalry among the Balkan States, such as Macedonia, Thrace, and the Dobruja, should be given the opportunity of expressing their sentiments by means of a plebiscite under the efficacious control of the League of Nations.

The Bulgarian Government is willing that a similar procedure should be adopted with regard to those regions within the confines of the Bulgarian State to which Serbia, Greece, and Roumania lay claim.

INDIA AND THE PEACE.

His Majesty the King has received the following message from the Viceroy of India:—

"On behalf of the princes and peoples of this country I tender to your Majesty with dutiful respect India's humble and grateful thanks for your most gracious message, which has thrilled all hearts throughout the Empire, her loyal congratulations on the glorious termination of the great war, and her heartfelt prayers for your Majesty s long and peaceful reign."

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the Indian Bishops to carry on religious and educational work among these classes, upon whom so much depends.

For further particulars apply to
H. P. K. SKIPTON, Secretary, I.C.A.A.,
Church House, Westminster, S.W.1.

PRESS ON THE NEAR EAST.

Turks and Mesopotamia.

The *Westminster Gazette* recently published some extremely interesting extracts from the diary of an officer who served in Mesopotamia. The following story of the Chaldeans is given with a keen touch:—

After saying good-bye to Archbishop Serapian we went to the house of the Patriarch of the Chaldean Catholics—Monsignor Emmanuel. He speaks French fluently. In appearance he is venerable, not tall, rosy-cheeked above an ample grey beard, with keen twinkling eyes, which evidently enjoy a joke. He was dressed in some dark stuff with red or purple stoles or bands, and a great gold cross on his breast. On his head a funny-shaped hat, such as one sees wizards wearing in books of fairy tales. His people, too, had suffered a lot just because they were Christians. He was still out of communication with his bishops and priests behind the Turkish outposts. How he blessed the arrival of the English! Now all would be well. He said that he had written to Talaat to say that "We are not Armenians, we never plot, we are Catholics—why kill us?" Surely a man in Talaat's position would have responded, and said, "Let me have your point of view; write to me fully, and I will discuss things with you." His only reply was, "Taisez-vous," and the massacres went on!

Another story, told of the best-known political officer in Mesopotamia, is very amusing:—

X. is, of course, and has been for some time, the most outstanding personality among the British in Mesopotamia—at any rate, in the eyes of the Arabs. His journey all through this country before the war, his intimate knowledge of the tribes, his ability to pass himself off as an Arab among Arabs, his determined character, have all helped to create a sort of X. legend. Since the war his activities in countering the machinations of the various German and Turkish agents among the tribes, and the remarkable success which has attended his efforts in that direction, have made his name equally well known among the Turks. Well, apparently soon after we occupied Mosul, X. heard in the curious but correct way he hears things that the commander of a squadron of Turkish cavalry at Tel Afar, on the Nisibin road, had robbed some villages of their precious store of grain, and was selling it to Nisibin merchants, and was obstructing our cavalry in taking over Tel Afar, as he did not want to clear out until he had made his pile. X. dashed off to Tel Afar at once, and ordered the Turkish major to clear out and hand over all his store of grain. The Turk refused and was very insolent, and went so far as to try to push X. out of the door of his office. X. thereupon, without another word, knocked him down. The Turkish major got up fuming, and said, "I will take you in to Ali Ihsan Pasha as a prisoner for this. I would have you know that you have struck Major Rachid Mohammed Bey, of the Ottoman Cavalry." The answer was, "I would have you know that I am X., and if you don't clear out at once I will knock you down again." "I most humbly beg your Excellency's pardon," replied the Turk; "had I known it was his Excellency X. who was here I would have gone at once." And he and his troop cleared out forthwith.

The Turk.

In the *Morning Post* of July 4 Mr. Alastair Shannon writes of his varied experiences as a prisoner of war in the hands of the Turk. Among much interesting matter, the writer says in connection with his imprisonment at Afion Kara Hissar:—

But the Turk did nothing to make us comfortable. We had to cleanse the houses of vermin; beds, chairs, tables, shelves, kitchen ranges were made by our own hands; food was bought by our own orderlies in the bazaar with much bargaining. Endless protests were made with regard to our cramped accommodation, and especially to the filthy sanitary conditions in which we lived. The one really provoking thing about the Turk, who is otherwise a nonentity, is that he is so hardy, so callous himself to comfort, that he does not sympathise with sensitiveness in others. This may explain his cruelty. To a nation who cares not how many in her armies fall out and die by the wayside it cannot be of much importance what happens to her prisoners of war, and it is not surprising that when hatred enters into such a nation's heart she should commit unspeakable crimes against the weak and unprotected. When there was protection, however, the coward quailed. We found there was protection in the name of England, and the Catholic Armenians found protection in the name of the Pope.

Of Turkish mentality he says:—

None of us could ever adequately fathom the Turkish mind. One day our Commandant shut up certain officers on the charge of preparing to escape, and at the inquiry said to them: "If you confess that you wanted to escape I will give you fourteen days' detention, but if you refuse to confess I will take steps to make your punishment worse." Certain suspects were confined so that they should not communicate with the rest of the camp, but all sorts of things were carried into them unexamined by the sentries. As I have told elsewhere, our Commandant once graciously permitted a football match between two camps *on condition that each camp played in a separate field*, and on another occasion he gave as his reason for curtailing walks that "the weather was such as to be detrimental to the health of the officers" under his protection. Certainly such things kept us in a constant state of good-humoured anticipation. Orders were continually being issued which flatly contradicted former orders. This was due to the fact that any of the numerous Commandants of railways or supplies or army corps passing through the town could give our Commandant any order affecting prisoners of war. Neither the establishing of a Ministry of Prisoners of War at Constantinople nor the Berne Convention materially altered the situation. For instance, the law that a recaptured escapee could only get fourteen days' detention was not of much use to fellows who were kept three months in gaol pending inquiry!

He concludes his article with some general impressions of the Turk.

With the exception of the Turkish officers in the front line, who are men because they are fighters, and of the patriarchal farmer class of Anatolia, I encountered no Turk whom I could genuinely admire. The average Turk spends half his existence sipping coffee, rolling and smoking endless cigarettes, and discussing politics. The remainder of his time is given to stupid revelry and noisy slumber. He is a born lout, and his wife a born drudge. I have no personal motive for animosity. Our guards were too listless, too tired, to be methodically troublesome. We did not hate them. We ignored them. We did not pity them. Englishmen are not given to pitying clowns who are lickspittles or tyrants as the mood seizes them. The Turk does not love us. He possesses only a sneaking affection for our wealth and a cringing fear of our power. He hates us as the slave aspiring to power will always hate the master of power.

England and Islam.

In the *Nineteenth Century* of July, Sir Theodore Morison, K.C.S.I., K.C.I.E., has an article of very strong interest on "England and Islam." He commences:—

It is time the British public realised the gravity of what is happening in the East. The Muhamadan world is ablaze with

Digitized by Google

anger from end to end at the proposed partition of Turkey. The outbreaks of violence in centres so far remote from each other as Kabul and Cairo are symptoms only of this widespread resentment. So far the papers have allowed very little to be known upon this subject, and the Muhamadans, always inarticulate and slow to use modern methods of publicity, have presented their case weakly and imperfectly. But soldiers and administrators who know the East are feeling grave anxiety at the way in which the legitimate interests of Islam have been handled in Paris, and the Secretary of State for India has made public the apprehensions with which the outlook fills him.

He proceeds to get inside the Moslem mind, and thence presents the Mohammedan view on the proposed partition of Turkey.

Christendom is so secure of the hegeomony of the world that we can with difficulty conceive of our civilisation being overthrown; but if we would understand Muhamadan feeling we should force ourselves to imagine such a catastrophe and realise what our own sentiments would be. Let us, for instance, suppose that the Yellow Peril actually materialised, that Mongolian troops had over-run Europe, that Mandarins were appointed to administer the conquered territory, and the Viceroy of Europe held his court in Paris or Turin; a few minor appointments in the Government service would be given to such Europeans as had mastered a specified number of ideographs, and these would be honoured once a year by an invitation to eat strange celestial dishes at the table of the Viceroy. Suppose that in this European cataclysm the Kingdom of Prussia had succeeded in maintaining a precarious independence among the woods and marshes of Masurenland. Would not this State command the sympathies of all Europeans? Would not Frenchmen and Englishmen value its independence? Would they not look upon it as the guardian of their civilisation—of what in those days we might not refuse to call our kultur? It is not necessary to suppose that the administration of the yellow mandarins would be bad—it might be imagined much better than anything we have yet known; but it would be alien, it would be based on non-European ideas, and it would aim at a non-European excellence. In such circumstances we should passionately resent the destruction of the last State which was run upon European lines, and which was consciously influenced by European ideals.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Military Commission (Constantinople). July 2.

Major GLYN asked the Secretary of State for War how many British officers comprised the Military Mission at Constantinople and what was the corresponding number of officers comprising the Military Missions of the Allies; and whether the names of the British General Staff officers now in Constantinople who have been associated in the past with the Ottoman Empire might be published?

Mr. CHURCHILL: The British Military Mission at Constantinople is attached to the Army of the Orient under the command of General Franchet D'Esperey, and consists of six British officers. I regret that the corresponding number of officers comprising the Military Missions of the Allies who are similarly attached is not available. The following British General Staff Officers now in Constantinople have had experience of the Ottoman Empire:—Lieut.-Colonel I. M. Smith—His Britannic Majesty's Consul at Van for one year previous to the war; Major V. A. Nye—Employed for eight years with the gendarmerie; Lieut.-Colonel L. L. R. Samson—Consul at Adrianople 1906 to 1914.

British Troops in Mesopotamia. July 8.

Capt. F. E. GUEST, Joint Parliamentary Secretary to the Treasury, in reply to Lieut.-Commander Kenworthy, said that the latest return showed that the strength of British troops in Mesopotamia on May 24, including officers, was 26,291. The average percentage in hospital during March was approximately 3.6. Everything possible was done to safeguard the health of the troops.

Lieut.-Commander KENWORTHY: Are native levies being raised to relieve these troops?

Capt. GUEST: There is no reference to that in the question.

Troops to India.

Replying to Colonel Yate and Lieut.-Commander Williams, Mr. CHURCHILL said that the special arrangements for the voyage of troops to India during the hot-weather season included the fixing of an ample scale of accommodation in the ships based on approximately 50 per cent. of the normal scale of accommodation for troops on that voyage. As far as possible, men would be permitted to sleep on deck. Each vessel was fitted with double awnings, windsails, and was provided with sail and shower baths. Special attention was being paid to ventilation, and electric fans would be installed where desirable. The hospital was to be on the cool side of the ship. Ice was being provided on a liberal scale, and an ample supply of mineral waters would be available. All ranks would be provided on embarcation with good sun helmets. Every vessel allocated for that service was thoroughly inspected before being accepted as suitable by selected officers of the War Office, who, in conjunction with an officer of the Ministry of Shipping, were charged with inquiring into all matters affecting the health and comfort of the troops, and who must satisfy themselves that all possible steps were taken to minimise the hardships of the voyage. The Cabinet had been into the question, and had approved all those special arrangements.

British Relations with Bulgaria.

Mr. CECIL HARMSWORTH, replying to a question by Sir S. Hoare, said that a British Military Mission had been attached to General Denikin's Headquarters in South Russia. He then said:—As regards Bulgaria and Austria, I would remind the hon. gentleman that a state of war still exists with those countries, and diplomatic relations are, therefore, strictly speaking, impossible; but, owing to the very special circumstances, his Majesty's Government have been carefully considering the question of making exceptional appointments to Sofia and Vienna, and it is hoped that a definite decision in the matter will be taken shortly. In the meantime, there are, as the hon. and gallant gentleman is no doubt aware, British Military Missions at Sofia and Vienna, which are examining condition in Bulgaria and Austria.

Later, Mr. CECIL HARMSWORTH, replying to further questions by Lieut.-Colonel A. Murray, Major O'Neill, and Capt. Ormsby-Gore, said that Sir Percy Wyndham had been accredited as his Majesty's Envoy Extraordinary and Minister Plenipotentiary on a special mission to the Republic of Poland. His staff consisted of four secretaries. Sir C. des Graz had been accredited as his Majesty's Minister to the King of the Serbs, Croats, and Slovenes. He resided at Belgrade, and was assisted by a commercial secretary, a military attaché, and two diplomatic secretaries. No consuls had yet been appointed to Croatia.

Topics in Parliament.

The subjoined headings are those given in the official Report.

SMYRNA. INDIA: Troops Detained.—Health of Troops.—Troops Transferred.—Royal Army Medical Corps. (July 1.)

INDIA: Public Services (Resignations).—Karachi Troop Train Incident.—Currency Committee. GERMAN BATTLE CRUISER "GOEBEN." ARABIAN PENINSULA (POLITICAL SITUATION). TURKISH GOVERNMENT (PEACE TREATY). (July 2.)

GREECE (CONDITIONS IN SMYRNA). BRITISH INDIANS (SOUTH AFRICA). CEYLON (CASHING DRAFTS). DEMOBILISATION: 1914-15 Men (Egypt).—Army Postal Service, Egypt. INDIA: 3rd Bedfordshire Regiment.—Army Officers (Appeal to the King). British Troops (Rations). (July 3.)

DEMOBILISATION: Troops Detained in India. Applications for Release. TROOPS AT KARACHI. (July 4.)

ALLIES AND ALBANIA. EGYPT: Press Censorship.—Recent Outbreak (Investigation). FOREIGN POLICY (ASIA MINOR). SELECT COMMITTEES: Government of India Bill. TROOPS AT ADEN (RELIEF). RAILWAY CONSTRUCTION, MESOPOTAMIA. RETAINED SOLDIERS (SERVICE IN INDIA). CEYLON (CONSTITUTIONAL REFORMS). BELGIUM AND YUGOSLAVIA (GERMAN AND AUSTRIAN CURRENCY). (July 7.)

SELF-DETERMINATION AND TURKEY.

A meeting of the Anglo-Ottoman Society was held on July 8 at Essex Hall, London, W.C., and resolutions were passed calling on the Government (1) to make a definite announcement that it would at the Peace Conference advocate the maintenance of Turkey as a sovereign and independent state, and (2) to redeem the pledge given by the Prime Minister that Constantinople, Thrace, and Asia Minor should be left under Turkish control.

Sir J. D. Rees, M.P., said that the proposal to carve up Turkey into a number of small states and to give a mandate to America to overlook those states would not be made by anybody who had any knowledge of the past history or the present condition of Islam. No good had come of the interference by one state in the affairs of another; if it had been an actual interference the result had been disastrous; but, generally, it had been a mere pretence.

Mr. Arthur Field said that it was proposed to give Adrianople to the Greeks. In this city, out of a population of 612,000, no less than 401,000 were Turkish.

Sir Theodore Morison said the situation now in Asia Minor was one that it was impossible to characterise adequately. The Greeks were in Smyrna and Aidin, the Italians were promised Kona—the most ancient possession of the Turks and the seat of Empire of the first Ottoman sultans—and France was threatening to enter Cilicia and the Taurus. If such things were done it was useless to speculate as to what was likely to happen to Thrace and Constantinople, because nobody questioned that the places now being occupied were whole-heartedly and entirely Turkish. Yet the right of a people to self-determination was the very stuff of the Allied case. How would it be possible to continue the government of India after the breaking of these pledges? There would be the most appalling difficulties, for it was because of these pledges that the Mohammedan population of India had refrained from embarrassing us when engaged in our war with Turkey.

Mr. Charles Roberts said that everyone now saw the wisdom of trying to get governments to correspond with the populations they administered.

Mr. M. Pickthall, Mr. Arnold Lupton, and Mr. M. H. Ispahani also spoke.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE STATE OF EGYPT.

Sir,—When your correspondent "F. H. S." writes that "it is at least arguable that Lord Cromer ought to have given a trial to native statesmen," one would infer that he persistently ignored the younger men who had grown up under the British protectorate, and that he never did give them a trial. That is not so. Not only had he come to the conclusion that a trial should be given to them, but in 1906 he himself for that purpose advised the appointment as Minister of Education of Saad Pasha Zagloul, who was then regarded as one of the ablest of the moderate "Young Egyptian" party; and in his "Modern Egypt," published the year after his retirement, he bears witness to Saad Zagloul's "enlightened administration." It is all the more disappointing that Saad Zagloul should have allowed himself to be carried away in these times by the turbulent flood of Anglophobe Nationalism. But might we not, perhaps, have been spared that disappointment had it been humanly possible to secure indefinitely to Egypt the benefit of Lord Cromer's wisdom, always cautious, but always also progressive?—I am, etc.,

VALENTINE CHIROL.

July 6.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—To "Foresight's" letter of June 30, which appeared in your last issue, we would retort that he, for all intents and purposes, ignores the main arguments in favour of handing over Cyprus to Greece.

We have never claimed that the inhabitants of Cyprus—306,997, according to Government returns at the end of 1918—constitute a nation, as "Foresight" imagines. Such a contention would be nonsensical, apart from not being the fact. There is no Cypriote nation, but the great mass of the population of the island most decidedly and indisputably form an integral part of the Greek nation of ten millions. But the argument for reuniting this population with Greece is not simply that the Cypriotes *are* Greeks; it is, above all, that they wish—in fact, *demand*—to be so reunited. Your correspondent is up against not merely an ethnological fact, but a political reality. Whether the fulfilment of Cypriote aspirations would be for the material benefit of the island is, after all, primarily a question for us, the inhabitants of Cyprus. After all, a population, like an individual, may, we think, legitimately put ideals above riches.

As a matter of fact, we emphatically deny that the Greek administration would have the unsatisfactory material results for Cyprus which "Foresight" seems to anticipate. But even if we were to assume "Foresight's" anticipations to be well-founded, we boldly declare that we prefer to fare worse under the azure flag of Greece than to lead the existence of men under foreign tutelage. We are indeed proud that we belong to a race which values union and independence more than any advantages, however great, that may be derived from a foreign mastery.

To the strategic arguments against cession we would repeat for the last time that our rejoinder is (1) that Cyprus has no strategic value, and the last war proves this up to the hilt, and (2) that the Greek Government and the Greek Cypriotes are ready through an honourable agreement to allow Great Britain, in the event of the union of Cyprus with Greece, to utilise that strategic value if our contention that it is non-existent is incorrect. If "Foresight" maintains that for this to be possible, Cyprus as a whole must remain in British hands, he might as logically argue that Great Britain, for the sake of Gibraltar, should annex the whole of the Iberian Peninsula.

To sum up, we think that your correspondent's arguments amount to this: that Great Britain ought to retain the island in spite of the wishes of the population, because this population is too weak to appeal to anything but her sense of justice. But surely, Sir, such a conception for the solution of the Cypriote question cannot but be repugnant both to the honour and self-respect of every fair-minded Britisher.

We, at least, refuse to entertain the thought that the British nation is contemplating the retention of the island, thus refusing to give her back to the bosom of her mother country. Such a decision would not only be tantamount to a return to the good old times of despotic power, but it will also prove to the world that the precious blood of Britannia's sons was not shed for the high principles of self-determination and liberty.—We are, etc.,

THE CYPRUS DEPUTATION.

2, Lancaster Street, Lancaster Gate, W.2,
July 7, 1919.

We have received from M. Nejmi Bodiamiabiade, of Paphos, Cyprus, two letters dated June 3 and June 6 respectively. Unfortunately they are too long to be printed in full, so that only the main points can be given here.

In the first—a rejoinder to Dr. Lanitis—the writer traces his family history from 1571, when his ancestor first went to Cyprus. His study of the English language has made him love England, Moslem loyalty to which he emphasises. He states that "the truth is that the British is the most honoured and liberal government in Cyprus as elsewhere, that Greeks have no grievances, that their impulse is neither national nor patriotic, and that it is the duty of the British Government to refuse their demands." He disapproves of the methods of the Greek Cypriots, and says, "We will never consent our country to be given to Greeks; we cannot bear to see another flag waving on Othello Tower but Shakespeare's own."

In the second, which is a reply to a letter of M. G. Triandafillides published on March 24, the assertion is made that the Greeks of Cyprus are not sufficiently civilised to regard the self-respect of Moslems. The writer refuses to believe that the religion, language, character, and national conscience of Cypriot Greeks are all of pure Hellenic type. He says that Greeks have much to learn of Englishmen, especially the virtue of calmness. The Greeks may be clever and have great business acumen, but in other matters of character and spiritual qualities they are little better than they were forty years ago. Right and Justice never depend on numbers; and he complains of the melodramatic way in which Greek Cypriots speak of Moslem safety.—[ED.]

THE "BALKANISATION" OF CENTRAL EUROPE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Many people whose opinion and judgment were in many questions very sound and reasoned consider the present political structure of Central Europe as being "Balkanised," under which term they understand a permanent danger to peace. Their reasoning may be summed up as follows:—In the place of Austria-Hungary, which, despite all its faults, represented a coherent economic entity, a number of small antagonistic States have been created whose jealousy will endanger the future peace of Europe. Therefore, something resembling the former Dual Monarchy must be restored.

Leaving apart the total impossibility of reconstituting anything resembling former Austria-Hungary, let us see whether Central Europe, in its present form, constitutes a greater danger to the future peace of Europe than was the case with the old Habsburg Monarchy. First of all, there is no "Balkanisation" of Central Europe in the old sense of the term. On the contrary, Central Europe has been *de-Balkanised*, because the Austro-Hungarian anomaly has been removed, and the newly constituted States, Czechoslovakia, Poland, and Yugoslavia, offer firm guarantees of a lasting peace.

The existence of such unnatural States as Austria-Hungary and Turkey was, indeed, a permanent danger to European peace. The Habsburg Monarchy was incompatible with the rights of self-determination of peoples; it was a survival of mediæval times, and it must have sooner or later broken down. Apart from the dominating Germans and Magyars, all nations, the Czechoslovaks, Poles, Roumanians, and Yugoslavs, numbering about 30 million, wanted to break away from it, and no force could keep them permanently under a foreign yoke. Now these 30 million of peoples are free. Through their separation the formerly dominating Austrian-Germans were no doubt placed in an unfavourable economic position. They, and especially their capital, Vienna, used to live from the labour and wealth of the subjugated nations. That is now at an end. Hence the cry of the Austrian Germans of their impossible position.

It is, however, true that the century-long existence of Austria-Hungary left many economic interests and ties among the nations composing it. A close economic co-operation is, therefore, only desirable. But it must be based on equal terms. An economic co-operation among the Czechoslovaks, Yugoslavs, Roumanians, and Poles appears to be almost certain. On the attitude of the Austrian-Germans and Magyars depends whether they will be included in this co-operation or not. If the Austrian-Germans will once and for all renounce their claims to preferential treatment, to which they were up till now accustomed, I do not think that any of the former Austro-Hungarian nations will refuse to co-operate with them.—I am, etc.,

ALEXANDER BROZ.

July 7, 1919.

Food sent for commercial purposes can now be accepted by the Post Office for transmission to the parts of Germany in Allied occupation, but no parcels or letters for other parts of that country. Parcels for civilians in Smyrna can be accepted if addressed Poste Restante, British Post Office, Smyrna. The postage on parcels for Roumania sent by sea direct has been reduced. Dates for the despatch of parcels for Bulgaria are irregular, but parcels can be received for transmission direct by sea.

NEAR EAST BOOKSHELF.

THE FUNDAMENTAL SLAV.*

When so many bad books have been written about Russia, both sensational and sentimental, it is no particular compliment to Dr. Masaryk to say that this is the most profound study of the subject that has been published. It can hardly help taking its proper place as a classic, and it is almost in our heart to regret that so distinguished a philosopher as the author should be compelled to turn aside to politics. Bohemia gains, but the world of letters loses, by the choice of Dr. Masaryk as first President of the Czecho-Slovak Republic.

The West knows little of Russian philosophy, and even these two volumes, comprehensive and penetrating as they are, do not convince us that it has lost much by its ignorance. Russia, as Dr. Masaryk truly says, has been in a state of political revolution since the time of Peter the Great, and that fact is of cardinal importance for Slavonic history; but the welter has produced no philosophy of universal validity. It may be true that no philosophy yet contributed goes to the roots of things. But every philosophy that counts many followers has some aspect of what one firmly believes to be the ultimate truth. The agnosticism of Hume, the idealism of Plato, the unconscious will of Schopenhauer, the mysticism of Plotinus, the natural selection of Darwinism, the pantheism of Spinoza, the transcendentalism of Berkeley, the intuition of Bergson—all these appeal to something universal in man. What has Russia to set against these as her contribution to the world's thought? Two names, and two only: Bakunin and Tolstoy.

Both are, indeed, of very great significance, and both have influenced Russian history. The short point, as the lawyers say, of Bakunin's teaching was his advocacy of anarchism; the short point of Tolstoy his advocacy of non-resistance. From the former it is an easy step to "Order No. 1" of the Russian Revolution and the practice of Bolshevism; from the latter it is an easy step to "no annexations and no indemnities." And after studying the works of these writers and the fruits of their works, one is tempted to ask whether it is worth while going out into the wilderness to see these reeds shaken by the wind. The practical Englishman is inclined to think that the activist philosophy of Dr. Masaryk, which creates a new State on a sure constructive foundation, and does not shrink from the plain duty of resigning personal ease at the call of public duty, is worth all the teaching of Bakunin and all the ethics of Tolstoy. We see what the one leads to and what the other leads to, and we prefer the active professor to the passive philosopher.

It may be objected that to test a philosophy by its fruits is unfair. So be it. But both Bakunin and Tolstoy fail for other reasons. Their work was negative, and mere negation can never stand. One of the salient facts that Dr. Masaryk has brought out, and we are grateful to him for doing so, is that Russian philosophy is rooted in revolt from Western teaching. The names of Hume, Darwin, Marx, and Hegel recur continually in his pages, and Russian philosophy is essentially an opposition to the teaching of those masters. Now, metaphysics did not begin with Hume, and wisdom did not perish finally with Darwin; but at least they were original, and their writings added new conceptions to the world of thought. But the anarchy of Bakunin was not original; it existed in the days of the cave-man, and was abandoned for ever when the first beginnings of society were established. And the non-resistance of Tolstoy was not original either; it is simply the new Testament stripped of its inspiration. It is not of such stuff that new worlds are made.

The moral imbecile is said to inherit the worst qualities of both parents, and Bolshevism has ignored the good and selected the evil in both its parents. Tolstoy taught non-resistance and belief in God; Bakunin taught freedom and atheism. Bolshevism has accepted non-resistance and atheism, and abolished freedom and belief in God. It is a curious outcome of the final doctrine of Bakunin, who constructed the dilemma, "If God exists, man is a slave; but man can and must be free, therefore God does not exist." But the dilemma, with its sharp inconsequence, is itself typical of a primitive logic that occupies itself only with the surface and the superficial contradictions of things; for Danté dissolved that dilemma for ever when he wrote the immortal line:

"E la sua volontate e nostra pace."

A. W. T.

* "The Spirit of Russia." By Thomas G. Masaryk. (London: Allen and Unwin. Two vols., 16s. each net.)

THE CO-OPERATIVE MOVEMENT IN INDIA.*

This book should be read by all who are interested in the economic development of India and other countries where similar conditions prevail. Given a large population of small producers, be they agricultural or industrial, co-operation is the most hopeful line of improvement, and while every country must solve its own problems in its own way, no country can afford to neglect the relevant experience of its neighbours. Now, India has amassed a very large body of experience during two decades of strenuous work, but it is buried in a long series of unappetising blue-books, not very accessible to ordinary readers; a critical summary was wanted, and this Mr. Wolff has now supplied. He writes with authority as an ex-President of the International Co-operative Alliance, and though he has not been in India he is master of the facts; his verdict must therefore be taken into serious account by the workers in India and throughout the East. Stated very shortly, his conclusion is that while India has made an excellent start, there is now a real danger that the movement may become officialised, and thereby sterilised; a special effort is therefore needed to organise some alternative to official supervision, pending the time, which is still distant, when the co-operative societies can provide all the supervision which they need. We think his conclusions will carry conviction to his readers; but even if they dissent, they will not regret the time given to its study.

SAINT SOPHIA.†

This little book is an earnest plea for the restoration of Saint Sophia from Turkish to Christian worship. It consists really of an historical and a political description of Constantinople. By being treated thus, the author's claims must either be accepted *in toto* or disregarded; for the 79 pages to which he limits himself suffice only for the bare statement of opinions, with neither authority nor qualification. Enthusiastic expression is the chief merit of the book; but the train of thoughts and the arrangement of sentences are without order. The point of view taken up and laid down with merciless accent is rather too angular to be received without more show of scholarship; and it is a mistake to assume (as the author does on page 21) that the traditional English attitude towards the Greek Empire is wholly due to the sceptical Gibbon. For there are others than atheists or deists who also are unable to welcome with open arms the Byzantine Greek and his claims. Moreover, the claims of Saint Sophia cannot now be treated as they might have been in mediaeval times, because in these days it is Expediency and not the idea of an Absolute (*i.e.*, Christian) Right by which matters must be decided. This fact is the capital degradation of the modern world; and when the author quotes Tennyson—"To follow Right were wisdom in the scorn of consequence"—he is urging on those who shall decide the problem with which he is concerned an impossible policy.

BOOKS RECEIVED.

"Greek Folklore and Greek Music." By P J. Petrides. (Lecture: William Cate.)

"Zionism, the Jewish National Movement." By Bertram B. Benas. (London: Zionist Organisation.)

"The Concession Hunters." By Harold Bindloss. "The Co-Citizens." By Corra Harris. "Thirty." By Howard Vincent O'Brien. "Those Fitzenbergers." By Helen R. Martin. "The Dream and the Business." By John Oliver Hobbes. (London: The Wayfarers' Library. J. M. Dent and Sons, 2s. net each.)

BOOK NOTES.

Early in October Mr. Arnold will publish "The British Interned in Switzerland," by Lieut.-Col. H. P. Picot. Lieut.-Col. Picot, who is very well known to the Near East for his work in Persia, was in charge of the British from Germany in Switzerland during the war.

We have received a copy of "The Kingdom of the Serbians, Croatians, and Slovenes" (Paris: Imprimerie "Graphique"). It is a small book, but gives much useful information on the newly formed Yugoslav State.

"The Toy Cart," a Hindu play in five acts, by Arthur Symons, has been published by Maunsel at 5s. net.

Miss Ethel M. Dell has written a book on India. Its title is "The Lamp in the Desert," and it is published by Hutchinson at 6s. 9d. net.

"Glimpses of the Great War" is a book published by the Theosophical Publishing House at 3s. 6d., and deals with France, Macedonia, Malta, Egypt, and Palestine.

The Rev. H. G. Harding has written "The Land of Promise," and the Church Missionary Society publishes the book at 2s.

* "Co-operation in India." By Henry W. Wolff. (W. Thacker and Co. 12s. net.)

† "The Redemption of Saint Sophia." By the Rev. J. A. Douglas. (The Faith Press. 2s.)

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. July	1919. June		1337. Shawal	5679. Tamuz
11	28	Friday	13	13
12	29	Saturday.....	14	14
13	30	Sunday	15	15
14	July 1	Monday	16	16
15	2	Tuesday	17	17
16	3	Wednesday	18	18
17	4	Thursday	19	19

Capt. Henry E. Pears has left England for Constantinople.

The Emir Faisal is expected to return to Paris at the end of July.

The Metropolitan of Trebizond will arrive in London this week from Paris.

The Emir Jaafar, nephew of the King of the Hejaz, arrived in Cairo from Damascus on June 18.

Colonel Nicolas Broumis, Paymaster-General to the Greek Army, left London on July 3 for Paris.

Mr. Hope Vere has arrived in Egypt, and has taken up his appointment at the Residency in Cairo.

The Maharaja of Kapurthala had the honour of being invited to luncheon with their Majesties on July 9.

General Sir Hari Singh, Commander-in-Chief of the Kashmir Army, arrived in London on July 3 from Dublin.

Mr. Farrokh Khan, who has been specially attached to the Persian Legation, has arrived in London from Russia.

M. Diamantides, Greek Under-Secretary of State and President of the Commission for Transports, left London on July 3 for Paris.

Colonel Sir Roper Parkington, Consul-General for Montenegro, and Lady Roper Parkington have left Claridge's Hotel for Harrogate.

Princess Marie Louise will open the Slava Fête at Claridge's Hotel on Monday, July 14, at which Mme. Astafieva is to appear in Greek dances.

Lady Townshend (wife of Major-General Sir Charles Townshend) gave a dance on July 4 at 86, Brook Street, for her daughter, Miss Audrey Townshend.

General Slatin Pasha has been delegated by the Austrian Government to deal with the question of Austrian prisoners of war, and has left Switzerland for St. Germain.

The paper *El Mokkatam* understands that Lord Milner's mission will consist of Sir William Garstin, Sir Ronald Graham, General Maxwell, Sir Arthur Chitty, and another member.

The Abyssinian Mission, before leaving England for America, left a message expressing appreciation of their treatment in England, and expressing a hope that the trade between Great Britain and Ethiopia will expand.

Lady Mainwaring entertained at luncheon on July 9 the Grand Duke Michael of Russia and the Countess Torby, M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, the Earl of Lathom, and Lady Lavery.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, on July 2, entertained at luncheon Prince Nicolas of Roumania, the Earl of Munster, the Greek Minister, Lieutenant-Colonel N. Arion, the Roumanian Military Attaché, and M. George Boncesco.

The marriage was celebrated on July 3 at St. Lawrence's, Weston Underwod, Olney, by the Rev. R. R. Vyvyan, vicar of the parish, assisted by the Rev. E. R. Sill, between Lieut. John Francis Bowyer, R.N. (Emergency List), younger son of Lieut.-Colonel W. G. Bowyer, and Violet, widow of Capt. Egerton Wright, M.C., and youngest daughter of Major-General G. R. J. Shakespear, Indian Army.

A marriage has been arranged between Lieut.-Col. Hugh Castle-Smith, A.D.C. to H.H. the Sultan of Egypt, and Maude Ellefred, only daughter of Sir Frederick Evans, K.C.M.G., K.C.V.O., C.B.E., Colonial Secretary, Gibraltar, and Lady Evans, 57, Wetherby Mansions, S.W.

The marriage was celebrated on July 2, at Holy Trinity Church, Tulse Hill, by the Rev. Montague Dale, between Edward, second son of Mr. and Mrs. Edward Speechly, of Karachi, India, and Lilian, second daughter of the late Mr. John Gurley and Mrs. Gurley, of Tulse Hill.

The marriage was celebrated on July 5, at St. Peter's, Ealing, by the Rev. J. Bertram Kite, between Arthur Stanley, second son of Mr. and Mrs. Charles Wimble, of "Thirlmere," Beckenham, and Dorothy, daughter of the late Mr. H. H. Rotton, I.G. Police, India, and Mrs. Rotton, 7, Eaton Rise, Ealing.

A marriage has been arranged, and will take place in August in Shillong, Assam, between Captain A. B. Blaxland, 16th Rajputs, elder son of the Rev. Bruce Blaxland and Mrs. Blaxland, Shrewsbury, Shropshire, and Lilian Alice, elder daughter of Mr. Macleod M. Ferguson and Mrs. Ferguson, of the Imperial Bank of Persia, Shiraz.

The marriage was celebrated on July 3, at St. Peter's, Cranley Gardens, by the Venble. the Archdeacon of Liverpool, assisted by the Rev. H. B. Cogan, D.D., and the Rev. W. Jackson, Harold Spooner, M.C., Chaplain Indian Establishment, to Alice Maud, youngest daughter of Major-General G. F. A. Harris, C.S.I., I.M.S., and Mrs. Harris.

A fancy dress ball took place at the Hyde Park Hotel on July 7 in aid of the Hon. Evelina Haverfield's fund for providing homes for Serbian soldiers in Serbia. This was the last of the series of Slava balls held under the patronage of King Manoel, Princess Louise Duchess of Argyll, Princess Marie-Louise, President of Slava Week, and the Marchioness of Carisbrooke, Vice-President.

The marriage was celebrated on June 11, at All Saints' Church, Srinagar, Kashmir, between the Hon. Major-General W. R. Edwards, C.B., C.M.G., K.H.P., Director-General I.M.S., son of the late Canon Edwards, Llandaff, and Nellie, widow of Lieut.-Colonel R. Bird, C.I.E., M.V.O., and daughter of the late Lieut.-Colonel R. Dewar, R.A., and Mrs. R. Dewar, 31, Beaufort Gardens, S.W.

The marriage was celebrated on July 5, at St. Saviour's Church, Paddington, between Conrad Lucas Rutty, 8th Australian Light Horse, of Tresco, Victoria, Australia, younger son of Mr. and Mrs. John Rutty, of "Holmby," High Wycombe, and Gladys Muriel Irvine, youngest daughter of the late G. H. List, engineer-in-chief, N.W. Railway, India, and Mrs. List, 8, Delaware Mansions, Maida Hill, W.9.

The marriage was celebrated on July 2, at St. Mary's Church, Streatley-on-Thames, by the Rev. H. G. Nind and the Rev. E. T. Gillam, vicar of the parish, between John Warwick Nind, third son of the late J. G. Smith, barrister-at-law, Chief Judge Court of Small Causes, Madras, and Mrs. Smith, Walnut Tree Cottage, Streatley-on-Thames, and Amy Mary, only daughter of Mr. and Mrs. D. W. Greatbatch, of Kimberley, South Africa.

The Prince-Regent Alexander, of the Kingdom of Serbs, Croats, and Slovenes, has accepted the honorary degree of Doctor of Law which the Senate of the University of Cambridge recently decided to confer upon him, and in a message to the Senate describes the honour as a new proof of the cordial sympathy expressed by all classes of society in England for his people, sympathy for which he and his people are extremely grateful. The degree will be conferred in the autumn, and the Prince-Regent will be present at the ceremony if conditions permit him to be absent from his country.

RETIREMENT OF DR. J. B. CHRISTOPHERSON.

Dr. J. B. Christopherson has retired from the Sudan Civil Service, and is now in England. Before going to the Sudan he held the post of demonstrator of anatomy at St. Bartholomew's Hospital, London, and he was surgeon to the Seamen's Hospital Society, Albert Dock branch. In the South African War he served as surgeon attached to the Imperial Yeomanry Hospital, Dealfontein. It was in June, 1902, that he joined the Sudan Government service—in the capacity of surgeon attached to the Egyptian Army. For a year and a-half he was Senior Medical Officer at Omdurman, and it was there that he showed much skill in warding off threats of a serious outbreak of smallpox. He was appointed in 1903 Physician to the Governor-General at Khartoum. In the early part of 1904 he initiated and organised the Civil Medical Department of the Sudan Government, and for five years—until 1909—was its first Director. He then became Director of the Civil Hospitals, Khartoum and Omdurman, and this position he held until his retirement. During the present war he served in Serbia as surgeon to one of the Medical Missions sent out. He was taken prisoner by the Austrians, but, being released in 1917, he was appointed a member of the Commission on Medical Establishments (France). It is, therefore, with a splendid record of seventeen years' service that Dr. Christopherson has left the Sudan. His medical triumphs in that country have been many, not least among them being his new and very important discovery in the cure of bilharzia.

Digitized by Google

A marriage has been arranged between Captain (Brevet-Major) Patrick Jack Tottenham Pickthall, M.C., Royal Artillery, of La Jaspellerie, Sark, eldest son of the late John Maynard Pickthall, and Kathleen, daughter of the late Colonel Claude Melville Crawford, 6th Goorkhas.

The engagement is announced of Temporary Captain James Elmslie Henderson, M.C., R.A., Egyptian Civil Service, only son of the Rev. George Henderson, B.D., Monzie, Scotland, and Edith Mary, elder daughter of H. Michael Elliott, Hallamgate Road, Sheffield.

At Caxton Hall, Victoria Street, Westminster, at 3.30 p.m., on July 17, Mr. Alexander Devine will give an address on "The Present Crisis in Montenegro." The chair will be taken by Sir Robert J. Kennedy, K.C.M.G., who was formerly H.B.M. Minister in Montenegro.

Delegates attending the International Hydrographic Conference visited the Admiralty Observatory at Ditton Park, Datchet, on July 3, accompanied by the President, Rear-Admiral Sir John G. F. Parry. Among those present were representatives from Egypt, Greece, Italy, and India.

Sister K. H. Wheatley, who, as our readers will remember, did much good work in Constantinople during the Balkan War, has been selected for the post of Matron under the Civil Administration in Mosul. During the present war, besides service in France, she has performed notable duties in India and Mesopotamia, and is therefore fully qualified for the new position of pioneer work amongst the Arabs.

APPOINTMENTS, PROMOTIONS, &c.

Our Cyprus correspondent writes :—Mr. B. Dickinson has been appointed to act as President of District Court of Larnaca during the absence of Mr. Alan Stuart, as King's Advocate.

Mr. H. C. Grimshaw is appointed to act as President of the District Court of Papho.

We learn from the *Egyptian Gazette* that Dr. Douglas Dunlop, Adviser to the Minister of Education, is retiring from the service of the Egyptian Government on the expiration of his leave this year, and that the Council of Ministers have approved the grant to him of a special pension of £E1,200 in respect of his long service in Egypt.

OBITUARY.

The death occurred on June 29, at the Vicarage, Minster Lovell, Oxon, of Charles W. White, of India.

The death occurred on July 4, at The Abbey, Abingdon, of the wife of Sir Henry Bliss, K.C.I.E., Indian Civil Service (retired).

The death occurred on June 28 in Bombay of Gregor Hugh Grant, of Bhagalpur, Bihar, and Orissa, eldest son of William Maling Grant, of Bhagalpur and Sendhurst Grange, Send, Surrey, aged 39.

The death occurred on June 28 of Commander William Ramsay Binny Douglas, C.I.E., Royal Indian Marine, second son of the late Binny Douglas and of Mrs. Douglas, 108, Oakley Street, Chelsea.

General G. A. Prendergast, 15th Bengal Lancers, died at 6, Bramham Gardens on July 8. He served in the Indian Mutiny and in the Afghan War in 1879, for both of which he received the medal.

The death occurred on July 6 at The Thirlings, Wooler, of Colonel John Watson Macclesfield Anderson, late of H.M. 26th Bombay Native Infantry, and Superintendent of the Sind Revenue Survey, in his 82nd year.

The death occurred on July 1, at 21, Hamlet Road, Upper Norwood, of Henry Frederick White, M.I.C.E., Indian P.W.D., late Chief Engineer Gwalior State, Central India, in his seventy-ninth year. He had held various engineering appointments in Burma, Hyderabad, Rajputana, and Central India.

DOMESTIC ANNOUNCEMENT.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. Announcements must be authenticated with the name and address of sender.

BIRTH.

HAMILTON SMITH.—On July 8, at Greenbank House, Aughton, Lancs., to the wife of the Hon. Frederick Hamilton Smith, a daughter.

NEWS IN BRIEF.

Greek forces leaving Roumania and other reinforcements have been ordered to Asia Minor.

Bonfires on the Quetta hills spread the news of the signing of the Peace Treaty throughout Baluchistan.

The Roumanian Government has officially recognised the Kingdom of the Serbs, Croats, and Slovenes.

According to Bolshevist wireless messages the French have decided to forward the Russian prisoners in Varna by steamer to Odessa, and Greek troops are being evacuated from Constanza.

Peace celebrations in Cairo are to take place on July 12, 13, and 14. Upon news being received of the signing of the Treaty a salute of 101 guns was fired. The natives showed no signs of participation in the rejoicings, and the Italian community held aloof.

Native soldiers have been placed on guard over the former German Legation at Tangier as a precaution against any attempt of German agents to destroy property before it is officially handed over to the Sultan.

General Sir H. Plumer is visiting different parish priests of Malta with a view to ascertaining the causes of discontent in the island.

Serbia denies emphatically that the remains of the assassin of the Archduke Ferdinand and others have been transported to Bosnia, and buried there in the presence of Serbian officers and representatives of the Government.

A protest made by the Italian Minister at Athens regarding the non-acceptance at Greek telegraph offices of telegrams written in Italian and destined for Serbia was met by the statement that the non-acceptance was in conformity with an official Serbian notification.

Reuter reports that according to a telegram from Constantinople it has been decided to dispatch a British regiment from the Caucasus to the Amisos district (near Samsun on the south coast of the Black Sea), in consequence of the presence there of bands of Turkish brigands.

By a legislative decree women having the same qualifications as those required for men are eligible for places in the Greek Finance Ministry's Audit Department. Women may be appointed, in future, to posts as Customs House officers, legal advisers, cashiers, and coastguards.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

THE NEXT STEP TO PEACE.

Mr. Lloyd George's survey in the House of Commons of the Peace Treaty and the Paris negotiations has been rightly accepted with thankfulness and enthusiasm by the British public. It is a long way from Armageddon to Amerongen; but it is unfortunate that popular interest should now be centred on the spectacular trial of the ex-Kaiser when the Peace is still far from complete, and unhappily there is a tendency on the part of both press and public to forget that the details of the terms granted to Austria, Bulgaria, and Turkey will be not less important for the future of the world than the clauses which the Germans have signed. Nor must the element of time be omitted. The Allies of Germany collapsed before their leader admitted defeat, but they have had to wait longer for the verdict, and indeed there are indications that Bulgaria, the first to quit the field, will be the last to enter the council chamber. It was inevitable, of course, that the German treaty should be drafted first. But it should not have been impossible to complete the Austrian terms almost at the same time, and to deal at least provisionally with the two remaining parties to the war. But Bulgaria seems to have been omitted altogether from the maps used by the Big Four in Paris, and the new diplomacy can hardly be congratulated on the conduct of the opening round with Turkey. It was admittedly a sound policy to ask the Turks to send delegates to state their attitude; and it was very natural for an Ottoman diplomat to put his case at the highest—the maintenance of the *status quo*. That was, as it were, no more than the formal handshake of the boxers before entering the ring, and nobody can have been more surprised than the Turkish delegation to find their bluff taken seriously, and a rhetorical lecture delivered on the iniquity of their pretensions. In contemplation of the stupendous task before them, the Allied statesmen or their secretaries at Paris seem to have lost their sense of humour. The Turkish claim was preposterous; for that reason it should have been laughed at, not dealt with in the manner of a schoolmaster correcting a foolish essay of an impertinent pupil. As it is, the return of the Turkish delegates to Constantinople must cause a delay of some weeks in the conclusion of the settlement; and we are afraid that the same must be added as regards the sudden departure of M. Bratiano for Bucharest. In this latter case, as in certain others during the past six months, it is difficult to avoid the suspicion that the smaller States in Paris have not always been treated with sufficient courtesy and tact. Their demands may have been excessive, and too much imbued with the chauvinism which so naturally shocks the Great Powers, but there are more ways of dealing with such pretensions than the curt method of a bare negative. We do not say that this is what happened in the case of Roumania, because no information as to the reason for the rupture has been vouchsafed by either party to the dispute; but the procedure is becoming painfully familiar, and the consequences cannot be other than unfortunate.

It is stated, indeed, with some show of authority that the Austrian terms are now practically complete in their military and financial details, but that territorial questions have been left over for the present. The statement unfortunately contradicts itself. The least important part of the late Austro-Hungarian Empire at the present day is German Austria, and its future has already been decided by the condition—which can hardly be more than provisional, since it can be so easily evaded—that it shall not unite with Germany. But it is frankly impossible for the relatively small province of German Austria to bear the whole of the Austro-Hungarian debt. The alternatives are repudiation—which we take to be ruled out in advance—or the assumption of some portion of that debt, part at least of which has been contracted for civil purposes, by the new States which are to be erected on the ruins of the old Empire. But how can the debt be apportioned among the new States without the precedent determination of their boundaries? The load must be apportioned to the shoulders that bear it, and at the present time the frontiers of Bohemia and Yugoslavia are entirely a matter of speculation. It appears that in this matter the Conference is proceeding on wrong lines altogether. The proper method would be to determine frontiers first and finance second; but because there have notoriously been disputes over boundaries, these have been adjourned, apparently in the hope that national jealousies would die down by the simple process of neglect. It is a matter of common knowledge that the result has been the exact contrary. There have been regrettable incidents without number, and almost open war, between rival partisans; at no time has local or national patriotism been more embittered, and a just settlement will be incomparably more difficult now than in February, since claims have been staked out and pledges given which, although properly condemned at the time, have sunk deeply into the consciousness of the contestants. The idea that the whole controversy, or rather series of controversies, would die down of inanition, shows a deplorable lack of political knowledge.

Nor can the position in the Ottoman Empire be considered any better. With the approval of the Conference, which had repudiated the staking out of claims in Austria-Hungary, Greece was allowed to stake out a very definite claim in Asia Minor. At the same time, the Conference failed to make any definite statement that Greece was acting with its approval, or regarding the lengths to which Greece should be allowed to proceed. The result so far has been most unfortunate; it has precipitated civil war in the Smyrna district, led to a revival of trouble between Greece and Turkey, and renewed that ancient secular controversy between Italy and Greece in the Levant, which it was in the interest of every Power using the Mediterranean to settle. Is there any more certain road to international friction and disaster than this? It is indeed an unhappy inauguration of the League of Nations and the aspirations for a new world that the old should be set by the ears in this fashion. The whole trouble is a consequence of the delay and vacillation and the apparently ineradicable habit of postponing difficulties. It is earnestly to be hoped that the Conference, now that the major settlement with Germany is happily out of the way, will adopt a different procedure, and discuss the territorial basis of the future before it proceeds to other factors, necessary but less vital to the populations of the Near East. According to the enlightened views of Western Europe, the people of the Balkans and Asia Minor may be primitive in their idea that boundaries are more important than anything else; but it is a maxim of sound statecraft to deal with people as they are, and not as they should be, and in that sense the method of discussing Adriatic, Levantine, and Macedonian problems has been hopelessly at fault. Vacillation and postponement have merely led to the exacerbation of competitive claims, and the danger of the whole proceeding has been seen in the steady advance of Bolshevism. The reports from the Near East are uniformly pessimistic, and no improvement can be expected until the future is settled on a firmer and juster basis than at present seems in sight.

A KOPTIC FESTIVAL.

(From a Correspondent.)

The Kopts celebrate annually, in May, a great *moulid*, or birth-festival, in honour of the Lady Dimiáneh (or Damiáneh), who suffered martyrdom in the reign of Diocletian. A convent dedicated to this virgin saint is held in great veneration. Marvellous cures are effected there, and much is heard of a miraculous chamber in which, during the festival, the Lady Dimiáneh herself and other saints appear in shadow to the faithful; this being one of the principal attractions for many pilgrims to the shrine. I was honoured by an invitation from the Koptic Matran, or Metropolitan, of Jerusalem, the courteous and hospitable Basileos whose acquaintance I had made during one of his annual visits to Egypt at the residence of the Patriarch of the Kopts at Cairo.

The convent stands in complete solitude in the waste lands to the north-east of the Delta, about halfway between Lake Bourlos and the Damietta branch of the Nile. From Alexandria you must go by a circuitous route *via* Mansourah. Starting at 8 a.m., you reach Mansourah (110 miles) at 5 p.m.—*i.e.*, you reach Talkha on the west bank of the Nile, where a group of noisy ferrymen await the train, the town—a great cotton centre—being prettily situate on the opposite bank. Here an imposing array of cafés and restaurants kept by Greeks welcomes the traveller. The town resembles in dust and general squalor most of the villages of Egypt. I secured a passage in one of the numerous Nile boats that convey pilgrims to the Fair; and after a Greek dinner, went on board at 9 p.m., starting soon after. My fellow passengers were a Kopt, his wife and daughter, all wrapped in thick rugs and fast asleep. Our boatmen were two swarthy and rather morose Egyptians who kept up a monotonous chant while they tacked and rowed. A shabby little awning sheltered part of the foredeck. The night was heavy with dew and mist. Before dawn we arrived at Kilweh, our landing-place, and moored alongside other boats filled with pilgrims. On the bank were large clusters of donkeys and mules, whose drivers were vociferating and haggling with travellers as they landed. Selecting a vigorous mule, I joined a string of pilgrims. The air was cold and damp, and we were well on our way before the sun shot up. As the mist dispersed we found ourselves riding through a pleasant tract of open country. We passed two small villages, Batra and Bis-engéli; then crossed a canal by ferry boat, and struck northward along a beaten track into a verdant but uncultivated expanse, intersected by small dykes, through which our animals waded. We kept on overtaking groups of pilgrims, mostly mounted.

At last the convent stood out in dazzling sunshine. So strong was the mirage that the building seemed to rise from a vast lake. It was still early morning when we arrived. The sun beat fiercely on numerous little white domes which surmount the convent, and which the Kopts say it is impossible to count. In front was an immense array of tents of all sizes and colours. Countless donkeys and mules were tethered amongst them, feeding on heaps of green *bersim*, or lucerne. Booths and stalls were filled with all the articles that are found at fairs all over the world, and with products of Egypt in particular. Everywhere groups of visitors were eating, smoking, chatting, bargaining, and scrutinising newcomers. The fair lasts eight days, and the time is spent in churchgoing, trading, and merrymaking. Outwardly it resembled in most respects one of the larger of the Mohammedan *moulids*. I fell in with a Koptic acquaintance from Cairo, and we strolled about the great encampment before entering the church. To reach the main entrance we passed along an avenue of booths, in which wares of a superior class were exposed. Among the dealers was an agent of the British Bible Mission from Cairo, whose books included a goodly array of Testaments and Gospels in Arabic. A few steps led up to the church. The Bishop of Jerusalem was officiating in the *heykel*, or chancel. The other compartments into which this, like other Koptic churches, is divided were occupied by a dense crowd, almost entirely of women. A less reverent congregation could not be imagined. A loud buzz of voices was broken by jokes and laughter. Deacons and acolytes in vain endeavoured to keep order. Now and then a priest stepped from the *heykel* and expostulated. At the entrance stood two surly-looking men armed with whips of hide, which they used freely upon intruders to whom they objected. The atmosphere was stifling, and we were glad to make our way to a large upper chamber to which the Bishop had invited me. It was furnished with a luxurious silken divan. Here, after a long service, His Eminence joined us, attended by a suite of priests and monks. After chibouks and coffee and a long chat, I explored the now almost empty church, in which were many pictures of the Lady Dimiáneh, with her forty virgins, and other saints. We next made our way to the "chamber of imagery," as it was called by Dr. Lansing, an American friend at Cairo. It was a small room supporting one of the numerous domes before mentioned. It was crowded with men, women, and children. Among them were several girls "possessed of devils," who lay on the floor. We managed to squeeze in. An old man, a pedagogue by profession, was keeping up a very dismal chant. We fixed our eyes on a point high up in the wall at which we were told the shadows would appear. We had not long to wait. After a few minutes a faint shadow, which appeared to have no definite form, was thrown upon the wall from a small aperture in the opposite spring of the dome. The apparition was greeted with a loud murmur of voices. My companion explained that the shadow had been pronounced to be that of St. Theodore (*Mar Tadrus*). Then, at short intervals, other shadows appeared, being acclaimed as those of the Virgin Mary, the Lady Dimiáneh, St. George—the mighty warrior—and other saints. It was clear that the miracle—a very clumsy one—was worked from the roof; but the credulity of the simple-minded devotees was no more surprising than what is to be witnessed at countless other shrines. There were several demoniacs and sick folk outside the chamber. The most striking of the patients was a well-dressed Kopt lady who lay on the bare floor and appeared to be very ill. Near her was her husband, or some close relative, who frequently stooped over her and whispered in her ear. She remained absolutely motionless and speechless, and evidently in need of careful medical treatment rather than faith-healing under such very unfavourable conditions.

We inspected other portions of the building. Beneath one of the domes is the reputed burial place of Sitt Dimiáneh. A few steps led to a bare chamber which contained no monument of any kind. The walls were covered with the names of pilgrims, and many scribblings in Arabic. Other rooms were occupied by pilgrims of both sexes resting or asleep; and some belonged to monks. The whole building stood in need of repair. I heard quite a chapter of legends connected with the convent—of cures effected, miracles wrought, sceptics confounded, and troubles evaded through the influence of the saint.

The good Bishop pressed me to remain till the end of the *moulid*, but I could only accept an invitation to a midday meal. He led me through a forest of small tents to a spacious green marquee. As we passed, all the bystanders ran forward to kiss his hand. In the tent a little band of choristers was drawn up, and chanted a long grace. There were two other guests, whose names I did not catch. The dinner, a thoroughly Oriental one, was served on a large tray placed on a *kursi*, one dish being a whole roast sheep. As we sat down a servant brought a knife and fork for my special benefit. While the sheep was "on," his Eminence deftly inserted his hand into it several times and handed me dainty morsels. All round the tent sat a venerable company of grey-bearded Kopts. After the repast the choristers again chanted a grace, and received the well-merited praise of the Mutran. Through an open end of the tent we looked upon a great stretch of sandy wilderness, where a troop of horsemen were galloping wildly in the mimic warfare of the *jerîd*, checking their horses while at full speed, and raising clouds of dust, which were carried away by a light breeze. As we watched the scene and the gleaming delusion of the mirage all around, we seemed to be standing on an island encircled by an endless expanse of waters. On the way back we were entertained with pipes and coffee in the tent of a notable Bey of the Kopts, who provided me with an excellent horse and escort, and a note which secured a change at a halfway house. A ride of about 25 miles brought me to a crossing, and I reached Mansourah about the same time that I had left it on the preceding night.

R. M.

The report of the Committee appointed last January, under the chairmanship of Lord Crewe, to inquire into the organisation of the India Office and the relations between Whitehall and the Government of India, was issued on July 9.

THE FUTURE OF ST. SOFIA.

On July 4, at Chelsea Town Hall, Prebendary Gough, Vicar of Brompton, gave a lantern lecture descriptive of a recent visit to the British forces in Salonika, Constantinople, and neighbourhood. Speaking of St. Sofia, he said that he went there accompanied by a young English officer, who spoke Turkish and liked the Turks; and, his young friend acting as interpreter, had a long interview with an old man they had seen reading the Koran. The old man took them about the building and showed them all sorts of things, but, although he was obviously very poor and lived, perhaps, on alms, he would not accept any payment. When they left him he looked up to Heaven and, with the sun falling on his face, gave them his blessing.

The lecturer said there were some very ancient Christian churches in Constantinople, now used as mosques, which he thought might be returned to Christian worship; but he was not prepared to advise that St. Sofia itself should be handed over to Christians. It had never been the property of the Greek Church, but of the Byzantine Empire, and the Greek Church was far from being that Empire's heir and successor. But why should not the Turks say that this great building was fit to be the church of all nations, and let it be a place into which any reverent person might go and say his prayers? It was the most wonderful sacred building in the world, the most impressive, the most subduing, and the most uplifting, and he would like to see it a place where there should be no quarrelling of sects, such as disgraced the Church of the Holy Sepulchre at Jerusalem, but a place where men could go and think solemnly and sacredly, none disturbing them because of rival creeds. On all grounds, political and religious, this would be the best treatment of St. Sofia.

Of Salonika he said that it had a splendid geographical position; but if neither Serbs nor Bulgars used the port, the prospects of business there were very poor. At the present time he understood that the Spanish Jews, who were the backbone of the industrious population of the town, were beginning to leave it. But while the British Army remained the Jews would still be able to do business.

The Government of India, with the approval of the Secretary of State, has extended the State of Benares by the inclusion in it of Ramnagar, the town on the bank of the Ganges opposite Benares, where is situated the palace-fort in which his Highness resides, and seven adjacent villages. The additional area comprises five square miles.

THE LEBANON HOSPITAL: ASFURIYEH, SYRIA.

The Lebanon Hospital for Mental Diseases, which is the only one of its kind in Syria, has just issued its twentieth report—for two years ending March 31, 1919. This institution was allowed to stand unmolested throughout the war—a remarkable tribute paid by the Turks to its value. The experiences of the hospital staff during the war were very trying, largely owing to the scarcity of food. Things greatly changed, however, with the entry into Beyrout of British troops, whose behaviour was characteristically generous. The report points out in its conclusion that five years of practically a state of siege inevitably caused deterioration to the hospital, and that there are debts to settle, reparation and replenishment to be done, and schemes of improvement to be carried out. For these purposes a sum of £15,000 is necessary, towards which there is in hand £1,300. The Committee therefore appeal for £13,700. All communications should be addressed to the General Secretary, Miss A. M. Gooch, Lebanon Hospital Office, 35, Queen Victoria Street, London, E.C.4.

INDIAN SELF-GOVERNMENT.

At a meeting held on July 2, at the Essex Hall, at which many members of the Indian community in London were present, Mr. Surendranath Bannerjee gave an address on Mr. Montagu's Bill for the reform of the Government of India. Lord Islington, who presided, said that as one who had been closely associated with the scheme under consideration, he trusted that the Select Committee and then Parliament might between them succeed, at an early date, in threshing out a settlement which on the one hand would promise a fair prospect of success in working, and on the other hand would be found acceptable to reasonable opinion throughout India. Mr. Bannerjee said: We have a population of 300 millions devoted to the British connection and ready to be spent in the service of the Empire. We believe that with the British connection are bound up the best prospects of Indian advancement. Self-government would allay Indian unrest and extinguish the last traces of the revolutionary movement.

News has been received, says *The Times*, that the ex-Shah Mirza Mohammed Ali has returned to Persia after long exile, and is at Kazvin, 100 miles north-west of Teheran, on the road to Tabriz.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

A report reaches me that very interesting developments in the matter of aviation may be expected shortly in Yugoslavia. In the course of the next few weeks it is confidently expected that there will be in operation a regular air service, postal and passenger, between the three chief towns of the new kingdom of the Serbs, Croats and Slovenes. Not the least interesting feature of the enterprise is the fact that a British firm will be responsible for the service.

***

Elsewhere will be found a report of the first annual general meeting of the British-Roumanian Chamber of Commerce. Lord Bessborough, who presided, referred to the good opening that it was believed would exist in Roumania for British business, and remarked on the gratifying interest now being taken by a large number of firms in trade with Roumania. The Chamber of Commerce has undoubtedly done much to awaken this interest, and it is most satisfactory to learn that a similar organisation is to be established in Roumania. Working together, the two Chambers should be able to do work of incalculable value for the development of British commerce.

***

The resignation of Sir Arthur Steel Maitland raises afresh the question of the organisation of our commercial intelligence system. The new Department of Overseas Trade was intended to provide a common ground on which the Foreign Office and the Board of Trade could unite in furthering British trade interests. The task of the head of the Department as an Under-Secretary of the Foreign Office, and also as an additional Parliamentary Secretary of the Board of Trade, was one which carried the possibilities of difficulty, but the compromise seemed to work perfectly under Sir Arthur Steel Maitland, who has greatly enhanced his reputation during the past two years, during which the Department has more than justified its existence, and by its initiative and enterprise has gone far to convince the business community that they may look to the authorities for real support in commercial matters. In the light of Sir Arthur's letter it is to be assumed that the system of dual control has, after all, proved unsuccessful. If that is the case it remains to find speedily some more practicable method of dealing with the question of commercial intelligence.

***

The fruit report of Messrs. C. J. Giraud and Co., of Smyrna, shows that the prospects for the export of fruit from Turkey this year are most unpromising. Stocks of figs and sultanas on the market are small, and as regards this year's harvest all fruit crops are reported to be in a bad way. The tree crops, it is stated, have very little fruit; "a disastrously small yield of sultanas" is foreshadowed by reports from all over the country; and the only relief is forthcoming from the fig districts, but even there the crop estimate is less than last year.

***

The estimated yields for the war period show that the fig crops were throughout very considerable, but that the yield of sultanas decreased every year from 44,000 tons in 1915 to 25,000 tons in 1918. Turkey was naturally deprived of large markets for her fruit crops by the war, but a demand arose for the fruit for the production of alcohol, and this, we are told, contributed in no small measure "to the absorption of a substantial proportion of the fruit crops"; and then after Bulgaria entered the war there was a steady business with the Central Powers. The new market for the fruit and the depreciated currency are reflected in the prices to which the produce rose. Thus, sultanas, which varied from 1¾ to 4 piastres the oke in 1915, reached 42 piastres in 1918, while figs, which realised an average price of 85 piastres per kintal in 1915, rose to 1,250 piastres in 1917.

***

As the outcome of the visit of the Greek Commercial Mission to this country last year the Greek Interests Bureau has just been opened at Dorland House, 16, Regent Street, S.W.1. The bureau will be primarily concerned in advancing the interests of Greece and Britain in agricultural, industrial and commercial matters, but other phases in the relations of the two countries will not be ignored, and besides the promotion of tourist traffic when adequate hotel accommodation has been found in Greece, literary, artistic, and scholastic matters will also fall within the scope of the programme. The bureau, which owes its origin to the goodwill and enterprise of the leaders of the Mission, and enjoys the co-operation of the Greek Minister, M. Caclamanos, is under the direction of Mr. William Hill, who accompanied the Mission during its tour.

***

At the general meeting of the Anglo-Egyptian Oilfields, Sir Marcus Samuel stated that the production for the present six months—127,604 tons against 136,241 tons last year—bore out very fully the anticipations of the directors that until the Egyptian Government comply with the request to give the company more territory there can be no great expectation of maintaining a large production. They were working, he pointed out, on a small anticline, and when a great well came in it necessitated the shutting down of pumping in all the other wells because the flow of gas was so great as to render it extremely dangerous to continue working. They had also ample experience that gushers did not last long. He was convinced that with a fluctuating production such as they had, no other company could, unless circumstanced as fortunately as the Anglo-Egyptian Oilfields, carry on the business.

***

Shipping companies serving the Moroccan ports have notified shippers that, in consequence of the extra heavy expenses of working and the detention experienced by the steamers, they are compelled to raise their tariff rates by about 10s. per ton on and after August 1 and by a further 10s. for the winter months to Rabat, Laraiche, and Saffi.

***

At this week's general meeting of the New Egyptian Company, Mr. Baumann, the chairman, was able to give a satisfactory account of the past year's operations. The gross revenue of the company amounted to £79,456, from which has to be deducted the expenses of administration in Egypt and in London, £20,061, and the interest on the debentures, £4,196, leaving a balance of £55,196, which with £24,482 brought forward, gives an available balance of £76,679. Out of this a dividend of 1s. 6d. per share, equal to 10 per cent., is to be paid, absorbing £33,478, and the large balance of £46,200 is to be carried forward, in view of the recent disturbances in Egypt and of the fact that considerable damage was done to the company's property. As regards prospects it may be noted that the sale of a further 648 feddans at an average price of over £150 was completed after the closing of the accounts, while from January 1 to May 31 of the present year deeds have been signed for 304 feddans, and in addition 371 feddans have been sold at an average price of £155.

***

Mr. Baumann drew the obvious moral for the shareholders that their dividends and the continued sales of land in Egypt depended on the settled order and the good government of the country. Commenting on the mixed nature of the population of Egypt, with its four classes of persons, the fellaheen, the effendia or official class, the European residents, and the sprinkling of British officials, he said that the trouble about Egypt was, that it was neither Egyptian nor British, and if they were to succeed there they must make it either less British or more British.

***

The report of the Assam Oil Company for 1918 shows results very similar to those achieved in the previous year, the net profit being £85,850, compared with £89,800. The allocations to depreciation is again £25,000, the excess profits duty for 1915, 1916, and 1917 takes £38,578, which is roughly equivalent to the amount brought forward, and the dividend on the ordinary and the preference shares is maintained at 8 per cent. While the production was less than in 1917 the various products realised good prices. Wells are being drilled in two new areas, and during the year a well was completed on the Makau field, in which oil was found, though not in paying quantities.

CONSTANTINOPLE BUSINESS LETTER.

Hindrances to Trade.

(From Our Own Correspondent.)
Constantinople, June 14.

So far as business is concerned, things are very quiet in Turkey at present, in spite of the paucity of the stocks of good class manufactured goods. No one is prepared to buy more than is absolutely necessary to keep things going, and even then, only goods that can be delivered almost immediately. A couple of months ago considerable quantities of manufactured goods, such as hosiery, underwear, and cotton piece goods, were dumped on the market from Greece, where there has been a severe commercial crisis owing to the inability or reluctance of buyers to accept goods ordered shortly before the Armistice in the expectation of the prolongation of hostilities. These goods are of very poor quality, but as they arrived at a time when the market was practically bare, they were sold without much difficulty, and Constantinople is now almost flooded with them.

Business is rendered almost impossible at the present moment by the heavy charges for freight and unloading, in addition to the lack of Customs accommodation and quay space Goods remain in lighters for three or four weeks. In addition to a freight charge of £8 per ton, it costs £4 a ton to discharge goods. As an instance, four cases of tinned meats costing £14 cost £3 14s. to deliver to the port, and by the time the goods were actually warehoused the total charges came to 50 per cent. of the invoiced cost.

Turkish Paper Money.

But the real key to the situation is the abnormal rate of exchange, as well as a feeling of nervousness and uncertainty as to the ultimate value of Turkish paper money. To-day British £1 Treasury notes are sold for about 400 piastres paper, although soon after the Armistice they could be bought for 150. Under the present circumstances business can only be done on a cash against documents basis, and no one will take Turkish paper money in payment. Therefore a merchant is obliged either to buy cash at the current rate of exchange, or to buy a cheque upon London, Paris, or elsewhere at an exorbitant premium. In the interval between the placing of the order and the delivery of the goods the rate of exchange, which fluctuates very considerably, may go heavily against him.

It is somewhat difficult to say how far the feeling of uncertainty as to the ultimate value of Turkish paper has to do with the unfavourable rate of exchange. No doubt there will be an improvement as soon as it is possible to export goods from Turkey. There is a considerable amount of material available for exportation, even apart from wool, which is on the list of goods of which the exportation is prohibited. But here again, the heavy freight charges form in many cases an insuperable obstacle. Such low-priced materials as valonea and rags cannot possibly bear a freight charge almost equal to their value. There is a good deal of mohair available, and shortly the dried fruits should be ready, which may help matters somewhat.

Nevertheless, the present heavy discount upon Turkish paper money is certainly due to some extent to a widespread feeling of doubt as to whether it may not suffer the same fate as the "caimé," as the Turkish paper currency, issued during the war of 1878, was called. Everyone recalls the disastrous results of the repudiation of the "caimé," which was burnt in stacks in the streets of Stamboul, and to-day, in consequence, everyone prefers any sort of money to Turkish paper Even the pre-war notes of the Imperial Ottoman Bank are at a premium of about 80 per cent. It is supposed that as Germany will be obliged to yield up to the Allies all securities, etc., placed in her custody to guarantee loans and emissions of paper money, the Allies will thereby become responsible for Turkish paper, especially as all German concessions obtained in consideration of financial obligations are also to be cancelled. But even this has had not the slightest effect upon the situation. If it were possible to accord Turkey a European credit the situation would be considerably improved. And after all, friends are affected as much as, if not more than, enemies, and surely there is enough potential wealth in the Ottoman Empire to cover the comparatively small Ottoman debt. For presumably, however the Empire may be carved up, each portion will have to bear its share of the financial burden.

Competition.

In the meanwhile there is every sign of an exceptionally severe struggle to capture the Near Eastern market. France, the United States, and Japan are all well in the field. The French have opened a well-organised information bureau, where samples are exhibited and requirements are studied. The Americans are equally well prepared for the fray, and a few days ago an American, Mr. R. I. Thomas, obtained a concession to exploit an oilfield which was discovered at Gallipoli. A Japanese commercial mission, consisting of thirty professors and business men, has recently arrived for the purpose of studying the situation and, if possible, of securing big contracts.

Nevertheless, British commerce has the initial advantage of unequalled prestige, and if the cards are rightly played Great Britain ought to capture the bulk of the business. One thing is absolutely essential: the peculiar requirements of the market must be carefully studied and met. In the past it has been a source of constant reproach to British manufacturers that even when they had the information they would not try to meet the peculiar requirements of the Ottoman market The German did, and got the trade. The moral is obvious. In the next place, a good agent is a necessity. A good agency is not necessarily a big concern handling nearly everything under the sun. There are many importers whose financial positions are perfectly sound, who do a considerable business by specialising in two or three particular lines which are allied to each other. It is these concerns which in the past have always been the most loyal and satisfactory supporters of British commerce in this part of the world, and for that reason they should now be encouraged and helped.

The Future.

For some time to come, engineering must be one of the most important factors in the Near Eastern situation. Roads, ports, railways, and works of all kinds are needed everywhere, while in Constantinople alone, fifty thousand houses would barely replace what has been destroyed by fire during the last five years. Agricultural machinery will also be in great demand, but hitherto the United States has produced more suitable machines than Great Britain. During the war the Germans were working a little scheme for the supply of motor ploughs, but of course that is now a thing of the past.

Shipping.

The ships of the old Austrian Lloyd Line are now being run by the Italians under the new title of "Lloyd Triestino." The old Austrian ships still bear the same names, and Italian merchant shipping has undoubtedly received a magnificent accession of strength. A direct service has been inaugurated between Constantinople and Taranto, in addition to the usual itinerary of the Black Sea and Ægean ports.

TRADE ENQUIRIES.

EGYPT.—ALBERT J. HALFON.—P.O. Box No. 1182.—ALEXANDRIA, British Agent, in touch for twenty years with the best clients of Egypt. Complete and unique organisation (also for visiting the provinces). Highest references. Would like to secure serious REPRESENTATIONS. Correspondence invited.

MESSRS. T. S. BOUTAGY and SONS of Palestine and Syria can export specialities of these countries and wish to represent shipping firms as well as maritime and fire insurance companies, and import English articles into these countries.—Address, T. S. BOUTAGY & SONS, Haifa, Palestine.

ROUMANIA.—S. N. Iancovici, Bucharest, Str. Academiei 6, desires to obtain English agencies. English correspondence. First-class references.

TEXTILE INDUSTRY IN TURKEY.

Production of Raw Materials.

(From Our Own Correspondent.)
Smyrna.

During the six or seven years preceding the general war considerable strides in the textile industry were made in Turkey, particularly in Smyrna town and district. At present in Smyrna alone, more than £500,000 is invested in these industries, the greater part of this capital, approximately 80 per cent., being British owned, and the balance Belgian or French. It is worthy of note that the whole of the textile industry with British capital is also run by British subjects, and it is not too much to say that so soon as the administration of the country is set in order and a stable and reliable form of government established, large orders will inevitably be placed with English firms, for the increase and extension of existing plants. It is an undoubted fact that Asia Minor being practically a virgin country, good government, security and justice will eventually offer an inducement for the investment of capital and for the development of the manifold industries which are at present lacking.

Two great factors on which the success of the textile industries in this country depend, should, however, be primarily considered. They are the following: (1) Development of cotton growing and (2) the rearing of sheep. The production of cotton might easily be doubled, but in order to attain this end it would be necessary to invest considerable sums in schemes and enterprises in the construction of dams for irrigation purposes, and the confining of the Meander River and its tributaries in new beds by which means thousands of acres of the best soil would be available for cultivation, and thousands more now insufficiently watered would have their complement.

In regard to wool, experience has shown that the country is naturally among the best adapted for sheep rearing, but hitherto the lack of security, and of scientific protection from disease, have proved serious obstacles. It would appear that the formation of a syndicate is at present under consideration, having as an object the amalgamation of five of the largest farms lying along the Aidin Railway Line with a total area exceeding fifty thousand acres for the purpose of sheep rearing. The plan is to centralise the working of these farms under the management of British or American expert farmers, so as to ensure their development on modern and scientific lines. It is reckoned that the capital needed for buying, stocking and working these farms will amount to some £600,000, but the success of the undertaking will, of course, greatly depend on the form of government eventually to be established in this part of the world.

SHIPPING INTELLIGENCE.

The Glenrazan, the first steamer despatched by the Moss Steamship Co., Limited, to the Near East after the signing of the Armistice returned to Liverpool on the 4th inst. with a cargo of 3,000 tons of manganese ore, making the round voyage in four months, the vessel having called at Poti, Batoum, Samsoun, Souchem, Constantinople, Smyrna, and Alexandria, at all of which ports it was apparent that the events of the last five years had greatly dislocated business, and that it will be some time before conditions are again normal, particularly in the case of the Black Sea ports, owing to scarcity of labour and lack of loading and discharging facilities. Whilst the Glenrazan is in Liverpool her name will be changed to Amasis, so that this nomenclature will conform with that of the other steamers of the fleet.

Messrs. John Birch and Co., Ltd., export engineers, of London, announce that they have undertaken the overseas agency of William Beardmore and Co., Ltd., the well-known Glasgow engineering firm. The Beardmore workshops are rapidly being converted from war to peace production of metals and machinery for distribution throughout the world. The Birch organisation, already far-reaching, is being further extended to meet these new requirements.

BRITISH ROUMANIAN CHAMBER OF COMMERCE.

The First Annual Meeting.

The Earl of Bessborough (Vice-President and Chairman of the Council) presided at the first annual general meeting of the British-Roumanian Chamber of Commerce, held at the London Chamber of Commerce on July 8, and amongst those present were Mr. H. Locke, Mr. H. C. Field, Mr. John F. Cleeves, Mr. E. W. Morgan, Mr. E. Dean, Mr. E. W. H. Barry, Mr. J. G. Evans, Mr. R. H. Rowell, and Mr. E. Agius.

The Chairman, in presenting the first annual report, which had already been circulated to the members, said:—"It would appear to be a happy augury for a useful and prosperous future for our Chamber that its first annual general meeting should be held a few days after the conclusion of Peace. I have pleasure in presenting the annual report of the Council and the statement of accounts. In doing so, I may say that the various gentlemen and firms who have associated themselves with the establishment of this Chamber have good grounds for satisfaction, in view of the progress that has been made in so short a time.

"I do not know that at this moment, immediately after the signing of Peace, when many of the political problems of the Near East are not yet definitely settled, it is possible for me to say much about the future. It is generally thought that the new Roumania will comprise within its boundaries some of the most fertile land in Europe, which must, as the resources of the country are developed, bring in its train increased opportunities for trade. I believe that there will be a good opportunity for British business in the future. The Chamber is now assisting in the development of this business so far as is possible. I have every reason to hope that in the future its opportunities will be largely extended.

"I understand that steps are being taken in Roumania to form there a British Chamber of Commerce, which will work in close relationship with our own. When this Chamber in Bucharest is formed, I hope that every effort will be made by them to create a Court of Arbitration, a vital necessity for the furthering of British trade. As you will see from the report, the Council has taken action whenever occasion for action has arisen. I believe I am right in saying that such concerted action as has been taken by this Chamber has not yet been taken by any body of traders which comprises so many interests in this country having relations with Roumania. It is gratifying to find that a large number of firms here are already interested, or are intending to interest themselves, in Roumania in the near future, and I have no doubt that the work of the Chamber will be of assistance to these firms; and that they will ultimately join us, and the Chamber will be very pleased to extend to them a hearty welcome." In conclusion, he moved:—"That the report and accounts for the year ending May 31, 1919, be received and adopted."

Mr. H. C. Field (of Messrs. A. Field and Co.) seconded the motion, which was carried unanimously.

On the motion of Mr. E. W. Morgan (Howse, Mead and Sons, Limited), seconded by Mr. John F. Cleeves (Cleeves' Western Valleys Anthracite Collieries, Limited), it was unanimously resolved:—(a) "That his Excellency M. Nicolas Misu, Roumanian Minister in London, be and is hereby re-elected President of the Chamber for the ensuing year." (b) "That Sir Albert K. Rollit, D.C.L., LL.D., Consul-General for Roumania, and the Earl of Bessborough, K.P., C.V.O., C.B., be and are hereby re-elected vice-presidents of the Chamber for the ensuing year."

The Chairman stated that there were ten vacancies on the Council, and the following gentlemen, who retired according to the rules, were eligible for re-election, namely:—Messrs. George Bonar (Low and Bonar, Limited), G. Boncesco (Roumanian Commercial Attaché), A. Bornemann (Ruston and Hornsby, Limited), F. C. Fairholme (Thos. Firth and Sons, Limited), H. C. Field (A. Field and Co.), Fredk. Greenish (J. Greenish and Sons, Limited), J. K. Lees (A. and A. Crompton and Co., Limited), C. C. Railton (Calico Printers' Association), J. Spence (Debenhams, Limited), and W. H. Suddards (J. Cawthra and Co.). The Chairman moved, and Mr. John F. Cleeves seconded, that these gentlemen be re-elected members of Council. There being no further nominations, the proposal was put to the meeting and carried unanimously, it being understood that the period of service in regard to these members would be for three years, in accordance with the articles of association.

The Chairman then moved:—"That Mr. H. Locke, hon. treasurer, and Mr. Charles E. Musgrave, hon. secretary, and Mr. Francis W. Pixley, hon. auditor, be re-elected to these positions. In doing so, he referred to the fact that Mr. Musgrave, the hon. secretary, who took a great interest in the work of the Chamber, was unable to be present that day owing to official duties connected with the visit of members of the London Chamber to the port and docks. The motion was seconded by Mr. E. Dean and unanimously adopted.

Mr. H. C. Field then proposed:—"That a hearty vote of thanks be accorded to the Earl of Bessborough, and also to Mr. H. Locke, Mr. C. E. Musgrave, and to Mr. Francis W. Pixley, for their services since the formation of the Chamber." This was seconded by Mr. E. Dean, and was carried unanimously, Lord Bessborough briefly returning thanks.—The proceedings then terminated.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, dated July 4:—

Owing to agricultural operations, the number on works decreased in Bankura District, Bengal, Bundelkhand Agency in Central India and in Central Provinces. Distress in Bhagalpur District of Bihar and Orissa shows signs of decrease, while distress in Angul District of Bihar and Orissa, and in Etawah District of United Provinces, is acute, and in Karauli State of Rajputana is increasing. Situation generally is unchanged in Bombay, but good rain has fallen in affected districts of Gujarat and Deccan, also in Kathiawar. Numbers relieved. Bengal.—Relief works, 7,305; test works, 2,456; gratuitous relief, 19,623. Bihar and Orissa.—Relief works, 3,498; test works, 6,079; gratuitous relief, 24,317. Feudatory States, Orissa.—Test works, 16,865; gratuitous relief, 23,278. United Provinces.—Test works, 18,741; gratuitous relief, 18,828. Rajputana.—Relief works, 1,055; test works, 4,968; gratuitous relief, 2,500. Ajmer Merwera.—Test works, 372; gratuitous relief, 203. Central India.—Relief works, 13,781; gratuitous relief, 10,565. Central Provinces.—Relief works, 10,806; test works, 10,567; gratuitous relief, 48,530. Bombay.—Relief works, 31,999; dependants, 13,894; village works, 5,510; test works, 1,193; gratuitous relief, 94,358. Madras.—Relief works, 56,399; test works, 2,493; gratuitous relief, 90,227.

INDIA'S COTTON YARN PRODUCTION.

According to the Department of Statistics, the total production of cotton yarn in Indian mills for the twelve months ended March last, was 615 million lb, as compared with 661 million lb. in the preceding twelve months, or a decrease of 7 per cent. Compared with the average of the five pre-war years the total shows a decrease of 32 million lb. or 5 per cent. The total quantity of woven goods manufactured during the period under review was 350 million lb., a decrease of 31 million lb., or 8 per cent., compared with the quantity manufactured during the preceding year, but an increase of 90 million lb., or 35 per cent., over the pre-war average.

The Indian gold output for May amounted to 38,608 oz., an increase of 360 oz. compared with the total for April.

The India Office announces that up to June 21 Indian Treasury Bills were issued to the following amounts—October 16, 1917, to March 31, 1919, Rs136,39,05,000; April 1, 1919, to June 21, 1919, Rs14,30,45,000; Bills discharged or discounted, Rs98,90,10,000; Bills outstanding on June 21, Rs51,79,40,000. Owing to cessation of sales, future notices regarding amounts outstanding of Indian Treasury Bills will be issued monthly instead of weekly, as hitherto.

ROUMANIAN COMPANIES.

Notice to British Shareholders.

The Roumanian Legation in London notifies that the previous notice on the subject of shares held by foreigners in Roumanian companies is cancelled and replaced by the following:—

"Persons and companies domiciled in the United Kingdom who hold shares in companies incorporated under Roumanian law which on or after August 28, 1916, have been sequestered or placed under the control of the Roumanian Government are hereby notified that, in order to comply with the provisions of the Decree-Law of the kingdom of Roumania, No. 1,353, of March 29, 1919, and the decision of the Department of Industry and Commerce of the Roumanian Government, No. 5,452, of March 5, 1919, they must within ten days from July 8 present their share certificates in such companies to the Roumanian Legation, 4, Cromwell Place, London, S.W.7, for the purpose of being vised and stamped. In the case of shares which were held by the present owner prior to August 28, 1916, proof must be produced in support of this. With regard to the securities which have been transferred or negotiated since August 28, 1916, proof must be given that on that date they were not held by or for account of subjects of countries with which Roumania has been at war nor in the meantime have been so held. The share certificates must be accompanied by a schedule in triplicate, giving the numbers and denomination of the shares held."

The following is the list of companies to which the present notice refers:—Erdoel Industrie, Societatea Express (in liquidation), Societatea Erderti (Bacau), Societatea Forestiera, Societatea Feher and Comp, Societatea Fenix, Societatea Furtuna (Jassy), Societatea Filaret, Fabrica de Tricotage a Societatii Anonime Romana, Societatea Goetz, Societatea Gruia Dudesti, Societatea Coroana (Fabrica de Produse Chimine), Societatea Ganz, Societatea Ilfov (Fabrica de Cherestea), Societatea Import-Export, Societatea Continental (Campina), Lissing and Maelman (Buzau), Societatea Lignitul Fabrica Luther, Societatea Motru, Lloydul Roman, Societatea Lessel, Loteria de Stat, Magazinele Generale si Antrepozitele "Obor," Societatea Marasti, K.K. Delsyndicat (Ploesti), Orenstein and Loppel, Petrol-Block (under control), Societatea Rahova (Lak-Blau), Societatea Romana-Germana, Societatea Anonima Silvica Romana, Societatea Anonima de Comert, Societatea Siemens Schukert, Societatea de Navigatie de Vapoare pe Dunare, Societatea Romana de Produse Chimice, Societatea "Stella," Societatea Romana-Germana (Telega), Societatea Austro-Ungara-Romana, Heinrich Schwarz Soehne, Societatea Germana-Romana pentry Valorificarea Matelor, Societatea Tisita, Societatea de Electricitate "Tudor," The Putna Saw Mills Company, Ltd., Societatea "Union." Societatea "Vega," Brown-Boveri, Societatea Auxiliara Arges (under control), Societatea Auxiliara, A.E.G. (Uzina Electrica), Societatea de Asigurari "Ancona" Societatea Agrara, Societatea Alianta, Banca Generala Romana, Banca de Credit Roman, I.M. Bendik and Comp, Societatea Anonima fosta Behles, Berliner Holz Comptoir, Buhusi (Fabrica de Postav), Societatea Buzau Nehoias, Creditul Petrolifer, Societatea Concordia, Societatea "Carpati" Fabrica de Zahar Chitila, (under control), Companla Generala de Electricitate, Societatea Carbon, Societatea "Coroana Romana," Societatea "Ceres," Societatea "Ceahlaul," Societatea "Carpatia," Societatea "Caminul Propriu," Dresdner-Bank, Societatea "Districutia," Societatea "Diana" Societatea Electrica, Societatea Silvica "Marnero" (Bacau), Societatea Co-operativa (Botosani), Societatea Co-operativa "Viitorul" (Botosani), Societatea Tramvaiul Electric (Jassy), Societatea "Vasilatu" (Valcea), Holtz-Comptoir Company (Dolj), Moara "Raiul" (Jassy), Uzina Electrica (Jassy), Fabrica de Tabscarie "Concordia" (Jassy), Fabrica de Tricotage Hodan and Cave (Jassy), and Societatea "Astra Romana."

A branch of the Eastern Bank, Ltd., has been opened at Mosul.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

As a result of the continuance of the strike, business has been almost at a standstill. Although fresh negotiations are taking place for a settlement there does not seem to be very much hope of an early resumption of work in the mills. The position of affairs is still very complicated, chiefly owing to the lack of unity amongst the operatives. Egyptian cotton rates show no change, and limited business has been done. Mixed reports are being received relating to the crop. It is feared that the output per feddan will be much below the current season as the plants have been injured by cold weather. Only retail lines have been put through in Egyptian yarns, and most spinners have refused to quote. A fair amount of demand has been met with in piece goods for Egypt and Near Eastern outlets, but buyers and sellers have found progress blocked. Shippers are anxious to place orders as there is a steady appreciation in values. Only isolated transactions have occurred for India in piece goods. Very little has been done for China. Manufacturers remain in a strong position, and there is no probability of cancellation of contracts as a result of late deliveries. American yarns have been flat and prices are strictly nominal. It has been very difficult to arrange sales in shipping yarns, very few producers being prepared to sell.

The Bland Line has established a weekly service between Tangier and Casablanca.

According to latest advices, the rate of exchange of Georgian roubles is 220 to the pound sterling.

COMPANY RESULTS, Etc.

The directors of the Batu Caves Rubber Company announce an interim dividend of 20 per cent. (4s per share), less tax.

The directors of the Singlo Tea Company have declared a final dividend on the Ordinary shares of 3s. 6d. per share, less tax at 5s. 9d. in the £, payable July 28; 20 per cent. for 1918.

The directors of the Dooars Tea Company have declared a final dividend on the Ordinary shares of 4s. 6d. per share, less tax at 5s. 9d. in the £, payable July 28, making 27½ per cent. for 1918,

Hope Tea.—Including £23,999 brought forward, the accounts for 1918 show a profit of £53,167. Further dividend of 10 per cent., making 30 per cent., less tax, for year, carrying forward £16,202.

The directors of the Bank of British West Africa recommend a final dividend to March 31 of 4½ per cent., making 8 per cent. for the year, plus bonus of 1 per cent., less tax.

Meenglas Tea.—The accounts for 1918 show a profit, including £8,034 brought in, of £22,327. Further dividend of 20 per cent., making 25 per cent., less tax, for the year, carrying forward £2,402.

The directors of the London County Westminster and Parr's Bank have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £20 shares (£5 paid), payable August 1.

The directors of the Bengal Dooars Railway Company have declared an interim dividend of 3½ per cent on the Ordinary stock on account of the year ending September 30 next, payable, less income-tax, on August 1.

The directors of the Eastern Extension Australasia and China Telegraph Company have declared an interim dividend for the three months ended March 31, 1919, of 3s. per share, payable, free of tax, July 15.

The directors of the Bank of Bengal announce a dividend at the rate of 14 per cent. per annum and a bonus of 3 per cent. per annum, both free of tax, placing to reserve Rs5,00,000. pension fund Rs1,00,000, and carrying forward Rs5,51,065.

Preference transfer books of the Delhi Umballa Kalka Railway Company will be closed from July 17 to July 31 for the purpose of preparing the interest warrants payable to those shareholders whose names are on the register at the time of closing the books.

Debenture stock transfer books of the Rohilkund and Kumaon Railway Company will be closed from July 17 to July 31 for the purpose of preparing the interest warrants payable to those stockholders whose names are on the register at the time of closing the books.

Bank of British West Africa, Ltd.—The transfer books will be closed from July 12 to July 23, both dates inclusive, to permit of preparation of final dividend to March 31 of 4½ per cent., making 8 per cent. for the year, plus bonus of 1 per cent., less tax. Warrants will be posted to shareholders on the evening of July 23.

The accounts of the Assam-Dooars Tea Company for 1918 show that, including £16,330 brought in, there is a disposable sum of £49,362. Further dividend of 15 per cent., making 20 per cent.; placing £5,000 to reserve, increasing it to £30,000; carrying forward £16,591, subject to excess profits duty.

An aviation company has been formed in Ceylon, with a capital of one and a-half million rupees.

It is reported from Budapest that the Hungarian Bank has issued new bank-notes of 5, 10, and 20 kronen.

Mr. W. H. Inskip has been appointed joint general manager of the London County Westminster and Parrs Bank, in place of Mr. J. W. Buckhurst, who is retiring, after 47 years' service.

ENGINEERING NOTES.

Agricultural Machines for Thrace.

In Thrace, and especially in the district of Adrianople, the use of modern agricultural machinery and implements has been growing in recent years. At present, ploughs, sowing, reaping, and threshing machines, with straw cutting and bruising apparatus, are required. Machines driven by steam or oil, but not with any highly explosive oil, are preferred. Small grinding (flour) mills with stones, and not iron discs, are popular. Such mills, light in weight or able to be taken to pieces for transport over hilly countries, would meet with a good sale. They are used for grinding wheat, Indian corn, or, usually, barley, and a mixture of barley and wheat, for bread. French burr stones are too hard for producing flour in accordance with the requirements of the peasants. Derbyshire stones are more suitable: but often the buyers require only the frame, into which they fit native stones. British firms hitherto had no representatives there, nor did they send travellers to that important district. German and Austrian firms were well established there before the war, and were doing a good trade. With the new state of affairs, however, and as the people are generally impressed with the well-known superiority of British machinery and implements, British manufacturers will not find difficulty in competing with foreign firms. Hardware, tools, and cutlery are also in good demand. The latter, of British manufacture, were hitherto imported indirectly by foreign or local firms who seemed to do very brisk business.

Utility of the Tractor.

In view of the great scarcity of labour and of draught animals in the Near East, the general utility of the tractor is a factor of very great importance to landowners there, since experience is showing that the tractor's use is far more extensive now than it was a few years ago. Apart from the present scarcity of labour and animals the farmer, under the stress of severe competition, is compelled to economise labour at every turn. Horse traction must be dispensed with to insure profitable returns, and manual labour must be reduced to the minimum. The tractor enables the farmer to dispense entirely with his horses, except for pleasure; for if he has an agricultural tractor it will perform every function that he is likely to require. Not only will it till his ground and reap his produce, but it will grind and cut it as well, and haul it to the market. With this machine every possible operation that is at present carried out by animal, manual, or even steam power, can be accomplished. Further, the possession of a tractor of the agricultural type entails practically no expense beyond the cost of the machine itself—a noteworthy circumstance in any scheme involving the displacement of animal by mechanical power. Any agricultural implement that has previously been utilised in connection with animal traction can be pressed into service, the only alteration necessary being the removal of the poles used when a team of horses are hauling, and the substitution of an inexpensive special spring coupling.

For stationary work, such as driving threshing machines, chaff-cutters, churns, &c., it constitutes an admirable source of energy. The power is transmitted from the engine direct through a pulley and belt. The advantages of this system are obvious. It does not necessarily entail the cartage of the material to be treated to one common centre, which is essential in the case of a stationary engine, but the tractor can be taken to the scene of operations. Another very important use, especially in the East, of an agricultural tractor on an estate or farm is its adaptability for pumping purposes. A rotary or centrifugal pump mounted on a portable base so that it can be moved from one place to another may be attached to the tractor, and when the house reservoir has been filled it can be taken to other parts of the estate and turned to account for general irrigation purposes, or for emptying a lake or pond for cleansing purposes, or drawing away water from a trench or conduit that has to be dug, &c. Consequently, an agricultural tractor need have no period of idleness, and can be a money earner throughout the year. In conclusion, however, it must be pointed out that for carrying out the operations with complete satisfaction, well designed and adequately-constructed tractors are needed, strong and reliable; and such are the British-made tractors, which for *general* use on an estate or farm have proved unsurpassable.

Motor Wagons for Persia.

Reference has been made to an order which the Persian Government has given to manufacturers in Italy for the supply of a number of motor mail-wagons; and according to recent information there are great possibilities for the establishment of a transport service by motor-wagons in Persia in the very near future. In South Persia the growth of cereal crops along the coastal belt is rendered very precarious by the liability to drought, while across the mountains the production of grain is so much in excess of local requirements that considerable quantities are burned because growers find its does not pay them to cut the crops. In the absence of animal transport this grain cannot be conveyed to the coast for export, but if motor wagons were available there is no doubt that a valuable shipping business in grain could be developed. Before the outbreak of the war a German firm was submitting proposals to the Persian authorities for the organisation of a transport service, but the war interrupted the negotiations, and it appears that new proposals will soon be submitted from other quarters. The British steam or oil wagon is recognised as the best and most reliable for this purpose and there should be great scope for makers of such wagons in Persia. Enterprising British firms who would be willing to undertake the organisation of transport service in the country should not lose the opportunity, for with these services there will be also harbour improvements and other engineering works to be constructed.

Irrigation Works in Roumania.

Before the war it was known that plans for the irrigation of the plains lying between the Danube and Bucharest, known as the Baragan, and also for the connecting of the city with the river by a navigable canal, had been prepared by the Roumanian Ministry of Public Works. The area to be irrigated amounts to 600,000 hectares, or about 1,500,000 acres, and the cost of the work, including the construction of about 500 kilometres of canals, is estimated at 250,000,000 francs. The plans were approved by the Government in principle, and a sum of 100,000 francs had been voted at the time to cover the cost of further investigation. It is calculated that the return on the outlay would amount to 300,000,000 francs yearly. According to recent reports a representative of an American syndicate is studying the matter on the spot, and it is expected that this country will also not be behindhand.

Chromiferous Ores in Greece.

Great interest is being shown in Greece and elsewhere in the development of certain mines in that country, especially those of chromiferous iron. Owing to the rapid development of the low-phosphorus chromiferous iron ores of Cuba, containing appreciable quantities of chromium, nickel, and cobalt, and the production therefrom of pig-iron and steel possessing exceptional qualities and used for special purposes similar deposits in Greece acquired unusual importance. These deposits occur in the western part of Greece, in the districts of Lokris and Boeotia, and in the island of Euboea (Negroponte), Skyros and other islands of the Ægean Sea. The most important are situated in the district bounded by the bed of the drained Lake Copais and the west coast of the Talanta Channel, and are all within a few miles of the coast, which, being much indented, furnishes excellent loading ports. Chromiferous iron, however, occurs in many other parts of Old Greece, in Argolis, Laconia and Arcadia, and in Acarnania and Doris, all the deposits, with the exception of those in Arcadia, being near the sea. If it is proved that the deposits in Greece are similar to those in Cuba, very interesting developments of the mining industry may be expected in the former country.

Motor-Boats for the Persian Gulf.

American Trade Commissioners have already advised American motor boat builders and exporters that there will be a demand for motor boats and automobiles in the Persian Gulf district; and have suggested to them that catalogues and price-lists should be sent to them in order that they may be ready for use as soon as peace conditions make it possible for these officials to assist importers and exporters of these lines. It is hoped that British motor boat builders and others will take notice of the expected demand, and that the suggestion will not be lost on the British authorities on the spot, and that they will facilitate propaganda in favour of British boats and cars.

Knitting Machines.

Stocking and flannel-knitting machines, hand and power driven, have hitherto been imported to an increasing extent in all countries of the Near East. Germany was the principal supplier, and a few were imported from England, although British-made machines are preferred, and are greatly favoured by the people. Makers of such machines who have decided to exhibit in the forthcoming exhibition at Athens may be sure of obtaining good orders.

Turkish Fruit Crops.

After an interval of four years the well-known fruit report of Messrs. C. J. Giraud and Co., of Smyrna, again makes its appearance. The present report which, in the circumstances is of exceptional interest, states :—

Our last report was issued on April 1, 1915. So far as circumstances then permitted, we estimated the receipts of the 1914 fruit crops at that date at the following figures :— Sultana raisins, about 36,500 tons; figs, 76,000 loads or 16,500 tons. The crops undoubtedly yielded a higher return, and subsequent arrivals which were mainly absorbed for distillery purposes, justify the estimates of a total production for the season of 90,000 loads or about 20,000 tons figs and 44,000 tons of sultanas.

In June, 1915, a blockade was established against the coast of Asia Minor, and exports by sea were entirely suspended. Imports, however, of alcohol having ceased, local distilleries both here, in Constantinople, and other parts of the country commenced utilising the lower grades of sultanas and figs, and this industry steadily developed and has contributed in no small measure during the war to the absorption of a substantial proportion of the fruit crops, more especially the inferior and cheaper grades.

Later on, after the entry of Bulgaria into the war and the opening of direct railway communications with Central Europe, regular shipments of sultanas and figs were made to Constantinople, and a steady business developed with Austria-Hungary and Germany.

Exchange.

Throughout the years 1915, 1916, 1917, and 1918, exchange between the Central Powers and Turkey ruled in favour of Turkey, but with the progressive issues of paper currency, gold in this country steadily advanced, finally reaching a premium of over 500 per cent. Gold and silver gradually disappeared from circulation, being largely hoarded by the native element, and all dealings were based on paper currency.

Up to 1914, the par value of the £ sterling was piastres 110, the Turkish pound being worth piastres 100. When the Armistice was signed last November, the value of the £ sterling at the time was nominally about 185 piastres. But as soon as the partial resumption of trade relations between Turkey and Entente countries was permitted, exchanges speedily adjusted themselves, and since the beginning of the year, exchange for sterling cheques has fluctuated between 360 piastres and 400 piastres per £ sterling.

This question of exchange is necessary to understand in view of its bearings on the prices of fruit on our market. In 1915 there was no premium on gold. In 1916 the premium, from about 15 per cent. in the early part of the year, advanced to 95 per cent. in December. In 1917 the premium steadily advanced month by month, reaching 525 per cent. In 1918, the premium declined to about 470 per cent. It now stands at about 430 per cent., but with foreign exchange freely obtainable, very few dealings in gold are reported.

Sultanas.

We give below the estimated results of the yields in the years 1915-18 and the average of prices for inferior and choice qualities. We quote the prices in native currency, first purchase cost from the dealer, without taking into account cost of packing, etc. :—

Year.	Yield.	Prices.
1915	about 44,000 tons	1¼ piastres to 4 per oke.
1916	,, 33,000 ,,	6 ,, ,, 9 ,,
1917	,, 27,000 ,,	10 ,, ,, 40 ,,
1918	,, 25,000 ,,	18 ,, ,, 42 ,,

In the spring months of 1916, the market spurted to about 15 piastres per oke.

After the signature of the Armistice in November, 1918, the market underwent a temporary collapse and receded from the maximum price of 40 piastres to about 25 piastres. But confidence was restored in January, and prices have been ruling steady between 18 piastres and 30 piastres and have recently advanced about 20 per cent.

It is clear from the above prices, that every allowance made for the premium on gold and for the depreciation of paper currency, sultanas have been selling at an average of over 300 per cent. on pre war prices, and this is easily accounted for by the reduced yields, the high cost of labour and transport, and the destruction of the vineyards in many districts.

The stock of sultanas on the market is presently very small, and consists mainly of low grades suitable for distillery purposes only. Total stocks remaining in the country are estimated at about 5,000 tons but in view of present political uncertainties and the unfavourable prospects of the vines, very little of this stock is likely to be released for sale presently.

Figs.

We give below the estimated yields, and average prices realised per Turkish kintal during the following years :—

	Estimated yield.		
1915	75,000 loads	av. per Kint. realised	85
1916	80,000 ,,	,, ,,	340
1917	65,000 ,,	,, ,,	1,250
1918	80,000 ,,	,, ,,	970

The load is equal to about 4½ cwt.

Stocks now remaining are small and market latterly has become firmer. No figs are left which may be considered suitable for shipment.

Crop Prospects.

The average rainfall in this province is about 23 inches. Last year (September 1917-18) the rainfall was below the normal having been about 14 inches. The present year has beaten all known records, and has so far exceeded 60 inches. Weather continues rainy.

All fruit crops are reported to be in a bad way. The tree crops have very little fruit. Reports reaching from all parts of the country, if reliable, would foreshadow a disastrously small yield of sultanas. The fig districts send more encouraging advices but the yield is assessed at less than last year.

Conditions generally at present are very uncertain. It is unlikely that shippers will have any desire to undertake business for forward delivery until the season actually opens and the question of exchange, labour, shipping, etc., can be gauged more closely than is presently possible.

EGYPTIAN MARKETS.

The returns of the Egyptian Markets, Ltd., for the week ended June 26 were: cattle markets £378, general markets £486, total £864, total for year £31,001. The figures for the corresponding week in 1918 ended June 27 were: cattle markets £315, general markets £452, total £767, total for year £27,160.

COMPANY MEETINGS.

NEW EGYPTIAN.

The eighteenth ordinary general meeting of the New Egyptian Co., Limited, was held on July 8 at Winchester House, Old Broad Street, E.C., Mr. Arthur A. Baumann (chairman of the company) presiding.

Mr. Thomas Day (London manager and secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The company has had a very good year, but as the accounts are voluminous and somewhat complex I shall select what I consider to be the chief points of interest. Taking the balance-sheet first, you will see that the total assets, taken at or under cost, amount in round figures to £756,999, while our liabilities amount to £587,735, showing an excess of assets over liabilities of £169,264, which is equal to 7s. 7d. per share. That is taking the cost of the land at £50 per feddan—I refer, of course, to the average book cost—but if you consider that we have lately been selling land at £150 per feddan you will see that the excess of assets over liabilities was certainly a good deal more than 7s. 7d. per share. This excess of assets is represented by reserve for profits on sales of land, not yet encashed, amounting to £49,186, capital reserve amounting to £40,398, and the profit and loss account amounting to £79,679. With regard to the reserve for profits on sales of land not yet encashed, amounting, as I said, to £49,186, this item compares with £19,284 for the previous year, or an increase of £29,901. Turning to the profit and loss account, you will see that the revenue from the company's land amounts to £23,209. After deducting the reserve for profit not yet encashed from the profit on sales of land, we get a net balance of £40,372, which compares with £17,275 for the preceding year. From the gross revenue you have to deduct the sum of £20,061, which you will find accounted for on the other side by expenses of administration in Egypt and in London, and that leaves a balance of £59,392, from which you must deduct the interest on the debentures, which is £4,196, so that we have a final balance of £55,196 available. To this we add £24,482 brought forward from last year, giving us a final available balance of £79,679.

With your consent we propose to dispose of this balance in the following manner: We propose to pay a dividend of 1s. 6d. per share, equal to 10 per cent., less income-tax at 5s. 9d. in the £, and this will absorb £33,478, and will leave a balance of £46,200, which we propose to carry forward to next year's account for reasons to which I will recur in a moment. A further 648 feddans were sold at an average price of over £150 per feddan, but the deeds were not signed at the conclusion of the financial year, and therefore, following on our previous method, they have not been taken into account. From January 1 to May 31, 1919, deeds have been signed for 304 feddans, and in addition to that a further 371 feddans have been sold at an average price of £155 per feddan, so that our prospects for the coming year seem to be good enough, providing that the political and social conditions of Egypt remain satisfactory. You will see that we propose to carry forward the sum of £46,000, having a view to the recent disturbances in Egypt and to the fact that some considerable damage was done to the company's property. That damage has been estimated at from £10,000 to £15,000, and we are making a claim against the Government. I wish the shareholders, both those who are here and those who will read the report of this meeting, to realise that their dividend and our continued sales of land in Egypt depend on the settled order and the good government of that country.

Recent Disturbances.

The recent disturbances in Egypt have been either concealed from or misrepresented to the British public. They have been alternatively represented as "unrest" or as "Bolshevism." As a matter of fact, the disturbances in Egypt were neither the one nor the other. They were a singularly well-concerted national rising, organised and executed by the two principal

Digitized by Google

classes of society in Egypt—namely, the fellaheen and the Effendia, or official class. There are four classes of persons in Egypt. There is, first the fellaheen, or peasantry—docile, industrious, only asking to be governed decently, which is the right of every man in every country. There is, secondly, the Effendia, or official class, consisting of the Pashas and Beys and the students. The third class are the European residents in Egypt, merchants, financiers, surveyors, engineers, managers of companies. The fourth class is a sprinkling of British officials, cool, competent, disinterested, just, but without any executive legal authority. They are simply advisers and consultants of the Sultan. That is an unworkable state of things for any country. The trouble about Egypt is that it is neither Egyptian nor British, and if we are to succeed there we must make it either more British or less British. We must either govern the Egyptians properly or let them govern themselves. But, gentlemen, there are two reasons why we cannot give Egypt Home Rule—the Suez Canal at one end and the Sudan at the other end of Egypt. We cannot leave the Suez Canal to a Levantine Effendia, and if we were to withdraw military protection from Egypt we should have the Sudan coming down upon Egypt and crunching the Egyptians as a bear crunches a rotten apple.

The Future.

I admit that the local discontent has been aggravated by the war levies and requisitioning of material, but that is now over, and it is for the British Government to see that we either govern the Egyptian fellaheen properly ourselves or make the Egyptian Pasha class do so. We must put an end to this double system under which the Sultan is a merely nominal ruler, and we have to create a new citizenship, which is a very difficult thing to do. I suggest that that new citizenship should be British, that British officials should be given executive authority and that it should be made perfectly clear in future that every resident in Egypt is a British subject, and that the Sultan is the Viceroy of King George of England, very much in the same way as the great Princes in India are the subjects of their Emperor. As you know, Lord Milner is going out to Egypt in October on a special mission. There is certainly no living man who is more competent to straighten out this crumpled condition of politics than Lord Milner, for in his early manhood he spent a good many years in Egypt as the Financial Adviser to the then Khedive. We can trust Lord Milner right enough; we can trust him to recommend the right thing, but I am by no means sure that we can trust either the Government or the House of Commons to adopt it. That is why I thought it important in my position as chairman of this company to say what I have said in the hope that both those who hear it and those who read it may feel the extreme importance of focussing public attention upon Egypt, because unless we do so most assuredly we shall find ourselves with a new Ireland on our hands in the most vulnerable spot in the British Empire—namely, the half-way house between London and Bombay. I now move: "That the directors' report, together with the annexed statement of accounts, duly audited, be received, approved, and adopted, and that a dividend of 10 per cent., or 1s. 6d. per share, less income-tax of 5s. 9d. in the £, be paid."

Mr. Edward Nathan seconded the motion, which was carried unanimously.

The Chairman then proposed the re-election of the retiring directors (Sir Ernest Spencer and Mr. H. E. Barker).

Sir Westby B. Perceval, K.C.M.G., seconded the resolution, and it was unanimously agreed to.

On the motion of Mr. Crowther, seconded by Mr. Parker, the auditors (Messrs. Cooper Bros., and Co.) were reappointed.

The proceedings then terminated.

EGYPTIAN PRODUCE.—Principal of important Egyptian Produce Export Firm, now in England, wishes to INTERVIEW Wholesale Buyers and Importers of Onions, Eggs, Dates, Gum, and all other Egyptian and Sudanese Products.—Write Box K 329, Lee and Nightingale's Advertising Offices, Liverpool.

ANGLO-EGYPTIAN OILFIELDS.

Need for Larger Areas.

The eighth ordinary general meeting of the Anglo-Egyptian Oilfields, Ltd., was held on July 10 at Winchester House, Old Broad Street, E.C., Sir Marcus Samuel, Bart. (Chairman of the company), presiding.

The Secretary (Mr. J. Y. Kennedy) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Since we last met there has been very little alteration in your affairs. The report which we have sent you gives a very full account of the operations of the company during the year under review, and there is not very much that I can usefully add to it. It is desirable to call your attention to two favourable paragraphs in the report. I refer to the two last paragraphs on the first page, in which we are able to inform you that we have discharged the arrears of interest on the income bonds amounting to £76,352 1s. 9d., and that we have also been able to pay £56,229 11s. 6d., the arrears of dividend on the cumulative preference shares. It follows that if the prosperity of the company should continue—and we hope it may—those will be non-recurring charges on revenue. The profits for the year are enumerated, and I must say that the item which you will find as set aside for depreciation—namely, £55,000—is not as large as we should like to see, but so long as we have the faulty income-tax laws which we now have, and which override the discretion of directors of the experience of your board, so long will British enterprise suffer. The amount which we have set aside for depreciation is the full amount which the revenue authorities allow us to write off.

Production.

On the question of production, the figures for last year you have in the report, and they are quite satisfactory. As to the present six months, the production up to date has been 127,684 tons, against 136,241 tons last year, and it bears out very fully the anticipations of your directors that, until in their wisdom the Egyptian Government comply with the requests which have been made to them to give to this enterprising company more territory which they can explore, we have no great hope or expectation of maintaining a large production. The difficulties are very great. We are working on a small anticline, and when a great well comes in it necessitates the shutting down of pumping on all the other wells, because the flow of gas is so great as to render it extremely dangerous to continue working; and the managers are constantly faced with this great difficulty, that when a gusher comes in all other production has to be temporarily closed down. We have had ample experience now that the gushers do not last, and when they are exhausted, as you have seen by the weekly reports which we publish—and that is the only form of information that we can give to the shareholders—our production goes down to 2,000 tons a week. I am quite sure you will sympathise with the managers on the immense difficulty of working a field under those conditions. Indeed, if it were not that we are very fortunate in our associates—I mean our commercial associates, as quite distinct from our partners, the Egyptian Government, who do nothing to help us—if it were not for the great help that we get from our associates in giving us steamers just at the time we want them and removing the produce as it comes, we should not be able to carry on the business at all. No other company could; of that I am quite certain. With a fluctuating production of this sort, unless the Anglo-Egyptian Oilfields were circumstanced as they most fortunately are, it would not be possible to carry on this business.

Contracts for Liquid Fuel.

Another point of immense importance is that we have been compelled, both in your interests and in the interests of Egypt, and indeed of the Empire, to accept large contracts for liquid fuel. Now just look how we should be placed, or any possible competitors would be placed, if we had not the very large resources of the Shell group to fall back upon. We have contracts which are stupendous as compared with the production of this company; indeed, the production scarcely covers the requirements of Egypt itself, and we are fortunate in having associated with us gentlemen of the calibre of Sir Henry McMahon and Mr. Hugo Baring, who was formerly the representative of the Egyptian Government. We can only hope that their representations, seconded by those which it is the duty of your managers to make, will at length bear fruit. If this company is to attain the success that we should desire, I repeat it will only be possible if the Egyptian Government abandon the attitude they have taken up and make up their minds to support us as loyally and as strongly as partners should. I referred last year to the prescience of Lord Kitchener, who stipulated that the Egyptian Government should have a share in the prosperity of this company if it was ever attained. It did not appear very likely then, and many years elapsed, as you know, before it reached a paying footing, but the Egyptian Government had in the aggregate—certainly up to this year—a far larger return from the field than the shareholders had. We do not regret it; on the contrary, we are very happy to see it, but we do plead that they should do something in return for it. Well, gentlemen, I do not think there is anything that I can usefully add to the report that you have now before you. The financial position, as you have seen, is satisfactory, inasmuch as we had at the end of the year very considerable funds, and these have not diminished since. I have only now to move: "That the directors' report and accounts be received and adopted, and that a final dividend for the year 1918 on the "B" shares of 10 per cent., making 25 per cent. for the year, and dividends on the "A," "C" and Preference shares in proportion according to their respective rights be paid."

Sir Henry McMahon, G.C.M.G., seconded the resolution, which was at once put to the meeting and carried unanimously.

On the motion of Mr. H. W. Morrison, seconded by Mr. E. Hume, Messrs. Turquand Youngs and Co. were appointed auditors for the current year.

Mr. Morrison: Mr. Chairman, I should like to propose a most hearty vote of thanks to yourself and the Board for bringing this company, after many years of waiting for dividends, up to what looks like being a great success, in spite of your not being satisfied with 200 square miles.

Mr. J. H. Perry seconded the vote, which was unanimously accorded.

The Chairman: Gentlemen, we are much obliged to you for your vote, but you know 200 miles do not represent much unless they contain oil, and that is our difficulty. We are rather convinced that a great deal of that 200 miles does not bear oil at all, and in fact we have offered to return it to the Egyptian Government; we have asked them to take it back; so please do not found any hopes on mileage; it is oil we want.

The proceedings then terminated.

COMPANY NOTES & REPORTS

Igalkande.

The report of the Igalkande Rubber and Tea Estates Company for 1918 states that the profit amounted to £4,060, which with £1,114 brought in makes a total of £5,175. The directors have dealt with this amount as follows:—To reserve for renewals and contingencies, £500; payment of excess profit duty, £379. They recommend a dividend of 7 per cent., amounting to £3,080, and that the balance of £1,215 be carried forward

Credit Franco-Egyptien.

The net profit of the Crédit Franco-Egyptien for 1918 amounted to 701,715 frs., and the dividend is 9 frs. per share. The report points out that the general situation in Egypt during the last working period was much the same as in the preceding year. Although the cotton plantations may have suffered, the crop, nevertheless, gave a satisfactory yield. The high prices reached for this product, as also by agriculture in general, have attracted a considerable amount of capital to Egypt, which has favourably influenced the prosperity of the country. However, owing to Government control of the harvest and cotton exports, bank operations were less prosperous.

Burma Ruby.

The report of the Burma Ruby Mines for the year ended February 28, states that the income and expenditure account shows a deficit of £562, and adding to this the debit balance of £6,754 from last year there remains a net deficiency of £7,316. 903,760 truckloads of ruby earth were washed at a cost of 10.4d. per load, as against 969,919 at 8.9d. last year, and the value of stones mined amounted to £44,168, compared with £50,123. The increase in the cost per load is due to the poor quality of the ruby earth which was being worked and to excessive rains in the summer, which carried large quantities of overburden into the open mines, all of which had to be passed through the washing machines though practically yielding no results; since January, however, richer ground has been worked, which is producing sapphires as well as rubies. Sales of rubies amounted to £50,843, compared with £54,598 last year. The local market in Burma and India was good all through the year, and in London the stock of stones, including recent consignments from Burma, was reduced from £13,115 to £11,910.

Assam Oil.

The report of the Assam Oil Company for 1918 states that profit was £85,849. After payment of dividends for 1917, the balance brought forward amounted to £38,052, making £123,901. Out of this sum the excess profits tax covering three years, 1915, 1916, 1917, was paid, and the interim and final dividends on the preference shares were paid on their due dates. The directors have transferred £25,000 to depreciation account, and propose to pay 8 per cent. on the ordinary shares and a further 1 per cent. on the preference shares in order to make their total dividend equal to that paid on the ordinary shares, both dividends less tax. This will leave £28,322 to carry forward, out of which the excess profits in respect of the 1918 accounts will be paid.

Rungajaun Tea.

The report of the Rungajaun Tea Company for 1918 states that the balance on the season's working was £550, to which must be added £10,377 brought forward and interest and profit on sale of investments, £112. After deducting income-tax, £2,099, there remains £8,940, which the directors recommend should be dealt with as follows: Preference dividend of 6 per cent., less tax, of which 3 per cent. already paid, £769. Ordinary dividend of 10 per cent., less tax, £1,282, leaving to carry forward £6,888. It is expected that a substantial sum will be received by way of refund on account of excess profits duty paid in previous years.

Dooloogram Tea.

The report of the Dooloogram Tea Company for 1918 states that profit was £5,241; £10,691 was brought in, which with adjustment of season 1917 account, £792, gives £16,724. Deducting income-tax £3,184 and garden managers' commission £611, there is left £12,929. The directors propose to place to reserve account £1,000 and pay a final dividend of 5 per cent. (less tax), making 10 per cent. for the year, carrying forward £7,574.

Mazdehee Tea.

The report of the Mazdehee Tea Company for 1918 states that most unfavourable climatic conditions prevailed during the season, and the garden was visited by a severe earthquake on July 8 last. Very considerable damage was done to the brick walls of the factory and bungalows, and manufacture for some time was carried on under extreme difficulties. Fortunately, no lives were lost, nor was any tea destroyed. Including the balance brought forward, after making sundry adjustments and crediting the amount refunded in respect of excess profits duty paid in previous years, there remains £4,553. The directors recommend a dividend of 5 per cent., less income-tax, and to carry forward £3,737. In common with most other estates, influenza broke out twice during the year, but fortunately the loss of life was not great. For the coming season the manager has estimated for a crop of 3,000 maunds, and the estimated expenditure is as follows:—At garden, Rs.73.500; at Calcutta, Rs8.500; total Rs82.000 at exchange 1s. 8d., £6.833; in London, including transit charges, £2,100, making £8.933. The Food Controller having ceased purchasing it is expected that the coming season's crop will be disposed of on the London market as in earlier seasons.

Ceylon Estates Investment.

The report of the Ceylon Estates Investment Association for the year ended March 31 last states that the balance carried forward was £1,133, which, added to excess profits duty recovered for year ended March 31, 1918, £82, and profit on the year's working of £1,326, makes £2,541. The directors propose a dividend at the rate of 7 per cent., less income tax, and to carry forward £1,163. The amount expended on manuring amounted to £1,264, which has been charged against the year's profits. The decrease in profit is due to the large increase in estate expenditure.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated July 3.

Good rains except to the north-west of India where, however, precipitation is expected.

Bombay cotton market firm. Fully good broach August 578. Piecegoods market quieter this week and rates have fallen generally. Calcutta jute market firm. Heavy jute goods firm. Hessians firm and prices higher all round, though only moderate business done.

NEW COMPANIES.

Anglo-Egyptian Flax Co., Ltd.

A private company with the above title was registered on June 21 with a capital of £55,000, in 50,000 participating preference shares of £1 each, and 100,000 ordinary shares of 1s. each. Its objects are to carry on in Egypt, the Sudan, Syria, Cyprus, Arabia or elsewhere, the business of growers and buyers of flax, brokers, produce and general merchants, importers and exporters, shipowners, shipping, foreign, colonial and general agents, etc.

South Russian Banking Agency.

The South Russian Banking Agency, Ltd., was registered as a private company on June 28, with a capital of £40,000 in £10 shares, to provide banking facilities of every description in and for the South of Russia. The first directors are to be four in number, whereof one is to be appointed by the London County Westminster and Parr's Bank, one by Lloyds Bank, one by the National Provincial and Union Bank of England and one by the British Trade Corporation.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

We have this week had an irregular market. With regard to Government stocks, after satisfying the Egyptian demand, prices are somewhat lower; but, on the other hand, in the case of certain land shares, the revived demand from Egypt has been sufficient to absorb all that were offering here, and this has led to a smart rise in prices.

Egyptian Unifieds, after a large turnover, finished one point lower at 85. The 3½ per cent. Prefs. have also declined a point to 72, at which price some business has been transacted.

In Bank shares Nationals have been in good demand, and a fairly extensive business has been done up to 21⅛, but they close unchanged at 21. In Agriculturals, all the shares offering here at 6⅛ have been taken, and the market closes strong at that price; which is 1-32 higher than last week. A feature has been the further sharp advance in Anglo-Egyptians, which are closing £1 up at 17¾.

In Land shares there has been a big enquiry from Egypt for Béhéras, and the price, after rising to 13⅛, closes 11-16 higher at 13, after a very fair number of transactions. Aboukirs, after changing hands up to 24s., close only 3d. firmer at 23s. 6d. Foreign Trusts are fractionally firmer at 14s. 6d., whilst, on the other hand, Delta Lands are slightly weaker at 13s. 9d. New Egyptians close unchanged at 23s. x.d. At the annual meeting yesterday the chairman stated that the intrinsic value of the shares, taking the unsold lands at their book cost of about £50 per acre, worked out at 22s. 7d., whilst the company has been selling land for some time past in the neighbourhood of £150 per acre. There was an unexpected enquiry for Sidi Salems yesterday from Egypt, and business took place up to 2⅜, a rise of ⅛ since last week. Another feature has been the rise in Sudan Plantations, which are closing 7-16 higher at 7 7-16. There was also a good enquiry from Egypt for Union Foncières up to 3⅜, but there are no sellers on this side now under 3½.

In Miscellaneous descriptions Salts and Sodas are ⅛ better at 3¼.

In Oil shares Anglo-Egyptians B close 3-32 better at 6 1-16. At the meeting held to-day the chairman made it clear that the future prosperity of this company depends upon fresh concessions being obtained from the Egyptian Government, who are partners in the concern. Roumanian Oils are 9d. better at 22s. 9d.

Amongst Greek securities, Monopolies are ¾ lower at 57¾, round which price rather large business has been done. The 1881 and 1884 loans were also extensively dealt in round the current quotation. The 1890 loan is no longer in demand, all the buyers having been supplied, and the price has fallen back 1½ points to 73. "Currant" bonds are also somewhat quieter at 95, but the market is rather a nominal one.

The Compagnie des Vapeurs Français has begun a service between Casablanca and Marseilles.

Lord Inchcape has presented £10,000 to the University of London as a contribution to the fund now being raised to establish a commercial degree.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

CYPRUS OIL TRUST.

An extraordinary general meeting of the Cyprus Oil Trust, Limited, will be held at Winchester House, E.C., to-day, at 12.30 p.m., for the purpose of considering and, if thought fit, passing the following resolution, viz., "That the capital of the company be increased to £75,000 by the creation of 550,000 new shares of 2s. each ranking for dividend and in all other respects *pari passu* with the existing shares of the company. In a circular it is stated that the new capital to be created will be employed in (a) the purchase of certain rights over 2,500 acres of oil-bearing lands situated in the Tazlau Valley District of Bacau, Roumania, (b) in the purchase from the Anglo-Bulgarian Oilfields, Limited, of 1,000 acres of oil-bearing land situated near Dedeagatch on the Ægean Sea, and (c) for the purpose of working capital and the general business of the company. It is proposed to offer to the shareholders 100,000 of the new shares for subscription.

A prize of 2,000 francs for English is to be given by the Association du Commerce, de l'Industrie et de l'Agriculture pour l'Enseignement professionnel au Maroc, the condition being that the prize is to be used to pay the cost of spending some months in England.

NOTES OF THE WEEK.

The news that the Bulgarian Delegation is expected in France on July 25 brings the prospect of a settlement of the Near Eastern question appreciably nearer. Some weeks have passed since the Bulgarian Government was invited to select delegates to proceed to Paris, and expectations have run high in the country regarding the opportunity that might be afforded of pleading Bulgaria's case before the Conference. Whether the delegation will be given the same privileges as the Turks remains to be seen. In order to avoid the risk of receiving the Allies' sentence without an opportunity of being heard the Bulgarian Government is understood to have proposed that the fate of the contested territories should be decided by a plebiscite. As the Allies' chief aim must be to eliminate irredentism from Europe, they will have to be very sure of their ground if they reject the suggestion. In districts where nationality is lightly changed to suit the views of the interrogator self-determination alone can settle the question, but it is essential that the plebiscite should be carried out with an impartiality above suspicion. Great Britain, France, and the United States are not concerned whether a certain village or region calls itself Serbian, Greek, or Bulgarian; but they are vitally interested that the decision should represent the wishes of the majority of the inhabitants, and consequently have some chance of finality.

There are indications that the Allies are losing patience with Bela Kun. In entering upon negotiations with him they chose the easiest course regardless of its morality, and now find themselves exactly where they were months ago, but with much valuable time and some prestige lost. Unfortunately, the line taken with the Hungarian Bolshevist is only a reflex of the general policy adopted towards Bolshevism, and it is to be hoped that the change in the Allied attitude towards Bela Kun will be followed by a reconsideration of the measures required to end the present *impasse* in Russia. Time is essentially a factor in all our dealings with the East. Quite apart from the undeserved successes that the Russian Bolshevists are obtaining owing to the weakness of the forces in the field against them, testimony is being borne from a variety of independent sources to the restoration of German influence in the country. A correspondent in this issue quotes the evidence of a competent Roumanian observer, who has been in close contact with the Russian military forces in virtue of his position in Bessarabia. The daily press reports a similar tendency in the north. The delay in the settlement of Eastern Europe has already done incalculable harm, but nowhere are the results likely to be more serious than in the case of Russia.

The protest made by a correspondent elsewhere in this issue against the abnormal delays in the postal service between Great Britain and the Near East is timely. Indeed, it is a matter for surprise that the actual state of affairs has been tolerated so long. While the war lasted and communication was precarious, delays were accepted as a matter of course. The grievance to-day is that the British Post Office does not avail itself of the steamer and railway services actually in existence, although the fullest possible use is made of them by foreign post offices. Our correspondent instances his experience in Constantinople, where letters may be three weeks in arriving from England; yet there is a daily train service from London to Bucharest, and it is possible by that route to reach Constantinople on the sixth day; via Taranto the journey takes seven days, but is capable of being accelerated. Belgrade can be reached in forty-eight hours from Paris, and the French mails are delivered within the two and a-half days; but it is exceptional for a letter from London to take less than seven or eight days.

As far as the lay mind can discover no attempt has been made by the British postal authorities to take advantage of improved communications. It is true that our French Allies control most of the services in question, and possibly they are not averse from seeing British trade hampered by the lethargy of the British Post Office. They may even consider it within their rights to place obstacles in the way of the British authorities; but that is no reason why the latter should not take steps to remove them. On one occasion there is reason to believe mail bags from Constantinople sent to Bucharest for despatch by the Orient Express, which leaves daily for Paris, were refused transport and were returned to Constantinople. Such an incident does not promote friendly relations between the peoples concerned in the Near East. We feel confident that the matter only requires investigation by a competent authority to have the existing anomalies speedily removed.

Last Friday, Signor Tittoni told the Italian Chamber that the Adriatic question was likely to be settled this week, but that the question of Asia Minor had to

Digitized by Google

wait until President Wilson ascertained the wishes of the American people. The first part of this statement will have been received with heartfelt relief not only in Italy, but throughout all the Allied and Associated countries; for, when the speaker added that a point had been reached when a decision was absolutely necessary and every delay was dangerous, he was in no wise indulging in hyperbole. Up to the time of writing no announcement is forthcoming regarding the solution to which Signor Tittoni referred, but we hope that his estimate will not prove too optimistic in regard to time.

The statement regarding the future of Asia Minor is less satisfactory, chiefly because events seem to indicate that, while America has done much for Turkey, and while there are many Americans who are particularly well informed regarding that country, the American people as a whole are but little concerned as to what may happen to it. It is, therefore, much to be hoped that the well-informed few will, in the interests of justice, spare no pains to put the case as fully as possible before their countrymen. We do not doubt that Italy would develop any portion of Asia Minor that might fall to her quite satisfactorily, or that she would administer it fairly. But the fact remains that if the principle of self-determination is to be ignored in the case of Asia Minor, the Turks will have a perfectly legitimate grievance to nurse. Of course, if Italy is to make good her " claims " by conquest, that is another matter—and one regarding which there might be a great deal of uncertainty.

In the meantime, it is pleasant to note that the present Italian Government shows far greater readiness than did its predecessor to recognize that there are two sides to every question; and that the Italian people, beginning to realise whither Signor Orlando's intransigence was leading the country, and to see what Italy would lose by insisting too closely upon her pound of flesh, are showing a desire to live up to their best traditions. Both Signor Nitti and Signor Tittoni have made it clear that they value the good opinion of their Allies more highly than any shallow triumph that might be gained at the cost of losing that good opinion; and though Signor Tittoni hinted in the Chamber that sacrifice might be called for on the part of the Italian delegates in Paris—and, therefore, on the part of Italy—the Government on Monday secured a vote of confidence by a highly satisfactory majority.

Relations between Mecca and Er Riadh have not been friendly for many years, and even the Great War failed to render them entirely cordial; the fact being that in Arabia policy follows lines utterly unlike those along which it moves in Europe, and statesmen are swayed by considerations which, apparently, lost their force in England at the Restoration. The Wahabite Arabs of the Nejd have all the fire and fanaticism of the Puritans, and they have their own opinion—truth to tell, it is none too high—of the Arabs of the Yemen and other parts of Arabia. So, it is hardly matter for surprise to anyone who has followed events in that peninsula that friction has led at last to something like a pitched battle between the forces of King Hussein and those of Ibn Saud. The trouble was brought about, nominally, by a dispute over Khurma, a district north-east of Taif; and the Hejaz force was actually commanded by the Emir Abdullah, son of King Hussein, who greatly distinguished himself in the recent war. It was, however, defeated by Ibn Saud's army, which captured all its guns and machine-guns, and returned in triumph to Riadh. The quarrel is regrettable, because it may afford an opportunity to agents of Turkey —or other mischief makers—to stir up further trouble amongst the Arabs, and thus, possibly, to disturb the world's peace. But it is certain that outside interference would be welcomed by neither party—unless, of course, it should take the form of armed help to one or other—and it is to be hoped that nothing of the kind will be attempted before the consequences have been carefully weighed.

It is too early to venture to predict that there will be no recrudescence of trouble in Egypt, but upon the whole the prospects are more favourable. The student class and certain intransigent elements at El Azhar are still ready to lend a ready ear to the tempter, or to play the part of tempter themselves when suitable occasion offers, but the bulk of the people show an inclination to settle down to work again. That, at least, would appear to be the view of the Council of Ministers, since they announced the abolition of the Press censorship as from the date of the signature of peace, and they should surely be in a position to form a trustworthy estimate of the situation.

Punishment has already overtaken some of those who were responsible for some of the worst outrages during the recent disturbances. At Wasta, three natives found guilty of murdering an English engineer have paid the extreme penalty; while at Minia the members of the self-constituted Soviet have been sentenced to terms of imprisonment ranging from six months to fifteen years, with fines of £500 up to £1,000. The Military Courts have pronounced sentence of death in fifty-one cases in connection with the murders at Deir el Mawab and Deirut, but one of the condemned has been pardoned, and in sixteen cases the sentences have been commuted —in some instances on the direct appeal of the President of the Council to General Allenby.

In thus exercising clemency General Allenby is doubtless acting wisely, in full knowledge of all the circumstances of each case, but it is a little surprising to find that he has agreed to " the liberation of those who have been interned on political grounds in connection with the recent troubles." The step will enhance the prestige of the Council of Ministers, but its effect in other directions is less certain. On the other hand, there can be little doubt that the imposition of collective fines upon some of the districts that made themselves notorious in the recent disturbances will be entirely beneficial. The Egyptian Fellah is accustomed to the idea of a village, or district, being held collectively responsible for wrongdoing within its borders; and he will readily recognise that damage to the railway or to other Government property is of the very kind that must be paid for in such fashion. But his recognition of the system does not make him any the more eager to contribute to such payment, and we may safely conclude that he is now doing some thinking that will have a salutary effect upon him.

The report that the ex-Shah had returned to Persia now turns out to have been incorrect. Mohammed Ali is still in residence on the island of Prinkipo, where he was lately visited by the Persian Ambassador at Constantinople. It is permissible to congratulate both the royal exile and Persia upon the inaccuracy of the former report. At the same time it is distinctly unsatisfactory that practically no trustworthy news of any importance reaches this country from Persia, and that rumours of the kind that has just been contradicted should be allowed to circulate for days uncontradicted.

Damad Ferid Pasha and the other members of the Turkish delegation to Paris appear to be in no hurry to return to Constantinople, having turned aside for a visit to Lausanne *en route*. How this dilatoriness will be regarded in Constantinople it is hard to say; but the Cabinet is certainly having a good many difficulties to contend with at the present time. The *Times* correspondent reports that its conflict with the Union and Liberty Party has degenerated into a violent personal dispute between the Acting Grand Vizier and Colonel Sadik Bey, and at the time the message was despatched the arrest of Colonel Sadik was expected. Another of the Cabinet's preoccupations, and a potentially much more serious one, is provided by Mustapha Kiamal Pasha, who is reported to be organising what is described as " a national army " in the Eastern Provinces, and has convoked meetings of notables. As he continues to hand over war material in accordance with the terms of the Armistice, it would seem either that he has no intention

Digitized by Google

of proceeding to extremities or that he is not yet sure of his ground.

The Turkish court-martial which has been trying the leaders of the Committee of Union and Progress has condemned Enver, Talaat, and Jemal Pashas to death *in contumaciam;* Javid Bey and the ex-Sheikh-ul-Islam have been sentenced to fifteen years' hard labour; while Rifaat Bey, ex-President of the Senate, and Hashim Bey, ex-Minister for Posts and Telegraphs, have been acquitted. The sentences have been submitted to the Sultan for sanction—which is unlikely to be withheld. Their execution will probably be a matter of extreme difficulty, but for the sake of Turkey and for the peace of the world it is to be hoped that the difficulties will be overcome; for until Talaat and Enver at least are rendered powerless for further harm, not only Turkey, but the whole Near East must be kept more or less in a state of suspense.

It is deplorable indeed that these utterly conscienceless adventurers should have had it in their power to work such harm to the Turkish Empire, but it is much more deplorable that they should have contrived to appeal to the sympathy, and win the admiration of a large section of Moslem opinion outside Turkey. For it is notorious that they themselves had no regard for Islam save as a means for furthering their own ends and self-advancement; and whenever it was a question between Islam and Turkey the former had to give way —the teachings of Mohammed were always subordinated to the "Turkification" of everything and everybody. In its young days the C.U.P. did undoubtedly render real service to Turkey, but in later days it undid most of the good it had first done, and did more than anything else to hasten the labefaction of the Turkish Empire. With the exception of courage, it would be difficult to name any redeeming virtues in either Enver or Talaat. Jemal, although he earned the worst possible character for himself in Syria, yet showed certain likable characteristics at times, and probably has still a few friends among Englishmen.

The Spaniards have not yet come to an end of their troubles in Morocco, but, having grappled with their difficulties, they seem determined to see the thing through. On Sunday their posts and lines of communnication between Larache and Tetuan were attacked by an enemy force led by Raisuli, and the Spanish High Commissioner's report declares that this attack was more violent than any before it. It was, however, repulsed with considerable loss to the enemy, and the message added that all necessary steps had been taken "to continue the resistance and to prevent any advance on the part of the rebels." Unfortunately, later reports and rumours indicate that the Spanish losses have been extremely heavy; and, as *The Times* Tangier correspondent puts it, "the care with which all information is being suppressed leads to the belief that the Spaniards have suffered a severe check." At some points the Spaniards have admittedly been hard pressed, and Raisuli's force claims to have taken some prisoners and to have captured much material.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 21.

Politics and the Weather.

The month of Ramadan will be over before these lines reach England, and there is little reason to apprehend that it will terminate less tranquilly than it began. On the 23rd the Sultan and the whole Cabinet adjourn to summer quarters at Alexandria, which, presumably, will become the centre of whatever activity the dog-days may leave to the Nationalists. Up to now, it may be remarked, there has been no heat to mention in Cairo, and an overcoat is worn with comfort driving, or sitting on a balcony after dinner.

Cairo itself has also been rather sleepy after the strenuous days of March, April, and May. In the provinces, however, Courts of Inquiry and Courts-Martial are busy from one end of Egypt to the other. The only important trial that has come to a conclusion is that of several score of prisoners at Minia for high treason and inciting to various offences. It has resulted in a general conviction; but the sentences have not yet been given out. The higher authorities have been carefully revising every sentence pronounced, and in a large percentage of cases have considerably reduced the penalties. This proof of justice tempered with mercy has undoubtedly produced a good effect. The widespread presence of British troops in the provinces and the intercourse between the officers, judges, and counsel with the population, especially with the more educated portion of it have also led to frequent modification of the hostility that was shown to everything British. It is often said now that if Egyptians had been spoken to in the same way earlier, and if they had been argued with and shown sooner how mistaken were some of their ideas and aims, much of what has happened might never have occurred. This would seem to augur well for the results of the labours of the Royal Commission if this body really holds its doors and its ears open to all comers. It will probably hear a good deal that will astonish it, but in return it will be able to convince the Egyptians of the absurdity of the chimeras with which they have been fed by their irresponsible leaders.

Leaders and Dupes.

Except for the nightly meetings at the Azhar, where inflammatory speeches are made by the Sheikhs and any nondescript orator who chooses to mount a pulpit, and for a steady flow of revolutionary literature in various forms, there is little outward sign in Cairo of any unrest. The propaganda is issued in the shape of newspapers, pamphlets, "red" books, "black" books, and such-like professedly historical records, and the diurnal flysheets and poems. One or two attempts have been made lately to seize this undesirable sort of reading for the masses, but without much real success. As long as

the notorious ringleaders are allowed to meet and organise each step in their campaign it is indeed hardly worth while to shut a printing press or arrest a couple of street Arabs distributing the noxious papers. And, as has been said in previous correspondence, for reasons of policy the Cabinet shows great reluctance to proceed to any violent measures of repression against the chiefs, and has done very little to stop the furious barking of the National pack, except now and then in the way of throwing out a sop to it by pardoning and releasing a member or installing some notorious Nationalist in a Government post.

So much for politics, which may with advantage be left for the moment to professional agitators. As long as the pot only simmers it need not be watched with anxiety.

The Profiteer Once More!

The gradual increase in facilities for travel—very gradual indeed, but still appreciable—is leading to a great exodus, first of refugees who are returning to Palestine, Syria, Asia Minor, and Turkey; and, secondly, of merchants and traders, principally Greeks and Jews, who, having made a certain amount of money in Egypt during the war, are now off to use it as only Greeks and Jews know how in countries where cash is scarce and where everything that man and woman needs is bought up as soon as imported at almost any price. Rice, for instance, would fetch over £50 a ton now in Greece if it could be landed there, and everything that can be purchased in Egypt and the Sudan, or indeed anywhere else, and dumped down in the Levant is snapped up by the famished populace.

Palestine and Syria and their Future.

The American members of the International Commission for sounding the wishes of the indigenous population as to their future "mandatory" protectors have already "started in" with characteristic energy. It is said that the members of other nationalities are expected ultimately to join them, but unless these expedite their arrival the *plebiscite* will practically be over before they arrive. Little birds warble gently that the *vox populi* is, so far, rather in favour of the British wherever opinions have been taken, but the latest arrivals from Palestine say that, whereas a few months ago the people would have voted solid for a British mandate, there are some districts now that are inclining towards an Arab suzerainty. The reason given is that the British representatives of various military or civil departments have not been too affable, and that as they are not acquainted with Arabic they work through exclusively, or almost exclusively, Christian interpreters. This, of course, gives an immediate advantage and handle to Pan-Arab propaganda.

The Emir Faisal is also said to be very active, and fairly popular in pushing the idea of a Great Arabian Empire. At one time the suggestion of placing the Mesopotamian and Syrian Arabs in any way under a Hejaz dynasty or sovereignty would have been greeted with mild amusement, but the alarming spectacle of Italian and Greek ambitions running riot in Asia Minor and the Archipelago has probably led the Arab-speaking races to reflect, and to wonder whether it might not be wiser to amalgamate all Arabic-speaking folk under an Arab sceptre, rather than establish any Western mandate over themselves, even if it were given to so well-tried a governing nation as the British, or to so disinterested and liberal a republic as the United States. Later on, the more educated and clever Arabs of Mesopotamia and Syria—the Baghdadis and the Damascenes—may be trusted to rise to the top of any Arab Empire or Government. In any case, the conclusions of the International Commission will certainly prove interesting reading for everybody directly or indirectly concerned.

Reuter's Constantinople correspondent writes:—The statement published a few days ago in London to the effect that the ex-Shah of Persia, Mohammed Ali, had returned to Persia and had reached Kazvin is incorrect. The ex-Shah is still residing on the island of Prinkipo, in the Sea of Marmora, and was visited on July 8 by the Persian Ambassador here.

THE KING'S BIRTHDAY AT JAFFA

HOW IT WAS KEPT.

The following is an extract from a letter recently received from Jerusalem:—

"A very nice incident happened at Jaffa on June 3. The Greek Orthodox community invited the British Military Governor to a service. He found thousands of people awaiting him, and on entering the church found the Greek bishop and his clergy awaiting his arrival to bless a huge silk Union Jack, some 20 ft. long. It had been made from P.T.1 subscriptions from poor and rich alike. The Governor accepted the flag, and the immense concourse of people accompanied him to the Town Hall after the service with the Union Jack carried in state before the procession. There a reception was held, and the rest of the day was given up to a series of festivals."

JERUSALEM ON ITS FUTURE.

(From Our Correspondent.)

Jerusalem, June 15.

The American members of the Inter-Allied Commission for settling the Near Eastern question have arrived from Jaffa, and are quartered at present in the Grand New Hotel, inside the city wall. The British Administration here sent to the various communities of the city asking them to choose a representative delegation to meet the Commission. These communities were informed that they had to choose a Power to act as a mandatory over them, and that they should not ask for independence, as it was agreed by all the Allied Powers not to grant such a thing at present.

Special days were appointed to the different sects and societies on which they could go to express their views to the Commission. This, of course, caused quite a stir in the city and much discussion.

This morning the Arab party and (it is said) the Christian-Moslem Society, flew from the balcony of the Arab Club and the Palestine Hotel white sheets bearing the following inscription:—"We demand total independence from Taurus Mt. to the Canal. Palestine an undivided part of Syria. We protest against Zionism. We protest against immigration." On another sheet were the words:—"Moslems, Jews and Christians alike demand the independence of their country." And on the third was this:—"Long live our Emir Faisal and the Allied Powers." It is not quite known who flew them, although it is known which party was responsible for them. These flags produced a sensation, and crowds gathered to see them and what was written on them. At 10.30, however, they were taken down by order of the Government, and no trouble took place.

It is said that the Commission will visit Hebron on Tuesday afternoon to hear the views of the people there, and on Friday, Beersheba and Gaza, thus finishing with the southern part of Palestine.

The people are waiting impatiently for the decision of the Great Powers in regard to their country.

One word more about the different parties of the country. As far as I know, the Jews compose one big party, who ask that they be allowed to settle in Palestine as their national home. To this both the Christians and the Moslems object. The Christians on the whole would rather have Great Britain in charge of the administration, with the understanding that they are to restrict the immigration of the Jews. The Moslems, on the other hand, were wont to ask for the Shereef's mandate, whereby they thought to do away with Zionism. This demand they have altered recently, and now they are asking that Palestine should form the southern part of Syria and that both should have the same mandatory Power. One can, of course, conceive of a small part asking for France and of a bigger one asking for America, but I believe that in reality they do not mind who gets the mandatory power over the country. Their chief wish and demand is the restriction of Jewish immigration; upon this they are united.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, July 8.

"Vidov Dan."

Saturday, June 28, was Vidov Dan. The famous battle of Kossovo was fought on the day of this obscure saint in 1389, and the anniversary of this disaster has been celebrated by all Serbs ever since. The defeat was avenged at Kumanovo in 1912, but this year saw the first celebration of the national day since the liberation of the country and the reunion of all the Yugoslavs. A solemn thanksgiving was held at the cathedral at Belgrade, which was attended by the Crown Prince, Sir Charles de Graz, the popular British Minister, General Plunkett, the Military Attaché, and Admiral Sir Ernest Troubridge. At Novi Sad, the centre of Serbian intellectualism in Southern Hungary, there was a great gathering of *sokols*, or members of the all-Slavonic gymnastic society, which, beneath its purely athletic exterior, has for years concealed the germ of a national organisation, and carefully cultivated the national sense of all oppressed Slavs. From every part of Yugoslavia they came in their hundreds, looking very picturesque in their striking costume of crimson shirt, grey trousers and jacket, hung hussar-wise across the shoulder, and crimson pork-pie cap with nodding plume. They came from every part of Croatia, Slavonia and Slovenia, Dalmatia, Bosnia and Herzegovina, even from Trieste, where they must hve successfully dodged the lynx-eyed Italian authorities.

The body of Tsar Lazar, last independent Serbian prince, who won a martyr's crown, in the popular estimation, at Kossovo, was moved about sixty years after the battle to the monastery of New Ravanitsa, in the picturesque groves of the Frushka Gora in Srem, not far from the prosperous township of Ruma. Here devout Serbs congregate every Vidov Dan from all parts of the Serbian territories, and this year in particular it was anticipated that there would be a record attendance. But the difficulties of transport are still too great, and most of the crowd, which was quite dense enough, came from the neighbouring provinces. The coffin containing the martyr's remains was exposed in an orchard near the monastery, while the Bishop conducted a requiem service which lasted two and a-half hours; then the body was reverently conveyed back to its resting place in the chapel, where the crowd of devout pilgrims visited it, depositing their humble kronen, and kissing the withered and blackened hand, bejewelled and clad in a golden gauntlet, which is exposed to the gaze of the faithful. Lazar must have been a man of small stature; for even with his lofty diadem, he falls far short of the splendid build of the average modern Serb.

The natives of Belgrade witnessed two days later the unusual sight of the procession of a corps of *sokols* through the town, on their way to a parade and exhibition of exercises. Three companies of *sokolitsas* added a peculiar charm to the picturesque parade, which was a very real emblem of the union of the Yugoslav peoples.

Belgrade After the War.

Belgrade has suffered heavily from the war, as was to be expected. The district near the old fortifications has been battered out of shape, but the main part of the town has suffered little; the picturesque suburb on the Topchidere Hill has had most of its houses more or less knocked about, but the greatest part of the damage has been done during the occupation; for the Austrians removed everything movable that was of any value. There are few houses where the greater part of the furniture is not missing, and it is quite a common thing for visitors to a house to recognise and claim articles of their own which had been moved about by the enemy to suit their own convenience. Large qauntities of furniture have been removed to Austria and Hungary, some of which is gradually coming back in the form of booty; in fact, the Director of Booty is one of the busiest public officials at the present moment, when the whole Government staff is working with unusual zeal and energy in the attempt to restore normal conditions to their long-suffering capital.

Apart from the inevitable dearness of living, the native of Belgrade has many inconveniences to put up with. For six months there have been no trams, and the lighting service has been erratic and precarious. The concession of the Belgian company which worked these services was the subject of many acid comments in the local press. Seeing their concession nearing the end of its period, they were unwilling to indulge in any heavy expenditure, until the town lost patience, and the municipality took control. From Vidov Dan, the natives enjoyed the unusual spectacle of seeing trams running, and, crowded and hot as they are, they are a great boon to the inhabitants.

Belgrade is still almost isolated from the surrounding country. The traveller from Europe leaves the train at the terminus at Zemun, and as the Orient Express is often late, he is frequently unable to catch the last boat across to Belgrade, and so is obliged to sleep an extra night in his *wagon lit*. The main line from Nish is at last open to traffic as far as Semderevo or Semendria, at the head of the Morava Valley, whence there is daily communication by boat to Belgrade. The line from Belgrade is only serving a few suburban stations. The enemy on retreating, as is notorious, did the maximum damage to the railway, destroying bridges and tunnels, which take a long time repairing, especially under present conditions. The railway bridge over the Save was to have been completed this month, but the contractors, the Reshitsa steel works, are troubled by political reasons; for the line of demarcation runs through their property, and to complicate matters there is now a strike, so that all work on the bridge is suspended for want of materials, although only one span remains to be completed.

Serbia at the Conference.

Considerable speculation has been aroused by the departure for Paris of the Prime Minister and Acting Minister for Foreign Affairs, M. Stoyan Protich, and the Ministers of Mines and Forests, Law, and of the Constituent Assembly and Unification of the Laws. The general opinion is that they have gone to Paris to press Serbia's cause for an adequate indemnity and reparation for the cruel wrongs which the country has suffered, as there was a widespread belief that the Peace Conference had finally decided that Serbia, alone among the smaller countries destroyed by the enemy, was to receive no compensation.

Currency Perplexities.

The difficulties of transport have aggravated the cost of living, already high enough, owing to the flooding of the country by enemy currency. The coinage in Serbia is now very complicated; the standard unit is, of course, the dinar, which is said to be well covered by the gold reserve held in Paris; the dinar is divided into a hundred centimes, called "para," usually specified as *pare dinarske*, to distinguish them from the old Turkish para, which was worth just half. Consequently when a Serb refers to "a hundred paras" he means a hundred Turkish paras, i.e., 50 centimes, unless he specifies *pare dinarske*, when, of course, he means half a dinar or franc. A five para piece is a *maryash*, and a 20 para piece is the *grosh*, again borrowed from the Turkish. Simultaneously with this old Serbian currency, there is an enormous mass of Austro-Hungarian paper money, with inscriptions in about a dozen languages, called *krune* and *filire*.

The bewilderment of the stranger is increased by the fact that while shopkeepers, as a rule, cabmen and the peasants in the market place always quote their prices in krune, the Government only recognises them unwillingly. From time to time an official rate of exchange is announced, which at present is three dinars to one kruna, and on this rate all transactions with the Government are reckoned. But this rate rarely agrees with the current rate in the town, which fluctuates constantly, to the delight of a whole flock of money changers which has sprung up. To-day every other shop in Belgrade, apart from its legitimate business, exhibits a notice that it changes money at the most favourable terms; at the present moment, these terms are about 3 or 4 per cent. below the Government rate. As a matter of experience krune are the most useful currency to carry in one's pocket, especially when going *preko*, or across the river, where dinars are very unacceptable. The ratio of dinar to krune varies, too, in different parts of Serbia, and in the districts that were occupied by the Bulgars there is a mass of Bulgarian levas to complicate the situation.

Russian Refugees.

The fall of Odessa has reacted on Belgrade by scattering thousands of Russians to the various cities of the Levant, and from Salonika a large number have arrived in Belgrade, where the Serbs have accorded a hearty welcome to the "Brother Russian." As they only received about 25 centimes for the rouble, many were in great distress; a few of the better qualified have secured posts in banks, but most were passed on by the authorities to the prosperous towns across the river. Belgrade was already far too congested to be able to accommodate the two thousand and more Russians for more than a few days. The influx has now stopped. The papers were filled with an appeal for help for their Allies, once so great, now so helpless, to which the generous Serbian people make a gallant response. A concert was held at the Oficirski Dom, where a crowded audience listened to some of the masterpieces of Russian music, in aid of Russian refugees, and a fund was organised. No Russian will be able to complain of want of hospitality in Serbia.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, June 30.

M. Take Jonesco's Home-Coming.

The leader of the Conservative Party arrived in Bucharest on June 25, taking up his residence in the house of his parents, his own luxurious and hospitable mansion having been completely gutted by the Germans. At an early hour he found himself surrounded by friends, political followers and journalists; but refused to make any specific declarations of a political character. He announced his intention of making a firm stand against the political corruption of the day, and briefly sketched the lines to be followed by Roumania in her relations with the outer world: "Roumania must uphold the policy of close alliance and warm friendship with the great democracies of the West, and prepare the way for solid friendships with all the States of Eastern Europe, which, like ourselves, have issued, in their actual formations, from the collapse of the Habsburg and Ottoman Empires."

He was no more communicative regarding his own political plans at a meeting of the Conservative Club subsequently convoked, but it is assumed that he and General Averesco, who have both been received in audience by the King, will join forces and prepare for combined action against the Liberals. M. Bratiano's return from Paris has long been announced in the papers, and it was even reported on good authority about a week ago that he had submitted his resignation to the King. The whole truth is not known, but it would appear that preparations are being made for a political change.

The Wolf in the Sheep's Skin.

Occasional observers cannot be too strongly warned against the fallacy of judging people, including those of the Near East, by appearances. You cannot hope to feel the true pulse of a nation by listening to the clamours of extremists or gazing upon the kaleidoscopic scenes of the Calea Victoriei; and presumably this principle applies in an equal degree to other small peoples in this part of the world besides the Roumanian. Certainly they all have their extremists, and I doubt not their Calea Victoriei, too, whatever the local name for it may be; and like Roumania they possess also their moderates. I am at present struck by the consternation manifested in a quiet way by apparently quite ordinary people who, taking a matter-of-fact view of events, never seemed to be deeply stirred by sentiments either chauvinistic or idealistic. Belonging to this class are many individuals who to-day show manifest symptoms of disappointment at the turn events are taking in the West. Quite apart from the subject of the Banat, or the Minorities, or any one of the vexed questions so hotly discussed, these men and women betray their latent idealism in their indignation against those who dispose so lightly of European destinies, in their bitter disillusion that the high principles, in virtue of which so much of the sacrifice of the last years has been borne, are steadily retiring into the background, and being replaced by considerations of a purely mercenary character.

The Late M. P. P. Carp.

There passed away on June 22, in the person of M. Carp, one of the most notable figures of modern Roumanian history. Born in 1837, he was educated in Germany, where he became ineffaceably tainted with the spirit of Prussian *Junkertum*. Returning to Roumania, he founded the literary society "Junimea," and translated "Macbeth" and "Othello." He entered political life about this time, and went as Diplomatic Minister to Vienna in 1882, where he rendered his country signal services in the question of the Danube. Subsequently he became leader of the Conservative Party and was twice Prime Minister.

In external politics he was an unwavering partisan of the Central Powers and an enemy of Russia. An uncompromising Conservative in internal politics, his autocratic tendencies caused him to be ever at loggerheads with his political friends, and perpetually out of touch with public opinion, for which he professed complete disdain. He was an autocrat convinced of his own crushing superiority—a conviction to which, by the way, many of his contemporaries subscribed—to whom democratic ideas appeared both hateful and absurd.

He left a deep mark on the political life of modern Roumania, although his political career, as such, was singularly barren. The influence he exerted was rather the result of what he was than of what he did. Though possessed of intellectual gifts of a high order, he was totally unable to adapt himself to the changing spirit of the times, and his ideas, clear and inflexible, did not always conform to the interests of his country. He will be remembered in Roumanian history as a man of granite whose uncompromising rectitude shone forth brightly amid the murky squalor of the political world in which he lived.

BOLSHEVISM IN BESSARABIA.

A correspondent writes:—

In a previous number of The Near East reference was made to the discovery of a Bolshevist plot in Bessarabia. According to more recent information this plot would appear to have been more serious and extensive than was to be inferred from the first reports. It is now claimed that the movement involved a widespread organisation, supported principally by the Jewish population, in which a number of persons of high standing were implicated, including, among others, an ex-general of the Russian Army. Unfortunately, French troops stationed along the Dniester do not seem to have escaped the Bolshevist contagion. If the statements now vouched for can be relied upon, the French soldiery had long been murmuring against the circumstances which kept them under arms so far from their homes, for purposes which were beyond their comprehension. Fraternisation followed between them and the Bolshevists across the river, and early in June affairs came to a climax. Bolshevist troops crossed the river from Tiraspol, and occupied the greater part of the town of Bender, including the historic fortress, and were met with but a half-hearted resistance from a portion of the French garrison. A battalion of Roumanian soldiers was hurried to the support of the Senegalese troops, and with the help of the latter, whose conduct is reported to have been admirable, they succeeded in ousting the Bolshevists. The population of Bender is represented as having sympathised with the Bolshevist attack. Subsequently searches led to large stocks of arms and munitions being discovered in private houses.

INDIA AND PEACE.

In a message dated June 30, Reuter's Simla correspondent writes:—Lord Chelmsford, the Viceroy, has issued the following notice:—

"His Majesty's gracious message on the signing of peace will appeal to all hearts in India.

"Germany's attempt to enslave the world has failed, and her power for evil is broken. The people of India have borne their part in the struggles and suffering of the war. I call upon them now to rejoice in the victorious peace. Such an epoch of our history calls for grateful celebration, and days will be set apart for thanksgiving and rejoicing throughout the length and breadth of India, in which every subject of his Majesty, soldier and civilian, old and young, rich and poor alike, may join in commemorating the triumphant peace which, under the mercy of Providence, has been vouchsafed us."

It is understood that these public celebrations will be held in December, but all cities and towns are already beflagged, and general rejoicing is taking place.

THE REBELLION IN EGYPT.

A BRITISH RESIDENT'S VIEW.

(FROM A CORRESPONDENT.)

The ostensible causes of the recent troubles in Egypt are so many and various that it is difficult to point to any one reason for this extraordinary outbreak, which has come at the most inopportune time for its promoters, for to make trouble when the country was full of hardened troops was surely the culmination of ineptitude. As for any real political yearning amongst the mass of the population, few believe that it exists, and the genuine cry for political independence is confined to those to whom British administration is irksome, and who long for the good old times when a man in Government service paid for his job the amount of his nominal yearly salary—in fact, the Government sold their posts much in the same way that a doctor sells his practice now in England. Everyone who has the most elementary knowledge of Egypt, knows the hollowness of the cry "Egypt for the Egyptians," but for those who believe in the omniscience of a popularly elected representative I will quote the words of Mr. Villiers Stuart, M.P., who was sent out to Egypt after Arabi Pasha's rebellion to report to Parliament on the causes of the unrest. From an exhaustive inquiry into the state of the country and the desires of the inhabitants we may take the following as typical of the general state of the country. It is the evidence of the villagers living on the plain of Thebes, near Luxor:—"Once the entire plain belonged to us, but about eight years ago the Government took possession of about 500 feddans. They themselves fixed the price arbitrarily at £7 per feddan; that is far below its real value, but we had to part with our land at the price whether we liked it or not. When the time for payment came, the Government made claims against us for arrears of taxes, and we received nothing." Mr. Stuart's opinion is summed up in the following, from his report:—"It would be a mistake to be too squeamish about interfering with the Turkish Governors of Egypt, for they have hitherto abused their power, neglected their duties, and cruelly oppressed and misgoverned the people for their own selfish purposes. The cry of 'Egypt for the Egyptians' is very misleading; really it means Egypt for the Turks, Egypt for the bureaucrats, Egypt for the small minority of office-holders who have hitherto preyed upon her vitals, and betrayed the interests of her population for their own benefit."

"Egypt for—the Turks."

Nearly thirty years later—in fact, shortly before the war broke out—a distinguished public servant who though not connected in any way with the Egyptian administration, yet had unrivalled opportunities for knowing the true feelings of the real Egyptians, wrote as follows:—"A certain section in the community is always crying 'Egypt for the Egyptians,' and many of its members cannot see that they are being cleverly worked by emissaries from abroad whose real aim is 'Egypt for the Turks.' These emissaries do their best to blind the minds of the unthinking lower classes to the fact that they owe their freedom from the whip, the corvée, and slavery to the British rulers in Egypt. . . . Happily, the Anglo-French agreement permits England to continue her great civilising work in Egypt . . . . and there is now no fear that Egypt will sink back into the misery and corrupt state to which it had been brought by Turkish misrule." Anyone who knows anything about the country will endorse thoroughly what these authorities say.

Foreign Instigation.

The incidents of the recent outbreak in Egypt bear too close a resemblance to the German-encouraged Bolshevism of the continent of Europe to escape the conclusion that they are closely related both in inception and organisation. The senseless destruction of public property, such as railways and irrigation canals, on which depend the whole prosperity of the country, the murdering of Englishmen, the futile processions, the strikes, are all exact replicas of different phases of Bolshevism; while the fantastic accusations against our troops are a perfect echo of German official and unofficial communiqués during the war.

Nothing shows the hollowness of the strikes and their absolute dependence on a head organisation more than the cabbies' strike in Cairo. As long as they received strike pay they refused to work, but when that stopped the strike stopped too, and the only demand which I ever heard they advanced was for the abolition of the R.S.P.C.A., which, as all who have been in Egypt will know, is one of the most necessary organisations, and with far too few branches and far too little support.

The Killing of Armenians.

However, what puts the origin of the disturbances beyond all doubt is the absolutely unprovoked attack on the Armenians, both in Cairo and Alexandria. The leaders of the disturbances in Cairo asked for the removal of the pickets of troops from the Mousky, as they said that the sight of British soldiers was liable to inflame the mob. Their request was granted, and immediately the rioters started murdering the Armenians. Very much the same thing happened in Alexandria, though the authorities there were able to remove the Armenians to a place of safety before many lives were lost.

Now the murder of some Englishmen can possibly be conceived of as tending towards the political independence of the Egyptians, but how will the death of more Armenians help? However, when one thinks of the attempted Turkish extermination of the Armenian race, and the tacit encouragement of the Germans, of how the Bolshevists handed thousands of Armenian refugees back to the Turks, one gets the key to the present outbreak; from the innumerable Turkish flags carried in the processions and demonstrations, the massacres of the Armenians, the organised propaganda, and the sinister activities of the leaders of this movement during the war, one is forced to the conclusion that a political catchword is being made the cloak for a diabolical plot, which, if it succeeds, will make Egypt a second Russia.

Dupes and Rascals.

What has prepared the natives for this outburst? The country has never been so prosperous as during the war The official requirements of the Army have caused quite a boom in trade, as every single production of the country has been in great demand; labour is scarce, and consequently the labourer can get unheard-of wages; and, to crown all, the private expenditure of most members of the Army has been far in advance of the silliest of tourists. It is a case of Jeshurun waxing fat and kicking, for prosperity has turned the Egyptian's head, and made him a prey to every rascally lawyer on strike, and every semi-educated student who has read a garbled translation of Wilson's fourteen-point speech.

Any Englishman who has a soul beyond the parish pump knows that as long as the British Empire lasts we can never relinquish our hold on Egypt: that it is essential to our safety and the safety of our Empire that we remain paramount in Egypt, and that no half-measures will do; and that whatever measure of self-government the Egyptian may fit himself for in the distant future, yet we shall remain the dominant authority in the country. No responsible statesman seems to have put these facts clearly before the Egyptians.

SELF-DETERMINATION AND THE TURKS

Speaking at the National Liberal Club, London, on July 10, Sir Theodore Morison said that extensive territories in Europe and Asia Minor, where the population was predominantly or entirely Turkish, were apparently to be given over to various European States. This was a direct denial of the very principles for which the Allies had fought, and was in contravention of a pledge publicly and solemnly made by Mr. Lloyd George in the beginning of 1918. Wherever there was a predominantly Turkish occupation the Turk should rule.

Lord Islington, who presided, said that one of the chief objects of the Allied Powers had been the establishment of nationalities formed from peoples hitherto under a foreign yoke; and the introduction of foreign Powers into the heart and kernel of the Turkish Empire would be a direct reversal of this policy. Its effects would be far reaching, not confined to the disruption of the Turkish nationality, but having a seriously disturbing effect on the whole Moslem community throughout the East. The British Empire numbered among its subjects millions of Mahommedans, and, although these had played an important and patriotic part in the war against Turkey, they would resent what would amount to the extinction of Turkish nationality. Turkey should bear her full share of the stern conditions imposed on the countries defeated in a war upon which they had entered without real justification; further, the cruelties committed against the Armenians should not be forgotten, and regard should be had to the aspirations of Arabs and others. But, after taking into account all these important considerations, he hoped that the Ottoman Empire in regard to those parts which constituted the symbol of its nationality—Constantinople, Thrace, and Asia Minor, where it was predominantly Turkish—should not be handed over to a foreign authority.

Mr. Harold Spender said the Turks did not rule Christians justly, and in regard to the coasts of Asia Minor, where the Greeks were in a majority, it would be a terrible responsibility to hand these people back to the Turk. But the Turk had a right to the interior of Asia Minor. With regard to Constantinople, where the Christian population, taken as a whole, was in a majority, but where there was not a majority of any one Christian race, that city should be internationalised.

Another speaker said that he had been on the front where the Turks were opposing us, and he had found the individual Turks valiant and honourable, and had a great admiration for them. He had also been in Salonika, and had found the Turks there the finest people in that cosmopolitan city. But to consider the qualities of the individual Turk and to consider the political outlook after the contract was signed and sealed were different matters. Our policy towards the Ottoman Empire in the past had been disastrous to the Christian peoples there.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE POSTAL SERVICE TO THE NEAR EAST.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I should like to call your attention to the anomalies of the postal service between Great Britain and the Near East in the hope that it will be possible to effect some improvement without delay.

I left Constantinople on July 3; travelled viâ Taranto to Rome and Paris, and arrived in London on the 10th: that is seven days. Before leaving Constantinople we were kept six hours on board ship; at Taranto we arrived at two and could not leave until 6.30. At Rome we spent the best part of the day sight-seeing—that is, from ten till nine o'clock at night. At Paris I arrived at ten o'clock in the morning to leave at 5 p.m. In spite of these delays I arrived here on the seventh day. Yet I have received a letter to-day which was posted in Constantinople on June 18.

The day I left Constantinople I received a letter that took just one month coming. The same letter mentioned two telegrams that had been sent me, which I never received. These telegrams I find are not sent by cable but by any available route, which means by ship or rail. We are losing business by these delays, and it is a matter that should be taken up in the interests of British trade. —I am, etc.,

ARTHUR BAKER.

London, July 14.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Though tempted to comment on the wholly inaccurate statement of my arguments for the retention at present of Cyprus as "summarised" by the "Cyprus Deputation" (THE NEAR EAST, July 11), I cannot venture to trespass further on your space. English readers, to whom the case on both sides has been fully presented, will have formed their own conclusions as to which contention carries most weight.

It is to be hoped that the Statesmen responsible for a decision will regard in its true perspective this important portion of an area in which the causes of future trouble and complication appear to be at present, if not increasing, certainly not diminishing.—I am, etc.,

FORESIGHT.

GREAT BRITAIN AND PALESTINE.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—THE NEAR EAST, in its issue of May 30, published an extract from an article in *Palestine* respecting Palestine, Great Britain, and the United States. The article states that the masses of the population who for many years to come will have no mature political understanding will always be at the mercy of an agitation which appeals to religious passions. This agitation need not be a very serious menace; but a political fabric cannot be built upon so unreliable a foundation. British policy must seek something more stable. That stability will only be found in a Jewish Palestine.

Taking it from a historical point of view, we find the following contrasts:—(1) Whatever the civilisations of India and Egypt might have been, we find that they were in a state of constant division and strife, and there was want of unity in their affairs. Although the invaders gained the ascendency throughout and dominated all parts, yet they were never able to unite the various tribes of the aborigines and make of them one homogeneous people, nor could they unite among themselves. This was owing to their caste and class system. On the other hand, we find that the people living in Palestine at that time were living more or less in peace, and, instead of strife and division, they were looking after their commerce and welfare. History repeats itself, and we can say with perfect certainty that the same precepts are followed at present, and will continue to be followed in the future. Thanks to the good policy of the British Administration, these agitations are at the present time neither so frequent nor of so serious a character as might be expected. (2) Every nation needs for its proper development contact and reciprocal intercourse; to learn from others whatever they have produced superior to their own. It has to cast off the shackles of prejudice, and frankly accept guidance and knowledge from other nations. It has to learn the advantage of mutual dependence of nation upon nation and of mutual help. These the peoples of Syria and Palestine have commenced to learn on a large scale, and now we find that the emigrants of this country in Egypt, the Sudan, Europe, and America occupy remarkable places and are highly regarded.

As to the Zionist movement and Palestine, we have to bear in mind the following:—(1) Palestine has been our country for over thirteen centuries, whilst the Jews occupied it for only a short period; besides, the Jewish Mission has long been completed in Palestine. Upon what rights and grounds should this country be given over to the Zionists? (2) Palestine is a great religious centre for the three chief religions of the world, and I believe it would be quite unfair to give this country to one party and deprive the other parties of their right in the land of their birth. The article issued in *Palestine* commences with appealing to feeling, and ends in *argumentum baculinum*. As to this I say nothing, for from the first appearance it points out clearly the inconsistency of the argument. (3) In conclusion, I should like to mention that the people of this country at large—Christians as well as Mohammedans—would like and infinitely prefer to be under the British Administration, as they know well that they are much better off under Great Britain than under any other country. Even the minority who have asked for American administration on the arrival of the American Commission have clearly stated that, if by being under the British Administration they would not be separated from Syria, they would prefer Great Britain to any other country. —I am, etc.,

G. K.

Jaffa, June 19, 1919.

A COPTIC FESTIVAL.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Referring to the very interesting description of the "Pardon" of St. Dimiane (pronounced in Arabic Doumiana) that has been published in your issue of to-day, I respectfully beg to ask your correspondent whether he is sure that he has been entertained by "Basileos" Metropolitan of Jerusalem. So far as I know, the Coptic Metropolitan of Jerusalem, Gharbiya, Kalyubiya, Sharkiya Et Autres Lieux, is El Amba "Timotheus" (Timothaos), the only Prelate in the Holy City who escaped deportation, which all the other Christian Patriarchs of Jerusalem suffered, when the notorious Jemal was retreating towards El Shaam (Damascus)

When I was in Cairo last year, I was studying the Coptic language, and my Coptic teacher, the late Egyptologist, Cladius Bey Labeeb, introduced me not only to the venerable Coptic Ethnarch, Cyril the Vth, but also to "Basil" (Basileos), Metropolitan of Abutis (Abu-Tig), the only Coptic prelate of that name.

I am, therefore, afraid that your correspondent has made a slight mistake in the name of the prelate. Having left Egypt a few days before the Armistice, I am not aware of the fact that the Coptic Metropolitan in Jerusalem has safely returned to Egypt. El Amba Timotheus, together with El Amba Iohannes of Alexandria, with whom I also am acquainted, are the leaders of the Coptic Reformation spirit. I should be very pleased, indeed, to hear that Timotheus of Jerusalem, not "Basil," is again once more in Egypt, because, after all, he might be the officiating pontiff, mentioned by your correspondent, at the Festival of St. Dimiane (the St. Catherine of the Greeks and the Latins), as the aforesaid convent is in the province of Gharbiya, under the diocese of Jerusalem.—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester, July 11, 1919.

YUGOSLAV CELEBRATION IN LONDON.

On July 12 the seventy-fourth birthday anniversary of King Peter I. of Serbia was celebrated by the Serbs, Croats, and Slovenes in London. The King sent a congratulatory message during the morning by his Master of Ceremonies, the Hon. Sir Arthur Walsh, to Dr. Koyitch, the Serbian Chargé d'Affaires, who in reply said he was convinced that King Peter and his Yugoslav subjects would never forget the sympathy which his Majesty and the British people had shown to them, especially in their struggle for national independence and unity.

THE REORGANISATION OF RUSSIA.

A ROUMANIAN OPINION.

(From Our Bucharest Correspondent.)

A distinguished Roumanian officer, who has recently returned from Bessarabia, where he held a high military command, has made some interesting statements for the benefit of readers of The Near East. Regarding the present state of Bessarabia, he remarked that the presence on its soil of a highly disciplined army was producing an excellent effect so far as the maintenance of order was concerned, providing as it did an efficient barrier to the encroachments of Bolshevism. The absence of trained officials in the province had entailed a heavy drainage on the resources of the Kingdom in this respect; but this lack of officials and functionaries, as he pointed out, is not limited to Bessarabia. Russia, as a whole, is suffering from the lack of trained functionaries, as well as trained officers. These two classes, which are essential for the successful reorganisation of the country, have been completely exterminated as a result of the Bolshevist movement. Great armies led by efficient officers would be necessary for the establishment of some semblance of order, and these would have to be seconded by a no less important army of trained officials if there were to be any prospect of maintaining the order once established. Military operations would take the form of a war of manœuvres, presenting insurmountable difficulties in a country as vast as that of Russia. Nor are the immense masses of men essential for this purpose available; indeed, the forces of which Admiral Koltchak disposes are totally insufficient.

A Russian soldier refuses to serve unless paid something like 50 roubles a day, and the pay of an amateur officer, devoid of military training and even of elementary education, runs into hundreds. There was no reason for assuming that there were two types or categories of soldier in Russia. Bolshevist or not, the Russian soldier is the same everywhere. (The French mission in Roumania committed this mistake in the winter of 1917-18, when they endeavoured to convince the Roumanian military commanders that they could raise and equip 60 divisions in Ukraine, under the illusion that the Russians of Ukraine were more trustworthy or less susceptible to Bolshevist contamination than Russians elsewhere.) Without efficient leaders the Russian soldier is valueless. It is the military inefficiency of the Bolshevist armies which enables Roumania to hold her own on two fronts with a handful of men, and there is no reason for believing that Admiral Koltchak's forces are made of material different from that of the Bolshevist troops.

My informant declared himself very pessimistic regarding Admiral Koltchak's qualifications for bringing the task he had undertaken to a successful conclusion, even granting him to be seconded by the right men and to have the necessary elements at his disposal, which is not the case. (It is interesting to note that the Admiral is of Roumanian origin, his name being spelt here Colceag.) Of General Denikin, with whom he is personally acquainted, he appears to have a very poor opinion.

Asked if the re-establishment of order in Russia would present any danger to Roumania, in view of Admiral Koltchak's refusal to recognise Bessarabia's union with the Mother Country, my informant assured me that all fears on this ground were unfounded, as there was no prospect of Russia becoming a homogeneus unified state for many years to come. On the other hand, a strong unified Russia would present a very real danger to Europe from the fact that her German sympathies are as widespread and as deeply rooted to-day as they were at any time.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

The wisdom which I have been able to cull from the ordinary man's views upon the Peace Conference has not been remarkable. And I have, I confess, become a pessimist on the subject. Human converse failing, I decided last week to have a heart-to-heart talk with my bulldog on the matter. Breaking through the pride of his dogmatic silence, I managed to discover some very plain truths. "What is all this yapping of little terriers?" he said. "Are you, too, deceived by it? Surely, you who have known me so long should be able to tell the pure-bred from the mongrel! These young hybrids will always be at one another's throats, and no example which I and my few compeers may set them will stop this." "All right," said I, "I know all that, but have you nothing more?" At this he became exceedingly grave. "Master," he said, "there is more. I hear very plainly a growl from the East. I think it comes from very big dogs, and I have told my friends all about it. But, unfortunately, they prefer to listen to a queer mongrel who is living with them in their kennel. About him I don't know much, except that his father was a wolfhound, that he has the smile of a collie, and that he gets most of the bones. Also he doesn't hear the growl from the East."

***

More than this I could not get from my bulldog. It is obvious, however, what he thought of Bolshevism and the Oriental religions and civilisations. His view was that it is folly to spend one's time in trying to ward off colds from slight breezes when there is a mighty wind blowing which may take ones breath away. Now he may be wrong over Bolshevism—that may disappear when those conditions vanish which gave it birth—but what of the other things? Are Christians trying to bury a live corpse, or are they in stripping a dead man, unable to see his stalking spectre? You probably know that bulldogs can, more than other animals, "see" things which are apparently non-existent; but on this occasion I think my bulldog's apparition was real. And he would, I know, convince those little terriers of its reality if he were able to get hold of them. For though he admires an occasional full-throated bark, be it from friend or opponent, those irritating whinings and pleading whimperings he cannot endure. It is his conviction that for the sake of dog-land he should stand over these yelping creatures, ready to shake them to their senses at any necessary time.

***

Readers of this journal are wearily familiar with the heroical declarations of Bolshevists. They know that in Russia the idea of Bolshevism, its application and consequent disasters, are very real; but it has been thought that in other countries, Austria and Hungary, for instance, it is not Bolshevism at all, but merely the anarchic expression of the people's sufferings, which gives these places a Reign of Terror. The following motion, however, which Bela Kun succeeded in getting passed at Budapest, looks like the real thing:—"As mild treatment not only does not bring reason, but encourages *bourgeois* counter-revolutionary activities, the Central Executive Committee make full use of the Proletariat Dictatorship to punish without pity, and authorises the Governing Council, if necessary, to suffocate in blood the counter-revolution." A pleasant prospect, is it not, for some of us? The words of this notorious member of the Ancient Race, who has cast aside all its wisdom, may have suffered in translation, but the intentions are clear enough. In pitiless baths of blood the ineffable *bourgeois* are to be drowned. We understand; for over four years we have tried to grow accustomed to such things; but we also know that those who talk most do least. Words fall from the lips of men as acorns from the branches of the oak; and how many in a thousand take root? Bela Kun at the present time is enjoying one long debauch in his own rhetoric, and in the disgusting example quoted he seems to have been ultra drunk; but these things cannot be done with impunity, and one day he will find his mug empty and the dregs exceedingly bitter.

Corsair.

The extraordinary temperature of 127 degrees, the highest ever recorded in India, was reported from Jacobabad on June 11. The previous highest recorded temperature was 126 degrees, from the same station in 1914.

NEAR EAST BOOKSHELF.

"ROUGHING IT" GENTLY.

Of all countries in the world Asia Minor is probably the fullest in past and future history. Its past stretches to unknown lengths, and its future seems equally unknown. Adequately to describe the region is almost beyond the task of one man, so varied are the qualifications and so unique are the experiences necessary; and it cannot be said that Mr. Hawley has succeeded. His qualifications are many—an eye to natural beauty, a fair sense of history, a power of observation very close, though mathematically and not poetically so, and much else—but they are not sufficiently numerous. And his experiences are those which a European (or American, as in the case under review) traveller would normally choose; for our author appears only to have "roughed it in the best hotels" of Asia Minor.

But the book is certainly interesting—the subject would indeed have to be treated very badly not to be interesting—and it is more the method of description than the style of narration that grows tiresome. The author keeps close to the beaten (i.e., metal) tracks, but what he thence sees he relates with minute detail and obvious pleasure.

Starting from the Asiatic shore of the Sea of Marmora, he proceeds to most of the towns on the Ægean, visits some of the interior towns, and ends his account with the towns on the Southern shore of the Black Sea. Of all the cities on the Ægean he is most fascinated with Ephesus, largely for its classical associations, but also for the calmness of the valley from Ayasoluk to the sea—a calmness in which he can dreamily and very delightfully reconstruct the past. One of the most pleasant spots in all the Levant he finds in a pool at Hierapolis, where the limpid, sparkling water, banks of wild oleanders, dandelions and maidenhair, and three young Yuruk nymphs combined to give an extremely happy experience. And his finest sight was the dawn of the morning at Angora.

As a sample of the author's chief merit, an exact and pleasing observation, we may give this description of part of the town of Eski-shehr:—"Some of the streets close by are used for an open market, which on fixed days brings a motley concourse. Men from the country, wearing turbans, and during winter and spring dressed in long coats trimmed with fur, come with their ox-carts to bargain with men wearing fezes and baggy trousers. Hundreds of women, dressed in red and yellow, as well as black, cross the causeway from the Hill District, and sitting in rows on the ground of the market place, display embroidered garments of home-made stuff, bowls of curdled milk, eggs which have often an unsavoury flavour, bunches of fowls with tied feet, vegetables, heaps of raisins and dried fruits, all exposed to the dust and dirt driven by every wind. Slightly apart from the others, shrewd-looking men squat beside innumerable old suits of clothes of every size, shape, and condition, and gaze alluringly out of their little eyes. From morn till eve a crowd of Jews, Turks, and Tartars, as well as Greeks and Armenians, when unmolested, wander about and sit in groups, chatting far more than buying, and evidently enjoying, as do the women, this opportunity to satisfy gregarious instincts as at a country fair."

Mr. Hawley makes very clear the natural fondness of the Turks for trees and flowers, though he does not seem to love particularly that or any other race in Asia Minor. The most hospitable, he says, are the Yuruks, the old nomads of the Turkoman race.

Of the political situation the author, perhaps wisely, says very little. But we venture to disagree with him when he says, at the end of his book, "When the women are accorded the same rights as men, and the men have risen to a higher place of thought . . . when just laws regulate their rights among one another, and when a stable Government insures the enforcement of those laws and the performance of its obligations, Asia Minor will occupy a far more important place in the world's activities than it has enjoyed for many centuries." It is rather because Asia Minor refuses to understand the modern idea of progress that she retains her importance; if she is raised or reduced to the level of other countries her history, as that of a separate entity, will be wholly in the past.

It remains to say that the map with which the book is provided is wholly inadequate, and that the interest of the plenteous photographs would be greatly increased by a better reproduction of them.

* "Asia Minor." By Walter A. Hawley. (London: The Bodley Head. 12s. 6d. net.)

INSIDE AND OUT.*

The decision of a wife to concentrate upon, and be content with, her home life rather than to embark upon the wide seas outside that home is not so easily made, however desirable it may be. Rabindranath Tagore has written a story of the problem presented by these two and opposing pulls upon the woman. A normal wife, Bimala, married to a rather abnormal husband, Nikhil, is swayed almost from her natural and conventional allegiance by Sandip, a Nationalist who flows in strongly on the tide of the *Swadeshi* movement. We are given a quite modern description of the conscious helplessness of the female to resist the impersonator of Success and Power (Sandip), and her inability to extract the heat of love from intellectual greatness (as existing in Nikhil). But this helplessness is only temporary, and by a somewhat clumsy contrivance of incident at the end of the book things right themselves. On the whole, the "novel" is extremely well done. Nikhil, a kind of super-European, who regards Truth as the Mount Everest of life, is an interestingly drawn character, and Sandip, a kind of Sinn Feiner, who understands and practices Nietzsche (if such a thing be possible!), does inspire just that amount of hatred which is intended. Nikhil goes through life building rows of lamps, but has no passion with which to light them; Sandip erects an arc lamp, and lights it, but the resultant rays are a false glare. The contrast between these two men's ideals is very cleverly made, and the way in which Bimala nearly loses herself in the gap which ever widens between them is shown convincingly. The matter of the book, however, is better than the form of it, for it is not difficult to see where the joints in the machinery come. What is gained by telling the story from three different points of view (Bimala's, Nikhil's, and Sandip's) is not obvious. Of colour in the tale there is little, and the incident is of no account. But with all these defects the book does, by means of its intellectual power, carry itself along satisfactorily.

* "The Home and the World." By Sir Rabindranath Tagore. (Macmillan and Co. 6s. net.)

BOOK NOTES.

We have received with the usual delight the summer number of "Mr. Punch." This organ is more than a superficially good representative of the British nation, and the present number, which is devoted chiefly to Peace Celebration, faithfully reflects the dignified national joys. The very great service which Mr. Punch performed during the war of keeping up good spirits is here fittingly ended.

The *Quarterly Statement* for July of the Palestine Exploration Fund reprints Dr. E. W. G. Masterman's article, "A Jewish Feast," which was originally published in THE NEAR EAST. It also contains an interesting account of "English Improvements at Jerusalem," based on a communication of Father L. H. Vincent, in which the well-known archæologist pays tribute generously to what has been accomplished by our countrymen. An article on "On-Ann, Heliopolis" and many archæological notes come from the ready and industrious pen of Mr. Joseph Offord; and the *Statement* is as interesting, and as useful for the purpose of record, as ever.

BOOKS RECEIVED.

"Glimpses of the Great War." (London: The Theosophical Publishing House. 3s. 6d. net.)

"English Self-Taught for Jews" and "English for Russians." (London: Marlborough. 3s. net each.)

ARMENIAN NATIONAL UNITY.

The Armenians have formed a new party to unite certain of their existing political and social organisations. The movement, which has the support of a large number of influential Armenian personalities and leaders, will be national and Liberal in character, and free from all extremist tendencies. Its main object will be the whole-hearted and patriotic support of the mandatory Power in its work of reconstruction and repatriation.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. July	1919. July		1337. Shawal	5679. Tamuz
18	5	Friday	20	20
19	6	Saturday.....	21	21
20	7	Sunday	22	22
21	8	Monday	23	23
22	9	Tuesday	24	24
23	10	Wednesday	25	25
24	11	Thursday	26	26

M. Naville, Director-General of the Banque Franco-Serbe, has returned to Paris *en route* for London.

The Maharaja and Maharani of Cooch Behar had the honour on July 15 of being invited to luncheon with their Majesties.

The Viceroy proposes to hold an investiture at Viceregal Lodge about the middle of September.

The Maharaja of Kashmir and Jammu flew from London to Paris by aeroplane on July 13.

Lord and Lady Francis Scott have arrived in London from Minto House, Hawick.

M. George Danielopol, the Roumanian Minister at Washington, arrived in London on July 11 from Paris.

Prince Nicolas of Roumania, accompanied by Colonel N. Arion, the Roumanian Military Attaché has arrived in London from Eton.

The Turkish delegation to the Peace Conference has broken its return to Constantinople, and is spending a few days at Lausanne.

Sir William Brunyate, Adviser to the Ministry of Justice, who is now on leave in England, will return to Egypt at the end of August or early in September.

Mr. A. W. MacNair, I.C.S., on return from leave, is appointed to officiate as Commissioner of Rohilkhand. On being relieved Mr. Sladen will revert as Magistrate and Collector of Bareilly.

The representatives of the India Moslem League, now in England, are Mr. Yakub Hasan, Mr. M. A. Sinnah, and the Hon. Mr. G. M. Bhurgari.

Sir Thomas Holland, who recently arrived from India, will be staying with Lady and Miss Holland at 3, Whitehall Court, S.W., until October.

Sir Michael O'Dwyer, upon relinquishing his appointment as Lieutenant-Governor of the Punjab, was received in audience by the King on July 14.

Mr. J. D. V. Hodge, Under-Secretary in the Home Department of the Government of India, is shortly to proceed on leave, and will be succeeded by Mr. F. J. Nobes, Under-Secretary to the Madras Government.

Princess Marie Louise opened at Claridge's Hotel, on July 14, a Slava Fête, which had been organised as a Victory thanksgiving for Serbia. The proceeds are to benefit the Hon. Evelina Haverfield's Fund for Disabled Serbian Soldiers.

The marriage arranged between Lieut.-Colonel H. Castle Smith, Suffolk Regiment (attached Egyptian Army), and Miss Maude Evans will take place at St. Paul's Church, Knightsbridge, on Tuesday, July 22, at half-past two o'clock.

The marriage was celebrated on July 1, at the Oratory, by the Rev. Edward Crewse, assisted by the Rev. John Talbot, between Major C. A. B. Hamilton, 1/3 Gurkhas, Lansdowne, India, son of the late W. Roberts Hamilton, I.C.S., and Barbara, youngest daughter of Mrs. Elliott Smith, 3, Pond Place, South Kensington.

Brigadier-General W. E. Fairholme, upon relinquishing his appointment as his Majesty's Military Attaché at Athens, had the honour of being received by the King, when his Majesty invested him with the insignia of a Companion of the Most Honourable Order of the Bath (Military Division).

A marriage has been arranged between Captain Charles E. F. Osborne, Indian Army, attached 2/88th Infantry, second son of Lieut.-Colonel G. H. Osborne, late Royal Irish Fusiliers, and Margaret Anson (Peggy), only daughter of Lieut.-Colonel Coldstream, Royal Engineers.

The marriage was celebrated on July 14, at St. Margaret's Church, Downham, Essex, by the Rev. R. T. Ratcliffe, assisted by the Rev. J. F. Twist, between James Stuart, youngest son of William Leslie, Esq., of Downham Hall, Billericay, and Calcutta, and Margaret, daughter of the late Edward Septimus McLaren.

Among the recipients of Civil List pensions granted during the year ended March 31, 1919, is the name of Mrs. Wells. She receives a pension of £75 in view of the valuable work performed by her late husband, Professor Charles Wells, in the study of Oriental languages.

Sir William Meyer, upon relinquishing his appointment as Finance Member of the Viceroy's Council, India, and Sir James Meston, upon his appointment as Finance Member of the Viceroy's Council, India, had the honour of being received by the King on July 15.

The engagement is announced of Mr. V. H. T. Fields-Clarke, Indian Forest Service, eldest son of the late Mr. G. T. Fields-Clarke and Mrs. Fields-Clarke, of Bedford, and Gertrude Helen, younger daughter of Mr. and Mrs. Herbert King, of Broom Manor House, Biggleswade.

The marriage arranged between Major Nelson Rooke, Highland Light Infantry, younger son of the late Dibney Rooke, Esq., and Mrs. Edith de Chair, and Marjorie, elder daughter of Sir Alexander and Lady Wood Renton, took place at the Garrison Chapel, the Citadel, Cairo, on July 1.

His Majesty inspected on July 12 a detachment of Indian officers, non-commissioned officers, and men belonging to Divisional Ammunition Columns, Royal Field Artillery, under the command of Captain R. Manners, Indian Labour Corps, who are on short leave from France.

Captain Horace C. Watson, who commanded the armed mercantile cruiser Hildebrand during the latter part of the war, entered on a new appointment on July 15 as Captain Attendant and King's Harbour Master at Malta, where he relieved Captain F. A. L. Andrews, who has served in that capacity since July 27, 1912.

Mr. Faris Yussef, the well-known Syrian philanthropist of Cairo, who has given several donations to the British and Allied Red Cross Societies, recently sent another donation of £E250 to the Right Hon. David Lloyd George for the benefit of maimed British soldiers returning from the war, and submitted to him an ingenious economic project for the benefit of British troops.

Lord Leverhulme lent his garden at The Hill, Hampstead Heath, on July 12 for the annual gathering of the Union of East and West, under whose auspices the Indian Art and Dramatic Society presented for the first time in English an Indian play based on an old Hindu legend, "King Haris Chandra," by Kedar Nath Das Gupta and K. C. Chunder.

The marriage was celebrated on June 17, at St. Paul's Cathedral, Calcutta, by the Rev. C. Stokoe, between Jocelyn C. P. Rawlins, Bengal Pilot Service, youngest son of Mr. and Mrs. T. D. B. Rawlins, of Bournemouth, and Mabel Mary, the only daughter of Captain and Mrs. Mayston, Port Officer, Orissa Ports.

The engagement is announced of Reginald Percy Ellis, Major the Durham Light Infantry and Machine Gun Corps, younger son of the Rev. A. T. Ellis, M.A., Vicar of All Saints', Walworth, London, and Helena Dorothy Edna, third daughter of Miralai G. S. Randall Bey, Governor of Tura Convict Prison, Tura, Egypt, and of Mrs. Randall.

The amelioration of the scale of Indian Army Pensions was discussed at a preliminary meeting of Indian Army officers held on July 14 at the headquarters of the Comrades of the Great War. A sub-committee was appointed to draft a memorandum on the matter for submission to the Secretary of State. Indian Army officers interested are invited to communicate with the General Secretary of the Comrades, 8, Grosvenor Crescent, S.W.1.

APPOINTMENTS, PROMOTIONS, &c.

The King has approved the appointment of Mr. Charu Chundar Ghose, barrister-at-law, to be a judge of the High Court of Judicature, Calcutta, in succession to Mr. Justice Chitty, who has retired from the Bench.

The King has been pleased to approve the appointment of Khan Bahadur Mian Muhammad Shafi, C.I.E., to be an Ordinary Member of the Executive Council of the Governor-General of India, in succession to Sir Sankaran Nair.

The King has approved the appointment of Rai Bahadur Krishna Sahai to be a member of the Executive Council of the Lieutenant-Governor of Bihar and Orissa, in succession to Sir Ali Imam, who is about to take up an appointment under his Highness the Nizam of Hyderabad.

The Bishopric of Persia, which was left vacant owing to war conditions when Bishop Stileman retired in 1916, has been filled by the appointment of the Rev. J. H. Linton, of the Church Missionary Society. The new Bishop was trained for the mission field at the C.M.S. College at Islington, and served first in West Africa. He went to Persia in 1908, where he became Principal of the Bishop Stuart Memorial High School for Boys, Isfahan.

OBITUARY.

The death occurred on July 11, at Brighton, of Francis John Preston, C.I.E., M.I.C.E., late of Bombay, aged fifty-five.

The death of Mr. A. W. Ward, who was Professor of Physics at Canning College, Lucknow, for thirty years, is announced.

The death occurred on July 2, at Malta, of Colonel Alexander Mattei, formerly Commanding Royal Malta Artillery.

Mr. Charles Rock, the well-known actor, died on July 12. He was the son of Surgeon-General de Falbeck, and was born at Vellore in 1866.

The death took place on July 13, at Dalhousie, of Lieut.-Colonel Louis Maurice Foster, late of the Indian Army. He served with the Chin-Lushai Expedition in 1889-90, on the North-West Frontier of India in 1897-98, when his work at Mohmand earned for him a mention in despatches, and in the Tirah campaign.

The death occurred recently in Edinburgh of Lieut.-General J. T. Dalyell, aged ninety-two. He entered the Army in 1847, and served with the Royal Scots Fusiliers in the Crimea. He held the medal with three clasps and the Turkish medal. General Dalyell was the only son of Lieut.-Colonel Thomas Dalyell, Bengal Light Infantry, who fell in the Indian Mutiny.

News has been received in Simla of the death on June 6 of the Maharaja of Ajaigarh, Bundelkhund. The late Maharaja was born in 1848, and in 1859 was placed on the *gaddi*. His rule has been notable for the successful measures which he took to place his State on a sound basis financially. During the famine of 1896 his labours for the relief of his subjects were rewarded, and in the following year the distinction of Knight Commander of the Order of the Indian Empire was conferred upon him.

Sir Percy Sanderson, K.C.M.G., died on July 11 at Grove Hill, Caversham. Born in 1842 ,he joined the Royal Madras Artillery in 1859, and from 1865-66 was A.D.C. to Sir William Denison, Governor of Madras. In 1868 he acted as A.D.C. to Lord Napier, Governor of Madras, but retired from the Service in 1870. Six years later he became Consul at Galatz, and in 1882 Consul-General for Roumania and Commissioner for the navigation of the Danube. Afterwards he acted for some years as Chargé d'Affaires at Bucharest.

Sir Bertram Sausmarez Carey, who retired from the Burma Civil Service a short time ago, died at Worthing on July 14. He was appointed to the Burma Police in 1886. In his earlier days in India he distinguished himself, and was twice thanked by the Viceroy—first for his work as Political Officer in the Chin-Lushai campaign of 1889-90, and, secondly, for his services, again as Political Officer, in the operations in the Chin Hills in 1891-92. He was appointed a Commissioner for Burma in 1890. Sir Bertram was made a C.S.I. in 1914 and a K.C.I.E. in January, 1918.

Colonel Peter Edward Hill, C.B., late of the Royal Artillery, who served in the Crimean campaign, the Indian Mutiny, and the Afghan War of 1878-79, died at Reading on July 13 in his eighty-sixth year He entered the Army in 1853. In the Crimea, in 1854-56, he fought at Balaclava and Inkerman, and was also at the siege of Sevastopol. For that campaign he had the medal with three clasps, the Fifth Class of the Medjidie, and the Turkish Medal. For the Indian Mutiny campaign, when he served in the North-West of India, he had the medal, and for his work in the Afghan War he was mentioned in despatches and received the medal.

NEWS IN BRIEF.

A Greek Legation is to be instituted at Helsingfors.

A mail service has been established between Baghdad and Czecho-Slovakia.

A large number of Jains assembled on the consecration of the new Jain Temple at Simla.

Close on a lakh and a-quarter of rupees have already been promised towards Bombay's Willingdon Memorial Fund.

Syrian emigrants, who have been in Egypt for the past few years, are returning to their country in large numbers.

The Victoria and Albert and the Bethnal Green Museums will be closed to-morrow.

The German troops who had been detained in Turkey and at Salonika are now on their way home by sea.

The Government of Mysore have constituted a Soldiers' Board to deal with all questions affecting the interests of serving, discharged, and demobilised soldiers.

The Constantinople correspondent of *The Times* states that it is expected that the British evacuation of Transcaucasia will begin in the course of the present month.

At the Leicester Galleries is now to be seen an excellent collection of "Ancient Art of the East"—Chinese, Indian, Persian, Greek, and Egyptian.

Until further notice the official guide (Mr. Leslie O. Faraker) will conduct visitors and lecture, at 3 p.m. daily, in the Exhibition of War Memorials at the Victoria and Albert Museum, South Kensington.

An inquiry was held in the Law Courts on July 10 to put it on record that bonds worth £400,000 belonging to the ex-Tsar Ferdinand of Bulgaria were forfeited to the Crown by the outbreak of war between this country and Bulgaria.

Prussian papers, according to a message from Germany, report that all the silver belonging to the King of Serbia which at the capture of Belgrade was handed over to the officers of the German 45th Infantry Regiment, is now, on the disbanding of the regiment, to be distributed among the officers as a souvenir.

A delayed Reuter telegram states that on June 29 the mail train from Delhi collided with a goods train near Rohtak, in the Punjab. Thirty-five Indians were killed and forty-three injured, two of the Indian railway staff being killed and three European passengers slightly injured.

News has been received from Casablanca that on July 8 1,500 natives attacked the French blockhouse at Sidi-Bou-Knedel, in the Upper Matmata District of Tunis. The assailants succeeded in reaching the barbed-wire entanglements round the blockhouse, but were finally driven off, losing thirty killed and wounded.

Throughout Serbia, on July 12, the festival of St. Peter and St. Paul, King Peter's name day, was celebrated. At Belgrade Prince Alexander, the Regent, accompanied by representatives of the British and French Armies, rode to the cathedral, where a Te Deum was sung.

At the Middlesex Guildhall on July 14 a court-martial was opened for the hearing of charges against a warrant officer, a Eurasian, who was British medical officer at the hospital at Bagtsche. The charges were concerned with the condition of British prisoners of war in Turkish hands after the fall of Kut. The case was adjourned until August 6.

THE FUTURE OF THE INDIA OFFICE.

The Report of Lord Crewe's Committee on the Home Administration of Indian Affairs completes the *dossier* relating to the pending scheme of constitutional reform. Its publication has been greatly delayed, and the text justifies the rumours which have been current that the delay was due to serious divergence of opinion; on the main questions for decision, the Joint Committee will not have the advantage of a unanimous report, but will have to choose between various lines of action, for each of which a certain amount of authority can be claimed. The issue is of real and practical importance, because the India Office constitutes a key-position in the reformers' campaign; whatever may be decided by Parliament, and whatever may be done in India, in practice the situation will be dominated largely by the day-to-day activities of Whitehall, and the task set before Lord Crewe and his colleagues was to indicate the lines on which these activities should proceed. The India Office, like some other familiar institutions, is in great measure a creature of tradition. Its roots strike deep into the old days, when the relations between England and India were predominantly commercial, and while it has gradually acquired control of the entire administration it has continued to discharge a variety of functions of a definitely commercial nature, the performance of which has reacted on its administrative business in a way that has long been recognised as injurious. The first step to be taken is obviously to separate the surviving agency business from the work of administrative control, and we are glad to observe that the policy of a clean cut, which has been steadily advocated in these columns, has been unanimously accepted by the Committee. Its execution must, of course, be gradual, but the recommendation that action should now be taken with a view to the transfer of all agency work to a representative of the Indian Government marks a definite stage, and justifies us in treating the Secretary of State as henceforward concerned primarily with administration. It is in regard to his administrative position that difficultes arise, and that divergence of opinion has become manifest. Parliament is supreme, the India Office is responsible to Parliament for the good government of the Dependency, and in order to bear that responsibility it requires full authority over the whole administrative machine. Parliament is, however, contemplating a practical curtailment of its supremacy so that the Dependency may become eventually a Dominion, and the realisation of that policy requires that the India Office, in turn, shall gradually curtail the exercise of its authority, and shall cease to interfere in those branches of administration which become subject to Indian popular control: the problem is to remodel the institution in such a way as to render it an efficient organ for this particular purpose, and there is so far no sign of agreement as to the lines on which this should be done. The discussion is complicated by many technicalities, but its nature can be indicated concisely by distinguishing between two schools, one of which would minimise, while the other would magnify, the position of the individual Secretary of State.

As an example of the former school, we may take the suggestions made in the joint report of Lord Chelmsford and Mr. Montagu. They proposed that, subject to the consent of Parliament, the Secretary of State should from time to time abandon by formal orders his power to control specific branches of administration, and that he should delegate increased authority in matters which he did not definitely abandon. To enable him to act on these lines they proposed to surround him with the best advice, by modifying the constitution of his Council, and by staffing his office to some extent from the Indian Services, while on the other hand he would be brought into much closer relations with Parliament through a sessional Select Committee of the House of Commons. Under this arrangement the Secretary of State would require to have no policy of his own, but would stand out as an intermediary between Parliament and Indian opinion, interpreting each to the other, and concerned mainly to find a middle course in cases where differences arose. The majority of Lord Crewe's Committee have set aside these suggestions on practical grounds. They say in effect that the House of Commons cannot furnish a competent Select Committee, and that such a Committee as it could furnish would do more harm than good; that the Council needs to be abolished, not improved, and that very little can be done to staff the Secretary of State's office from the Indian Services. They propose to substitute for the present Council an Advisory Committee with no executive or initiatory powers, but available for consultation if the Secretary of State so chooses; they would transfer to him the control of essential Indian legislation; and they would retain for him the power of interference in any case where his responsibility to Parliament for the peace, order and good government of India might appear to him to require action on his part. The result of these proposals, taken as a whole, is not stated formally in the Committee's report, but is in effect to make the personality of the Secretary of State the dominant factor in the situation. He must now listen to his Council, which can moreover by the threat of its financial veto force him to refer certain matters to the Cabinet: under the proposed scheme he need listen to nobody at all. "Good government" is such an elastic phrase that even the pettiest details could be brought up for review; and a strong, self-confident Minister, responsible only to a tame or tired Parliament, would be left free to mould the destinies of India in accordance with his preconceived ideas, or with the views of any clique or junta which might happen to possess his confidence.

As we have said above, these proposals come from a majority only of the Committee. We have not space to state the grounds on which some or all of them are rejected by such acute critics as Sir James Brunyate, Professor Berriedale Keith, or Mr. B. C. Basu, or the alternative measures which these critics put forward; and these particulars are indeed unnecessary for our present purpose, which is to bring out as clearly as possible the nature of the main problem for decision. A time of transition has to be faced, during which authority is to be transferred gradually to Ministers responsible to the people of India, and we are searching not for any ideal or permanent constitutional organisation, but for something which will work during this time. Can we proceed by laying down regulations for this period in advance, or will it be wiser to trust the Secretary of State to deal with each question as it arises, relying on him to bring the vessel into port, and leaving the choice of the course to his individual judgment? That is in effect the problem raised, though no such general statement of it is to be found in the Committee's report. Recourse to a dictatorship is no novelty in constitutional procedure, even among the world's democracies; it works sometimes, but not always, and the result depends mainly on the individuality of the dictator chosen. Can we then be fairly confident that in the course of practical politics India will be assured during the period of transition of a Secretary of State gifted with the requisite qualities, a wide and dispassionate outlook, judicial impartiality, and an iron will? The examination of these questions will form not the least difficult portion of the task set to the Joint Committee, to which the whole scheme of constitutional reform has now been referred.

THE BRITISH NAVAL MISSION'S WORK ON THE DANUBE.

One of the first tasks of the Allies on the cessation of hostilities in the Near East was to provide for the restocking of the countries that had been so systematically ravaged by the Germans. In this work it has been difficult to lose sight of the main chance, with the result that in the case of some military and relief missions it has troubled both onlookers and the people of the countries concerned to decide where a line, if any, could be drawn between the officer on active service and the energetic commercial agent bent on booking orders for his principals. The British Naval Mission sent to Belgrade has proved such a striking exception that its altruistic efforts on the Danube would deserve a niche in contemporary history, even if the actual work accomplished had not played the important part that it has in the resumption of the ordinary life of Serbia.

The British Naval Mission reached Belgrade empty-handed. It was accompanied by no boat-loads of goods for free distribution or to serve as samples for the booking of orders. But it brought something probably far more valuable to the Serbian nation at that particular moment—namely, driving-power and organising capacity. Its strength on the first day of its arrival was two—all told. Admiral E. C. Troubridge, with Commander Alfred Stead as the Chief of Staff, arrived in Belgrade on November 11, having left Salonika by motor-car three days earlier. The staff of the Mission began to arrive three weeks later. Serbia at that moment entirely lacked transport; but the Danube and Save were there, and Admiral Troubridge wisely decided that his first consideration must be to restore, as best he could, the water communications of the country. Three small steamers, manned for service, were immediately available, while up and down the waterways were seventy or more other steamers stranded for want of coal, and more than seven hundred lighters waiting to be taken possession of and pressed into service.

The organisation was placed in Commander Stead's hands, an advance of half a million kronen was made, and coal was obtained from the British Navy. On November 15, or four days after Admiral Troubridge's arrival in Belgrade, the service to Semlin (Semun) was inaugurated. Six days later the Pancsora boat started its regular sailings, and on November 26 services were opened to Shabatz, Smederevo (Semendria), and elsewhere. By June 1, 1919, ten regular passenger services in all were being maintained, representing a steamer traffic of over 1,400 kilometres daily, and in Belgrade alone the passenger traffic was at the rate of 3,000,000 a year. These services were as follow:—Between Belgrade and Semlin, *hourly* from 5 a.m. to 8 p.m. *Daily:* Belgrade and Janchevo, Belgrade and Smederevo (Semendria), Belgrade and Titel. *Three times a week:* Belgrade and Gradishte, Belgrade and Segedin, Belgrade and Mitrovitza. *Twice a week:* Belgrade and Radujevatz (via Orsova and Turnu Severin), Belgrade and Baja, Belgrade and Brod. The table of passenger and freight receipts is not without interest.

	Kronen.
November 15-30, 1918	78,674
December, 1918	397,898
January, 1919	562,209
February, 1919	779,061
March, 1919	1,727,251
April, 1919	1,443,300
May, 1919	2,469,000
	7,457,393

These figures show the development of purely civilian passenger and commercial traffic, for all soldiers, together with refugees and prisoners, were carried free. All military transport was free, as well as the transport of all Government goods and the stores of relief missions. During this period the monthly expenditure remained less than 1,000,000 kronen, divided between some ninety steamers at 6,000 kronen per month and about 750 lighters at 600 kronen per month. (The rate of exchange for the kronen reached 150 to the pound sterling.) Accordingly, by the end of June not only had the original advance of 500,000 kronen been repaid, but a profit of nearly 3,000,000 kronen had been made and an efficient organisation had been created. The ship's officers were to a large extent enemy subjects; but they knew the Danube, they were wedded to their calling, and they appreciated the straight dealing that they experienced at Commander Stead's hands.

The success of the undertaking made a strong appeal to the Serbian Government, which soon became anxious to bring the steamer service under its own management. It was arranged that the transfer should take effect on July 1, and on that date the British Naval Mission ceased to be responsible for it. The future progress of the enterprise will be watched with interest, and it is to be hoped that neither shortage of coal nor any other cause will affect its efficiency. This river service has been something more than a mere convenience to the Yugoslavs. It has had its moral as well as its economic effects. The opening up of communications immediately after the Armistice had a settling influence on the people's minds; it enabled the first steps to be taken towards the resumption of the ordinary life of the nation, and it was a powerful factor against the spread of Bolshevism. The Naval Mission aspired to bring the whole of the Danube as far up the river as Pressburg into the scheme, and to this end a "treaty" was concluded on January 29, 1919, between Commander Stead and the Czecho-Slovak Government, by which the latter undertook responsibility for the steamship service on the Danube between Pressburg and Baia, and agreed upon a working arrangement with the Naval Mission at Belgrade. Unfortunately the advent to power of Bela Kun in Budapest stultified this agreement, and Baia remained the upstream terminus of the service, as well as the limit of Allied jurisdiction. Here a naval force kept watch and ward upon Bolshevist activities in Hungary, and after six months of desultory "scrapping" had the satisfaction of seeing towards the end of June six enemy vessels—two monitors and four vedettes—approach under the white flag. The crews had come to surrender the bulk of Bela Kun's "fleet." It is at least open to argument that, if during December and January the Allies had contrived to open up communications on the Upper Danube as systematically as had been done below Baia, the progress of Bolshevism in Hungary might have been arrested. When the attempt was made to extend the Yugoslav service to Czecho-Slovakia it was too late, and the British naval authorities, instead of inaugurating a service with Budapest, had to undertake an expedition to rescue the Allied missions from the Hungarian capital. Below Radujevatz, the last port in Serbian territory served by the Belgrade steamers, the river passed under the jurisdiction of the French, who, in spite of the object-lesson afforded them by the speedy transport of their troops on Admiral Troubridge's steamers from Semendria to Novisad, remained indifferent to the advantages of passenger services on the river within their sphere of influence. A ferry was maintained between Rustchuk and Giurgevo, but its essentially military character was emphasised by the fact that no attempt was made to ensure connection between trains arriving at Rustchuk and the trains that leave Giurgevo three times a week for Bucharest.

Great Britain is deservedly popular in the Near East, for her representatives have shown a disinterested desire to help the different people to the best of their power, but it would be difficult to find a more practical contribution to the rehabilitation of the Balkans than the prompt inauguration of a steamer service on the Danube, Theiss, and Save.

It is believed that the official decision to repatriate all Germans and Austrians in India will lead to the great Lutheran German missions coming wholly under the superintendence of the "C.M.S." and "S.P.G.," and possibly some of the American societies. For some time past the British missionary societies have been carrying on the work of these missions at the request of the Government with conspicuous success, particularly in an educational direction. Special care has been taken to guard against any charge of proselytising.

PRESS ON THE NEAR EAST.

Macedonia.

The *International Review* of July contains an article on "The Fate of Macedonia," by J. D. Bourchier, F.R.G.S., in which the writer pleads strongly for the protection of the Bulgar element in Macedonia. He traces the history of the efforts to prove that Macedonia is not a Bulgarian land down to the latest theory that its inhabitants are a nondescript race without nationality. He then says:—

If the population of Macedonia is neither Serb, Bulgar, nor Greek, the obvious solution of the question would be found in the creation of an autonomous State. The nondescript "Macedonians" would have a right to govern themselves and to refuse absorption into any of the neighbouring States. But the Serbians and Greeks have always refused to hear of such a solution. They raise the objection that if Macedonia received autonomy she would soon follow the example of Eastern Roumania and proclaim union with Bulgaria. The objection is, of course, fatal to their own claims, but they justify it on the ground that Bulgaria, if augmented by the annexation of Macedonia, would become too strong. Even that consideration now loses weight, as Serbia and Greece will soon receive an immense expansion which will put each of them beyond the reach of Bulgarian competition. On the other hand, Bulgaria, anxious to maintain the integrity of the kindred race, and aware of its national sentiment, has always desired Macedonian autonomy. In order to assure this she has been willing to postpone or even to forego annexation. We are reminded of the mother who preferred to resign her claims to her child rather than to see it cut in twain by order of King Solomon.

Macedonian autonomy would probably be only a temporary solution, but it would be infinitely better than a confirmation of the unnatural arrangement of the Bucarest Treaty. It would be necessary that the country should be policed for several years by a neutral power—America for preference—in view of the intrigues and even the encroachments to which it would be exposed on the part of its neighbours. If the inestimable boon of protection were accorded to them, together with the right to speak their own language, to worship in their own churches, and to send their children to their own schools, the Bulgarian peasants of Macedonia would care little under what form of government they lived. Among the upper classes a considerable number of persons would prefer autonomy in view of the prospect of a political or commercial career which would be opened up to them at Salonika. That town would naturally become the capital of the new autonomous State. It is now the commercial capital of Macedonia, and its prosperity, as well as that of the interior, depends on the maintenance of unrestricted communication between the two. Its population is cosmopolitan, being mainly Jewish and Turkish; the Greek element, previously comparatively insignificant, has been increased since the town has fallen into Greek hands, while the Bulgarian, which formerly numbered some 12,000 souls, has been literally exterminated.

The article concludes with an appeal against the proposed partition of Macedonia, by which, the writer says, a million and a-half Bulgarians would be subjected to alien and hostile rule.

Mid-Asia.

In the *Glasgow Herald* of July 8 Louise Peralta has an article on "Mid-Asian Khanates." She refers to the supposed crash of the "Berlin-Bokhara" and the "Middle-Asian Thought" schemes, and then says:—

But has the crash been as fatal as some people are willing to suppose? In answering this question two all-important facts have to be borne in mind. The first fact is that the Ottoman Imperialistic Movement is older than the World War which has now ended. This Imperialistic Movement originated shortly after the Turkish Revolution of 1908. Like the Swadeshi Movement in India, and like most of the European Nationalist movements, including Sinn Fein, it was the outcome of a linguistic impulse. The Othmanli Turki, the literary and official language of the Ottoman Government, is as alien to the so-called Turki—which is saturated with Kurdish, Arabic, and Persian words and idioms—of the apricot-growers, the carpet-weavers and the nomad shepherds of Anatolia and Irak Arabi as are alien, one to the others, these peoples and the Rumeli-Epirote Semites who, for at least a dozen years, have formed the Government at Stambul. Yet, notwithstanding this, the "Pure Turki Movement" developed into a genuine social revival, concerning itself with the improvement of the economic condition of the peasantry and of the trading class. These elements of peaceful progress, however, converted themselves with extraordinary rapidity into potential weapons of war. What had been originally a language movement reached to an Othmanli Irredentist propaganda, militantly claiming kinship with the other Turkish peoples, inspired by the fact proclaimed by Enver Pasha that "no less than 70 per cent. of the Turki-speaking population of the world is to be found outside the Ottoman frontiers." This striding movement was scarcely interrupted by the Balkan War. The group of young Balkan Jews who had formed themselves into the Committee of Union and Progress, knew so excellently—backed by Germany—the movement's political capacity for aggression, that Pan-Turanianism remains at this moment a mighty weapon of offence in the hands of the Ottoman Government.

The second fact which leads to conclusion that the Turko-German Middle-Asian idea has received, instead of a check, an impetus, as the very impressive truth that Asiatic antipathy to Europe, for fifty years carefully veiled, boldly declared itself immediately after the Russian Revolution by the formation of the autonomous native State of Bokhara. The Chagatai Turks, whose example was followed by the Turks of Kirghistan, also lost no time in declaring for the complete severance of Mawara-en-Nahr from the Russian body politic. The Muslims of Nawara-en-Nahr and of Bokhara have been purely Asiatic peoples under European rule. Both have, outside the bonds of Islam and of Orientalism, almost no interests in common with the Tatars of Kazan and Baku. Yet the strength of those two bonds is illustrated by the history of the Muslims of Baku during the last eighteen months. Baku has long been the focus of the Islamic group on the outer edge of Russia. The interests of the Baku Muslims—in the days of Russian Imperialism conspicuous for their loyalty—centre in the industrialism of the oilfields. It was certainly at first their hope that Russia would hold together. But to say that they have been driven by anarchy out of the Russian orbit does not express the case. They—who with the Kazan Muslims form a group that has been more closely and for a longer period associated with Westerns than has any Eastern people—have been magnetised out of the Western sphere by Orientalism and by Mohammedanism. Together with the Kazan Muslims they are reaching after an autonomy supported on the one hand by the promises of the Stambuli would-be makers of a Central Asian Islamic Federation, and on the other by the anti-European influence of Bokhara. The moral is a portentous one. Orient wants to be quit of Occident. If they will but raise higher the eternity-old wall between the two, Orient does not scruple to use Bolshevist bricklayers.

The Future of Turkey.

The *Spectator* of July 12 takes up a strong attitude in regard to the pro-Turkish propaganda now being placed before the Allies. Especially it refers to the threats of the "Muhamadan world," which Sir Theodore Morison has recently said show that Islam is ablaze with anger at the prospect of partition. We give the following extracts as representing the high moral line of argument as opposed to the policy of expediency:—

It is well known throughout Islam that a Mohammedan under British rule is as free to practise his religion as he would be in Mecca, that the properties of the Mohammedan Church are a great deal more sacred to a British administrator than to a Turkish official, and that any anti-Mohammedan agitation, as in India, is sternly repressed. We act in this way, not because we have any desire to placate Islam, but because we believe firmly in religious toleration and abhor persecution. Wherever our rule has been criticised by Mohammedans, as in Egypt, it has been condemned on the ground that it was too tolerant. The Moslem fanatic, like some other fanatics, would rid the world of all who do not agree with him, and is impatient with the stolid British administrator who stands in the way. We have, therefore, a clean record in this matter, as all Islam knows, or ought to know. But it must not be supposed that because we are tolerant we are also timid. "The Muhamadan world" must not think that we treat our Moslem subjects fairly because we are afraid of them. Above all, it must beware of trying to intimidate us. British people have never been moved by threats, and are still less likely to pay attention to them at the close of the greatest and most successful war in our history. We shall deal justly with Turkey because it is our habit. We shall not condone the crimes of the Turk and allow him once again to work his will on his miserable subjects—most of whom were not Turks—because certain Moslems and their friends tell us that there will be trouble if we deal out stern justice to our beaten foe.

The only true solution of the Turkish problem is to expel the Turkish Government, "bag and baggage," from Europe, and to confine it to Anatolia, where, under European supervision, it may conceivably build up a civilised State. All the rest of the former Turkish Empire should be divided into autonomous provinces under European guidance. Armenia, Mesopotamia, Palestine, Syria and Cilicia, the Hedjaz, the Greek lands of Western Asia Minor, have languished for centuries under the alien Turkish rule, but their natural fertility is so great that they are assured of a prosperous future as soon as they are given peace and order. There is no greater tragedy in the world's history than the contrast between ancient and modern Asia Minor, and the severest critic of the Allied peacemakers would not suppose that they could fail so completely in their duty as to miss the chance of restoring Asia Minor to its former state.

Articles to Note.

"What Constantinople Means to Britain and Islam," by Lieut.-Colonel A. C. Yate; and "A Way Out in India," by John Pollen, C.I.E., LL.D., in the *Asiatic Review* (July).

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Deportations from France. July 10.

Lieut.-Colonel MALONE asked the Secretary of State for Foreign Affairs whether he is aware that arrangements are being made for the deportation of Miss May Kathleen Ydlibi and her father from their internment in France to Turkey; whether he is aware that Miss May Kathleen Ydlibi is a British subject and should presumably be repatriated to Great Britain; whether he can see his way to approach the French authorities to allow the family solicitors, Messrs. Enever and Aarons, to proceed to France in order to settle the domestic arrangements of this family and to have access to these persons; and whether, in communicating with the French authorities, he will request their retention in that country until their business affairs have been settled?

Mr. HARMSWORTH: Further investigations are being made into the case of Miss Ydlibi, and I regret that until they have been carried out I am unable to reply in detail. I hope, however, to be able to make a further statement before very long.

Government of India Bill (Deputations). July 11.

Colonel YATE asked the Secretary of State for India if he would give the names of the members of the various deputations from the National Congress, the Indian Moslem League, the Servants of India, the Home Rule for India League, and similar associations who had been brought to England to give evidence before the Joint Select Committee on the Government of India Bill?

Mr. MONTAGU: My hon. and gallant friend is in error if he thinks that deputations have been brought to this country under Government arrangements. They have come from India of their own accord to place the views which they represent before the Joint Committee during the consideration of the Government of India Bill, and I understand that some of them have applied to the Committee to give evidence. Statements have appeared in the Press in regard to these deputations; but I have no official information as to the bodies represented or the membership of the deputations which have arrived in this country.

Army in Mesopotamia. July 15.

Mr. CHURCHILL, in answer to Lieut.-Commander Kenworthy, said that future policy with regard to the policing of Mesopotamia could not be definitely laid down until we received a mandate to administer the country. The possibility of using native levies to some extent was, however, under consideration. As regards the Army of Occupation, our future policy was to cut it down as much as possible and to employ as large a proportion of Indian and other native troops as possible. The extent, however, to which local native troops could be employed depended on their efficiency, which was at present an unknown quantity. It was hoped to make considerable use of the Air Service with a view to economising troops and their maintenance in the outlying unsettled districts.

Troops in Karachi.

Mr. CHURCHILL, replying to Mr. Hurd, said:—A report has now been received, and I am informed that the health of the troops at the Concentration Camp at Karachi is fairly good. There are nearly 700 troops at the camp, and the number in hospital on July 4 was twenty-three. There have been no deaths owing to the heat. As regards letters, I am informed that immediately it was decided to retain in India demobilisable men from Mesopotamia, orders were issued to intercept the English mails for such men at Bombay Base Post Office. It is regretted that some delay was unavoidable in retrieving mails already *en route* to Mesopotamia or awaiting delivery in Mesopotamia. With regard to the statement that letters have been returned direct to England, I can only suggest that this was due to individual requests made by men on their departure from Mesopotamia.

The State of Afghanistan. July 16.

Mr. MONTAGU (Secretary of State for India), in reply to Mr. Lyle, said that except for affairs of outposts there was now no fighting on the Afghanistan frontier, and there was every reason to hope that the Afghan peace delegates would present themselves at the British lines on July 22.

Commander VISCOUNT CURZON asked whether it was intended to allow the present ruler of Afghanistan to retain his throne in view of his recent unprovoked attack upon British territory?

Mr. MONTAGU: The Ameer has asked for an Armistice, and it is hoped that peace negotiations will be opened shortly. Our object is to secure our frontiers against a recurrence of such unprovoked attacks, and it is not our present intention to express any opinion as to who the future ruler of Afghanistan will be.

The Malta Disturbances.

Mr. CECIL HARMSWORTH (Parliamentary Under-Secretary for Foreign Affairs), replying to Mr. Swan, said that in the riot which lately occurred at Malta three Maltese were killed and eight wounded. No casualties had been reported among the troops, but several were severely handled. The report that the riot was provoked by the action of British officers was entirely without foundation. An inquiry into the riot was proceeding at Malta, and the Secretary of State was awaiting the Governor's report.

Troops in Egypt.

Mr. CHURCHILL (Secretary of State for War), replying to Mr. L. Lyle, said that according to the programme now being followed by the forces in Egypt all men who joined the Colours in 1914 are due to embark for demobilisation by the end of this month. Those who joined the Colours in 1915 are to embark by the end of August. In addition, all men over 37 are to embark by the end of August, and other men who are eligible for demobilisation under current instructions are to embark by the end of September.

Topics in Parliament.

The subjoined headings are those given in the Official Report.

GOVERNMENT OF THE SUDAN LOAN (GUARANTEE). INDIA: Karachi (Rest Camp).—Burial of British Soldiers.—Non-Commissioned Officers (Promotion).—Over-payments by Officers. ROYAL ARMY ORDNANCE CORPS (EASTERN DRAFTS). MESOPOTAMIA (CIVIL ADMINISTRATION). (July 8.)

INDIA: Pamphlet ("Coercion and Repression").—Karachi Troop-Train Incident.—Government of India Bill.—Discharged Army Officers (Government Posts).—Afghan Frontier Rising (British Casualties). EGYPT: State of Provinces. DEMOBILISATION: Troops in Egypt. (July 9.)

PERSIA (EX-SHAH). ASIA MINOR. MONTENEGRO. GOVERNMENT OF INDIA (SELECT COMMITTEE). INDIA: North-West Frontier Military Operations. (July 10.)

GIBRALTAR HARBOUR (SURVEY). GOVERNMENT OF INDIA BILL (DEPUTATIONS). (July 11.)

GREEK RULE (ALLEGED MASSACRES). INDIAN ARMY (OFFICER'S APPEAL).

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

This week the prospectus was issued of the British Overseas Bank, Ltd., which has been formed under the auspices of a strong group of banks, including the Imperial Ottoman Bank and the Anglo-South American Bank, Ltd. It is pointed out in the prospectus that it has been increasingly evident since the termination of the war that the future prosperity of this country will be largely dependent upon the early and rapid resumption and expansion of foreign trade, and that as a means to secure this end it is felt that increased and improved banking facilities will be necessary, and for this purpose the bank has been formed. The business of the bank will be conducted on specialised lines and effective co-operation with trade will be maintained by the presence on the Governing Council of trade interests, thereby securing benefits to the general business community as well as to the bank. The bank will facilitate the foreign trade of the British Isles and the Empire by specialising in all matters of exchange, payments, and receipts abroad, and the handling of foreign collections, documents, and securities. Commercial credits will be issued, and the bank will give its acceptance to bills in connection with Home, Colonial, and International trade, and agencies and branches will be established, if and where necessary.

***

The authorised capital of the bank is £5,000,000, divided into A and B ordinary shares of £5 each, of which the A class ranks first for a cumulative dividend of 6 per cent., and after a dividend of an equal amount has been paid on the B shares, the arrangement is that in any further division of profits the B shares shall receive twice as much as the A shares The constituent banks have taken up at par 200,000 of the B shares, and the issue made this week consisted of 200,000 A shares, 20,000 of which have been allotted to the Prudential Assurance Company. With the great advantage of the support of the eight constituent banks, the British Overseas Bank starts its career under the most favourable auspices. Of the need for an institution of this character there is no doubt, and it may be expected to play a very important part in future trade development. As to the regions with which it will specially concern itself, I have already mentioned that among the constituent banks are the Imperial Ottoman Bank, with its wide connections throughout the Near East, and the Anglo-South American Bank, Ltd. These banks are respectively represented on the Governing Council of the British Overseas Bank by Mr. E. W. H. Barry and Mr. R. J. Hose.

***

The report of the Bank of British West Africa, which has just been issued, shows that the past year was one of steady and continuous progress. The net profit amounted to £83,767, as against £71,514 for the previous year, and the dividend is at the rate of 8 per cent. per annum, less income tax, and 1 per cent. bonus, as against 8 per cent., £10,000 has been applied to writing down premises, and £12,500 has been added to the reserve, as against £10,000 last year, bringing that fund up to £250,000; while £3,000 is placed to the staff fund, and £5,000 to the insurance fund, as against £2,000, and the carry forward is £22,600 as compared with £21,612.

In recent years there has been a very marked extension of the activities of the Bank of British West Africa, particularly in Morocco, where the number of its branches is constantly being increased; while last year Egypt was brought within its sphere of operations by the opening of a branch at Alexandria. With a view to opening further branches, and for the expansion of the existing business, the directors have decided to issue the remainder of the authorised capital of the bank, namely 55,000 shares of £10 each, calling up £4 on each share. Shareholders are offered 40,000 of the new shares at £6 each, £2 representing a premium. As regards the balance of the shares, it is announced that the position of the bank would be further strengthened if the increase of capital was accompanied by the establishment of close relations with one of the leading London banks, and the directors have arranged with Lloyds Bank to take 15,000 shares at £7 5s. per share, and also to acquire 15,000 shares in the existing capital. There is no question that this arrangement should be of the greatest value to the bank in its work of development, and the fact that the greatest of the joint stock banks is now definitely, though indirectly, interested in West Africa, affords further ground for confidence, if such were needed that British interests in Morocco and elsewhere will be amply considered.

***

Attention is drawn in the June issue of the *Journal* of the British Chamber of Commerce of Egypt to a question of considerable importance to British manufacturers. "It is to be regretted," says our contemporary, "that under the British Protectorate, and with the general desire to promote the interests of British trade in Egypt, the Egyptian Government should still issue specifications for contracts of a technical nature in French instead of in English. Apparently, under the changed conditions, no measures have as yet been taken to remedy a disadvantage which has been so detrimental to British interests in the past."

***

Trade requirements in the Near East form the subject of some interesting comments in our Constantinople Business Letter this week, in which our correspondent emphasises the necessity for British manufacturers to take into consideration what their competitors are doing. As an example, he asks why "certain not unimportant British firms made it an invariable rule to quote 'loco' prices and to insist upon cash with order," and points out that all American firms doing business with the Near East are willing to quote c.i.f. prices, and to allow concessions as regards payment; certain Swiss firms leave payment until a month after the receipt of goods; while Italian firms ask for cash against documents. This conservatism on the part of British firms is due as much as anything to the dislike of innovations. But that attitude will not do in the future in the Near East markets if really satisfactory results are expected. Only by concessions and by keeping pace with foreign methods will it be possible to develop trade in the Near East to the extent that is desired.

***

The profits of the Mortgage Company of Egypt for the past year amounted to £83,777, as against £107,390 for the previous twelve months, and deducting the dividend paid and accrued on the preferred shares, and adding the amount brought forward, there is an available balance of £68,250. The dividend is maintained at 8 per cent., the allocation to general reserve is £10,000, as against £17,500, to writing off the discount and expenses of the debenture issues £2,800 as before, and £35,450 is carried forward, as against £34,742.

***

It is now announced that the negotiations for the amalgamation of four English oil companies carrying on operations at Baku—the Baku Russian Petroleum Company, Bibi Eibat Oil Company, European Oilfields Corporation, and the Russian Petroleum Company—have been brought to a successful conclusion. A new company, Baku Consolidated Oilfields, Ltd., has been formed, and it is proposed that the respective undertakings of the four companies shall be transferred to the new company, subject to the approval of the share and debenture holders of the various companies. The importance of the new company can be gathered from the fact that the total production of petroleum by the four companies for the years 1913-1916 inclusive was, approximately, 1,250,000 tons, or an average of 300,000 tons a year, the trading profit for the same period being £860,000, or an average of £215,000 a year. It is intended that the combine shall have an authorised capital of £2,500,000, divided into 1,250,000 "A" shares of £1 each (Preferred Ordinary) and 1,250,000 "B" shares of £1 each (Ordinary). The "A" shares will be entitled to a non-cumulative preferential dividend of 8 per cent. per annum, and to participate pari passu in any profits beyond 8 per cent. per annum on the "B" shares. The "A" shares are also entitled to priority in any distribution of assets.

CONSTANTINOPLE BUSINESS LETTER.

Trade Requirements.

(From Our Own Correspondent.)

Constantinople, June 20.

An announcement this week in the *Orient News* to the effect that the Federation of British Industries, generally known as the F.B.I., intends to establish an office in Constantinople is most welcome. We have already allowed others to steal a march on us in the matter of commercial propaganda, and the sooner the F.B.I. gets to work here the better. But unless British manufacturers realise also that the Near Eastern market is well worth having, and unless they are willing to make a bid for it by taking into consideration what their foreign competitors are doing, the F.B.I. will not be so successful as it undoubtedly could be. For instance, why do certain not unimportant British firms make it an invariable rule to quote "loco." prices and insist upon cash with order? There is not a single American firm doing business in the Near East that is not willing to quote c.i.f. prices and to offer certain concessions with regard to payment. The usual thing is 25 per cent. cash with order and the balance against documents. Certain Swiss firms, when dealing with merchants of sound repute, go so far even now as to leave the payment until one month after the receipt of the goods. The French are sending goods on consignment invoiced at 5 per cent. less than actual price, which provides for the agent's commission and makes for economy in the Customs. Italian firms, without exception, ask for no more than cash against documents. There are many instances of agents who have no difficulty in getting such terms from foreign firms, but who can get nothing better than cash with order and "loco." quotations from British firms! Of course, a great deal depends upon the agent; but it is no use having an agent who is not to be trusted. Neither is there any need to risk anything with such an agent. There are plenty of sound, straightforward British firms here who may be trusted to any amount. There are also hundreds of Armenian and Greek firms who are perfectly trustworthy.

Another mistake that is being made is to send samples by parcels post instead of sample post, with the result that the samples are held up, often for weeks, on the way and in the Customs.

The length of time required for delivery is also a great obstacle to business, and most especially at the present moment. There must be sufficient stocks in Great Britain to supply the comparatively modest demands of the Near East at the present moment, and surely it would be better to neglect the home market temporarily in favour of the foreign market, if by so doing a good market can be captured. The home market can always be brought back to the fold, but opportunities abroad will not come along every day.

Finally, there is the matter of language in correspondence and advertisement. French is the Esperanto of the Near East. It may not be very good French, but everyone speaks it and understands it, which, after all, is the main thing. English is very little understood outside the British and American colonies here. This is where the French especially have a great initial advantage. Only by corresponding and advertising in French can we expect to neutralise that advantage.

The British Chamber of Commerce

In my last letter I touched upon French and American organisation for the commercial struggle that is upon us. Although, as usual, we have had our hands so full that we come somewhat late in the field, yet our Chamber of Commerce here, when its organisation is complete, as it shortly will be, will in no way be behind the commerce bureaus of our competitors. Indeed, the scheme that is now being worked out will give us a commercial organisation superior to that of any of our competitors. But with one reservation: on condition that firms in England who are interested in the Near East give the British Chamber of Commerce in Constantinople adequate support. In the past, for some obscure reason, the Chamber received practically no support from firms in England. This is not as it should be. The Chamber is to British commerce what the British Embassy is to politics. But unless those for whose benefit it exists support it properly it cannot possibly fulfil its functions. For instance, before the war the French Chamber of Commerce had a membership of over a thousand, including many home firms of importance, although the French share of business was only 10 per cent. as compared with our 35 per cent., and it was with difficulty that we got four hundred members for the British Chamber of Commerce. The result was that, whenever it was necessary to approach the Turkish authorities with reference to some grievance, the French had far more weight behind them, and far more attention was paid to them than to us. The reason usually given by home firms for their refusal to become members of the British Chamber of Commerce in Constantinople is that they are already adequately represented, and that they do not see what the Chamber can do that the agent cannot do. But it is perfectly obvious that if the Chamber numbers, say, 500 British home firms of standing among its members, there would be very many things that it could do that would be utterly impossible to the most efficient agent acting alone. Furthermore, a powerful Chamber of Commerce would not only be an advantage to individuals, but would also be a great help to British commerce generally. It is, therefore, not only to the interest, but it is also the duty of every firm in Great Britain interested in the Near East to become a member of the Chamber of Commerce in Constantinople. The practical advantages will be numerous and important. For example, when it gets going the Chamber will be in a position to give sound information about any firm or individual in the Turkish Empire. Even if that were the only advantage it would be worth the membership subscription; but that will be only a small department of the really important and efficient organisation that is now well on the way to completion. The most perfect organisation, however, is abortive unless those for whom it is designed make use of it and give it their support. Inquiries should be addressed to W. Smith-Lyte, Esq., The Secretary, British Chamber of Commerce, Constantinople.

The Exchange.

The rates of exchange remain pretty firm, although £E1 have dropped to 111, after having touched 116 a few days ago. Sterling are back at 400, after a temporary drop to 397.

Markets.

The removal of the prohibition to export wool may have a favourable effect upon the general situation, wool being one of the most important exports. The price of Anatolian wool is about 40 piastres the oke. Mohair is 65-70 piastres the oke, according to quality.

With regard to foodstuffs, the market remains firm. Olive oil is 70-90 piastres the oke, according to quality; sugar is £T99-100 the case of 100 kilos; crystallised sugar is £T53 the sack of 100 kilos; and rice is 45-50 piastres the oke.

Tobacco.

The High Commissioner for Greece at Constantinople announces that the quantity of tobacco in the depots at Constantinople is about 30,000,000 kilos; in Bulgaria there is a stock of 40 to 50 million kilos. The prices are in Constantinople 85-145 piastres the kilo; in Thrace, 80-110 piastres; in Smyrna, 80-120 piastres; at Nicomedia, 80-110; at Samsoun, 80-150 piastres the oke.

ECONOMIC MISSION TO SERBIA.

Colonel Sir Hamar Greenwood, in reply to Mr. A. Short, said that the Economic Mission to Serbia was sent in two contingents, of which the first had already returned. The object of the mission was to investigate commercial conditions generally in Serbia, and also reconstruction problems in engineering and public works, transportation, agriculture, timber, mining, town-planning, and sanitation. The official members of the mission included no direct representative of any specific business interest. The mission was not intended to take the place of private initiative, but it was affording any facilities in its power to representatives in Serbia of British firms. The expenses of the official members of the mission were borne by the Commission Internationale de Ravitaillement. The mission had no power to make recommendations with a view to legislation. A report of its investigations would be published on the completion of its work, and an interim report had already appeared in the *Board of Trade Journal* of June 19. A similar mission was sent out to Poland by the Department of Overseas Trade and the Commission Internationale de Ravitaillement in the early part of the year. The report of that mission was at present under consideration.

[In a written reply Sir Hamar Greenwood states:—The first contingent consisted of Mr. E. C. D. Rawlins, commercial secretary for Serbia and Greece; Lieutenant-Colonel C. E. Jordan Bell, R.E., War Office; Mr. F. A. Llewellyn, Office of Works; and Mr. W. Trask, nominated by the Federation of British Industries. This contingent was accompanied in an unofficial capacity by Mr. A. E. Tabor, of the Levant Company, and Captain T. G. Mapplebeck, of the Associated British Manufacturers. The second contingent consisted of Mr. F. A. Llewellyn, Office of Works; Captain E. C. Foot, Forestry Corps of Canadian Army; Mr. G. E. Farrar, Office of Works; Mr. C. L. K. Foot, ex-manager of Government Stock Farm at Alington; Mr. F. H. Cerrito, Office of Works; and Mr. G. W. Tully, Office of Works (Scottish Branch). Mr. Rawlins was in charge of the mission attached to it. Mr. F. A. Llewellyn had since been in charge.]

Something *Quite* Different

from All other Paints—

"Riversea" Paint

Is Elastic, Waterproof, and is Impervious to Heat, Cold, and Atmospheric Conditions.

Is a Perfect Preservative for Iron, Wood, Stone, etc. Salt Water has no effect, and the Paint is a positive cure for damp, and resists the action of strong Acids. Can be submerged under water.

Is supplied in any Ordinary Colour.

THE YEMEN.

Development of Ports and Industries.

The *Board of Trade Journal* of July 3 contains an interesting article on the ports and industries of the Yemen, written in the light of a report to the Admiralty by a naval officer, who spent three and a-half years of the war on patrol duty between Jeddah and Perim, in which the writer deals with the ports and with industries, at present latent, which are capable of rapid development by means of ports. The article runs:—

Red Sea harbours between Jeddah and Perim have been little developed, and what had once been done has since been lost by deterioration. And yet most of the larger harbours are capable of great improvement at moderate cost. The coral reefs, a great natural advantage, could be carved into quays, small piers built in sheltered waters, mooring buoys laid down, and lights put up. The best known port is Hodeida, which the Turks had planned to connect by railway with their military capital of Sana. But, in the author's view, Salif, near the British island of Kamaran, will supersede Hodeida as the principal sea outlet of Southern Arabia. The caravan route from Hodeida to Salif is over firm, level country, and there would be no difficulty in carrying a Sana-Hodeida railway on to Salif. Between Perim and Hodeida there is no port at all promising, and Hodeida is an open roadstead with many coral banks in its approaches. But although Hodeida itself is unsuitable as a harbour, Khor Khetib, some ten miles to the north-west on the promontory which bounds the Hodeida roadstead, is described as of considerable merit as a small harbour. The Turks had proposed to spend some £200,000 on Khor Khetib, and had begun developments, which our naval author spent "a very happy day" in thoroughly destroying.

Salif.

Salif, he says, is "evidently the future main harbour and outlet for Yemen and Azir." The island of Kamaran, upon which he was based for the greater part of three years, lies just off it, and the Kamaran passage contains no uncharted dangers at less than five fathoms depth. The western shores of Kamaran Island are similar, so that both shores are very suitable for the construction of piers and jetties. Salif as a harbour is assured of a commodity for which the demand is universal. The rock salt deposits run right down to the sea shore, and are almost inexhaustible. They extend for many miles and, writes the author, "it is difficult to realise the vast salt deposits of Salif until one has landed and visited the salt quarries," which were begun by an English firm before the outbreak of war. India is a large and ready market, "consequently, in Salif, we have a very large sheltered harbour capable of rapidly receiving a cargo, and always ready to offer in return a rock salt cargo, irrespective of such cargoes as the interior of Yemen can supply." During the war period, salt rust has destroyed nearly all iron and steel materials of the works, and the pier at Salif, though still in existence, has gravely deteriorated. If a new pier be constructed on a large scale, extending further out seaward it should be capable of taking ships alongside for the direct shipment and discharge of cargo. The southern passage of the Kamaran Narrows is not difficult, but for safe working needs compulsory pilotage. "There is not sufficient room in the southern entrance," says our naval authority, "to allow of mistakes being made." He discourages the northern passage for various reasons. "So long as Kamaran Main Southern entrance is clear there seems little object in throwing open a less direct and more difficult passage for the navigational experiments of foolhardy mariners." Kamaran Island has no undeveloped resources which are apparent, but if for political reasons it were held desirable to make full use of Salif, Kamaran harbour, hard by Salif, could be developed in its place to meet the full requirements of the Yemen's export trade.

In the author's survey of the coastline of Azir and the Yemen, Salif alone comes up to his standard of a real seaport. Mocha, to the south, he rules out as dead, and while condemning Hodeida, has much to say in approval of Khor Khetib, near by, as a first-class small harbour. It is, however, very small. North of Salif the water is smooth, being sheltered by banks and islands from the prevailing westerly winds.

Undeveloped Trades.

Two undeveloped trades appear to be ready for immediate exploitation:—1. Export of salt from Salif to overseas markets and also to Red Sea ports. 2. Export of salt fish from the Arabian coast generally. The rock salt deposits of Salif have already been referred to. They not only could provide direct cargoes of practically unlimited tonnage, but also are at hand to salt the fish which abound in Arabian waters. The chief ground for the small fry, which require shelter and protection from the ravages of their seniors, is the well-known Farisan Bank, a centre of the pearl fishing industry. Farisan waters are stated to hold more small fry to the square mile, and to be more plentifully stocked with large fish, than Lagos or the Mediterranean. Fish are so plentiful all along the coast that nearly every port meets its own requirements, and since the best fishing grounds are in waters most undesirable for steam navigation, the Red Sea fish supply has largely escaped European notice. Coral waters are not generally well adapted for heavy net fishing. The Arab uses light nets for fry and the line for large fish. But there are many localities where the heavy net would have its obvious advantages. If an export trade in fish were developed, as the naval author—himself a keen sea fisherman—believes that it could be, the Arab would need to learn how to cure the fish for steamer stowage. At present he cures it lightly for his own needs. The best fishing grounds are north of Salif.

Farisan Pearl Fisheries.

The pearl fisheries of the Farisan Banks, off the northern coast of the Yemen, have not been exploited to any great extent. The pearls produced are yellow and small, yet, in the opinion of the author of the report, there are greater possibilities in the fisheries of the Farisan Banks than in those of the much more famous Bahrein Islands in the Persian Gulf. He starts from the theory that the oyster forms a pearl by covering up with layers of calcium carbonate some irritant substance in its body. Irritation may be caused by a foreign substance, such as a grain of sand, or be of bacterial origin. It appears that certain kinds of fishes, such as sharks, skate and ray, when in coral waters, contract an irritant disease which is communicable to oysters through the germ which causes it. An infected oyster then forms a pearl to protect itself. The Farisan coral formation is favourable ground for those kinds of fish which are likely to infect the smaller oysters of the shoals and also the larger oysters of the deeper waters with the disease which induces them to secrete pearls. The more fish were introduced of the kind desired the more oysters would be infected, and the more pearls would be formed. The whole process sounds mechanical and cold-blooded—from the point of view of the oyster—but it does contain dazzling possibilities for pearl fishers. Even in a rich fishery like Bahrein not more than five per cent. of the dredged oysters contain pearls at all, and only a very small percentage contain other than seed pearls. There is thus, in artificially assisting natural processes, a liberal margin to work upon. It is pointed out that an almost unbroken coral wall, some 80 miles long, runs from south to north in the upper Farisan waters, and rises to within a few feet of the surface. Big fish coming in from the westward work up to this wall, but do not cross it. To the eastward the waters are deeper, and therefore colder in the summer time. The value of this great wall in the economics of Farisan pearl fishing is thus described:—"It will be seen therefore that we have a gigantic pearl bank, some 80 miles in length, limited on one side by a definite wall and open on its westward side. We may stock this bank, or such portions as we require, with the fish necessary for pearl cultivation. It is only necessary to carry our live fish over to the west of the wall and leave them there without further care. In winter these fish have the necessary deep waters to westward, but they would be unlikely to roam very far. . . . The scheme is, of course, a large one for fish development, though not necessarily so for initial stages." The shark, a desirable fish for infecting oysters, does not give much trouble to the Arab pearl divers.

CO-OPERATIVE MOVEMENT IN INDIA

The progress of the co-operative movement in India during the year 1917-18 is shown in a statement which has just been issued. The total number of banks rose during the year from 264 to 282, with a membership of 91,494, as against 76,475, and a working capital of Rs. 580 lakhs, as against Rs. 485 lakhs the previous year. The number of agricultural societies increased from 20,990 to 23,742, while there was an increase in the number of non-agricultural societies from 1,237 to 1450. The total membership of the agricultural societies was 851,407 with a working capital of 689 lakhs. The non-agricultural members numbered 203,837, and the working capital of their societies was 171 lakhs.

ENGINEERING NOTES.

Steam Engines and Oil Engines.

The reasonable cost of motive power is essential to the success of any enterprise, industrial, agricultural, or marine, in which machinery is employed. Particularly is this the case in the Near East where fuel, especially coal, has to be imported, and where many promising enterprises have been unsuccessful owing to the higher prices of coal and its uncertain outlook. The cost of coal was one of the principal reasons why the use of steam engines was comparatively restricted in the Near East. All along the Eastern Mediterranean coast there were only about six or seven depôts from which English coal could be obtained—the only steam coal available—and from there it had to be carried to where it was needed, either to inland centres or to other ports on the coast. In this way its cost would be double and often treble its price in England. In the circumstances steam engines were not economical motive-power producers except, perhaps, those nearest the central coal depôts. Thus enterprising proprietors, who wished to develop an industry, preferred to utilise other sources of energy, such as waterfalls in mountainous or hilly districts, windmills, animal power, and even treadmills. But although motive power of this kind was to a certain extent useful for some industrial purposes, it could not be used for the cultivation of land and other field works. Hence the adherence in many districts to the old and primitive methods of agriculture, and the slow progress in promising local industries. It is due, however, to the efforts of a British firm of agricultural engineers that the first portable steam engines with enlarged fire-box and the automatic straw-burning apparatus appeared in the Near East, first in Roumania and Southern Russia and then Macedonia, Asia Minor, etc. The demand for straw-burning portable engines was considerable; and also for threshing machines, flour mills, chaff cutters, etc. Steam power in the agricultural fields was increasing, but again with restrictions in many districts. In most parts of the Near East the straw is as valuable to the farmer as the wheat itself; it forms the staple food of his animals, especially in winter. Hence most of the threshing machines for the Near East are ordered to be fitted with a straw-cutting and bruising apparatus, which is put into operation when coal or wood are obtainable, or when, on large estates, the straw is sufficient for burning as fuel, and for part of it to be cut and bruised for fodder; but for the average farmer or small holder the straw produced is hardly sufficient for fodder, and its use as fuel is out of the question. Thus, the utility of the steam engine, although considerably extended, presented serious drawbacks.

With the appearance of the oil engine, however, a new era may be said to have begun in the industrial and agricultural development of important regions throughout the Near East, which possesses some of the largest oil sources in the world. There are the great oilfields such as those between the Black Sea and the Caspian Sea, and in Roumania, producing millions of tons per annum, from which fields refined or crude oil can be cheaply distributed throughout the region, and there are numerous smaller services in various parts of the Near East which natives work, obtaining from them hundreds of tons of oil per annum. It is no wonder, therefore, that the oil engine has found such a splendid market throughout the Balkan States and the Levant. Its lightness and portability enable agriculturists and others engaged in industry to use it as a motive power in hilly and inland districts, where but a few years ago such a service would have been considered an impossibility. It may be interesting to British oil engine manufacturers who have not realised the importance of the Near Eastern markets to mention here that one agent sold in his district in the year before the war oil engines amounting to about 2,700 horse-power. With the exception of one of 900 horse-power for an electric light installation, and four or five of from 40 to 60 horse-power, and others were from 2 to 12 horse-power.

Mining in Trebizond.

Much has recently been written about Trebizond, the important district (or vilayet) of Asia Minor, on the south coast of the Black Sea, with an area of about 12,400 square miles, and a population of 1,200,000 before the war. It is a mountainous and afforested district, with much fertile land and considerable mineral wealth. The capital is Trebizond, on the Black Sea, which had a large trade and active industries. British manufacturers will find it a good market for agricultural machinery, hardware, and tools. There are numerous mineral deposits in this district, both near the coast and in the interior, and it is especially rich in copper. Silver-lead, zinc, iron, and manganese are also met with. The possibilities of the district appear to be known to British mining engineers, who have often visited the country. There are in the vilayet thirty-one mines, of which, however, owing to lack of capital, exhaustion of the veins, or low prices before the war, only four were being worked. A British company was carrying on research work at a group of mines near Tireboli, but the war interrupted their work. There is a silver-lead mine at Araland, between Off and Surmeneh, which is said to be rich and has been worked.

Developments in Bohemia.

Motor ploughs were not made in Austria before the war, but now it is reported that several firms in the newly created countries will manufacture them. In Bohemia it is proposed to produce agricultural machinery on a large scale for export to the East. The prospects of these industries, however, depend largely on the supply of iron and coal. At present there is a great scarcity of iron, and it appears that application for the release of that metal for the purpose of machinery export have been in most cases refused.

Paper Driving Belts.

Driving belts are very dear, and with the scarcity of leather great inconvenience is experienced in factories in the Near East, in some of which machines are kept idle for want of driving belts. It may be a consolation, and perhaps be of use, to those who experience the need of belting, to know that paper belts have been used in Germany. The paper of which they are made is cut into narrow bands which are then spun. The belts are made by weaving or braiding. Woven paper belts are of two kinds—paper fabric and paper thread belts, the former being the more frequently used. The fabric is first cut into bands forty metres long, and the bands are subsequently made up according to the desired width and thickness. A core of strengthening material is interposed, either of cotton or sheet metal, though recently these cores have consisted of paper thread and metal wires interwoven. The core is surrounded with the paper strips and the whole sewn with strong thread. Belts so prepared are said to be very flexible and to wear satisfactorily.

EMPIRE SUGAR PRODUCTION

In the Preliminary Report of the Empire Sugar Supply (Technical) Committee, submitted by Mr. Arthur R. Ling on July 16 at the annual meeting of the Society of Chemical Industry, over which Lord Denbigh presided, there are some interesting facts given regarding sugar production in India and the Near East. Of India the report states that it was at one time the largest producer of sugar of any country in the world, but so far as statistics show at the present time it occupies a second place in the list, Cuba coming first. However, it must not be forgotten that statistics in British India are by no means complete, whilst those of the Indian states are still less so; consequently, much of the sugar which is produced and consumed by the Indians is unrecorded. The area under sugar-cane and sugar-yielding palms for the season 1916-1917 was estimated to be as follows:—Sugar-cane, 2,437,000 acres; palms, 175,000 acres. The cane was estimated to produce 2,626,000 tons of gur, and the palms 400,000 tons of gur, a yield of 0.92 tons and 2.28 tons per acre, respectively. These figures have, however, little significance, for the present small holdings will have to be converted into centralised estates if any real improvements are to be effected in India as regards increasing the yield and quality of the sugar. With regard to the future development of sugar cultivation in Ceylon, it may be said that fully two-thirds of the island receives less than 75 inches of rain per annum, and the cultivation could only be carried out in the dry area with irrigation, especially when it is remembered that the greater part of the rainfall falls within the months of the north-east monsoon season. Of Cyprus the report states that up to the middle of the sixteenth century it was one of the principal producers in the Levant of cane sugar, but no attempt has been made in recent years to revive the industry. It is believed, however, that beet could be successfully grown in the island, and within the last year or so inquiries have been made from two different sources as to whether the Government could grant monopolies for the manufacture in the island of sugar (a) from beet, and (b) the carob bean. In regard to Egypt, there is no suitable land available for the extension of the sugar industry, but, should the remaining basins of Upper Egypt be converted to perennial irrigation, a considerable area will be available. From the Sudan no information has been received, but it appears that, with irrigation, there should be a possibility of establishing a sugar industry.

A sum of £E400,000 has been allocated in this year's Egyptian Budget for the enlarging of the Suez Docks. The total amount necessary for the completion of the work is £E650,000, of which £E200,000 has already been spent.

NEAR EAST MARKETS.

Poor Outlook for Yugoslav Crops.

Effects of a Wet Spring.

(From Our Own Correspondent.)

Belgrade, July 8.

After a long wet spring, the hot weather has set in, but too late, for the unceasing rains of April and May have done enormous damage to crops throughout the country. The Bosnian plum crop, the value of which averages about eighteen million dinars a year, is reported ruined, and grain has suffered proportionately, especially maize, which is very backward. But even if the plum crop has been a bumper one, it is difficult to see how the Bosniaks could have drawn much benefit from it under present conditions. In past years the Bosnian, and the equally valuable Serbian, plum crop was exported bodily to Budapest, where it was sorted, picked, and re-packed, and placed on the European market through Hamburg. Many of the Carlsbad plums consumed in England grew in Serbia, but the homely producers had no knowledge of the value and art of packing. The pekmez, a kind of crude plum jam, an evil-looking black paste, was exported to America, whence it was re-exported, after proper preparation, as plum and other jams.

Egypt's Winter Crops.

"It has become clear," says the *Bassir's* correspondent at Itar-el Baroud, "that this year's winter crops are very bad. The cornfields where the Hindi variety of wheat is cultivated will hardly produce a quantity equivalent to the quantity of seeds sown therein. As for the Baladi wheat, this has not been touched by untoward factors; but the Hindi was sown in larger areas by most of cultivators this year. In such districts as the sandy lands of Kafr Daoud, Khatatiba, the Nubarieh Canal, etc., the Indian wheat cultivation is good, because these places are not exposed to the effects of dampness."

The final memorandum on India's winter oilseeds (rape, mustard and linseed) crop of 1918-19 issued by the Department of Statistics states that the total area under rape and mustard is reported to be 4,833,000 acres, which is 32 per cent. below the finally revised area of last year. The total estimated yield is 758,000 tons, as against 1,153,000 tons, the revised final figure of last year, or a decrease of 34 per cent.

This year's Greek fig crop is estimated in an American Consular report at 25,000,000 lb. The yield of 1918 was above the average of recent years by between 2,000,000 lb. and 3,000,000 lb.

THE ALEPPO BOURSE.

(From a Correspondent.)

Perhaps the term "Bourse" is a complimentary misnomer when applied to the seat of Exchange in Aleppo. One's pre-conceived ideas of a Bourse (which, the dictionary tells us, is the French name for an exchange) picture a stately hall, upon the floor of which members are gathered in excited knots bargaining for stocks and shares in accordance with certain rules and regulations. The Aleppo Bourse is, in reality, a "street market," free to all comers, and, as far as one can see, governed by no rules or regulations. As one enters the bazaar by the vegetable market, threading one's way through the kaleidescopic crowd, and dodging at intervals donkeys laden with cabbages, beetroot, or lettuce, or strings of disdainful camels, one may happen to glance down a side alley and catch a glimpse of a heterogeneous crowd crowned by a sea of tarbooshes. Turning down this side alley one arrives at the outskirts of an orderly and quiet crowd which has taken up its stand at four cross roads, under a dome considerably higher than the rest of the bazaar. This, one will be informed by one's guide, is the Aleppo Bourse; here, should the highness wish to, he may exchange some of those Egyptian notes for Turkish gold, wherewith to buy that beautiful Shiraz carpet (made in Aleppo—or was it Naples?) which the highness so much admired. If you should be foolish enough to be prevailed upon to exchange money or dabble in doubtful securities, you will be introduced to an exchange merchant, or broker, who will conduct you to his "office" near by—a box-like aperture in the wall, raised some two feet from the ground, after the manner of all the shops in the bazaar. You will be invited to take a seat on a stool—the inevitable coffee and cigarettes will be produced, and then will commence the eternal haggle which is the very breath of life of the Eastern. It is not to be supposed that all bargains are concluded in this leisurely manner; mingle with the crowd of merchants, bankers, and money-changers, and you'll hear prices being quoted and bargainings on all sides, but in a half-hearted way. It was a dull and lifeless market in those days—the writer is speaking of last February—and well it might be, after four years of war, which were practically four years of siege. Although Syria had then been occupied four months by the Allies, the road to Allied markets was not yet open, and the same old securities were changing hands. The following is a list of the principal securities, giving their prices on the Aleppo Bourse over a period of two months:—

Figures in Turkish Pounds Gold.
(L.TI. Gold = 130 Silver Piastres.)

—	Amount	Jan 16	Jan 24	Jan 30	Feb. 3	F'b 12
Egyptian Notes	£E100	85	86	86	85	81
English Notes	£100	82	83	83	82	77

Argentine Interior 5% Loan (Pesos), L. 100	L. 245 T. paper	L. 46 T. gold

Some of the above foreign paper money is, according to the Cairo Correspondent of this paper, finding its way to Cairo since all restrictions have been removed. Much of it, especially the Austrian banknotes, were doubtless collected, as the correspondent suggests, purposely for the financial market. During the war it was necessary for the Central Powers to establish their credit with gold, but once they had won the war they would doubtless have attempted to collect and withdraw as much gold as possible and force the Syrian to take their paper currency. Had their ambitions been realised, these large quantities of paper would have been on hand, "according to plan."

EGYPTIAN MARKETS.

The returns of the Egyptian Markets, Ltd., for the week ended July 3 were:—cattle markets £200, general markets £250, total £450, total for year £31,451. The figures for the corresponding week in 1918 ended July 4 were:—cattle markets £338, general markets £513, total £851, total for year £28,011.

BANK OF BRITISH WEST AFRICA.

New Issue of Shares.

The directors of the Bank of British West Africa have issued a circular stating that they have under consideration the desirability of opening additional branches, and further capital will be required to prepare for this and for the expansion of the bank's existing business. It has, therefore, been decided to issue the remaining unissued capital of the bank, 55,000 shares, of £10 each, and to call up the sum of £4 per share thereon. The directors felt that it would further strengthen the bank's position if, concurrently with this increase of capital, they could establish close relations with one of the leading London banks. With this object the board have arranged with Lloyds Bank Limited, to take 15,000 of these shares, £4 per share paid, at £7 5s. per share. Lloyds Bank have, with the approval of the board, also acquired by private treaty 15,000 of the existing shares. The control of the bank and of its policy will remain, as heretofore, in the hands of the board, and the directors are satisfied that the acquisition by Lloyds Bank of a shareholding interest in this bank, will prove of assistance to the bank in its development. Mr. J. W. Beaumont Pease, Deputy Chairman of Lloyds Bank, has joined the board of the bank, and the Chairman, the Earl of Selborne, K.G., G.C.M.G., has accepted a seat on the board of Lloyds Bank. The 40,000 shares of £10 each remaining unissued are now offered to shareholders registered on the books of the bank at the date of the circular, in the proportion of one new share for every four at present held, at the issue price of £6 per share, of which £4 will represent the amount to be paid up on each share, and the remaining £2 will be premium. The premium on the 40,000 new shares and on the 15,000 shares allotted to Lloyds Bank Limited, will be added to the reserve. Any shares not allotted will be taken at the issue price of £6 by Lloyds Bank Limited. Letters of renunciation are issued. Payments for shares will be required as follows:—£3 being £1 per share and £2 premium with acceptance; £3 per share on October 31, 1919. Interest at the rate of 3 per cent. per annum will be allowed upon pre-payment of the amount due on October 31. Shares issued on the terms of the circular will rank for dividend on the full amount of £4 per share as from October 1, 1919.

NEW COMPANIES.

Indian Peninsula Rubber and Tea Estates, Ltd.

The Indian Peninsular Rubber and Tea Estates, Ltd., was registered as a private company on June 16 with a capital of £155,000 in £1 shares.

Union Cotton.

Among new Egyptian companies is the Union Cotton Co., of Alexandria, which has a capital of £E100,000 in £50 shares. Its objects are to undertake all commercial operations, more particularly the purchase and sale, the importation and exportation of cotton and cottonseed, direct or for a third party, and also commercial transactions abroad or in Egypt, in cotton goods.

During April last 39 joint stock companies were registered in India, with an aggregate authorised capital of about Rs.184 lakhs, as against 26 companies with a capital of Rs.114 lakhs in the corresponding month of the preceding year.

According to a Bolshevist message, over 350,000 acres in Turkestan have been sown with cotton this year.

A temporary increase of 20 per cent. has been made on all port dues levied at Tunis, Scusse, and Sfax.

An Egyptian paper states that all steamers under the control of the Ministry of Public Works which are now working by coal will be worked in the future by petrol.

The British India trade returns for May show that the imports have increased by £2,509,000, and that the exports have decreased by £176,000 as compared with last year.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

MANCHESTER, WEDNESDAY.

Owing to the settlement of the strike the spinning mills and weaving sheds have got to work again, and it is hoped it will be a long time before industrial matters trouble us again. The tone of the market has been very strong, prices in all quarters being dearer than a week ago. Most spinners and manufacturers have been quite indifferent as to booking fresh orders, as their engagements are extensive. No particular change can be recorded in Egyptian cotton prices. Crop advices vary somewhat, but on the whole the plants seem to be doing rather better, there being reports of warmer weather which is favourable for the growth. More money has had to be paid for Egyptian yarns, especially the finer counts. An active demand has been experienced. An encouraging inquiry has been met with in piece goods for Egypt, and the Near East generally. Buyers have resisted somewhat the higher prices which have had to be paid, but there is a feeling that values have not yet touched the top. India and China have given encouraging support in standard makes and fancies. It is a long time since manufacturers as a body were in such a strong position, and for anything wanted full prices have had to be paid. There has been some improvement in the off-take in shipping yarns. More trade has been done for European countries and the outlets of the Levant. India has also purchased bundles on a very fair scale. American counts for home use have stiffened in price with a steady business.

RAILWAY DEVELOPMENT IN BURMA.

The Government of Burma (says the *Board of Trade Journal*) has decided to encourage the development of railway communication by the adoption of the general British policy in the case of colonies—that in a country with a generally scanty population and no towns of considerable importance, strategic points on frontiers and general trade routes, etc., should be linked up. It is thus calculated to develop the country by first establishing the lines of communication—a policy for which, according to opinion in British India, there is ample scope also in British India itself, where, it is pointed out, the construction of feeder lines to the main lines on a wholesale scale should be prosecuted. The conditions for railway development in British India and Burma are very different from those in Australia and Canada, where large areas of useful land—arable, forest, or mineral—are opened up by railways regardless of the uninhabited condition of the country. The assumption that rich territory, once opened up by means of communication, will find its own development is an axiom which, in the case of European populations, never fails. Conditions in India are different, in that the population, even when not apathetic, requires both education and capital, and the railways, therefore, hesitate to launch out in the matter of undeveloped areas, although these areas may urgently require means of communication for purposes of development.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates: July 1 and 2, 500,000 francs against 250,000 francs; July 3, 360,000 francs against 240,000 francs; July 4, 340,000 francs against 370,000 francs.

The Bombay Government has appointed a Committee to arrange for the establishment of a Nautical Institute for the training of Indian merchant seamen.

For the four months ended April the Ceylon Customs returns show a net increase of Rs.5,21,886 in the revenue collected. There was, however, a net decrease of Rs.2,26,817 in the revenue for April itself.

The death took place suddenly at his residence, Woolton Vale, Liverpool, on July 12, at the age of 85, of Mr. Robert Gladstone, J.P., a freeman of the city, and a partner from 1862 to 1900 in the firm of Ogilvy, Gillanders and Co., said to be the oldest trading house in the East India trade.

COMPANY MEETING.

CYPRUS OIL TRUST.

The New Properties.

An extraordinary general meeting of the Cyprus Oil Trust, Limited, was held on July 11 at Winchester House, Old Broad Street, E.C. Mr. T. Bremner presided.

The secretary (Mr. F. A. Baird) having read the notice convening the meeting,

The Chairman said: The main object of the meeting is to increase the capital of the company to £75,000 by the creation of 550,000 new shares of 2s. each, ranking pari passu with the existing shares, and I will now give you some further details of the board's policy in the near future and the oil properties proposed to be acquired. The shareholders were notified early in March last of the position with regard to this company's properties in Cyprus, to explore and develop which this company was formed. Briefly, our interests there are for the time being in the hands of the Colonial Office. Our oil rights there were given up by us on the understanding that a large and influential oil group, who, by arrangement with the Colonial Office, will send out oil experts to explore the Island of Cyprus for oil, have agreed with us that, should discoveries at depth prove oil to exist in payable quantities in Cyprus, and a separate company to work them be formed, shareholders in this company would be given an opportunity to participate in the issue of capital in the separate company on the same terms as the group themselves. This being the case, your directors have in the interests of the shareholders made it their business to look around for other spheres of enterprise more immediately available, and they are glad to be able to put some facts before the shareholders to-day with regard to the proposed new acquisitions in Bulgaria and Roumania.

Oil Lands near Dedeagatch.

Part of the fresh capital proposed will be required, as stated in the circular issued to shareholders, to satisfy the consideration payable for 1,000 acres of oil lands in Bulgaria near the seaport of Dedeagatch, reported on by Dr. Arthur Wade, B.Sc., F.G.S., etc. This property is situated near the village of Balikeui, five miles to the north-west of the town of Feregik, in Western Turkey, and the area will be selected on what is called the chess-board system; that is, we take, with the Anglo-Bulgarian Oilfields Company, alternate blocks of, say, 25 acres up to 1,000 acres in all. Dr. Wade is a well-known oil expert, and is now the official oil expert to the Commonwealth Government of Australia. In his report he states that the district is chiefly occupied by beds of older tertiary age, consisting of huminulitic limestones underlain by red and green clays and a series of soft sandstones and conglomerates, with occasional seams of blue clay, with some gypsum. This lower series smells most strongly of petroleum in two or three places where exposed, and strong emanations of petroleum gas come from shallow holes put down in these beds. Petroleum-bearing sands are present in the area, and are capped by limestones and clays, and are folded into anticlines. The main anticline is broken, but the subsidiary anticline presents strong possibilities of oil in bulk. The oil should occur at no great depth from the surface, and Dr. Wade advises a preliminary borehole by means of light boring plant to test the area. Everything necessary for the work exists on the spot, such as food, labour, coal, and water, and an important French colliery is about 25 miles east of the property, while the main railway line from Salonika to Constantinople runs through the property, and the seaport of Dedeagatch is some seven miles to the south.

The Roumanian Property.

The other property we propose acquiring is in respect of oil rights over what we believe to be very valuable oil properties in Roumania, extending to 2,500 acres. The directors consider themselves fortunate in having been able to secure the contract with Mr. Bertie Maw for these Roumanian properties. This gentleman has had many years experience of oil in Roumania, and the 2,500 acres which this company are proposing to acquire from him are proved oil-bearing properties situated in the well-known Tazlau Valley district of Bacau, Roumania. The properties will eventually be held direct from the proprietors by definite acts of concession at a very nominal rental, approximately £30 per annum, and they will, when oil production actually begins, be held on a royalty basis for 20 years, the royalty being 8 per cent. on the oil extracted, while this company will have the right to renew the lease for a second period of 20 years on a royalty basis of 10 per cent. on the oil extracted from the properties, this royalty being payable in both cases in money or in kind. The properties, as I have said, cover approximately 2,500 acres, and were taken up by Mr. Maw and carefully selected by him in three separate lots, on the recommendation of Mr. Lewis Hamilton, the well-known oil expert. The anticline is stated to run through the whole of the Tazlau Valley, and it is a theory of experts that it is a continuation of the Galician anticline.

The three properties are immediately north of the Steaua Romana Company's properties, through which a pipe-line runs to Moineste, which is the nearest station, and where oil is pumped into railway tanks and transported over the State Railway to the refinery.

The valley of the Tazlau is now recognised as a very rich oil-producing district. Much work has been done here, and it is stated that all the bore-holes sunk in this valley are giving satisfactory results. Mr. Maw has such confidence in the property as an oil producer that he has agreed to accept the bulk of the purchase price in shares at a premium of 100 per cent., which is the price at which they will be offered to the shareholders. With regard to drilling for oil, the country is sandstone, and, though somewhat hard to drill, the cost is very moderate. It is reckoned that an expenditure of some £12,000 would bring four producing wells into profitable production. The upper petroleum layers give excellent results, but the deeper layers have been found to be very rich in petroleum and the quality of the raw material is very good.

Our share capital, when increased, will even then be a very modest one of £75,000, and we shall have a large portion of this in reserve for the future purposes of the company. It is proposed to offer only 100,000 of the new shares in the first instance to the shareholders as soon as possible, and the proceeds will be ample for all the present requirements of the company.

The Chairman concluded by moving the adoption of the resolutions.

Mr. D. G. Spiro seconded the resolutions, which were carried unanimously.

A vote of thanks to the chairman concluded the proceedings.

Cotton By-Products, Ltd., is exhibiting a cottonseed defibrating machine at the British Scientific Products Exhibition, Central Hall, Westminster. On July 23 Mr. E. C. de Segundo will give a lecture on "How the cotton provides us with foodstuffs and other commodities besides clothing" in Committee Room B of the Central Hall, and at the close of the lecture an adjournment will be made to the company's exhibit, and a demonstration will be given of the machine in operation.

TRADE ENQUIRIES.

EGYPT.—ALBERT J. HALFON.—P.O. Box No. 1182.—ALEXANDRIA, British Agent, in touch for twenty years with the best clients of Egypt. Complete and unique organisation (also for visiting the provinces). Highest references. Would like to secure serious REPRESENTATIONS. Correspondence invited.

MESSRS. T. S. BOUTAGY and SONS of Palestine and Syria can export specialities of these countries and wish to represent shipping firms as well as maritime and fire insurance companies, and import English articles into these countries.—Address, T. S. BOUTAGY & SONS, Haifa, Palestine.

ROUMANIA.—S. N. Iancovici, Bucharest, Str. Academiei 6, desires to obtain English agencies. English correspondence. First-class references.

COMPANY NOTES & REPORTS

Mortgage Company of Egypt.

The report of the Mortgage Company of Egypt, Limited, for the year ended March 31 states that, after providing for interest on the 4½ per cent. first charge debentures and on temporary loans, and applying a sum of £10,038 9s. 1d. in the aggregate in writing down the value of the freehold premises of the company in Cairo, the property acquired by foreclosure, the instalments in arrear, and in making further provision for bad debts, the accounts show a profit for the year of £83,777 9s. 6d. Deducting the amount of the dividend paid and accrued on the 5 per cent. preferred shares to March 31—viz., £50,000—there remains a balance of £33,777 9s. 6d. Adding the amount brought forward from last year's account, £34,472 16s. 8d., there is available for distribution a total sum of £68,250 6s. 2d., which the directors propose to allocate as follows :—(1) To payment of a dividend of 8 per cent., being 2s. per share on the amount paid up on the ordinary shares, £20,000; (2) to general reserve, £10,000; (3) towards writing off the discount and expenses of the debenture issues, £2,800—£32,800; leaving a balance to be carried forward to the next account of £35,450 6s. 2d. The economic situation in Egypt during the period covered by this report continued to improve, and the payments by the company's clients were well maintained, with the result that the instalments in arrear have been reduced from £220,279 to £171,163. The board have, therefore, thought it unnecessary to make such large provision as last year for losses; but they have set aside £8,500 for writing down the cost price of property acquired by foreclosure, for writing off a portion of the instalments in arrear, and for making further provision for bad debts. They further propose to increase the general reserve to £180,000 by adding thereto a sum of £10,000. The disturbances which took place in the spring of this year interfered for a time with the normal course of business. It may be hoped, however, that confidence will at no distant date be completely restored. The board have appointed Sir Henry Paul Harvey, K.C.M.G., C.B., as a director to fill the vacancy occasioned by the retirement of Joseph Mosseri Bey. Under the articles of association, this appointment terminates at the general meeting, but Sir Henry Paul Harvey, being eligible, offers himself for re-election. Colonel the Hon. Sidney Peel, D.S.O., M.P., Mr. T. A. F. Critchley, and Sir William E. Garstin, G.C.M.G., G.B.E., directors of the company, retire by rotation, and, being eligible, offer themselves for re-election. Messrs. W. B. Peat and Co., the auditors, retire, and offer themselves for re-appointment. Meeting, Wednesday, July 23, at the Cannon Street Hotel, E.C.4, 12 o'clock noon.

Bank of British West Africa, Ltd

The report of the Bank of British West Africa for the year ended March 31 states that after providing for current charges, rebate on bills, also bad and doubtful debts, there remains a net profit of £83,767 9s. 3d. to which must be added £21,612 14s. 10d., brought forward from last year, making a total of £105.380 4s. 1d. Of this sum £20,300, being 3½ per cent. for the six months to the end of September, has already been distributed in interim dividend, and the directors now recommend the payment of a final dividend of 4½ per cent. for the second half year, together with a bonus of one per cent. absorbing a further sum of £31,900, making the distribution for the year 8 per cent. dividend and one per cent. bonus, less income tax. £10,000 has been applied to writing down premises and furniture account, £3,000 has been added to the staff fund, £5,000 to the bank's insurance fund, and £12,500 to reserve, bringing the reserve fund up to £250,000. The balance of £22,680 4s. 1d. is carried forward. The investments held stand in the books of the bank at less than their market value as on March 31. The Grand Bassam (Ivory Coast) branch was closed, and new branches at Marrakech (Morocco), and Alexandria (Egypt), were opened, during the year. Mr. J. W. Beaumont Pease, deputy chairman of Lloyds Bank, Limited, has joined the board of this bank. The directors retiring by rotation are the Earl of Selborne, K.G., G.C.M.G., Mr. W. F. Moore, and Mr. O. Harrison Williams, who, being eligible, offer themselves for re-election. A resolution will be submitted to alter Article No. 71, so that the number of directors shall not be less than five nor more than fourteen, as against the present maximum of ten, and a resolution fixing the remuneration of directors will also be submitted. The auditors of the bank, Messrs. Harmood Banner and Son, offer themselves for re-election. The warrants for the final dividend and bonus will, subject to the adoption of this report, be posted to the shareholders on July 23. Meeting, Cannon Street Hotel, E.C., July 23, noon.

Upper Egypt Hotels.

The report of the Upper Egypt Hotels Co., Ltd., for the year ended March 31, shows the net trading profit on hotels of £E4,414,655. The expenditure, with the debenture interest, etc., amounted to £E7,535.716, and total receipts were £E6,569.894, leaving a loss for the year of £E965.822.

Anglo-Ceylon.

The accounts of the Anglo-Ceylon and General Estates Company for the year ended March 31 show a profit, including the sum brought forward, and after deducting debenture interest, of £159,203. An interim dividend of 10 per cent. was paid in January, 1919, absorbing £25,000, but of this 5 per cent. should be considered as result of previous year's working. The directors recommend a final dividend of 20 per cent., making 30 per cent. for year, and that £14,600 be set aside for redemption of the 4½ per cent. debentures due to be paid off in October, 1920, £10,000 to reserve fund, leaving £59,603 to be carried forward, subject to excess profits duty for 1918-19.

Galaha Ceylon Tea.

The report of the Galaha Ceylon Tea Estates and Agency Company for 1918 states that gross profit, including balance brought forward and after providing £750 for depreciation of machinery, is £21,004. From this has to be deducted interest on debentures at 6 per cent. per annum £2,820, dividends on preference shares at 6 per cent. per annum £3,600, and London charges £875, leaving £13,709. An interim dividend of 5 per cent. was paid on ordinary shares, absorbing £2,500. The directors propose to pay a final dividend of 10 per cent. on the ordinary shares (making 15 per cent., free of tax), absorbing £5,000, to place £2,000 to reserve, and carry forward £4,209.

Pabbojan Tea.

The report of the Pabbojan Tea Company for 1918 states that the profit is £44,901; add dividends on investments £359, interest earned in London £755, and interest earned in Calcutta £953, adding balance brought forward £64,171, and deducting excess profits duty paid on account of 1917 £12,401, balance of income-tax account 1918 £4,670, and commission paid to staff on balance of 1916 profit £579, leaves £93,489. Two interim dividends of 6½ per cent., less income-tax, have been paid, absorbing £7,410, income-tax thereon at 5s. 9d. in the £, £2,980. The directors recommend a final dividend at the rate of 12 per cent., less tax, making 25 per cent., £6,840; income-tax thereon at 5s. 9d. in the £, £2,760, and a bonus of 10 per cent., or 2s. per share, less tax, £5,700; income-tax thereon at 5s. 9d. in the £, £2,300. The directors propose to carry to reserve fund the amount of two calls on the company's 10,000 shares in the Glen Lorna Tea Company, making those shares fully paid, £2,500, and to add to the fund for permanent buildings, coolies, etc., £5,000, leaving to be carried forward £57,989, subject to excess profits duty.

Balijan.

The report of the Balijan Tea Company for 1918 states that the crop account shows a profit of £7,566; add additional profit made on account of 1917, £206, and amount brought forward, £17,719, making £25,492; less excess profits duty for 1917, £1,391; interim dividend of 6 per cent., £1,496; income-tax thereon at 5s. 9d. in the £, £604; leaving £22,001. The directors recommend payment of a final dividend of 14 per cent., less income-tax, making 20 per cent., £3,491; income-tax thereon at 5s. 9d. in the £, £1,409; leaving to be carried forward £17,101, subject to excess profits duty on account of 1918, if any, and also an amount payable on additional profit for 1917.

East Indian Tea.

The report of the East Indian Tea and Produce Company for 1918 states that the expenditure amounted to £7,240. The profit was £11,867 Deducting £989 debit balance brought forward, debenture and other interest and debenture trustees' fees, £10,855, there remains to be carried forward £22.

Imperial Tea.

The report of the Imperial Tea Company for 1918 states that there is a profit of £57,568. Adding the balance brought forward, £3.778; sundry adjustments, season 1917, £736; and excess profits duty recovered for 1917, £16,469, gives a total of £78,551; from which has to be deducted income-tax, £16,754; garden managers' commission, £3,094; debenture interest, £5,454; preference dividend (six months to June 30, 1918), £3,000; amount written off for depreciation of machinery, £2.000; leaving a balance for disposal of £48,249, out of which the directors propose first interim ordinary dividend of 4 per cent., less tax, £10,486; to add to reserve account (bringing it up to £100,000), £10,000; extra remuneration to directors, £845; preference dividend for six months to December 31 (already paid), £3.000; and recommend that a final dividend of 6 per cent., less tax (making 10 per cent. for the year) be paid on the ordinary shares, £15,730; leaving to be carried forward (subject to addition of excess profits duty, recoverable for 1918), £8,186.

Highland Tea.

The report of the Highland Tea Company of Ceylon for 1918 states that, after payment of all charges, the net profit amounts to £3.244, to which has to be added the amount brought forward, £1,669, less paid for excess profits duty for 1917, £954, giving a total of £3.959. It is proposed to allocate to interim dividend of 4 per cent., paid in November, £1,280; final dividend of 5 per cent. (making 9 per cent. for the year), £1,600; depreciation of buildings and machinery, £500; carry forward, £579. Income-tax will be deducted at 5s. 9d. in the £.

Bambrakelly.

The report of the Bambrakelly (Ceylon) Tea and Rubber Company for the year ended March 31 states that the net profit amounts to £3,843, to which has to be added the amount brought forward, £3,544; also amount refunded in respect of excess profits duty paid, £1 160, making a total of £8,548. Deducting contribution to war charities, £105, the capital expenditure for the year, £808, and the interim dividend of 5 per cent. paid February, £4,000, leaves available £3,635. The directors recommend the payment of a final dividend of 3 per cent. (making 8 per cent. for the year, less tax), £2,400, leaving to be carried forward £1,235. The company will have a claim for the return of a proportion of the excess profits duty paid by them of approximately £4,000.

Ceylon (Para).

The report of the Ceylon (Para) Rubber Company for 1918 shows a surplus of £18,303. After sundry adjustments, including payment of excess profits duty for 1917, amounting to £21,253, and writing off income-tax account £3,766, the balance amounts to £23,573. From this falls to be deducted bonus to European staff (£1,000), interim dividend of 7½ per cent., less income-tax (£5,250), leaving £17,323. It is now proposed to pay a final dividend of 20 per cent., less income-tax, making 27½ per cent. for the year (£14,000), and to carry forward £3,323, to which may be added amount repayable in respect of excess profits duty, which the directors estimate to amount to about £1,900.

New Sylhet Tea.

The report of the New Sylhet Tea Estates for 1918 states that the profit is £8,886, balance brought forward £4,812, interest £365. After paying income-tax, debenture interest, preference dividend, commission and bonus, £3,490, placing to general reserve account £1,000, there remains £9,573. An interim dividend of 5 per cent. has been paid on the ordinary shares, £700. It is proposed to pay a final dividend of 15 per cent. on the ordinary shares, £2,100, and to carry forward £6,773.

COMPANY RESULTS, Etc.

The directors of the Victoria Jute Company announce an interim dividend at the rate of 20 per cent., payable August 1.

The directors of the Sannuggur Jute Factory announce an interim dividend at the rate of 20 per cent., payable August 1.

A general meeting of the Société d'électricité d'Odessa wil be held at the company's offices, 158 rue Royale, Brussels on July 31.

The directors of the Titaghur Jute Company announce an interim dividend at the rate of 20 per cent., less tax, payable August 1.

In order to provide more working capital, the directors of the East India and Ceylon Tea Company have applied to the Treasury for permission to issue the balance of the ordinary shares.

The Bank of Madras has declared a dividend for the half-year ended June 30, 1919, of 10 per cent., with a bonus of 2 per cent. 395,488 rupees are carried forward and one lakh of rupees is transferred to the reserve.

Hutti (Nizam's) Gold Mines.—An extraordinary meeting will be held at Winchester House, Old Broad Street, E.C., on July 23, at noon, for the purpose of submitting resolutions as to the future policy of the company.

Coupons and drawn bonds of the Piræus, Athens, and Peloponnesus Railway Three per Cent. Bonds, due on July 15, 1919, will be paid on and after that date at Messrs. R. Raphael and Son's offices, Austin Friars House, E.C.

The Bank of Bengal has declared for the past half-year a dividend at the rate of 14 per cent., together with a bonus of 3 per cent. per annum. Rs.5,00,000 have been transferred to the reserve and Rs. 5,51,000 carried forward.

The directors of the Bank of Bombay announce a dividend for the half-year of 15 per cent. per annum and a bonus of 4 per cent. per annum. Rs.5,00,000 is transferred to the reserve fund, Rs.50,000 to the pension fund, and Rs.433,898 is carried forward.

Empire of India Tea.—The directors of the Empire of India and Ceylon Tea Company have declared a final dividend on ordinary shares of 3s. 9d., less tax at 5s. 9d. in the £ payable August 1, making with the interim dividend of 9d. per share a total of 22½ per cent. for the year 1918.

Anglo-Persian Oil.—Transfer books in respect of 2,000,000 Cumulative 6 per Cent. Participating Preference shares (issues 1909, 1911 and 1918), will be closed from July 17 to 30, inclusive, for preparing dividend warrants payable July 31 for half-year ended March 31.

The directors of the Lunuva (Ceylon) Tea and Rubber Estates have decided to issue 25,000 shares of £1 each at par, part of the unissued capital, in the first instance to shareholders, in the proportion of one new share for every seven shares held. The authorised capital is £250,000, of which 175,000 shares of £1 each are issued.

The accounts of the Rangalla Tea Company of Ceylon for 1918 show a profit of £3,652, to which must be added excess profits recovered for previous year £220. After deducting £500 for depreciation and adding £1,237 brought forward, the directors propose a final dividend of 5 per cent., making 8 per cent. for the year, to place £1,000 to general reserve and to carry forward £1,849.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

We have had an active and rising market in Egyptian securities this week. Telegraphic communication with Egypt has much improved, and there has been a sustained demand from over there for Government stocks and for bank and land shares. Egyptian Unified have been in rather scanty supply, and very little business has been possible; the price finished half a point up at 85½. Some business was done in the 3½ per cent. Pref. at 72, but sellers are now asking half a point more.

In Bank shares Nationals have been in steady demand all the week, and close a quarter up at 21¼, but sellers are very scarce; and in Agricultural Banks, after a fair amount of business at 6¼, the price closes 1-16 firmer at 6 3-16. Anglo-Egyptian Banks have again improved ¼ to 18, and Land Banks are nearly ¼ higher at 7⅛.

In Land shares the feature has been the big rise in Béhéras, which are closing 1¾ up at 14¾. Business has been, however, on a very small scale, as there have been very few sellers. Aboukirs have risen 1s. to 24s. 6d., and Consolidated Lands are 3d. firmer at 3s. New Egyptians and Delta Lands have also been features, the former rising 3s. to 26s., and the latter 2s. 6d. to 16s. 3d. Foreign Trusts have appreciated 1s. to 15s. 6d., Gharbieh Lands are ⅛ firmer at 2⅜, and a fair amount of business has been transacted in Sidi Salems, which are closing 1-16 firmer at 2 7-16. In Sudan Plantations there was at one time a very sharp rise to 8¼, and then a relapse to 7½, the price closing 3-16 higher at 7⅞. Union Foncières have been exceptionally enquired for, but very little business has been possible, as here also there has been a great scarcity of sellers. The price closes 3-16 higher at 3⅝.

In Miscellaneous descriptions, Salt and Sodas are again ⅛ up at 3⅜.

In Oil shares Anglo-Egyptians, after rising to 6¼, are closing ¼ down at 5 13-16. Roumanian oil shares have been steady.

In Greek securities 81's and 84's are both about a point down at 74, and Rentes are nominally half a point lower at 54½. Some business has been done in Piræus-Athens-Peloponnessus 4½ per cent. bonds at about 68½.

INDIAN GOLD STANDARD RESERVE.

The India Office has issued the following statement showing the form in which the balance of the gold standard reserve was held on June 30.—In India: Nil. In England: Cash placed by the Secretary of State for India in Council at short notice, £6,014,842; British and Colonial Government securities (value as on March 31, 1919). £26,812,421; British Government securities since purchased (cost price), £3,408,457; total £36,235,720.

An Italo-Caucasian bank, with £1,600,000 capital, has been established at Rome. It will have branches at Tiflis, Baku, and Grosny.

An assembly of merchants of the Baroda State was to be held this month at Baroda, when discussions relating to trade and commerce were to take place.

The Hon. Mr. W. E. Crum, of Messrs. Graham and Co., has been elected by the Bengal Chamber of Commerce as an additional member of the Imperial Legislative Council in place of the late Mr. W. A. Ironside.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated July 10:—

Good rain throughout except in extreme North-West.

Bombay cotton market irregular. Fully good Broach July-August quoted 594. Piece goods market.—Demand poor, but prices steady, and, with rain secured, demand likely to revive. Calcutta new jute crop fair; advancing prices. Preliminary forecast acreage, 2,749,120; weather most favourable. Hessian market dull, but steady. Sacking more interest and advancing prices.

DISTRESS IN INDIA.

The India Office has issued the following telegram from the Viceroy, dated July 11:—

Scarcity is reported from Sirajganj Sub-Division in Pabna district, and from two circles in Chittagong hill tracts of Bengal. Distress is generally slight in United Provinces, where prospects are improved owing to recent rains. No special developments elsewhere. Numbers relieved:—Bengal: relief works, 6,492; test works, 2,536; gratuitous relief, 20,039. Bihar and Orissa: relief works, 5,207; test works, 5,173; gratuitous relief, 25,648. Feudatory States of Orissa: report not received. United Provinces: test works, 17,362; gratuitous relief, 19,652. Rajputana: relief works, 884; test works, 4,853; gratuitous relief, 2,400. Ajmer Merwara: test works, 435; gratuitous relief, 408. Central India: relief works, 12,974; gratuitous relief, 11,275. Central Provinces: relief works, 12,173; test works, 9,811; gratuitous relief, 45,443. Bombay: relief works, 27,673; test works, 906; gratuitous relief, 94,756; dependants, 14,226; village works, 5,498. Madras: relief works, 52,592; test works, 1,848; gratuitous relief (incomplete figures), 85,279. Exportable surplus of Burma rice has exceeded expectations and reduction of shipments to India in next two months is unlikely.

In recent months an increasing demand for Japanese confectionery and cakes in India is reported.

The Indian gold output for June was 38,359 oz., a decrease of 249 oz. as compared with the total for May.

A notice has been published in the Casablanca papers contradicts rumours which have been current there to the effect that the export of barley and wheat would soon be allowed.

Mr. Nigel F. Paton, of Messrs. W. and A. Graham and Co., has been elected by the Bombay Chamber of Commerce as its representative on the Imperial Legislative Council in place of Mr. Malcolm N. Hogg, resigned.

The report of the Scottish Tea and Rubber Trust for the year ended May 31 states that profit, including £1,156 brought forward, and after providing for all expenses of management, directors' fees and bank interest, amounts to £11,368. From this there falls to be deducted the interim dividend of 3 per cent. paid, less tax, £2,625, leaving available £8,743, which the directors propose should be disposed of as follows, namely:—In payment of a further dividend of 9 per cent., less tax, making 12 per cent. for the year, £7,875, carrying forward £868.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

NOTES OF THE WEEK.

The expectation that the arrival of the Bulgarian delegates in France implied an early announcement of the terms of the general settlement of the Near Eastern question is not likely to be realised. Turkey, or, more particularly, the future of Constantinople, is understood to be the obstacle. Signs are not wanting that the United States are no longer so emphatic in their refusal to mix themselves up with European politics, and would be prepared to consider the question of a mandate, provided the scope offered to them was wide enough. In other words, we may imagine a mandate over Constantinople alone would have no attraction for America, but she might take up the *rôle* if she were given control over, say, the whole of Turkey. In view of the admitted advantages of having the United States taking their share of the burden falling upon the Allied Powers as a result of the war, the Paris Conference will be tempted to postpone the question until the American Government is able to make up its mind definitely upon the subject. It will not be a matter for surprise, therefore, if the Turkish settlement is still further postponed.

If the American attitude is correctly represented, it would seem as if the acceptance or non-acceptance of a mandate might resolve itself entirely into a question of bargaining. The spectacle would not be very edifying, and we can hardly suppose that it would be the wish of the United States Government to modify the terms of peace imposed upon Turkey in order to increase the area to be placed under American jurisdiction. There is much to be said for committing Turkey to the care of a single mandatory Power; but, in view of the pledges already given by the Allies, there can be little doubt as to the main boundaries of the new Turkish State. The Arabs must be excluded from it, and for this reason the recognised limits of the Arab penetration to the north would mark also the southern frontier of America's sphere of control. The suggestion attributed to one influential American that the United States would be sure to consider a mandate much more "worth while" if it included Mesopotamia cannot have been intended seriously.

Some pregnant questions on the subject of Montenegro, which are reproduced elsewhere in this issue, were asked in the House of Commons last week by Mr. Ronald M'Neill. It was hardly to be expected that they could be answered fully; and Mr. Cecil Harmsworth made a candid appeal to Mr. M'Neill not to press the subject. We could wish that the very correct solicitude invariably shown by the British Government for foreign susceptibilities could occasionally be reciprocated. In regard to Montenegro, Great Britain has had to expose herself to the charge of being a party to the coercion of a small State, because she has been unwilling to take up a firm line on what is, after all, a very minor question, and one which, by no manner of means, could be made the subject of any real friction between ourselves and any of our Allies. But so long as our Allies know that Great Britain can be relied upon never to press a point to a definite issue, we shall continually find ourselves in a false position. The suggestion that the British Government feels very strongly on the subject of Montenegro, and must insist upon seeing fair play, must have secured instant respect, as it would have been supported by the logic of the position. If, as is confidently affirmed, the Montenegrins desire absorption in Serbia, there is no need for interference from outside. It is only necessary to leave them entirely to themselves, to have every Serbian soldier or *komitaji* withdrawn from the country, and to allow the wish of the majority to prevail. Such a course disarms the opposition of the minority, and insures that the political step taken at the wish of the majority does not leave the least justification for subsequent intrigue and unrest. Any other method of procedure spells trouble in the future.

Last Friday the situation in Asia Minor was under discussion by the Supreme Council in Paris, and—apparently as a result—it is announced that General Allenby is to take over supreme command of all troops, British, French, Greek, and Italian, in this area. There is a certain vagueness about this statement which is the reverse of reassuring. Reports regarding the situation are so confused that it would be unprofitable to comment upon them at any length; but, unless the Allies contemplate undertaking operations on a considerable scale against the Turks, it is difficult to see why General Allenby should be taken away from Egypt just now. If it is merely desired to stop the Turks from fighting the Greeks in the Smyrna region, it would probably suffice if France and Great Britain gave them clearly to understand that it would be to their own interests to do so, and at the same time guaranteed that they should receive fair play when the time came for their case to be dealt with in Paris.

The Sudan has sent a deputation of leading notables to this country for the purpose of congratulating the King on the victorious conclusion of the war, and of

Digitized by Google

expressing the loyalty of the Sudanese, and their gratitude for benefits conferred by British administration. There can be no doubt that these expressions are as genuine as they are spontaneous, for throughout the war the Sudanese have shown themselves well content with their present lot, and when Egypt suddenly lost its head they refused to listen to the agitator, and gave solid proofs of their loyalty. Much of the credit for this state of affairs belongs to El Sayed Sir Ali Morghani, K.C.M.G., who heads the deputation now with us, who is a descendant of the Prophet, and the Principal Religious Notable of the Sudan. Other members of the deputation who have also done good service in the cause of peace are Sheikh Taweb Ahmed Hashim, M.B.E., Mufti of the Sudan; Sheikh Abul Ghasim Ahmed Hashim, President of the Board of Ulema; and Sayed Abderrahman Mohammed Ahmed, the son of the Mahdi.

An Imperial Irade has been issued confirming the sentences passed by the Court-martial upon Enver, Talaat and other ex-Ministers and leaders of the C.U.P., and Turkey has thus taken another step towards putting herself right in the eyes of the world. The path before her is, however, a long and difficult one; and having regard to all the circumstances of the case it is not surprising that the Cabinet should show a very strong desire to resign. In point of fact, it tendered its resignation last week, but it is still uncertain whether the Sultan will accept it. Meanwhile Mustapha Kiamil Pasha has brought upon himself a sentence of outlawry by refusing to obey an order to return to Constantinople, and has gone to Erzeroum. His intentions are not yet clear, but his action has caused some nervousness among the Armenians; and must further embarrass the Government. Another disquieting feature is the report that a plot against the Sultan has been discovered. If this be true, there will be little doubt regarding the source of the plot: the Sultan is known to be distinctly hostile to the C.U.P.; and that body has always regarded assassination as a legitimate method of removing those who fail to appreciate its own merits.

Our Belgrade Correspondent sends an account of celebrations in that city in honour of King Peter's Name Day. By his courage, his constancy, and his sharing of their troubles, the aged King has won not only the admiration but also the real affection of his people, just as the Prince Regent has won them by the same qualities added to his successful generalship; and the rejoicings in Belgrade will have been of a very hearty character. It is pleasant to know that on this occasion many of our countrymen were present, and that, having faced hardships and dangers together during the war, Serbs and Britons were able to enjoy together a well-earned hour of relaxation. It was, of course, much more than that: it was, in one way, the first opportunity for the Greater Serbia to mark its gladness at the realisation of its long dream. We hope that it was also an earnest of future friendship and understanding between the subjects of King Peter and ourselves.

The Afghan envoys for the negotiation of peace have arrived at Rawal Pindi, and the constitution of the party is regarded as indicating that the Ameer is desirous at least of making a real effort to come to terms. In a letter dated July 18, and addressed to the Viceroy, he expresses the hope that, "God willing, peace between the two friendly Powers will be established in the near future, and the honourable object of both parties will be attained." This appears to indicate a certain adaptability, and optimists will find the phraseology grateful and comforting. In view of past occurrences, however, it would seem safe not to indulge in any prophecy regarding events in which Aman Ullah Khan may play a part.

Indian public life is poorer by the death of Dr. T. Nair, the well-known medical practitioner, who had devoted his energies of late years to contesting the social and political supremacy of the Brahmins, and to asserting the claims of other classes of the population, particularly in the Presidency of Madras. This course of action inevitably aroused the hostility of ordinary politicians, who like to think of India as already a homogeneous nation, and Dr. Nair had enjoyed at least his fair share of abuse, but he was a stout fighter, and gave as hard blows as he received. He undoubtedly succeeded in making the Brahmin question a live issue, and one on which there can only be one decision so far as Englishmen are concerned, and now that he has fallen a victim to the disease by the study of which his professional reputation was established, we may hope that his fellow-countrymen will come to recognise the part he played in bringing India one stage on the long road she has to travel.

We have never been able to understand the reasons which prompted Dr. Nair's last public activity—the decision not to press the claims of non-Brahmins before the Southborough Committee. On the merits of the case it was unjustifiable, for even if we admit that the two Hindu members of the Committee were definitely hostile to those claims, there remained four Englishmen and a Moslem, men who were in no way pledged, and whose natural bias was, if anything, in their favour, while Dr. Nair had too much experience of practical politics to expect that any committee would be altogether impartial. Presumably the decision was governed by tactical considerations, and in any case the claims in question are assured of a hearing before the Joint Committee, strongly backed as they are by the Madras Administration, and to a great extent supported by the authority of the Government of India.

The question at issue is quite simple, though its solution is beset with difficulties. The Hindu population of Madras consists of 3½ per cent. of Brahmins, 18 per cent. of outcastes, and 78½ per cent. of the intermediate classes known collectively as non-Brahmins. If their communal interests were to be recognised in the Legislative Council, the preponderance of the non-Brahmins ought to be overwhelming, and it is clear that on any democratic theory of government they should be able to impose their views, if unanimous, upon the province as a whole. The Brahmins, however, have added astute organisation to the social and spiritual ascendancy conferred on them by the ancient institutions of the country. Few as they are, they dominate the existing Council, and there are widespread apprehensions that they will succeed in dominating the next; and, in fact, perpetuate themselves as one of those oligarchies which are natural in India but are repugnant to the genius of the British Empire. These apprehensions may possibly prove to be ill-founded, but their existence is a fact of great political importance, and the Government of Madras have urged that the constitution of the Council must be such as to prevent the possibility of such a result—or, in other words, that an adequate proportion of seats should be set aside for representatives of the non-Brahmin communities.

Whatever may be done for the time being, it is obvious that ascendancy must sooner or later yield to the democratic ideals which have now been adopted for India, and the best thing that could happen would be that the Brahmins should abdicate gracefully so far as the field of politics is concerned, and recognise frankly that in the Council and at the polling-booth one citizen is as good as another. There are signs that opinion is gradually tending in this direction, but the obstacles are very great, and we do not expect to hear of abdication just yet; communal representation introduced as a temporary expedient might accelerate the process, but it is equally possible that the result might be to make the Brahmins "harden their hearts," and to increase the bitterness of the final struggle when it comes. The situation is, in fact, one of extreme difficulty, and we can only hope that the collective wisdom of the Joint Committee will be successful in finding a satisfactory solution.

LETTER FROM CAIRO.

(From Our Own Correspondent.)
Cairo, June 30.

Egypt and the Peace.

With the signature of the Peace another milestone has been set in the path of the history of the world in general, and of Egypt in particular. As regards Egypt the conclusion of the Peace with all its stipulations ought definitely to close the Nationalist agitation and leave the British Protectorate face to face with the Egyptian protected, without any further prospect (not to say "hope" or "fear") of outside interference.

Egypt is now finally established, by the consent of all the Great Powers, as a country that has henceforth to look to England, and to England alone, in all her difficulties, grievances, or aspirations. Already, in pursuance of Anglo-French agreements the French Minister has left Cairo. His place has been taken by M. Gaillard, a Consul-General. The public has not yet realised the change, but in truth there seems to be very little probability of any French Minister being henceforth accredited to the Protectorate. And when France thus frankly gives open proof of her recognition of the change in the status of Egypt, the other Great Powers will presumably not be long in following the example of the one that has always considered herself hitherto as possessing interests almost equal to those of Great Britain.

Celebrations—and Abstentions.

Whilst officially this sort of recognition can scarcely be long delayed, the irresponsible foreign agitators in Egypt and the Nationalists will perhaps require an extended period before acquiescing in all the Peace terms. The petulant and foolish attitude consistently preserved by these obstinate kickers against the pricks was again made manifest during the Bairam feast. The news of the signature of the Peace reached Cairo about six o'clock on Saturday afternoon, and was posted up in the clubs and suchlike public places almost immediately. On Sunday the whole population, practically, of the capital was *en fête*. The foreign elements led by the British and French, and enthusiastically seconded by the Greek, decorated their houses and places of business with their national flags, and the Egyptians showed their Crescent and Three Stars in honour of Bairam, if not of peace. Every other imaginable flag was also flown, the Armenians displaying a red, white, and blue that many mistook at first for French or Russian. But the Italian Emblem which on all *fête* days generally outnumbers those of all the rest, was nowhere to be seen. Not only this, but flysheets were said to have been distributed, couched in violent language, saying that the Allies had deceived Italy, who had borne the brunt of the war, and that Italians were more than ever completely with the Nationalists in their struggle for freedom.

Side by side with these the Egyptians had placarded the Mosque walls and the cemeteries with statements that it was a lie that peace had been signed; but that, on the contrary, it would not be long before the Germans and Turks would march triumphantly into Cairo. It cannot be said, however, that these somewhat childish attempts to stem the very universal delight at the definite ending of the nightmare of war had much success.

Hopes of Constitutional Reforms.

Although the signature of the Armistice was taken by most people to mean what it has since proved to have been—viz., the irrevocable admission of defeat, there was always a faint, indefinite feeling of uneasiness as to whether a satisfactory peace would materialise out of the defeat. That this feeling was not without a good deal of justification the events of the last month or two have amply demonstrated. Although fighting of a sufficiently desperate character seems still to be going on in various areas, the signature of the Peace nevertheless has given a very solid foundation upon which the really Great Powers will be able to work out the knotty problems still remaining. Many of these look no nearer solution than they were in their inception, but in the case of Egypt the sailing should be plain. Putting aside the wailing and gnashing of teeth of the disappointed politicians of all breeds who hoped to fish profitably in troubled waters, the Egyptian Question is crystallising into a few tolerably clear issues. These issues are to be threshed out between reasonable and responsible Egyptians and representatives of the Protecting Power, and when a decision has been come to, the new Egyptian Charter or Constitution will be given to the country as a free gift, and as the maximum that can at present be freely given. All the ridiculous ideas of the Nationalists that they could force the hand of Great Britain either by their own action or by bringing foreign pressure to bear diplomatically, have proved so many mirages.

It will now depend very largely upon the prudence and good sense of the Egyptians other than the Extremists, how great a measure of administrative autonomy can be granted them. Although the Extremists have arrogated to themselves the title of *Watani* or Nationalists, the present Ministry, and in fact every Egyptian is Nationalist, in so far as he would like to get as much as he can of the administration and all that goes with it into his own hands. The war-cry of the Extremists, or Zaghloul Party, was evacuation, and not a shadow of any foreign control whatsoever. The object of the decent and sensible Nationalist is some sort of an elective Parliament, Parliamentary and Ministerial responsibility, and a larger number of the higher posts to be given to Egyptians. There is nothing inherently impossible or, indeed, unreasonable in these aspirations, and it will probably become a mere matter of discovering a convenient method of embodying them in a new constitutional form.

The Royal Commission.

Sir William Brunyate had already drawn up a rough sketch of proposals something in this sense, but they did not meet with the approval of the late Ministry. As, however, it is now more than suspected that that Ministry was at heart completely at one with Saad Pasha Zaghloul, this is perhaps not to be wondered at. In any case, his scheme was formed without consultation with Egyptian authorities; and the Royal Commission that is expected to come out in the autumn is essentially a Commission of Inquiry and consultation, on whose recommendations the future of Egyptian Administrations is supposed, rightly or wrongly, to depend.

A list of four alleged members of this Commission has been published in the local Press here, but is generally believed to be mythical. The names given were General Sir J. Maxwell, Sir W. Garstin, Sir R. Graham, and Mr. Chitty. These are all personalities well known to everybody in Egypt. The last two were Advisers to Ministries, and the impression produced here at the prospect of these two ex-officials or their colleagues being on the Commission was not generally favourable. Not that there was any personal bias against any of the distinguished nominees, but as a matter of principle there is certainly a very strong feeling here that with Lord Milner presiding the other members of the Commission should not be chosen from former Anglo-Egyptian officials. Whether this opinion is justifiable or a right

one, the writer will not pretend to say, but it is undoubtedly and very decidedly held in Cairo.

Government Employees' Salaries.

Mohammed Said Pasha and his Cabinet having weathered the first month of office—and the month of Ramadan at that—have all removed to Alexandria for the summer. No sooner had they arrived there than the *Official Journal* published a Ministerial Decree to the effect that in view of the universal complaints from all Ministerial employees of the inadequacy of their salaries to meet the increased cost of living it had been decided to continue the extra war allowance for another year, dating from June 1, 1919, and also to increase it 50 per cent. This would require about £800,000, and the sum would be found by the Cotton Control authorities. This surplus would in an ordinary way be devoted to irrigation, but there being already ample funds for all irrigation needs, it became at once available. It is certain that nothing could go further to allay discontent amongst Government employees than a measure like this, which applies all round, except to the Ministry of Justice, where a generous rise of pay had already been made. Evidently Mohammed Pasha Said knows which nail requires hitting on the head, and in spite of many threats still being levelled at him, the public feeling appears to be gradually calming down under his touch.

BELGRADE LETTER.

(From Our Own Correspondent.)

July 15.

The King's Name Day.

Although the Gregorian Calendar is now adopted officially by the Kingdom of the Serbs, Croats, and Slovenes, the Orthodox Church retains its old style. Consequently St. Peter's Day fell on July 12, and was celebrated throughout the country with enthusiasm, for it was the King's Name Day, and his birthday, too. For four years there had been no celebration of Petrov Dan, so on this occasion the rejoicings were as unrestrained as they were general. The aged and war-worn King is expected soon to return to his native country. His absence was the only thing lacking to make the day perfect. "If only our dear old King were here to-day," one lady was heard to say, "not an eye would be dry in the place."

A Thanksgiving Service was held in the morning at the Cathedral, which was attended by the *Corps Diplomatique* and most of the foreign visitors and residents. Afterwards the Prince Regent, riding, as his father used to, on a splendid white charger, held a parade on the Terazija; under the blazing sun it was a brilliant scene, and the first ruler of the United Kingdom of the Serbs, Croats, and Slovenes was greeted with frenzied salvoes of "Zhiveo, zhiveo."

In the evening the officers of Belgrade gave a ball at the Oficirski Dom; a thunderstorm marred the proceedings at the beginning, making it impossible to sit or stroll in the garden, but in every other respect it was an unqualified success. It was a brilliant scene, with officers in every kind of uniform, glittering with decorations and orders, set off by the sombre black of the diplomatists and civilians and the varied toilettes of the ladies. The democratic element was represented by a countryman in the native costume of jack boots, and blue cloth jacket heavily braided with black. All Serbian society was represented, as well as the whole foreign colony. The British Legation was represented by the Minister, Sir Charles des Graz, Mr. Atherstone Johnstone and Mr. Brice; Admiral Sir Ernest Troubridge, with Lt.-Col. Stead and Major Phillips; the British Military Mission by General Plunkett, the Military Attaché. There were also present Colonel Jamieson, Lt.-Col. Jordan Bell, R.E., and Lt.-Col. J. E. Cochrane, R.F.A., Major and Mrs. Hanau, Major Herrick, Captains Brew and Graham, Rev. E. Laffan, the Chaplain, Dr. and Mrs. Malcolm Burr, and Mr. F. A. Llewellyn. The British nursing colony was represented by Dr. Conway, Dr. MacPhail and Dr. McNeill, Miss Pook, Miss Jealous, and other sisters who have done heroic work in Serbia since the earliest days of the war; and Sec.-Lieut. Flora Sandes, who received many congratulations on her well-earned promotion. At nine o'clock the Guards' band, under Major Binichki, struck up the impressive strains of the Serbian anthem, and the Crown Prince entered, followed by his suite. His Royal Highness, who looked exceedingly well, opened the proceedings with a *kolo*, and soon the crowded room was in movement in time to the haunting air of the national dance.

Anglo-Serbian Friendship.

Voivoda (Field Marshal) Sir Zhivojin Mishich, K.C.M.G., has been decorated by President Poincaré with the highest grade of the Legion of Honour. His numerous British friends will congratulate the gallant veteran, who has twice swept his country clean of a hated enemy in so meteoric a manner. The Voivoda was particularly touched at the presentation by General Plunkett, in the name of the Army Council, of a handsome motor car, as a token of admiration and esteem from his British brothers in respect for his high military talents, as shown in the recent brilliant offensive on the Macedonian front.

Great gratification is expressed by all Serbs at the sympathetic attitude of Great Britain. Telegrams of congratulation upon peace, after seven years of war, from the Lord Provosts of Edinburgh and of Glasgow, have been reprinted in the Serbian papers, while the telegram from King George to King Peter is reproduced in large type. The reference to His Majesty's hope of close connection and co-operation in the future is especially welcome, as Serbs almost without exception turn their eyes towards Great Britain, not only for material assistance, but, for example, friendship and sympathy. Britons should be proud of the high estimation in which they are held by this simple, but loyal and sincere, nation of yeomen.

By the express desire of Voivoda Mishich, the national rejoicings were made the occasion of a special effort to raise funds for men broken in the wars. A house-to-house call was made throughout the town, and many special entertainments were organised, and produced good results; the town of Novi Sad voted half a million krune; it is anticipated that a handsome sum will be raised.

Settling Down to Peace.

Communication with the outside world is gradually improving; the fast train to Fiume, which used to run on Tuesdays and Fridays, now runs daily.

Serbia is slowly returning to peace conditions. Many restrictions on travel on the south side of the Danube and Save have been removed, and the last party of "invalids" has arrived at Dubrvnnik (Ragusa) on their way home for their resting place at Bizerta. The boys and girls who have been at school in England and France are now returning to their own country. It is anticipated that by the end of July all will be back. Great hopes are entertained that these fortunate young folk will be a valuable acquisition to the *intelligentsia* of the country, which has been so sadly depleted during the last seven years of war. The Government fully realises the necessity of giving increased educational facilities, and has resolved to found two new provincial universities, one at Skoplie and one at Serajevo, to begin with only three faculties each, viz., Law, Technical Science, and Philosophy.

The fusion of Yugoslavs, in the commoner but narrow sense of the word, with the Serbs or *Serbiantsi* of the old kingdom is proceeding rapidly; so far, 2,600 Yugoslav and 1,560 Montenegrin officers have been admitted to the Army, and there remain but 800 Yugoslavs and 300 Montenegrins to receive commissions.

A Parliamentary Commission is sitting to enquire into the causes of the appalling mortality on the disastrous retreat through Albania in the dark days of 1915, especially among the younger generation and the "Schoolboy Battalion," which suffered terribly. Its report is awaited with mixed feelings.

A Good Story.

It is well known that Serbian domestic politics have always been extremely acrimonious, and in the old days the various parties attacked each other savagely, in the House and in the Press. Austria characteristically endeavoured to exploit these apparent dissensions in her own interest. But she was always rebuffed by the united front which the Serbs never failed to present to an enemy. The following story is illustrative of this characteristic, and is interesting enough to record. Some years ago, the Danube Steam Navigation Company forced a tariff war upon the Serbian Steamship Company. Far richer, better organised, with superior boats and a better service, the Austrians were confident of winning. But they reckoned without their hosts, for word went forth throughout Serbia, and a general boycott of the Austrian boats was ordered and conscientiously carried out. For two years not a Serb travelled on an Austrian boat, and no Serbian goods were carried by them, while the smaller, slower, and more uncomfortable Serbian boats were always crowded. One morning, at Shabats, when a large crowd was waiting to book by the Serbian boat, and the Austrian booking office was deserted, a single individual walked boldly on board the hated Austrian boat. Groans and hisses from the crowd greeted him, till he cried out: "I am a railway official, and have a free pass; let them burn their coal for me for nothing," when the groans were turned into a roar of laughter. Alone he walked on board, and alone he disembarked at Belgrade. After two years the haughty Austrians gave way, and made a working arrangement with the Serbian company.

CYPRUS NOTES.

(From Our Correspondent.)

English in the Island.

The number of Cypriots who have passed the recent examinations in English is remarkably large. Both Greeks and Turks learn to speak our language with wonderful ease and rapidity, and the numbers of those who can both speak and write English with fluency and correctness is astonishing, seeing how little encouragement has been given in most of the native schools. Progress in general education, although it might have been far greater had the Greek element co-operated loyally and heartily with the Government, has been in the circumstances satisfactory. The number of primary schools in the island is now about 495—viz., for boys, 386, with 460 teachers; and for girls, 109, with 177 teachers. Going back to 1881, three years after the British occupation, when figures were first available, there were about 40 State-aided public schools and 30 private for Turks, and about 40 and 9 respectively for Greeks. The numbers of pupils (boys and girls) in all schools receiving education at present are approximately as follows:—Moslem, 7,500; Greek, 35,000.

There is no doubt that but for the war education would have advanced yet more rapidly in late years. But perhaps, in view of remarks on the number of educated, or semi-educated, loafers and town idlers in recent Blue Book reports, education under existing conditions has not been an unmixed blessing in Cyprus.

The Future of the Island.

The present state of suspense and expectancy is a strange one, and differs from that of any previous "crisis" since the Occupation. The air is full of conflicting rumours, and telegrams and papers are scanned with the keenest avidity in all communities. So far there is a complete absence of any racial animosity. It is felt that, whatever may be the fate of Cyprus, a new era must be at hand for the island. Should it remain in the hands of Great Britain there must be a real forward movement which will make for the development of its resources. It ought no longer to be said, as Sir William Ramsay has stated, that the island has "never been developed industrially, commercially, or as a naval or military station." Should it, on the other hand, pass to other than British keeping, will it be for the benefit of the inhabitants? If Cyprus is to emerge from its present stagnation the task should hardly be entrusted (under the strong protest of the loyal Moslem population) to a nation which is not yet in a position to cope with difficulties which, in spite of the League of Nations, may not improbably arise for an island geographically situated as is Cyprus.

Those who know the island best express serious misgivings should Cyprus be deprived of the strong guiding hand and support of Great Britain. When your able Cairo Correspondent, in 1915 (before the conditional offer of Cyprus), visited the island, he expressed himself in The Near East (Nov. 26, 1915) as follows:—

"How could" (in existing circumstances) "Great Britain with her Far Eastern interests and her position in Egypt, be expected to entertain for one moment the idea of the cession to-morrow to a second-class and consequently weak Power, of an island which is shown to have strategic potentialities *vis-a-vis* the Valley of the Nile, and which in the hands of a foreign Power, be it strong or weak, may come to be a terrible menace to our hold on the Suez Canal, and thus to our Empire? From every point of view, therefore, the Pan-Hellenist agitation is as ill-founded as it is ill-timed, and the more the question is studied the clearer does it become that there is every reason in the world why we should retain our hold on Cyprus and not repeat the error we made in the case of Corfu."

These words would, I think, sum up the feelings of the British element and of not a few others who share their view.

Meanwhile the offices of the High Commissioner, the Chief Justice, the Chief Secretary, and several other heads of departments, are carried on by acting members of the administration. Naturally, too, there has been a great exodus of officials whom the war has kept from leave for five years.

THE PEACE NEWS IN JERUSALEM.

(From a Correspondent.)

The following is an extract from a letter dated "June 23, 1919, Headquarters, O.E.T.A. (South), Jerusalem.":—

"I must tell you how I received the news of the declaration of Peace. We were expecting a wire at Headquarters about 6 o'clock on the evening of the 28th, and I, with several other officers, was awaiting the news. It came in just about 7.45 p.m. Hurriedly we drank to the news, and then just pelted up the stairs of the German tower (of the former Stiftung on the Mount of Olives). It was a fearfully tiring blow racing up those many flights of steps, but at last a crowd of us reached the bell-chamber. We rang the three great bells for all we were worth for a good half-hour, till we could hear the bells of the city taking up the news. The Russian Tower on the Mount of Olives followed us; then the Latin Patriarchate, Schneller's Institution, and the Holy Sepulchre; and soon every bell in the city was pealing in triumph. It was splendid to hear it and to know that the first news in Jerusalem was spread from the German bells on the Mount of Olives rung by British officers. By a happy coincidence the news arrived as the Bairam celebrations started, and nothing could have been more opportune. I must tell you also that the bells in the German church tower inside the city were rung by ——, formerly of Ramallah, and now a captain in the American Red Cross; also that immediately the news came through, ——, an officer in the Education Department, played 'God Save the King' on the organ of the German church here—a personal gift of the ex-Kaiser"!

INDIAN REFORM.

The European Association of India has received a strong protest against the constitution of that part of the Joint Committee on Indian Reform which represents the House of Commons. The protest, which is contained in a telegram from the Association's Council, declares that the Committee, whose names have just been announced in India, is composed chiefly of avowed supporters of Mr. Montagu's proposals. It urges that the utmost be done to secure due consideration being given to representatives of all parties materially concerned in the reforms whose interests, in the opinion of the Council, have been ignored and prejudiced by the Committee's nominations.

The question of the constitution of the Committee has already been raised in the House of Commons by Colonel C. E. Yate, M.P.

PRESS ON THE NEAR EAST.

Raisuli.

The Tangier correspondent of *The Times* sent an illuminating message on July 16 concerning the rather confused affairs in the Wad Ras district. Of the leader of these warlike tribesmen he writes:—

I have just interviewed a native who left Raisuli's headquarters twenty-four hours ago. He had a long conversation with the famous mountain chieftain, who appeared to be in the highest spirits.

"What," he asked, "is going on in Tangier?"

My friend replied, "The French and English are keeping a great feast for the victory of the Allies." Raisuli smiled, and said, "So am I," and continued: "I rejoice with the French and English. They have got rid by themselves of one of their enemies, Germany. I am getting rid of another enemy for them, Spain. If afterwards the French and the English like to come here we will lay down our arms and receive them with dancing and music." Raisuli seems somewhat quickly to have forgotten his pro-German proclivities, as I have always stated would be the case as soon as victory was ours, and he is probably as genuinely pro-Ally to-day as he ever was pro-German, which is not saying much.

The correspondent states that Raisuli has plenty of men, arms, and ammunition.

The tribes will fight desperately. They have suffered heavy losses, and are thirsty for revenge. The desertion of the Anjera tribe has deeply affected them, and now it appears that the loyalty of the Anjeras themselves is not too sure. If the Spaniards can obtain the victory all will go well. If they fail their situation in this part of their zone becomes critical. Spain is capable of conquering her zone, but she must carry out that conquest seriously. She must realise how great is the task before her. She must be victorious, and not risk these quite unnecessary and constant checks which only raise the spirit of opposition of the tribesmen and depress public opinion at home, and render her liable to adverse criticism abroad. She has the good will of every one, but she must be successful or abandon her task. The next few days will be eventful, and every one wishes her good luck.

Bela Kun: A Roumanian View.

Our Bucharest Correspondent sends us the following translation of a passage in the *Indépendance Roumaine* on the Allies' treatment of Bela Kun:—

The Paris Congress, which condemns for ever Lenine and Trotzki, appears to invite their emulator, Bela Kuhn, to send delegates for the purpose of treating the question of peace. The Magyar Bolshevists are immune. . . . This clemency towards the actual rulers of Budapest is of recent date, for it is not so very long since the anti-Bolshevist Government of Karoly at Szegedin received from the same Entente all possible encouragement for the struggle against the dictator Kuhn, of Budapest. . . . . The impression one derives from the oscillating policy of the Allies is that they are backing two horses symbolised by the names of Koltchak and Bela Kuhn: the one which first reaches the post will be considered the winner. If the Great Powers, which are more happily situated, think they can play this game of hazard, it must not be assumed that their example may be followed by the small states, whose vital interests demand serious guarantees and a policy which excludes all equivocation. This is why we look upon the recognition of the Admiral's Government as a simple manifestation of a political character, not destined to be productive of more serious consequences than the other efforts made up till now by the Allies with a view to reorganising the Russia of to-morrow.

British Rule in Egypt.

A writer to the *Times* of July 17 contributed an extremely able article on the changes required in British rule in Egypt. He states that the poorer classes among the labourers of Egypt and the lower-paid officials in the service have suffered very severely. He says:—

The native of Africa will bear a great deal, but, once he arrives at a certain point on the subject of a grievance, he wants matters settled, and settled at once. Under the conditions it was easy for the agitators to get at him, more particularly as his grievances were very real. In almost every case in Africa where we have had difficulty or trouble with the natives they have behaved in a manner similar to their recent conduct in Egypt, with a blind hatred of any form of law and order. They are but children, and it was the nurses' business to see that conditions in the nursery were not allowed to go beyond control. There is nothing strange in all that has happened recently in Egypt.

He then declares his conviction that the Egyptian must have a greater share in the management of Egypt, and gives his plan for affording the local people the means of participating in their own affairs.

I cannot help thinking that it will be necessary to return in a large measure to the system of British Governors in the provinces, or at least to a system of inspectors holding full executive powers. Although this may appear to be a retrograde step, it will at least tend to decentralize the administrations and give the local people room for a more intelligent interest in the government of their particular town or province. It is, however, essential that the *personnel* selected for this work should be men of experience and with a genuine sympathy for the people they are to assist and help. Throughout the East, and I think more especially in Africa, the personal equation is of the utmost importance.

He now makes a point that has been insisted upon again and again—the creation of a common interest between Egypt and the Sudan.

It is important that at the earliest date possible the political differences in the control of Egypt and the Sudan be adjusted so that the two countries are brought into line with a common interest. The future development of Egypt depends very largely upon the assistance that can be given by the development of the Sudan. As a first principle the present *coterie* of Egyptian irrigation officials must be made to understand their obligations to one of the richest protectorates in Africa. Egypt requires grain and meat, and the Sudan can supply these in unlimited quantities. In addition, Egypt wants room for any surplus population in the years to come. It is stated that the Egyptian will not emigrate; to this the answer is that he has got to, and also that he will go to the Sudan when he is given a chance. Up to the present it has suited people in Egypt and in the Sudan to say that the Egyptian will not and cannot thrive in the Sudan. To this those who have served in the Sudan reply that they would like to settle and farm there, but have not been encouraged to do so.

Finally, he says that we must recognise the changes that have taken place in the temperament of the Egyptian, who is much more sophisticated than he was two decades ago. His view is that the system of centralisation must be abolished, business elements must be introduced into the administration, and generally there must be more elasticity in coping with the changed conditions. Given sympathy with firmness, the people of Egypt, he declares, have ahead of them a great future.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

"THE INDIVISIBILITY OF THE BANAT."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In the issue of June 11 of your paper you published a communication from Bucharest which, under the seemingly impartial title, "The Indivisibility of the Banat," really defends a purely Roumanian theory about that province, exactly as it has been formulated at the Paris Conference by the Roumanian Premier, M. Bratiano, who, as certain signs would indicate, has not the entire support of the country he represents. In order to satisfy the great principle, "Ut audiatur et altera pars," by which Great Britain was always guided in seeking truth, I ask you kindly to find room in your paper for the following exposition of Serbia's point of view concerning the Banat.

We Serbians consider (we flatter ourselves that our theory is based on science and on indisputable facts) the Banat is not an ethnical, geographical, and economical unity. On the contrary, it is geographically, economically, and ethnically divided into two parts, which have been, throughout history, always considered as separate units. The part which we consider as Serbian, owing to the preponderance of the Serbian population in it, is especially distinguished by its geographical and economical uniformity. Nature itself has defined it in such a way that it is quite distinct from the other provinces. On the north is the great River Marosh, and on the south the Danube, on the west the River Teiss, and on the east the offshoots of the Carpathians, which finish on the line Arad-Temesvar-Dognachka, somewhat to the east of Bela Crkva. All the rivers of this part of the Banat flow into the Danube and its tributaries, as, for example, the Teiss, Begeï, Tamish, Karosh, Nera, etc., which means that the whole region inclines towards the region south of the Danube, with which it forms a geographical whole.

Economically, this part of the Banat varies in many ways from the rest. It is essentially grain-producing, while the other parts are mineral or pastoral, which fact confirms its geographical unity.

The unnaturally-formed Austro-Hungarian monarchy endeavoured to destroy this unity, among other means by a network of railways, but this cannot be a reason for determining the political future of this part of the Banat, for it is surely unheard of that political boundaries should be decided according to the direction of railway lines.

Meanwhile, we Serbs claim this part of the Banat, for the following reasons:—

1. Because the majority of the population is ethnographically ours—a fact acknowledged by the writer of the "Indivisibility of the Banat."

2. Because this part of the Banat has always been inhabited by Slovenes and Serbs. The Slovenes began to settle here already at the end of the sixth century. In the ninth century, when the Hungarians (according to the Hungarian historian Szentklary) came to the Panonia plains they found almost the whole Banat occupied by Slovenes, who were in constant communication with the Slovenes south of the Danube. After the battle of Kossovo (1389), and when a portion of our people fled from Turkish terrorism, the Banat began to receive a purely Serbian character. In 1483 the Hungarian King Matthew wrote to the Pope that no less than 200,000 Serbians had immigrated here in 1482. This migration of the Serbian people continued till the end of the seventeenth century, and only ceased with the liberation of Serbia from the Turkish yoke.

3. Because the Austrian authorities, the greatest opponents of Serbia, whose policy was the denationalisation of the Banat as a Serbian province, by colonising it with Germans and Roumanians, recognised the purely Serbian character of that region. With regard to administration, Banat was till 1860 an integral part of the Serbian Duchy or of those other earlier administrative forms whereby it was designated as purely Serb.

4. Because the Banat, or that part of the Banat which we claim, protects our capital, Belgrade, which is within gun-range of those who are to hold the Banat, as it was within the gun-range of the Austrians. Strategically that part of the Banat is absolutely necessary to us for the defence of the Morava valley, which was ever the road to the Near East, and in this war, too, for the German advance towards Constantinople—Sofia.

5. Because the new Serbian culture and literature found in the Banat its most distinguished representatives. Banat is the birthplace of the Serbian philosopher Dositej Obradovitch, who early in the nineteenth century came to London and requested that his native land should be united with their brothers south of the Danube in one State; it is the birthplace of the greatest Serbian poet Giura Yakshitch; and also of our greatest scientific inventor, Pupin, of whom America is likewise proud; and of many others.

6. Because Banat has ever been the bearer of Serbia's aspirations and also her refuge when the mediæval Serbian empire fell under the Turkish onslaught. In the monasteries of Banat, founded by Serbian monarchs, Serbian ideals were preserved in the darkest days of our struggle for national re-union. In these monasteries Serbian printing-presses spread Serbian culture throughout our Fatherland until the very latest days of our national history.

7. Because, since the disruption of the Austro-Hungarian Monarchy even the Germans, Hungarians, and Roumanians of that region have expressed the desire to become the subjects of the Serbian King. The two former because they are in such a minority that they have no chance of autonomy; the latter because they are aware that, like their fellow-countrymen, who have hitherto been subjects of Serbia, they can only in this manner free themselves from the economical subjugation of feudalism under which they have suffered during the existence of the Austro-Hungarian Monarchy, and which is just as hard in Roumania. Hence they are anxious to become subjects of a State which does not tolerate the feudal system of ownership.—I am, etc.,

D. KOSTOVITCH (Lieutenant).

THE POSTAL SERVICE TO THE NEAR EAST.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Mr. Arthur Baker calls your attention to a matter which my own experience amply confirms. I left Smyrna on May 29, and after spending two nights in Rome and two nights in Paris, reached London on June 8. A letter dated Smyrna, June 3, reached me on July 4, and recent information from Smyrna, dated June 27, leads me to believe that up to that date several letters posted by me in London between the 8th and 15th of June had not yet reached destination.

Even to this day—July 21—I have no advice from Smyrna of the receipt of any letter posted by me in London since the date of my arrival.—I am, etc.,

Giltspur Street, London, E.C. EDMUND GIRAUD.

A COPTIC FESTIVAL.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—My omission to state that my visit to the Convent of St. Dimiáneh was made many years ago, when Basileos was Mutran of the Kopts, at Jerusalem, very naturally led your correspondent, Mr. Theodore Mosconas, to suppose that it was a recent one. The interesting information given by him is, however, a welcome result of the oversight.—I am, etc.,

THE WRITER OF THE NOTE.

July 21, 1919.

WAR HONOURS.

The following war honours have been awarded to the undermentioned officers:—

BY THE KING OF THE HELLENES.

Greek Medal of Military Merit.

2nd Lieut. J. W. Hoskings, M.B.E., Capt. H. G. Harrison, 2nd Lieut. G. J. Stroud, M.B.E.

Cross of Officer, Royal Hellenic Order of the Redeemer.

Maj. F. W. Gamwell and Maj. J. Weston.

Chevalier of the Royal Order, George I.

Lieut. S. W. Briggs, Lieut. T. F. Clarke, Lieut. R. W. Kerr, Lieut. C. H. A. Willett.

BY THE KING OF ROUMANIA.

Star of Roumania (Officer).

Maj. J. P. C. Cooper, O.B.E., M.C., 10th Brigade.

Star of Roumania (Chevalier).

A.-Capt. C. C. Anderson Pelham (France), A.-Capt. H. W. Stockdale, D.F.C., 101st Sqn.

Crown of Roumania (Chevalier).

Lieut. F. H. Knobel, 10th (A.) Wing, 40th Sqn.

Order of Michael the Brave, 3rd Class.

Lieut. J. A. Parkinson, 201st Sqn.; Lieut. L. H. Ray, 91st (A.) Wing, 19th Sqn.

BY THE SULTAN OF EGYPT.

The Order of the Nile, 3rd Class.

A.-Brig.-Gen. P. L. W. Herbert, C.M.G., C.B.E. (Notts and Derby. R.); Lieut.-Col. C. E. Risk, D.S.O. (R.M.L.I.).

The Order of the Nile, 4th Class.

A.-Maj. F. G. Brown, O.B.E., Capt. W. H. Dolphin, Maj. W. D. Long, O.B.E., and A.-Lt.-Col. S. S. Nevill, O.B.E.

BULGARIA AT THE PEACE CONFERENCE.

Reuter's Paris correspondent writes on July 23:—The question whether Bulgaria is to have a direct outlet on the Ægean Sea, through Western Thrace, is now occupying the attention of the Peace Conference. As American delegates are unwilling to deprive Bulgaria of such access, the Greeks are very anxious to know whether America will participate in framing the Bulgarian Treaty. The Bulgarian Peace Delegation left Sofia on Sunday last for Paris via Bukarest.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Now that the stokers of the fire which caused the Egyptian pot to bubble over have grown weary of ill-doing, it is imperative to consider one or two things in the future of that country. More than once in these columns I have urged the importance of English education in Egypt, lamenting its small influence. Why is it that English is so little and French so much spoken there? A partial answer seems to be provided by Mr. H. A. Garabet, who has written on the subject in the *Monthly Journal* of the British Chamber of Commerce of Egypt. Because Egypt is part of the British Empire, it is our tongue that should be spoken there. But truly we have ourselves largely to blame. The teaching of English in Egypt where practised is unsatisfactory. The number of English schools is few, and that of those who, having learned the language at such places can still speak and write it, is almost negligible. Why not establish an infant University in the land? The authorities should plant the seed now, when the soil is ready, for the times are not always ripe.

***

Some time ago I received the following lines, and found much to amuse in them. Personally, I did not think Busreh was half such a bad place as here painted. The "obese Turkish squire" and "Corsair" are, of course, very old friends, and this meeting did me good.

O Busreh, loathliest village of the plain,
Who comes to thy inhospitable shores
Shall find no rest, but ever more and more
Suffer the unnumbered tortures of the damned.

Take heart of grace, Ixion at the wheel.
Cease, O Prometheus, to abjure the rock.
Worse fates befall the luckless M.E.F.

Abhorred of gods and mortal men alike,
Busreh the Beastly be thou herewith dubbed.
So shall thy name go stinking down the years,
And age to age shall echo "Beastly Busreh."
Time was we reckoned you as passing fair,
A place where men might come and go at will,
Mocking th' upraised hand of Authority;
Where once the obese philandering Turkish squire
Sprawled at his ease and urged his bellum on,
Intriguing the voluptuous painted "bint,"
The Corybantic courtesan of Khurra,
And set his fez at a more rakish angle
And puffed contented at his "qalian,"
Oblivious of his piece-goods for a spell,
A prey to amorous reflections—
The bhoosa-laden barge, the hooting tug,
The clanking S-boat, the monotonous tramp
Of pickets, the insensate loud guffaw
Of John, the unimpressionable Chink,
The chain-gang off to spade away their crimes,
Th' ubiquitous Ford Vanette, and above all
The towering menace of the A.P.M.—
These are your sad and sorry substitutes.

Omar, incomparable Bedlamite,
What subtle esoteric joys abound
For men who travail in Earth's desert places?
Perchance for you, whose eyes did never scan
The dim blue goodness of the distant weald,
Nor watched the rosy-fingered sun at dawn
Kindle the wooded cone of Chanctonbury,
The wilderness were Paradise enow.

One boon he craves from the high gods above—
He who has borne one single summer through
The sights and sounds and smells of Ashar Creek,
The Mespot hero, Hector of his kind,
Inordinately sun-protected he,
Tunic and tabs and topee, cap-a-pie,
Spine-pad and wrist-watch and the Lord knows what—
One boon he craves, nor maybe craves in vain,
A quiet, secluded corner at Magil.

And herein lies the essence of the joke,
A stranger he who pens these limping lines,
Twenty miles distant at Mohammerah.

—A. W. B.

***

If I refer again to Hungarian Bolshevism, I know my readers will pardon me, because the failure to crush it when opportunity offered is a thing which has made the hair of the civilised world (*i.* of course *e.*, the world minus the "Bolshies" and the Conchies") stand on end. You will remember how the Roumanian forces were marching, more or less triumphantly, on the forces of Bela Kun, how this was done with the approval of the Peace Conference, and how the whole affair suddenly was stopped. Perhaps you do not know that the Yugoslavs were asked to co-operate in the advance against Kun, and that they refused owing to the non-recognition by the Great Powers of the Triune Kingdom. Now that kingdom has been recognised, and the whole business as suddenly recommences . . . . What do you make of it? A mere coincidence, you think? I have lost myself too many times in the labyrinth of European politics to say that you are wrong; but if you are right—well, I've lost myself once again, that's all!

***

Apropos of Mirza Firooz Khan's interesting description of the Consular (?) activities of Herr Wustrow at Tabriz, I am reminded that that city appears to be a favourite resort for Prussian bullies of this particular type. Just three years ago, Herr Schönemann, who was then German Consular Agent at Tabriz, distinguished himself by a comparatively bold attack upon the British and Russian Consuls as they, with their military escorts, were travelling from Khenghevar towards Hamadan. I do not think the Allied party suffered any loss apart from their escorts; but there was quite a brisk fight, and Herr Schönemann must have felt very aggrieved if he did not subsequently receive a nice little parcel of Iron Crosses. The Gendarmerie, then in a very low state as regards *moral*, were unable—or unwilling—to give the Anglo-Russian party any help; and the incident gave the Persian Government a very bad quarter of an hour unless I am much mistaken.

***

Of course, it was by no means an isolated example of a German Consul turning highwayman and assassin. Indeed, the thing happened all over Persia—north, south, east and west—and while the Germans set the Persian authorities at defiance—very frequently quite openly—they pursued the now recognised Teutonic method of referring to them as "fools," "dolts," "swine," and so forth and so on. If only we could get a complete record of their doings in that part of the world during the war it would make extraordinary, and most interesting, reading. At the time we had, unfortunately, to depend almost entirely on reports that found their way to us through Russia, and their weird rendering of Persian names often made it quite a puzzle to get at the facts of the case. I remember, for instance, that in the message reporting the incident referred to above, Hamadan was given as Khamadas, and I spent a long time looking for the place on the map before the truth dawned on me.

***

They also serve who only stand and wait, and they get their fun, too! This is proved by a most amusing incident reported from Lucknow. It appears that one evening some under-trial prisoners in the Hardoi district jail were smoking together, waiting for and betting on their probably quite-well-deserved sentences. The warders forbade them to smoke, and a refusal to obey this order led to the beginning of the fun. They resorted to the Suffragette-honoured method of refusing to take their food, and the prison doctor ordered the two ringleaders to be separated from the rest. This would not do for their companions, who proceeded with bricks and stones to assault the worthy doctor and his warders. These authorities in alarm called upon the only other people present, the ordinary prisoners, who fell upon the under-trial men. Furiously and for some time a fight with lathis and sticks was carried on; and all concerned seem to have had one of the times of their lives until more of the powers that actually were arrived. I do not know how many Irishmen read these columns, but I know they will love to hear this story, more especially when I add that several persons were injured and some prison structures were damaged. Now, with all Irishmen I am not on all fours (or both twos), but this example of the mice playing while the cat was away goes to the heart of "Corsair," who could never abide cats.

CORSAIR.

It is announced that the French Post Office at Alexandria will come to an end in a few months' time by order of the French Government. The staff will be transferred to other posts in the Levant or will be absorbed by the Egyptian Postal Administration.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

NEAR EAST BOOKSHELF.

THE GLORIES THAT WERE GREECE.*

The author of this well-printed lecture has set down many interesting things concerning the achievements and possibilities of his countrymen. He commences by qualifying the statement of Mr. Solomon Reinach that the modern Greeks have not given a man of genius to the world; and he does this, not by producing facts to the contrary, but by saying that when Greek society is free the inextinguishable Hellenic genius will arise. Proceeding to Greek folklore, he shows how the historic ballads were composed chiefly of the heroic deeds of the klephts and armatoloi, emphasising the mountainous character of these poems. Of these ballads, and of the domestic and individual classes of folklore, excellent examples are given.

Throughout the lecture the author deliberately identifies the two terms, song and poem, and in doing so claims that the Greeks alone of Europeans have preserved the sense of close relation between literature, music, and dance. This fact may or may not be due to the possession by the Greeks of six or seven scales, as against the two—major and minor—of most European countries. The author realises that it is the difficulty of harmonising these scales which prevents their more common use, but points to modern examples which tend towards a solution. The rhythmical side of Greek music is well developed, as there is in the native dances great variety of rhythmic cadences, giving the composer and the choregrapher almost unlimited freedom in the composition of the most complicated figures. It is in such freedom, indeed, the old Greek freedom moulding and moulded by the new circumstances, that the author places his hopes of seeing once more on earth "the glories that were Greece."

A UNIVERSAL HUMORIST.†

One does not now hail with delight the prospect of reviewing a new war story, for such stories are too frequently composed of individual trivialities and forced humour. It is with the greater pleasure, therefore, that we welcome this little book by Mr. Sommers. He has contrived, with the ease and humour typical of the British soldier, to make interesting what may be called the "Tommy" attitude towards the many hardships and the scanty joys of the Egyptian Expeditionary Force. He knows well that our men, wherever they fought, were Crusaders, but he is far too British to sentimentalise over the fact; and by his very concealment of it he betrays the high ideal. The unintelligible, often unfounded, optimism of the British Army, and its universal and satisfying attitude of "Carry on; it'll all be over some day," are equally well shown in this book. Very naturally the stream of humorous incidents flows along, and if one or two of the jokes are a little pushed or bearded, it doesn't seem to matter in the least. As a sample potation from this stream we may select the following stanza, which represents the heights of indignation which the British soldier can reach when he is really bored:—

> There was an old man of Jerusalem,
> Who habitually used to bambooz'l 'em
> By selling our men the fruit of the hen
> At three times the price that he should sell 'em.

BOOKS RECEIVED.

"Income Tax, Weights and Measures, Stamp Duties, Coinage; British, Colonial and Foreign." (London: National Bank of South Africa, Ltd.)

"Tales of Serbian Life." By Ellen Chivers Davies. (London: George G. Harrap and Co. 7s. 6d. net.)

"Reminiscences of a Territorial in the D.C.L.I. on Service in Europe, Asia and Africa in the Great War." By Nemo. (Plymouth: Bowering and Co.)

"Anthology of Modern Slavonic Literature: In Prose and Verse." Translated by P. Selver. (London: Kegan Paul, Trench, Trubner and Co., Ltd., 5s. net.)

BOOK NOTES.

"By Jaffa Way," by Lieut. H. G. Mansfield, M.C., is the title of a small volume of lowly verse. It runs pleasantly along the humble lines of conventionality, does not hesitate to pick up a few *clichés* on the way, and attains its end without distinction.

Sir Valentine Chirol's memoir of "Cecil Spring-Rice" is being published this month by John Murray.

From the same firm "The Turks in Europe," an historical study by W. E. D. Allen, with an introduction by Brigadier-General H. C. Surtees, is announced.

* "Greek Folklore and Greek Music." By P. J. Petrides. (Lecture. William Cate.)

† "Temporary Crusaders." By Cecil Sommers. (The Bodley Head: 4s. net.)

TEMPORARY NURSES FOR INDIA.

The Secretary of State for India makes the following announcement:—Nurses are required immediately for temporary service with British troops in India. Applicants should be fully trained nurses between the ages of 27 and 35. The terms will be as follows:—

Staff Nurses	Rs. 200 a month.
Sisters	Rs. 250 a month.

(At the present value of the rupee, viz., 1s. 8d., the number of pounds a year is the same as the number of rupees a month.) Engagement will be on a half-yearly basis. An outfit allowance of £20 will be given, and a gratuity of Rs. 100 is granted in respect of the satisfactory completion of each period of six months' service. Preference will be given to those who have recently served with either the Q.A.I.M.N.S.R. or T.F.N.S. Applications cannot be entertained from nurses now serving. Inquiries should be addressed to the Secretary, Military Department, India Office, Whitehall, S.W., and must be clearly marked "Temporary nurses" on the top left-hand corner of the envelope. Original certificates and testimonials should not be sent.

RETIRED INDIAN OFFICERS' PENSIONS.

The Secretary of State for India has sanctioned the extension to retired officers of the Indian services and to their relatives and to retired nurses of Q.A.M.N.S.I. of the bonus of 20 per cent. on pensions granted in respect of service in the present war, on the same conditions as were announced by the Minister of Pensions in the House of Commons on March 6 last in respect of pensions of officers of the British service and their relatives. The bonus will be calculated as from January 1 last, and will be continued till September 30 next. Limits are put to pension and bonus combined. If the pension reaches or exceeds the following limits no bonus is admissible:—Officers, £300 a year; nurses of Q.A.M.N.S.I., £175 a year; officers' widows (exclusive of children), £200 a year; officers' parents or sisters, £100 a year. In the case of retired officers whose pension includes a service pension as well as a disablement pension, the bonus will be calculated only on the latter. The bonus will be added to the pension as soon as possible, and it will not be necessary for application to be made for it.

THE AFGHAN FRONTIER.

The latest official communiqués state that a relief column which was rescuing a convoy moving towards Lakaband and Fort Sandeman (Northern Baluchistan) was greatly outnumbered by a Waziv lashkar and a large body of Sherranis, and suffered several casualties. The survivors estimate the enemy strength at 4,000. Four British officers are reported to have been killed and two wounded, while there were 100 casualties in the Indian ranks. The enemy proceeded to Haripal, a large camp ten miles north of Kapip. On July 18 the enemy temporarily captured a hill south of Fort Maude, causing us 40 casualties.

SYRIA AND PALESTINE RELIEF FUND.

Mr. T. H. Baxter, organising secretary of the Syria and Palestine Relief Fund, has just returned home after a three months' visit to Syria and Palestine. Whilst in the country he inspected all the principal centres of relief work, including Beyrout and the Lebanon district, Damascus, Jerusalem, Gaza, Nazareth, etc., and has reported fully the results of his visit to the London Committee of the Relief Fund. Palestine having largely recovered from the effects of the war, all the work of the Fund in the South has been closed down with the exception of the orphanages; 300 orphans still remain, and are shortly to be taken over by the Administration.

In Syria conditions are returning to the normal, though the greatly increased cost of food still remains as a reminder of the famine and privations of war time. The Lebanon district above Beyrout is still in much greater need than other parts, and in scores of villages the people have lost practically everything. The agents of the Relief Fund have found thousands who have dismantled their houses to buy food, or mortgaged their lands and property. With livestock gone, clothing in rags, and bedding sold for provisions, they are contemplating the greater severities of the winter with deep anxiety.

The work of the Fund will be continued, therefore, though on a limited scale, in order to meet the distress in the Lebanon district feared during the coming autumn and winter. Valuable help is already being given by means of a string of medical centres, and also by the provision of employment in various forms for the people. As in other parts, these efforts are being carried out in an efficient and economical manner, and testimony is borne both by military officials and Administrative authorities alike to the thorough character of the work.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

Obtainable at HARROD'S, SELFRIDGE'S and all the leading Stores.

Lord and Lady Francis Scott have left London for Scotland.

Lord and Lady Inchcape have left London for Belfast.

King Peter of Serbia has arrived at Arandjelovats, in Serbia. His Majesty was welcomed by Prince Alexander, the Regent.

Major-General Greenly, the head of the British Military Mission in Roumania, has returned to London from Bucharest.

M. Theodoroff, the Prime Minister of Bulgaria, is at the head of the Bulgarian Delegation which is expected to arrive in Paris to-day.

Princess Marie and Prince Nicholas of Roumania arrived on July 18 at Buckingham Palace.

Lord and Lady Willingdon will pay a private visit to Calcutta next Christmas.

Lt. B. MacLachlan (attached to the British Legation in Athens) has been awarded by the King of Serbia the White Eagle, 5th Class (with sword).

Liang Chi Chow, formerly Chinese Minister of Finance, has left Paris for the Balkan States in order to study political organisations.

His Majesty the King and the Shah of Persia have exchanged telegrams of congratulation on the conclusion of peace with Germany.

Lady Oranmore and Browne left London on July 22 for Castle McGarrett, Ireland, where Lord Oranmore hopes to join her next week.

M. Protitch, the Serbian Prime Minister, and the Ministers, MM. Trifkovitch, Marinkovitch, and Cramere, arrived in Belgrade from Paris on July 10.

The marriage of Captain Thomas Hall Plumer, M.C., and Miss Monica Tempest-Hicks will take place to-morrow at St. Paul's Church, Knightsbridge, at 1.30 o'clock.

The following decorations have been awarded by the King of the Hellenes :—To the Bishop of London, Order of the Redeemer, *Grand Cross;* and to T.-Brig.-Gen. G. W. Dowell, C.M.G., Order of the Redeemer, *Commander.*

Mr. Fitz Patrick, of the Cairo Tanzim Department, who was attached to the British Red Cross during the war, is shortly expected in Egypt to take up his new post of Controller General of the Administration, Ministry of Public Works.

A marriage has been arranged, and will take place in August, between J. Guthrie Monteath, Sudan Civil Service, and Mairie Katherine, daughter of Mr. James Cadenhead, A.R.S.A., R.S.W., and Mrs. Cadenhead, 15, Inverleith Terrace, Edinburgh.

The Raja of Jubbal has offered the Government his personal services, all the resources of his State unreservedly and Rs. 500 a month for ambulance work in connection with hostilities on the North-West Frontier.

The King received at Buckingham Palace on July 17 the Chief of Ichalkaranji, who, attired in picturesque native dress, was introduced by Colonel Sir James Dunlop Smith, Political A.D.C. to the Secretary of State for India.

Mr. A. F. Scholfield, Keeper of the Records of the Government of India, who is proceeding on nine months' leave, will, it is understood, join the library of Trinity College, Cambridge, on the expiry of his leave.

Justice Louis D. Brandeis, of the Supreme Court of Justice of the United States, and also Hon. President of the Zionist Organisation of America, is now on a visit in Palestine, for the purpose of acquainting himself with the general conditions of the country, and particularly of the Jewish settlements.

The Prince of Wales received his Highness the Maharaja of Kapurthala on July 23, who was presented to his Royal Highness by Lieut.-Colonel Sir James Dunlop Smith, Political Aide-de-Camp to the Secretary of State for India.

The *Pioneer* understands that his Exalted Highness the Nizam has decided that instead of having a Chief Minister an Executive Council will be established in Hyderabad with Sir Ali Imam as President. The members, who will be selected from among the officials of the State, will be nominated later.

At St. Paul's Church, Knightsbridge, on July 22, Lieutenant-Colonel Hugh Castle Smith, Suffolk Regiment, A.D.C. to the Sultan of Egypt, eldest son of Mr. and Mrs. Castle Smith, was married to Miss Maude E. Evans, only daughter of Sir Frederick Evans, Colonial Secretary, Gibraltar, and Lady Evans.

The marriage was celebrated on July 15 at St. Mary's, Cadogan Gardens, between Major Patrick Jack Tottenham Pickthall, M.C., R.A., of La Jaspellerie, Sark, eldest son of the late John Maynard Pickthall, and Kathleen, daughter of the late Colonel Claude Melville Crawford, 6th Goorkhas.

Many readers, both in England and in the Near East, will learn with regret that, owing to the change in the status of the Khedivial Shipping Company, Mr. Alfred Silley has severed his connection with the company. Mr. Silley will shortly return to Constantinople, but for the present Mrs. Silley and family will remain in England.

Reuter's Bucharest correspondent, writing on July 22, says :—Dr. Seton Watson, the well-known writer on Balkan affairs, who has just made a journey of investigation through the old Austro-Hungarian Empire, has stated that peace will never be re-established in Europe until Hungary is disarmed and Bela Kun is driven from Budapest.

The engagement is announced between Norman Huson Morris, of Rowdeford, Devizes, Wilts, only surviving son of Mr. and Mrs. Huson Morris, of Hayes, Kent, and Una Mary, only daughter of Sir Michael O'Dwyer, G.C.I.E., K.C.S.I., and Lady O'Dwyer, D.B.E., of 30, Half Moon Street, Piccadilly (after September 1, 115, Coleherne Court, Earl's Court).

A marriage has been arranged, and will take place early in September, between Brevet Major E. Leslie Ricketts, the 96th Infantry, I.A., and General Staff, only son of Mr. and Mrs. E. W. Ricketts, Fyzabad, India, and Mildred, elder daughter of Mr. and Mrs. Towers, Milverton, Hanger Hill, Ealing, late of Montevideo, South America.

A marriage has been arranged, and will take place at the Chapel Royal, Savoy, on July 30, at half-past two o'clock, between Captain L. Hungerford Jackson, 13th Rajputs, son of M. Hungerford Jackson, Kensington Hall Gardens, and Freda Mary, daughter of the late Colonel E. H. Dalgety, C.B., and Mrs. Dalgety, of Bedford.

A marriage has been arranged, and will shortly take place, probably in Calcutta, between Captain Keith Cantlie, I.C.S., of Kohima, Naga Hills, Assam, eldest son of Sir James and Lady Cantlie, Harley Street, London, and May Gordon, eldest daughter of Mr. and Mrs. James Walker, Richmond Hill, Aberdeen, Scotland.

The marriage arranged between Lieut.-Colonel G. A. Peake, R.E., eldest son of the late Mr. George Peake and of Mrs. Peake, of Clifton, and Beatrice Rose, only daughter of the late Mr. and Mrs. Edward Frampton, of Cheltenham, and granddaughter of the late Mr. Henry Baker, Treasurer-General of the Ionian Islands, will take place early in September.

The marriage was celebrated on July 17 at St. Sophia's Church, Bayswater, W., by the Great Archimandrite, Dr. Pagonis, assisted by the Archimandrites Moschovakis and Vesdekas, between Theodore, second son of the late Nicolas Thalassinos and Mrs. Thalassinos, of Constantinople, and Aglaia Christine, second daughter of Mr. and Mrs. Emmanuel M. Rodocanachi, of 66, Westbourne Terrace, W.2, and Chios, Worthing.

On July 17 his Majesty inspected a detachment of Indian officers, non-commissioned officers, and men belonging to Divisional Ammunition Columns, Royal Field Artillery, under the command of Captain R. Manners, Indian Labour Corps, who are on short leave from France. On the King's invitation, they witnessed an open-air Investiture in the Palace Quadrangle. The visitors were posted at one side of the Royal dais, while his Majesty's Indian orderlies, also in native dress, were on duty at the opposite side.

The *Church Times*, in reference to the appointment of the Rev. J. H. Linton to the Bishopric of Persia, which we noticed last week, has the following personal notes on the new bishop :—Born in Scotland, brought up in Ireland, and trained in England, Mr. Linton has shown by his steadfastness, thoroughness and

THREE SMALL PERSIAN RUGS FOR SALE.—Collector's Choice Specimens; old dyes; all in excellent condition. Brought home by advertiser before the War. No dealers. Seen by appointment only. Apply—M. T. B., 5, Trinity Road, Wimbledon, S.W.19.

versatility some of the best qualities of all three branches of the kingdom. From Hawick, his birthplace, he went to Cork, where he studied at the School of Science and Arts as a textile designer, but hearing the call to service in the mission field he entered the Preparatory Institution of the C.M.S. in 1900, and the Society's College at Islington in the following year. He graduated B.A. (Durham), and took first class in the Oxford and Cambridge theological examination. He was accepted by the C.M.S. as a missionary in 1904, and after being ordained deacon by the Bishop of London went to West Africa, serving for two years as Vice-Principal of the Training College, Oyo.

APPOINTMENTS, PROMOTIONS, &c.

M. Jonnart, Governor-General of Algeria, has resigned his appointment.

Major Gaskell will, it is understood, succeed Colonel Johnson as Secretary of the Indian War Memorial when the latter proceeds home this month.

Mr. W. A. Hertz, of the Burma Commission, has been nominated an Additional Member of the Imperial Legislative Council.

The Lieutenant-Governor of Bihar and Orissa has nominated Mr. Bernard Abdy Collins to be an Additional Member of the provincial Legislative Council.

Lieutenant-Colonel A. B. Dew, C.S.I., on return to India from leave, has been appointed Chief Political Officer on the staff of the General Officer Commanding, Baluchistan Field Force.

Mr. J. Lang, I.C.S., and Mr. S. W. Goode, I.C.S., are nominated Additional Members of the Bengal Legislative Council, in place of the Hon. Mr. Stevenson Moore, I.C.S., and Mr. S. S. O'Malley, I.C.S., resigned.

The Admiralty announces that Vice-Admiral Sir John M. de Robeck has been appointed to succeed Vice-Admiral the Hon. Sir Somerset A. Gough-Calthorpe as Commander-in-Chief in the Mediterranean, to date from the 26th inst.

Sir Graeme Thomson, K.C.B., Director of Transport and Shipping, Ministry of Shipping, has been selected for appointment as Colonial Secretary of Ceylon in succession to Sir Edward Stubbs, K.C.M.G., who has been appointed Governor of Hong-Kong.

Captain W. E. Lowry, I.C.S., Deputy Commissioner, whose services have been replaced at the disposal of the Burma Government, is appointed to officiate as Commissioner of Settlements and Land Records, in place of Mr. H. Clayton, appointed Commissioner.

Mr. H. Fyson, I.C.S., who has done such exceptionally good work as Deputy Commissioner of Lahore during the past three months, has been compelled to take leave on medical certificate, and is coming home. His place as Deputy Commissioner will be taken temporarily by Mr. A. A. McC. Mitchell, and his permanent successor will be Mr. S. D. Butler, from Attock. Mr. Butler was Deputy Commissioner of Lahore in 1909-10.

OBITUARY.

The death occurred on July 15 at 30, Maberley Road, Upper Norwood, of James Coulter Graham Keddie, C.E. (late Public Works Department, India), aged seventy-seven.

The death occurred on July 19 at Tormore School, Upper Deal, Kent, of Donald Percival, eldest son of the late Malcolm Neil Macdonald, of Tormore, Isle of Skye and Jogopore, Sarun, Bihar and Orissa, India.

Mr. Richard C. Plowden, late of the Punjab Police, died on July 22 at Kingston-on-Thames at the age of sixty-two. He joined the service in 1878, and had a varied experience. He served in the Afghan War of 1880-81.

Captain Edward Gould Hasted, a Military Knight of Windsor and a Crimean veteran, died on July 18 at the age of eighty-two years. In the Crimean campaign he took part in the expedition to Kinbourn, and had that medal and the Turkish medal.

Colonel K. J. W. Coghill, C.B., late Colonel 2nd Bengal Fusiliers, and late commanding the 19th Hussars, died on July 15 at Castletownshend at the age of eighty-five. He served during the Indian Mutiny, and received the medal with clasp. He also took part in the Egyptian Expedition of 1882, when he was awarded the medal with clasp, the bronze star, and the Medjidie (third class).

The death occurred in Syria on July 16 of Major-General Sir Henry John Milnes Macandrew, K.C.B., D.S.O. He was born in 1866, and in 1888 entered the Indian Army, joining the 5th Cavalry. He graduated at the Staff College, and in all spent about one-third of his service in the Indian Army on the staff. In the Tirah campaign (1897-98) he served as brigade transport officer, and received the frontier medal with two clasps. From 1903 to 1905 he was brigade-major to the Inspector-General of Cavalry in India. In France he served on the staff of the Indian cavalry divisions from 1914 to 1917, when he was promoted major-general and received command of the 5th Cavalry Division. With the Indian Cavalry Corps he went to Palestine, and under General Allenby took part in the advance from the Egyptian frontier to Aleppo. At Aleppo, and indeed throughout Syria, his loss will be severely felt, for over both the inhabitants and affairs of the country he had great influence.

The death is announced of Lieutenant-Colonel his Highness Sir Bhavsinhji Takatsinhji, K.C.S.I., Maharaja of the Kathiawar State of Bhavnagar. He was born in 1875, and succeeded his father in 1896. During the two great famines which at the passing of the 19th century took so heavy a toll of Kathiawar, he did much good work, and was unremitting in his care for his subjects. In making his State the model it was he selected sound counsellors, who helped him in his endeavours for the social and educational advancement of his people. He was created Knight Commander of the Order of the Star of India in 1904, and was granted the personal title of Maharaja in 1909. Among his many important projects were the improvement of the Port of Bhavnagar, the extension of railway works, the inauguration of a savings bank in his State, and the help of agricultural science by founding scholarships. As in the South African War, in the present war he was untiring in his loyal co-operation with the British Government.

NEWS IN BRIEF.

It is proposed so to extend the work of the Royal Academy of Music as to embrace India.

Paris newspapers report that the Bulgarian Peace Delegation, which is due to-day, will be lodged at Neuilly-sur-Seine.

The Netherlands Government has recognised the new Kingdom of Serbs, Croats, and Slovenes.

Postage stamps have been issued in connection with the Serbian military occupation of Hungarian territory.

The Chiefs' Conference will be held at Delhi at the end of October, and will probably last a fortnight.

The next meeting of the United Provinces Legislative Council will be held at Lucknow at 11 a.m. on August 4.

Egypt's peace celebrations coincided with those of France, and were remarkable for a display of enthusiasm, a pleasant feature being the participation of Egyptian officers and soldiers.

According to the *Pravda*, a search carried out at the Roumanian Legation in Petrograd resulted in the discovery of a machine-gun.

Cairo's Hotels de Luxe.

FRIDAY, JULY 25, 1919.

THE AUSTRIAN PEACE TERMS

Austria has had to give two bites to her peace pill—a testimony to the fact that the details of her dismemberment have proved as complicated as the machinery which held the hybrid empire together. Her delegates were invited to present themselves at Saint Germain on May 14. They were kept waiting until June 2, when an incomplete treaty was presented to them. A further delay of six weeks followed, and on July 20 they received the second instalment of the Allies' terms. The first part of the treaty placed on record, in broad outline, the accomplished facts of the war; it confirmed the dismemberment that the actual course of the fighting or subsequent events had brought about, and it reproduced a number of clauses from the Treaty presented to Germany designed to regularise the international situation as a result of the defeat of the Central Powers. The boundaries of the new Austria, especially in the south-east, were not clearly defined, and a number of clauses, including those relating to finance, to reparation, and to military matters, were expressly reserved. These clauses are now embodied in the supplementary treaty, of which only a summary had been issued on the day when it was handed to the Austrian delegates. According to this document the frontiers between Austria of the one part, and Hungary and Czecho-Slovakia of the other, have been modified so as to include in the limits of Austria territories inhabited by German-speaking populations. The conditions under which ex-Austrian territories pass to Italy are set forth, and with these territories the Italian Government takes over all the obligations and rights of the Austrian State on all the lines of railways managed by the Austrian State in the territories transferred to Italy. Within three months the Austrian military forces are to be reduced to 30,000, including officers and depot troops; and, as in the case of Germany, universal military service is abolished and voluntary enlistment substituted as part of a plan "to render possible the initiation of a general limitation of armaments of all nations." Within the same period of time the armament of the Austrian Army must be reduced according to detailed schedules, and all surplus surrendered; the manufacture of all war material is to be confined to a single factory under the control of the State, and other similar establishments are to be closed down or converted; the importation and exportation of arms, munitions and war materials of all kinds are forbidden.

There is nothing in regard to the reparation that Austria is called upon to make and to the financial terms imposed upon her that suggests that pre-war friendliness has secured for her any measure of relaxation denied to Germany. Her responsibility for causing loss and damage to which the Allied and Associated Governments and their nationals have been subjected as a consequence of the war is affirmed and admitted, and, while it is recognised that her resources will not be adequate to make complete reparation, she is required to make compensation for damage done to civilians and their property in accordance with categories of damage similar to those provided in the Treaty with Germany. The amount of damage is to be determined by a special "Austrian" section of the Reparation Commission named in the German Peace Terms, and will be notified to Austria before May, 1921. Some reparation, however, will have to be made immediately and "a reasonable sum" for this purpose will be fixed by the Reparation Commission. Austria has also to make an immediate contribution to the physical restoration of the invaded areas by handing over animals, machinery and equipment; she cedes all merchant ships and fishing boats belonging to nationals of the former Empire, and delivers up a fifth of her river fleet. Of particular interest, in view of the controversy that has arisen round them, are the financial clauses of the treaty. It is stipulated that the costs arising under the present treaty, including the costs of the Armies of Occupation and reparations, shall be a first charge upon all assets and revenues of Austria, who is not to be allowed to export any gold before May 1, 1921, without consent of the Reparation Commission. Each of the States to which Austrian territory is transferred, and each of the new States created out of the old Empire will assume part of the Austrian pre-war debt specifically secured on railways, salt mines, and other property; similarly, the unsecured bonded pre-war debt of the former Empire is to be distributed by the Reparation Commission in the proportion that the revenues for the three years before the war of the separated territory bore to those of the Empire, including Bosnia and Herzegovina. On the other hand, the Republic of Austria alone is to bear the charge of the war debt; it renounces all rights as to all international, financial, or commercial organisations in Allied countries, Germany, Hungary, Bulgaria, Turkey, or in the former Russian Empire, and has to expropriate, on demand of the Reparation Commission, any right of her nationals in any public utility or concession in these territories, in separated districts and in mandatory territories, holding herself responsible for indemnifying her nationals so dispossessed.

That the terms are stiff may be at once admitted, but few people outside Austria or Germany will contend that they are unjust or excessive. The "liberated territories" would have preferred to see themselves freed from any financial responsibility whatsoever in respect of the heritage of the old Dual Monarchy that becomes theirs; but they have to assume the part of the Austrian pre-war debt specifically secured on certain property that they acquire, as well as the unsecured bonded pre-war debt. The new Austria, reduced as she will be to modest proportions, will find it difficult enough to bear the obligations actually imposed upon her, which include the whole of the war debt. She will start her existence as a bankrupt, and it will be of interest to see whether this factor acts as a deterrent to other German states that may be anxious to absorb her or to come to some political understanding with her. In any case, Austria's punishment calls for no tears outside her own territory; her responsibility for the war was even more direct than that of Germany, and was second only in degree. Ultimately, her fate can hardly fail to be linked up with that of Germany. The ties that bound her to Hungary are broken, and she is cut off from the sea coast. Much of her trade passes to the new States that have been created out of her, and these, under happier political conditions, will, it is to be hoped, not only improve upon their past industrial and commercial record, but will also see that their trade, which was mainly with Germany, takes on a new orientation. They will do well, however, to appreciate the difficulties of their position in this respect. Czecho-Slovakia is entirely wedged in between Germany, Austria, and Hungary. In the past it was Germany who supplied Great Britain, France, Italy, and Russia with Czech products, and if this intervention is to be eliminated in future, direct trade routes with the Allied countries, which cannot be blocked by Germany, will have to be opened up. The value of the Slav wedge against German pressure towards the East depends upon its cohesion, which in turn will be proportionate to the political solidarity of the federal units and to their economic interdependence. These are matters which can only be satisfactorily evolved if peace is maintained in South-Eastern Europe. In view, therefore, of the peculiar interest that the Czecho-Slovak Republic has in seeing that the States associated with it are not distracted by internal dissensions or external complications, we may welcome its influence in the maintenance of peace in the Near East.

GREAT BRITAIN AND THE NEAR EAST.

WANTED, A NEW GOVERNMENT DEPARTMENT.

By Major the HON. W. ORMSBY GORE, M.P

British responsibilities in the Near East will undoubtedly be heavy after the ratification of the various peace treaties. We may take it as probable that Great Britain will continue to be responsible for the administration of Egypt and the Anglo-Egyptian Sudan, and will further become responsible to the League of Nations for the peace, order, good government, and progressive development of Palestine and Mesopotamia. Added to these we already actually possess Aden, British Somaliland and Bahrein, and we have special rights and interests possessed by no other Power in relation to each and all the independent States which compose the Arabian Peninsula.

Hitherto the ultimate control of British responsibilities both political and administrative, in these vast territories has been divided between the Foreign Office and the India Office. Egypt, the Sudan, Palestine and political relations with the Hejaz have been dealt with by the Foreign Office. Aden, Mesopotamia, and the relations with Arab Emirs, other than the King of Hejaz, have been dealt with by the India Office. The former have acted through the High Commissioner in Cairo and the Commander-in-Chief of the Egyptian Expeditionary Force, the latter through the Resident at Aden, the Commander-in-Chief in Mesopotamia, and the Chief Civil Commissioner at Baghdad.

The view I desire to put forward is that when peace conditions are reached such a division of control cannot continue without inevitable political and administrative difficulties of a serious character, and, further, that neither the Foreign Office nor the India Office is qualified or equipped for the task of dealing properly with the problems of either half or of the two halves united.

Present and prospective British responsibilities in the Arabic-speaking world must be controlled by one department, and that department has to be created *ab initio*. There should be one civil service—interchangeable with the Anglo-Egyptian Civil Service, and, while I am of opinion that a Viceroy of the Near East is both undesirable and impracticable, the responsible heads of British administration in the several countries mentioned should be co-ordinated under one Minister in London.

I suggest that four principal agents will be required—viz., High Commissioners at Cairo and Baghdad respectively and Chief Commissioners at Jerusalem and Aden respectively.

The functions of the new department, though inevitably including important political and diplomatic relations with the League of Nations on the one hand, and with the protected or neighbouring independent States on the other, will, in the main, be administrative. Finance, law, irrigation, land settlement, military and police establishments, trade and commerce will bulk largely in the work of the new Ministry, and mainly for this reason the Foreign Office is unsuited by its constitution and by the character of its *personnel* for discharging such a task. The diplomatic service and the Foreign Office *personnel* are now interchangeable. The training and traditions of this service are in diplomatic work, and it has long been felt that Foreign Office control, when it has been exercised, of the administrative and internal problems of Egypt has been weak, to say the least of it, for the very reason that the organisation and diplomatic training and outlook of the Foreign Office lack both the experience and organisation for dealing with problems of internal development and administration. In the days of Cromer and Kitchener Foreign Office control was to a large extent atrophied, and the British Consul-General—as he then was styled—was left to work an anomalous constitution and to deal with administrative problems with little or no interference from home. A continuous supply of Cromers and Kitcheners might make it possible for such a personal system to continue, but it is doubtful whether modern world conditions and the growth of Parliamentary control, both in London and in Egypt itself, would permit the continuance of the system. Foreign Office control during the *régimes* of Sir E. Gorst and Sir Reginald Wingate has not produced the happiest results. In Parliament, at any rate, and in English as well as Egyptian opinion in Egypt it is widely felt that the past Foreign Office *régime* cannot be, and ought not to be, continued in its present form.

Then let us for a moment consider the position of the India Office. Here, at any rate, is an office which cannot be accused of lacking the knowledge and experience of internal and financial administration. Objection to the control and administration of the Arabic-speaking world, where responsibility for such control and administration is to fall upon British shoulders, by the India Office is based not upon any administrative incapacity in that office, but on the fact that the Indian and the Arabic-speaking peoples are so utterly different that an attempt to make even Mesopotamia a colony or dependency of India would be disastrous. British rule in India has resulted in the evolution of a highly specialised and extremely efficient bureaucracy with a very clearly defined code and tradition of its own, the result of contact for a century with the peculiar conditions of Indian life. An attempt to apply the methods and special traditions of administration in India to Egypt, Palestine, or Mesopotamia would be to court failure at the outset. Further, the Indian constitutional reforms now under way involve little less than a revolution—personally I think a necessary and in most respects desirable revolution—in the India Office, the Government of India, its provinces, and in the Indian public services. With such developments in the offing the India Office has quite enough to do to deal with the three hundred millions of mankind in the great sub-continent without further taking charge of the very different problems presented in the new-old lands of the Nile, the Tigris, the Euphrates, and the Jordan.

It may be said that the tasks before the new Ministry that I have in mind are so varied that to group them together can only be a temporary expedient. Admittedly, the tasks are very different. In Egypt forty years of *de facto* British Government have restored plenty and a steady development of economic prosperity to a country which we found loaded with debt, vitiated by corruption, and groaning with oppression, illiterate and backward. Now we have to deal with the political problem of associating with us in responsibility for future government and further development more of those Egyptians whom we have educated, without allowing the old evils of corruption, financial profligacy, and class oppression to re-assert themselves.

In Mesopotamia we are beginning at the beginning, as it were. The land of the two rivers, once the granary of the world and the centre of successive civilisations, formerly inhabited by many millions of people, lies derelict for the most part, with millions of acres of irrigable land either a desert or a swamp. Since Hulagu Khan, the Turk, in 1258, destroyed the canal system of the Babylonians and ended the Khalifate of Baghdad, Mesopotamia has been under a blighting rule which has meant stagnation and misery to its inhabitants.

In Palestine we have, in the first place, the Jewish national movement, with all its far-reaching influences throughout the civilised world, and to the support of which we are pledged. We have a similar economic and reconstructional problem to that which we find in Mesopotamia, and we have to perform to the satisfaction of the adherents of the three great monotheistic faiths throughout the world the delicate task of trustee for the League of Nations.

Associated with our task in all three areas is the maintenance of our friendly and intimate relation to the Arab movement which centres in the person of the King of the Hejaz, the Keeper and Protector of the Holy Cities of Islam. Our support of Arab aspirations for freedom from the Turkish oppressor during the war necessitates the continuance of our friendly offices whenever and wherever asked to secure for King Hussein the support and means whereby he may be able to discharge his great responsibilities to his lieges and to the Moslem world. Just as we desire peace, good government, development and progress in the territories for which we are to be responsible, either as protecting Power or as mandatory of the League of Nations, so we desire the same in the neighbouring territories not under our control.

These tasks are not light ones. They will require a staff both in London and in the countries concerned neither small nor inexperienced. They will require a large Arabic-speaking Civil Service, as well as engineers, agronomists, architects, teachers, and the like. All such *personnel* must feel that they have in England a Ministry not less generous and considerate than has been the India Office in regard to Indian civil servants; for in such a new service

KING OF SPAIN.

Digitized by Google

confidence must be established at the outset if goodwill, good work, and sympathy with the problems to be faced are to be secured. They must feel, too, that the Minister and his staff in London know about and care for their efforts, and that in the London office there are men who themselves have had personal contact with and experience of the countries, and can speak the language of their peoples.

The question next arises—if for the above reasons the Foreign Office and the India Office are to hand over to a new department, is it necessary to create a new Secretaryship of State for the purpose? I personally think that while such a solution is the best and most desirable, we cannot continue very long without reorganising and reallotting the functions of many of our departments of State. For instance, the present anomalous position of the Overseas Trade Department, half Foreign Office and half Board of Trade, cannot continue, and sooner or later the Board of Trade, having handed over some functions to the Home Office and some to the Ministry of Labour, can, by taking over the commercial functions of the Foreign Office and the Ministry of Supply, and possibly Shipping and Ways and Communications as well, become a Ministry of Commerce and Industry. Similarly, the Dominions Department of the Colonial Office should soon be transferred to the direct control of the Prime Minister, or preferably to the Lord President of the Council. It may then become possible to establish a Secretary of State for Imperial Administration, with a seat in the Cabinet, who would have under him two Ministers—viz., a Minister for the "Near East" and a Minister for Protectorates and Crown Colonies other than in the Near East. But this can only come when the complete reorganisation of the Government takes place, following further Imperial development on the one hand and local internal devolution within the United Kingdom on the other. Meanwhile it is so vital to get the Near East started, with the arrival of peace conditions, under a separate department, separate at all costs from the Foreign Office, that public opinion in support of such a proposal should be mobilised as soon as possible.

Finally, it should be added that there are those who hold that, in addition to the countries mentioned above, Cyprus, Zanzibar, British East Africa and Uganda, and ex-German East Africa should also be transferred to the care of the new Near Eastern Department. Each has to be considered on its merits. If Cyprus remains British, it is obvious that it should come under the new department, as also Zanzibar, which is the southern limit of Arabic speech and Arab influence. Mombasa is part of the territory of the Sultan of Zanzibar, and forms the principal entry into British East Africa, while the other entry is the Nile Valley, and it is thought that the valley of the Nile should be regarded as one whole from its sources in the Great Lakes to the Mediterranean. German East Africa will probably be held under a mandate somewhat similar to Mesopotamia and therefore might be included within the purview of the new Ministry. However, it is no use overloading the ship at the start, and the main thing is to secure a department for dealing with the Arabic-speaking world and with the gigantic tasks of political and economic development in territories with the fate of which is bound up the peace and prosperity of at least twenty million people inhabiting countries whose peace affects the peace of the whole world.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Egypt (Lord Milner's Commission). July 17.

Mr. HARMSWORTH, in replying to Lieut.-Col. Sir Samuel Hoare, said there was no truth in the report of the composition of Lord Milner's Egyptian Commission (which was given from *El Mokkatam* in the issue for July 11 of THE NEAR EAST). He also said that the Commission had not yet been appointed.

Yugoslav Nationality.

Mr. SHORTT, replying to a question by Commander Viscount Curzon, as to whether one Count Pejácsivich had recently come to this country; whether he belonged to the Austro-Hungarian Embassy in London in 1914, and a year ago was employed in the Austro-Hungarian Embassy in Berlin, expressing strongly anti-Ally sentiments, said he was aware of the diplomatic appointments which this gentleman had held, but he had now been recognised as of Yugo-Slav nationality and came to this country with a Serbian passport. He did not think his presence here was likely to be detrimental to our interests, but he could be required to leave the country if any occasion should arise.

Commander VISCOUNT CURZON: Is the right hon. gentleman aware that peace with Austria has not yet been signed, and that this man is allowed to go about London exactly as he did in pre-war times? Mr. SHORTT: We must have some regard to a Serbian passport, and we can protect ourselves if necessary. EARL WINTERTON: Is not this person one of many formerly connected with the Hungarian Embassy who came to this country camouflaged as Yugoslavs, and is the right hon. gentleman aware that the late Ambassador has announced his intention of coming as soon as possible? Mr. SHORTT: Yes, Sir, I have heard of that.

Montenegro.

Mr. R. MCNEILL asked the Under-Secretary of State for Foreign Affairs whether: (1) Montenegro declared war against Germany on August 9, 1914; if so, why Montenegro was not invited to sign, and did not sign, the Treaty of Versailles between Germany and the Allies; (2) if he has any official information as to the number of Montenegrin refugees still detained in France; whether these refugees are forbidden to correspond with their relatives and friends in Montenegro, or to return to their own country except with Serbian passports and subject to conditions imposed by Serbian authorities in occupation of Montenegro; if he is aware that these refugees include a number of Montenegrin soldiers who were anxious to return to their country during the war to fight under their native flag, but refused to swear allegiance to the Serbian monarchy and to enlist in the Serbian army; whether steps will be taken to facilitate the return to Montenegro of all who have been exiled as a result of Serbian action, in order that they may take part in any plebiscite that may be taken to determine the future destiny of their country; (3) whether the declaration of war by Montenegro against Austria on August 6, 1914, and against Germany on the 9th of the same month was in pursuance of treaty obligations to Serbia and loyalty to a kindred race; whether he is aware that this action was adduced by the German delegation at Paris as evidence that Montenegro had been an aggressor against the Central Powers and consequently disentitled to a war indemnity; whether he is aware that one-third of the Montenegrin army perished on the battlefield endeavouring to stem the Austrian invasion and to cover the retreat of the Serbians across Montenegrin territory; whether, in view of this record, the Montenegrin Government or people have done anything to forfeit the confidence and esteem of their Allies; (4) if he is aware that during the war reports were current reflecting gravely on the loyalty to the Allies of the King of Montenegro; that these reports were widely credited in certain quarters, were and are believed by many persons to have been originated by parties in Serbia for the purpose of discrediting the Montenegrin monarchy, and thus preparing the way for the annexation of Montenegro by Serbia; and whether, in view of the fact that the conclusion of Peace renders reticence on such matters no longer obligatory, he will now make a full disclosure of the facts of the case, stating the evidence, if any, on which the reports referred to were based?

Mr. HARMSWORTH: The hon. gentleman is correct in stating that Montenegro declared war on Austria-Hungary on August 6, 1914, but my information is that war was declared by her on Germany on August 8 and not on August 9, 1914.

As regards the question of the Montenegrin refugees in France, I have no official information, and I would point out that as these individuals are detained in France, provision of facilities for their return to Montenegro is a question for the French Government. I am afraid I have no figures as to the actual losses of the Montenegrin army, but I know that they were heavy. I should like to assure the hon. gentleman that he is incorrect in supposing that the Montenegrin people have done anything to forfeit the confidence and esteem of His Majesty's Government. On the contrary, His Majesty's Government are endeavouring to discover their true wishes and aspirations, and in this connection I would refer to the replies returned to the hon. gentleman on July 1. I can add nothing to those replies at present, and I would remind the hon. gentleman that peace with Austria has not yet been signed.

Mr. MCNEILL: Does the hon. gentleman realise that there is a number of points which have been left unanswered, and that if I do not press them at this moment it is for no other reason than that I want to avoid embarrassing the Foreign Office?

Mr. HARMSWORTH: Yes. I fully realise that, and I thank my hon. friend.

Smyrna. July 21.

Mr. F. C. THOMSON asked the Secretary of State for Foreign Affairs whether he could give any information as to the state of affairs in Smyrna?

Mr. HARMSWORTH: My information is to the effect that no disturbances have occurred in Smyrna itself since those which followed immediately on the Greek landing on May 15. While the town is in Greek military occupation, the Turkish civil administration is exercising its functions. As regards the interior, the Peace Conference in Paris are endeavouring by every means in their power to prevent the recurrence of fighting between the Greek and Turkish forces by an arrangement strictly defining the limits of Greek military occupation, undertaken under the sanction of the Powers.

Topics in Parliament.

The subjoined headings are those given in the Official Report.

INDIA: Floggings (Burmah).—Army of Occupation Allowance.—Royal Army Medical Corps (Pay).—Commissions (Indians).—Imperial Cadet Corps (Dehra Dun).—Officers Medically Unfit.—Reforms (Views of Local Governments).—Deputations (Priority Certificates). DEMOBILISATION: Troops in Egypt and India. EGYPTIAN EXPEDITIONARY FORCE. PERSIA. TROOPS' PAY, BAKU. RE-ENLISTMENT (SERVICE IN INDIA). AFGHANISTAN. BURMA (CONSTITUTIONAL REFORMS).

NEAR EAST (BRITISH POLITICAL REPRESENTATIVES). (July 15.) TURKISH EMPIRE (PARTITION). SALONIKA FORCE (SICKNESS). INDIA: Army Officers (Promotion).— Income Tax (Evasion).—Punjaub Riots.—Military Hospital, Kohat. (July 17.)

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The long-expected Sudan Loan is now on the point of eventualising. The necessary financial resolution authorising the guarantee of the interest on a loan to be raised by the Sudan Government of an amount not exceeding £6,000,000 was passed by the House of Commons in Committee last week, and the Bill has now been published, and will be found elsewhere in these columns.

***

The position with regard to the Loan can be briefly summarised. Before the war—in 1913 to be precise—a similar guarantee to that now asked for was agreed to in respect of a Loan for £3,000,000 for irrigation and kindred purposes. The work was suspended during the war, and now that it is over the whole position is altered as regards the necessary expenditure, and it is estimated that while £3,000,000 was sufficient in 1913, double that amount is required to-day. Hence the necessity for the present Bill.

***

I need scarcely explain the paramount necessity of doing everything possible to further the extension of cotton-growing within the Empire, and I am glad to see from the debate on the financial resolution that there was a full recognition on the part of the members of the importance of the Sudan as a potential cotton-growing country. The debate was in many respects very illuminating, and I much regret that lack of space prevents the publication of some of the more important contributions to it—notably, the speeches of Earl Winterton and Mr. Ormsby-Gore, which showed the most intimate acquaintance with the questions at issue.

***

The Guardian Assurance Company, one of the principal British insurance offices, has undertaken the important step of forming a subsidiary company called the Guardian Eastern Assurance Company, which will specialise in the insurance of persons and property in, exports to and imports from, Egypt, Palestine, Mesopotamia, India, and other Eastern countries. The company, which will undertake all kinds of insurance, should find the Near East a particularly fruitful field for its activities in view of the efforts now being made to develop trade relations between that region and the United Kingdom.

***

The surprising step taken by the Greek authorities of prohibiting the importation of cotton goods was interpreted as meaning that a very desirable market would be closed to Manchester for some considerable time, in view of the stock of cotton goods in Greece. Fortunately, this has not proved to be the case, thanks to the prompt action taken by Major Kennard, the Near East Commissioner of the Federation of British Industries. As a result of his representations the Greek Government has withdrawn as from July 4, its prohibition of the import of unbleached cotton goods up to 24 (English), bleached cotton yarns up to 24 (English), dyes, distempered yarns up to 24 (English), and coloured cotton cloths, such as drills and checks, as well as raw Turkish and Indian cotton. The Federation is to be congratulated on its success in this case, which is at once a justification of its policy of appointing overseas representatives, and an illustration of the value of united action on the part of British manufacturers where questions of foreign trade are concerned.

***

I understand that it has been practically decided that the opening of the Athens Exhibition is to take place on October 19, and it is hoped that the King of the Hellenes will be able to perform the opening ceremony. The demand for show space at the exhibition has been very great, and only a small amount remains unallotted, and applications are limited to the end of July. It is interesting to note that the Canadian Government will be among the chief exhibitors. Canada, as I pointed out recently, having examined the prospects of many markets, has turned to the Near East as affording her the greatest scope for the development of her trade, and the energy with which our Dominion has already translated her intentions into action should surely be an incentive to firms in this country.

***

Now that the war is out of the way the French schemes of development in Morocco may be expected to proceed apace. The Budget for the French zone for the current year certainly lends colour to the view that no time will be lost in carrying out works which will further the progress of this most promising region. A total expenditure of over £7,250,000 is provided for the development of the country, of which £2,790,646 is for public works, £258,159 for roads, and £3,603,896 for agriculture, forests, irrigation, etc.

***

I have previously had occasion to comment on the economic advance made by Mysore State in recent years. One of the most important factors in this development has been the Mysore Economic Conference, which investigates and discusses suitable industrial openings in the State. As a result of its work a large number of industries have been taken up with the aid of the Government, among them soap manufacture, rice milling, weaving, the manufacture of mathematical instruments, pharmaceutical products, and wood distillation. Industries now being investigated include the manufacture of paper pulp and paper, glass and bangle making, pottery work, and the manufacture of matches and pencils. Obviously the successful establishment of only a few of these industries would mean much to the State.

***

The restrictions on the issue of bonds or shares involving what is known as the export of capital were criticised by Mr. C. Birch Crisp, at the general meeting of the British Bank for Foreign Trade. He pointed out that restriction upon the export of gold was one thing, but that the export of capital apart from gold could only take the form of shipments of goods or by rendering similar services, and he expressed the view that until the London market is reopened to foreign states a material rise in our exports is improbable. In this respect Mr. Crisp reflects the views of a considerable section of the business community.

***

In the year ended March 31 last a very notable increase took place in the earnings of the East Indian Railway. The gross receipts amounted to Rs.13,92,50,200, as against Rs.12,21,83,500, and against this increase of Rs.1,70,75,700 the inevitable increase in the operating expenses was only Rs.64,32,600, and the net revenue rose from Rs.7,98,57,600 to Rs.9,05,00,700. The increase in coaching traffic was 9.59 per cent., while in the goods traffic the increase was 15.67 per cent., the chief increases being in coal, hides, jute, limestone, railway material, rice, sugar, and timber. Decreases occurred in grain other than rice, iron and ironmongery, and mineral oils. Rs.4,55,32,800 of the surplus profits fall to the Government, and Rs.39,66,600, to the company, which permits of the distribution, in addition to the guaranteed interest of 10 per cent., of a dividend of £2 4s. per cent., as against £1 7s. for the previous twelve months, giving a total return of £7 9s. per cent. for the year on the deferred annuity and annuity class "D" capital. This is the highest return since the commencement of Government ownership of the system.

***

Mr. Alfred Silley, whose connection with the Khedivial Shipping Company has just been severed after some twenty years' service, is shortly proceeding to Constantinople, where he will start in business on his own account. His unique acquaintance with shipping and insurance business in the Near East will find full scope, and his very many friends at home and "out there" will cordially wish him every success in his new venture.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

CONSTANTINOPLE BUSINESS LETTER.

(From Our Own Correspondent.)

Constantinople, June 28.

It is a matter for great regret that, even after the bitter experiences of the war, British firms are still employing German representatives out here. This is really inexcusable. It is not a question of men who are, so to say, accidentally of German nationality. There are many people out here with not a drop of German blood in their veins, although they may be German subjects. I am referring rather to genuine Germans now "camouflaged" as Ottoman subjects, Czecho-Slovaks, Yugoslavs, and so forth. And, in spite of everything, there are British firms who insist upon keeping such men as their representatives. These men may be very good agents from a strictly business point of view, although even that is open to discussion, but there are Englishmen, or those who have never been anything else but the friends of the British, who are in no way inferior from the business point of view, and who are certainly to be preferred from any and every other point of view. The German agent is not only a business but a political factor. Have we really need of any further evidence in this matter? Here in the Near East, where one talks politics as they talk sport in England, it is of the utmost importance that we should never again allow Germans to be our business representatives. It is nonsense to say that business and politics may be kept in water-tight compartments. The German has proved to us beyond all argument that for him, at least, business and politics are simply different phases of one and the same scheme. And let no one cherish the illusion that the German mind is henceforth going to work along different lines. After all that has taken place during the last five years it is a disgrace for any British firm to be represented by a German.

There is another point with regard to agents that it is as well to bear in mind. The British agent's chief consideration is the interest of the firm that he represents. But for the German agent, the connection, the clientele is the all important factor. To maintain that connection and to increase it is the German agent's first consideration, and if it is a question of choosing between the interests of the firm and the interests of the customer, in most cases it is the firm that is sacrificed. The German relies for his business a great deal upon his personal relations and his own capacity for "blarney." The Englishman's methods of business differ very considerably. He relies more upon the quality of the goods for their sale, and he avoids that intimate personal contact which is usually a drawback in matters of business. The result is that the British agent can adopt quite a different attitude. His first consideration is the interest of the firm that he represents. For these reasons, among others, one very rarely finds a British agent representing a non-British firm.

Enemy Banks.

The Inter-Allied Financial Control announced this week that sums deposited in certain enemy banks will cease to bear interest from July 1, 1919. The banks concerned are:—Deutsche Bank, Deutsche Orient Bank, Wiener Bank Verein, Société Anonyme Hongroise de Bank et de Commerce.

During the war the Turks and Germans thought they had the chance to cut out the Imperial Ottoman Bank. The result was the foundation, under the auspices of Javid Bey in particular, of "Le Credit National Ottoman." At the general meeting, held on the 25th inst., the board of directors was modified in a way that cannot but be of very great advantage to the bank. Javid himself was eliminated, together with his notorious associates Hussein Jahid and Midhat Chukri. A dividend of 3 per cent was declared, and those shareholders who were forced to subscribe by the Committee of Union and Progress may consider themselves lucky.

Shipping.

At a meeting of the Allied High Commission this week, it was decided that henceforth merchant vessels should pay light dues as before the war.

Among the ships of all nationalities that throng the port, may be seen one bearing a strange flag. The ship is called the *Polonia*, and the flag is the flag of Poland. The design is a St. Andrew's cross in crimson and the Polish eagle in the corner in the same colour, the whole upon a white ground. The *Polonia* is running at present to the Black Sea ports and Constantinople.

Markets.

Business is still quiet and there is nothing fresh to report. The Turkish lira is at a slightly higher price, Sterling having dropped to 380, but the difference is not enough to have much effect.

FOOD PRICES AT ALEPPO.

(From a Correspondent.)

At the present time, when the cost of living has risen by leaps and bounds in the majority of the countries directly affected by the war, it cannot be said that the price of foodstuffs in Aleppo and Northern Syria is unduly high. Considering that for four years it was exploited and drained by the Germans, it speaks well for its natural richness in agricultural produce that prices are no higher than they are. Naturally fertile soil and cheap labour, coupled with the fact that the country has not been laid waste, must be the reasons for this. During the last year of the war and for the first few months after our occupation, prices of necessaries, such as wheat, barley, flour, meat, etc., ruled high. Imported groceries, such as tea, coffee, sugar, etc., were naturally scarce on account of the blockade, but the high prices of the necessaries (of which the country was self-supporting) were probably during the war, and most certainly after the war, the result of profiteering.

After our occupation every opportunity was naturally taken by the Syrian to reap a rich harvest out of the British troops, who, having outpaced their supply organisation, were compelled temporarily to live on the country. The arrival of the first supply trains and the reaping of a good harvest let loose upon the market large hoards of hidden grain, and prices quickly fell. For instance, wheat, which was 40s. to 45s. per shembul (105 kilos) on January 19 fell to 27s., to 32s. on the 30th. Barley similarly fell from 20s. to 25s. per shembul (88 kilos) to 15s. to 17s. The following is a list of prices on January 30, by which time Army supplies were coming through by rail, and camel caravans were arriving fairly regularly from Baghdad and Damascus, bringing such commodities as coffee, sugar, and rice. The prices, where not otherwise stated, are per rotl of 2½ okes, equal 2¾ lb., and are worked out on the ratio of 160 Turkish piastres to £1 sterling:—Bread, 9d. to 1s.; flour, 13s. 6d. to 17s. 6d.; sugar, 6s. to 7s.; coffee, 9s. to 11s.; soap, 5s. 6d. to 6s. 6d.; rice, 4s.; butter, 9s.; cheese, 7s. to 9s.; olive oil, 6s.; milk, 2s.; meat (sheep) 10s., (goat) 8s., (beef) 6s.; eggs, per 100, 12s.; chickens (each), 3s.; charcoal, 1s.; wood, 3d. to 6d.; carrots, 6d.; beetroot, 5d.; petroleum, 30s. to 40s. The above prices have naturally fluctuated since, but have on the whole fallen. The prices of chickens and eggs seem a dream of pre-war days compared with English prices, but the inhabitants consider them a case of gross profiteering due to the arrival of the British soldier, who purchased eggs in large quantities. Such was the demand for eggs that large numbers of what must surely have been pre-war eggs were unearthed by the wily Aleppine and foisted upon the unsuspecting soldiery under the guise of "new laid." There is a limit to human endurance, however, and retaliation for a repeated supply of bad eggs has been known to take the form of a little bombing practice, the bombs being the aforesaid egg and the target the vendor. Such is the East, however, that the victim looked upon it merely as bad luck in being detected in a piece of "cute" business. It must be remembered that the above prices would be slightly higher if dealing with Turkish gold, the rate of exchange being 145 P.T. per L.T. The newcomer to Aleppo must also remember that all prices are quoted in what is locally termed "Churuk para" or Aleppo money—"Churuk para" is not real coin but merely an expression, and to reduce "Churuk para" to "Sagh para" or real coin it is necessary to subtract 1-5 from the price quoted. Normally 40 paras go to the piastre and 20 piastres to the mejidie; at the present moment you should get eight mejidies for your sovereign. It will be seen that the novice, unless he is aware of this local custom, would be at a distinct disadvantage when trading either wholesale or retail in the Aleppo Bazaar.

ROUMANIAN IMPORT RESTRICTIONS.

The Board of Trade are in receipt of a copy of a notice issued by the Roumanian Revictualling Commission, Paris, setting out the regulations governing the importation of goods into Roumania. It appears from this notice that invoices for goods shipped to Roumania do not require to be *viséd* by the Roumanian Government representatives in the country of export. The existing provisions as to the importation of goods into Roumania, as given in the notice, are as follows:—

All the restrictions imposed on trade during the war are abolished, with the exception of the provisions regarding trade with the enemy. Nevertheless:—(1) Articles of prime necessity (meat, cereals, potatoes, haricot beans, sugar, fish, alcohol, and petroleum) are only to be purchased and sold by the Roumanian State. (2) The importation of articles of luxury (a list of which is given in a schedule annexed to the notice) is not allowed without the previous authorisation of the Roumanian Minister of Industry and Commerce. (3) All goods other than mentioned in Paragraphs 1 and 2 above may be imported without previous authorisation or formalities. (4) To obtain authorisation to import the articles of luxury referred to in Paragraph 2, an application containing a description of the goods and their quantity and value must be addressed to the Minister of Industry and Commerce at Bucharest (Director-General of Commerce). The Minister, after consulting the Chamber of Commerce, will accord or refuse authorisation. If authorisation to import is granted the goods will be treated in the same manner as those covered by Paragraph 3. (5) On arrival of the goods, the importer must present, in addition to the documents for Customs formalities, invoices in duplicate, and if such has been granted the authorisation to import referred to in Paragraphs 2 and 4. No formality or *visa* for these invoices is required. A commission of 2 per cent. is charged on these invoices by the Customs. This Commission will be charged in leis, at the current rate of exchange as fixed by an Exchange Commission. (6) After the Customs formalities have been complied with, the goods may not be requisitioned by any authority, nor may the circulation thereof be prevented. Nevertheless, the profit at which the wholesale merchants may sell the goods to the retailers, or the retailers to consumers, must not exceed 20 per cent. (7) In the interior of the country the transportation of the goods referred to in Paragraphs 2 and 3 will take place without special formality or authorisation. The railways will reserve each day at least 15 per cent. of the available wagons for the carriage of these goods in the following order:—(a) The carriage of goods for the authorities. (b) The carriage of goods for rural and urban co-operative societies. (c) The carriage of goods for private individuals. A list of the goods which are classed as "articles of luxury" (and in respect of which an import permit is therefore still necessary) may be inspected by British traders interested on application at the Inquiry Room, Department of Overseas Trade (Development and Intelligence), 73, Basinghall Street, E.C.2.

THE RISING RUPEE.

The Exchange Problem and a Policy.

(From A Correspondent.)

The recent rise in the value of the rupee from 1s. 6d. to 1s. 8d. has aroused much criticism, especially from the exporter who already has lost heavily and is faced with prospect of further heavy losses should exchange rise higher. In the main, however, the majority of the criticisms are vitiated in that they fail to distinguish between a rising exchange and a high exchange. The former does cause loss to the exporter, but the latter is immaterial once exchange has been steady for a reasonable period with no prospect of further advance. A proof of this contention is found in the events which followed the closure of the Mint to free coinage of silver in 1893. While exchange was rising to the fixed level of 1s. 4d., the exporter was handicapped, but once the level of 1s. 4d. had been reached no such handicap persisted and the export trade went rapidly ahead, far more rapidly than hitherto, as trade in general was freed of the anxiety of a fluctuating exchange. It must be freely granted that if it were possible to prevent the rise in exchange the rise should be prevented, but it is impossible as it is manifest that the exchange value of the rupee cannot be below its intrinsic bullion value, and that therefore as the price of silver rises so must the value of the rupee. It would seem that the only possible means of prevention would be to recall the present coinage of rupee and coin a new rupee with a smaller silver content, but such a course is practically impossible on account of the magnitude of the task. Although it is impossible for the Government to prevent a further rise in exchange should the price of silver further advance, it is possible to prevent a fall in exchange should the price of silver fall. For the following reasons it seems advisable that a fall of exchange should be prevented and further that the Government should immediately announce its policy that to whatever height exchange may rise from that height it will never fall.

1. The announcement of such a policy would immediately remove all uncertainty of a possible and rapid fall in the exchange value of the rupee, and would therefore enable the importer to operate with the greatest freedom without fear of an unexpected and heavy loss. The exporter would be still hampered by the possibility of a further rise in exchange, but he would be equally so hampered whether the lower limit of exchange was fixed or not.

2. When the price of silver has reached its maximum and until such time as the price recedes to a value making an exchange of 1s. 4d. possible there will be an unstable exchange dependent on the fluctuation in the silver price. Such a fall in the price of silver must inevitably take a very considerable time if it is ever realised; therefore, sooner or later it would seem inevitable that the Government must fix exchange at some figure above 1s. 4d. Surely, therefore, it would be the bold and wise course to announce now that to whatever figure exchange may rise, from that figure it shall never fall.

3. Once the general opinion is formed that the exchange has reached its maximum, those who have resources which they will eventually require at home will immediately take steps to remit home all their surplus cash that they may take advantage of the high exchange to realise the maximum amount in sterling of their surplus rupees in India. Similarly those with funds at home would hesitate to bring their money out to India for the purpose of investing in rupee undertakings. Such action would be disastrous to the expansion of Indian industry as it would deprive India of much capital that would normally be invested here. Such a result was evident last year when the rupee stood at 1s. 6d. with the possibility of falling back to 1s. 4d.; how much stronger would the tendency be with the rupee at 1s. 8d., or even higher.

4. The more the exchange value of the rupee is divorced from its intrinsic value the greater the profit Government make on coinage. Consequently it is to the interest of the Government to fix the exchange value of the rupee as high as possible. Therefore, once the rupee has reached any given value from causes outside control of the Government it is evident that to allow the rupee to recede again in value is for the Government to forego large profits on future coinage. The original parity of 1s. 4d. was not fixed on for any inherent merit in that parity, but rather because that value was the highest that the Government could contemplate would be realised in a reasonable time. Once the Government had announced 1s. 4d. as the final value to be aimed at, it could not subsequently raise the value further by artificial means, as such a course would have resulted in an element of uncertainty. But now that the rupee has advanced through causes outside Government control there seems no valid reason why the old parity should still be adhered to.

5. The pernicious habit of looking upon Rs15/ as being equivalent to £1 sterling is still prevalent, especially in the European retail trade, with the result that retail prices are considerably higher than they should be. In the European shops if Rs12 are taken as equivalent to £1 in order to reckon the corresponding price at home the reply is always given that the correct value is Rs 15 to the £. There is no doubt that the retailer takes full advantage of the confusion. If it were officially announced that the old parity was dead, such imposition would, if not impossible, be far more difficult.

On the other side, it is difficult to find any advantage in allowing the possibility of a fall in exchange to remain. When exchange starts to fall the exporter will be encouraged, but the encouragement of a possible unlooked-for gain is not calculated to increase the volume of exports to the same extent as the possibility of an unexpected loss is calculated to decrease the volume of imports. An unexpected gain is a welcome windfall, but the fear of an unlooked-for loss is a mighty deterrent as such loss may end in disaster which no trader cares to face as it may lead him to irretrievable ruin.

INDIA AS A HARDWARE MARKET.

India is a particularly important market for British supplies of hardware of all kinds. Before the war India's imports of cutlery, implements, and tools (excluding agricultural and machine tools) from the United Kingdom amounted to nearly £300,000 in value, and of hollowware and sundry small hardware to £322,000. In spite of the larger consuming power of the Indian Empire and the consequent increased demand for imported goods, Great Britain only succeeded, owing to difficulties arising from the war, in supplying such goods to India in 1917 to the value of £230,000 and £107,000 respectively. The Indian market for builder's hardware, such as locks, hinges, door-bolts, etc., was worth annually about £150,000 before the war, and this figure represents approximately the value of these imports in 1916-17, although actually the quantity imported works out at less owing to the increase in prices. In domestic hardware, including enamelled ironware, the position formerly held in the import trade by Germany and Austria has not been completely filled, although Japan has made enormous progress. Greater use has, of course, been made of home-manufactured substitutes for the foreign article. Nevertheless, a big business awaits the British manufacturer who can put a cheap article on the market. The British position has not been seriously assailed with respect to instruments and tools generally. Here it is a matter for Great Britain to continue to supply her well-known lines, keeping the price as low as possible in view of the competition of Japanese and locally produced substitutes, and of the well-finished American specialities. In cutlery it may be said the market is waiting for the full resumption of British supplies. In addition to the light hardware goods indicated above, India imports a total value of over a million pounds' worth of heavier hardware, including sugar mills, oil presses, water lifts, and dairy appliances, over three-quarters of this trade belonging to the United Kingdom. Here again American and Japanese competition is steadily increasing.

INDIAN OPIUM.

Its Use in European Medicine.

In pre-war times the opium used in this country for medicinal preparations and for the manufacture of morphine was obtained from Turkey and Persia. It was at one time believed that Indian opium was not rich enough in morphine to be employed for these purposes. Although this is true of a large part of the opium prepared in India for export to the East, it is now clearly established that opium suitable in every way for medicinal use in Europe and for the manufacture of morphine can be readily obtained from certain areas in India. So long ago as 1890 the Imperial Institute suggested to the Government of India that the production of medicinal opium for export to Europe should be undertaken. No action was, however, taken in this direction until 1907, when the question was again considered at the suggestion of the Imperial Institute in connection with the restrictions which were then placed on the future export of Indian opium to China. Finally, after the outbreak of war, the Government of India permitted the export of a certain quantity of opium to the United Kingdom for use by manufacturers of morphine, and it is hoped that the trade thus begun will be developed and firmly established.

The proof that Indian opium is of much better quality than was previously supposed is mainly due to investigations carried out at the Imperial Institute. In a detailed report published in the *Bulletin* of the Imperial Institute in 1915 it was shown that of 102 samples of opium from different parts of India about half could be substituted for the best Turkey and Persian opium employed in European medicine, while an additional 25 per cent. could be used for special medicinal purposes for which a smaller proportion of morphine in the opium is sufficient. The results of further investigations, which are published in the current number of the *Bulletin*, confirm the earlier opinion as to the high quality of Indian opium. The average amount of morphine in 24 samples from various parts of the United Provinces was found to be above the highest standard demanded by the British Pharmacopœia. In fact, 19 of them were so rich in morphine that they would need dilution with lower-grade opium before they could be used for medicinal purposes in the United Kingdom. Similar results were obtained in the case of twelve samples of Benares opium, representing the different kinds available for export, all of which were found to be quite suitable for medicinal use or for manufacturing purposes in the United Kingdom.

INDIAN COTTON MILLS PRODUCTION

Figures compiled in the Department of Statistics in India, from accounts rendered by millowners, give the result of the spinning and weaving in cotton mills in March, 1919, as follows (in thousands of pounds):—Yarn spun, 56,182; woven goods manufactured, 27,805. The total quantity of yarn spun during the month amounted to 56 million lb., and that of woven goods to 28 million lb., as compared with 49 million and 23 million lb. respectively in the corresponding month of the preceding year. In the seven months, September, 1918, to March, 1919, the quantity of yarn spun amounted to 344 million lb., and that of woven goods to 187 million lb., as against 372 and 213 lb. respectively in the corresponding months of the preceding year. In the twelve months, April, 1918, to March, 1919, the quantities produced were 615 million lb. of yarn and 350 million lb. of woven goods. There was a decrease in the production of both yarn and woven goods in Indian mills in 1918-19, as compared with 1916-17 and 1917-18. The exports of cotton twist and yarn in the twelve months, April, 1918, to March, 1919, were only 64 million lb. as compared with 122 and 169 million lb. in the preceding two years.

The Government of Bengal has submitted a Town Planning Bill for the consideration of the Government of India.

The preliminary forecast of the Indian jute crop gives 2,749,120 as the total acreage under cultivation, being an increase of 182,037 acres in Bengal, 53,501 in Bihar and Orissa, and 13,200 in Assam. The percentage of increase is 9.9 above that of last year.

TEA PRODUCTION IN INDIA.

Review of Position in 1917.

The Blue Book, just issued, on the production of tea in India in 1917 states that the total area under tea was 664,300 acres, or 2 per cent. less than in 1916. Estimates had to be made in respect of 39 non-reporting gardens. Of the total area, 614,800 acres were reported to have been planted, as against 601,400 acres in the preceding period. The total number of plantations decreased from 4,486 to 4,252, the decrease being due to the fact that during settlement operations in the Punjab several small plantations were in many cases treated as one. The total production of both black and green teas is reported to have been 370,358,000 lb., an increase of about 2,000,000 lb., the figures for black tea being 368,123,000 lb. While the area under cultivation has increased by 24 per cent. in the decade the increase in production has been 51 per cent. The highest production per acre in 1917 was in Lakhimpur, Assam, namely 75 lb. per acre, while the lowest production was in Garhwal, United Provinces, namely, 22 lb. For the whole of India, excluding Burma, the average production per acre was 604 lb., a decrease of 10 lb.

Record Exports.

The total export by sea in 1917-18 amounted to 359,182,305 lb, as against 291,439,082 lb. in 1916-17, an increase of 23 per cent. and a record. Exports to the United Kingdom amounted to 266,963,516 lb., an increase of 19 per cent.; but those to Russia, the second best customer for Indian tea in Europe, decreased by about twenty million pounds. France, whose imports in 1916-17 were only 80,078 lb., in the period under review took 719,696 lb. The total exports to Europe, excluding the United Kingdom, decreased by 18,576,000 lb. Shipments to almost all the African countries increased, the total trade amounting to 11,431,427 lb., as against 2,393,863 lb. The principal increase was in the case of Egypt, whose imports rose from 1,081,273 lb. to 6,226,321 lb.; while Cape Colony took 3,229,163 lb., as against 605,973 lb.; and the exports to Natal were 1,081,548 lb., as against 118,000 lb. There was a great increase also in the exports to American countries, the total exports amounting to 43,911,312 lb., as against 13,216,358 lb. Of this total Canada took 21,152,917 lb. as against 8,443,092 lb.; while the exports to the United States increased from 3,031,648 lb. to 20,665,481 lb. The total exports by sea to Asiatic countries decreased by one million pounds. China, Ceylon, Persia, Arabia, and Asiatic Turkey (mainly Mesopotamia) are India's best customers in Asia, and the exports to all of these, except China, increased. In the case of the trade with China the exports declined from nine million pounds to about three million pounds. Australia, New Zealand, and the Fiji Islands imported between them about 5,616,000 lb. more than in 1916-17. The stoppage of exports from the United Kingdom resulted in increased direct shipments to Canada, the United States, South Africa, and South America. Exports by land increased by 285,000 lb., or 25 per cent. The tonnage shortage, it is pointed out, was the controlling factor in the trade of the year. The scheme of the Food Controller of H.M. Government for purchasing and shipping Indian tea between November 1, 1917, and May 31, 1918, relieved the Indian market during the latter part of the season. The Food Controller originally contracted for 40 per cent. of the crop, but ultimately contracted for 25,000,000 lb. in excess of this amount, and finally took all the tea that was offered in order to fill the available tonnage.

Prices.

The average price per lb. realised for all teas sold at public auction during 1917-18 was 7as. 3p., as against 8as. 8p. in 1916-17 and 8as. 11p. in 1915-16. The Calcutta market opened on June 12, 1917, with common Pekoe Souchong at 6as. 6p. per lb. Early in September the quotation had declined to 4as. 6p. per lb. The Government contract brought about a gradual recovery, and the Home Government's scheme left very little common tea for distribution in the market. 7as. was reached in December, but was followed by a smart drop to 5as. 6p. At the end of the season, however, a large Army order forced the price up to 7as. 6p.

The report states that the present position and prospects of the tea industry appear to be satisfactory, although it is difficult in existing conditions to forecast the future. The immediate future of the industry is largely a question of shipping. There is no doubt that a large demand will continue. Supplies are stated to be short in most of the consuming countries, and it seems doubtful whether production will be able to cope with the demand for several years to come.

ENGINEERING NOTES.

Woodworking Machines for Roumania.

It is well known that Roumania is one of the best markets for agricultural machinery in the Balkan States; but it has not apparently been realised yet by British makers of woodworking machinery that she is just as good a market for their production. The timber trade is the third most important industry of Roumania, and with the extension of her territories her position in that respect will be greatly improved. The forests are extensive, contain valuable timber, and are carefully exploited. Timber is exported in the rough, dressed, and in a manufactured state to the average value of £1,200,000 annually. Some of the sawmills are large, and were equipped with German and Austrian machinery. Their number in recent years has been increasing, and according to recent reports timber-working appliances, framesaws, circular saws, planes, lathes, moulding and tenoning machines, cabinet makers, joiners, and carpenters machines and tools are much wanted. It is interesting to note that while more woodwork was being exported there was also a flourishing import trade of certain timber products, especially the choicer kind of cabinet work and furniture, the value reaching about £400,000 a year. Part of this was imported from England, but France and Austria were more favoured in these lines. It is intended to check this importation by developing Roumania's own timber industry on thoroughly modern lines. Considerable expense will consequently be incurred in equipping the old and new woodworking factories with modern machinery. In view of this fact British manufacturers of such machinery should be prepared for the occasion. The case is urgent, and some foreign competitors are already on the spot. In the circumstances, therefore, publicity, by judicious advertising in papers which reach the commercial and industrial classes of the country, or by means of showrooms, is certainly advisable in order to counteract some of the disadvantages of distance. One point in the British manufacturer's favour is that the quality of British machinery is well known in Roumania, and that very sound business relations already exist between the two countries. But, of course, that will not be of much help to manufacturers if the latter simply wait for the buyers to come to them. With the opening for free traffic of the Dardanelles, the importance of the Black Sea port of Braila is evident. This town has a large, highly industrial population, and the establishment of permanent British stores and show-rooms would undoubtedly bring a closer intercourse in trade and commerce between Roumania and the United Kingdom.

Fresh Meat from the Near East.

The war is responsible for the interruption of an important scheme being carried out, for the commercial value and success of which no doubt could be entertained. It was based on the exportation of fresh meat, fruit, fish, etc., from the Near East to the United Kingdom and the Continent. Cold storages were being planned in Roumania, Serbia, and Greece, and a certain number of steamers plying between England and the Ægean and Black Seas were to be fitted with refrigerating installations for frozen meat. So far as known, a German firm was likely to supply the necessary refrigerating plant of machinery—a firm which had already been doing considerable business with the East. The apparent preference given to the German system must be attributed to the fact, strange though it seems, that the latest British refrigerating systems were not sufficiently known, though they are superior to the German, and in some instances cheaper. The slaughter-houses, storage depots, etc., were planned in accordance with the British system in similar enterprises. It is said that as soon as the shipping difficulties are over the interested parties intend to carry out their original scheme—minus, it is hoped, the origin of the refrigerating plants—and thus the prospects of having in the British market fresh meat from the Balkan mountains and the plains of Roumania and Greece, and fresh fruit from Greece, Asia Minor, and the Ægean islands are evidently very hopeful. In the meantime it would be advisable for British manufacturers of refrigerating plants to make their productions and systems better known in the Near East, where, apart from such enterprises as the one mentioned above, the local steamship services and the general public will soon prove desirable buyers.

A British Refrigerating System.

It may be of interest to those who are concerned in the above enterprise and to others to give a few notes on the simplicity, efficiency and economy of a British refrigerating plant. The system generally employed for the importation of meat, fish, fruit, dairy produce, etc., is the Dry Air Carbonic Refrigeration in which carbonic anhydride is used. This material is a most powerful refrigerant, and is applicable to commercial purposes; incidentally it may be mentioned that it is the gas which is used for making all aërated waters, and constitutes the sparkle of wines and bottled beer. The refrigerating machine consists of (1) the compressor in which the gas drawn from the evaporator is compressed; (2) the condenser, consisting of coils, in which the compressed warm gas is cooled and liquified by the action of cooling water; and (3) the evaporator, consisting of coils, in which the liquid carbonic anhydride evaporates, producing any degree of temperature that may be required down to 80 degrees below freezing point. The required quantity of carbonic anhydride originally put into the machine is used over and over again, going progressively through the process of compression, condensation, and evaporation. Thus a small quantity only is required to be added from time to time in order to replace any small losses, and for this purpose carbonic anhydride is sent in steel cylinders to any part of the world. The cost of the material is only a few pence per pound, and the quantity required for a complete charge is very small.

Roumania's National Bridge.

According to recent information, a business man, long resident in France and prominent there in the steel-nail industry, is now in the United States with a proposition to rebuild the Roumanian national Bridge across the Danube. The estimated cost is stated to be about £48,000, and it is claimed that the work is so urgent as to make it impossible to wait for deliveries of steel from European mills and bridge shops.

Threshing Machines for Greece.

In the rush of American and Continental travellers all over the Balkan States to secure orders for agricultural machinery, which now is the great desideratum in that region, it is very satisfactory to hear that a large British firm of threshing machine makers are engaged upon a £50,000 contract from Greece for the supply of their special threshing outfits to that country. The order was placed some months ago, but at that time such problems as labour and the supply of materials were chronic, if not acute. Delivery could not be promised for the period desired, but, it is said, that already the first consignment is on the point of arriving at Piræus or Salonika. The order may be completed before the end of the year.

COMPANY MEETINGS.

P. and O.

Resolution for Modification of Charter Confirmed.

An extraordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held on July 18 at the offices, 122, Leadenhall Street, E.C., for the purpose of confirming if thought fit, the resolution passed at an extraordinary general meeting and at separate meetings of the preferred and deferred stockholders, held on July 3, as follows:—"That the regulations set forth in the Second Schedule to the Ninth Supplementary Charter of the Company of the 8th day of September, 1903, be altered and added to in manner following, that is to say, by inserting the following new regulation after Regulation No. 102, under the heading 'Capitalisation of profits and payment of dividends in specie'—namely:—102a. Notwithstanding any rights conferred on stockholders by Clause 14 of the company's charter of the 8th September, 1903, the company shall have the following powers:—(a) The company may from time to time or at any time by resolution passed in general meeting capitalise any sum or sums forming part of any undivided profits of the company whether standing to the credit of any reserve fund or not, and direct the appropriation of the sum or sums so capitalised to and amongst the members of the company who would have been entitled thereto if the same were distributed by way of dividend, and provide for the distribution of such capitalised profits by way of capital distribution by directing that the same shall be used to pay up unissued stock of the company of any denomination or denominations on behalf of such members, and that the stock so paid up shall be distributed as capital amongst such members in proportion to the amounts which would have been received by them if such profits had been distributed by way of dividend as aforesaid and in satisfaction of their shares and interests in the sum or sums so capitalised as aforesaid; (b) any general meeting declaring a dividend or bonus may direct that such dividend or bonus be paid wholly or in part by the distribution of specific assets and in particular of paid-up stock or securities of the company or of paid-up shares, stock, or securities of any other company, or in any one or more of such ways, and such resolution shall be effective and effect shall be given thereto by the directors accordingly; (c) where any difficulty arises in regard to any distribution to be made as aforesaid the directors may settle the same as they may think expedient, and in particular may issue fractional certificates, fix the value for distribution of any stock or specific assets or any part thereof, and may, in order to adjust the rights of all parties, determine that cash payments shall be made to any members upon the footing of the value so fixed, and may vest any such stock or specific assets in trustees upon such trusts for the persons or corporation entitled to share in the distribution, or any of them, as may seem expedient to the directors; (d) where requisite the directors may appoint any person to sign a contract for allotment and acceptance on behalf of the persons entitled to share in any such distribution as aforesaid or any of them, and such appointment shall constitute the person so appointed the agent of the person or corporations entitled for the purpose of executing the contract." Lord Inchcape, G.C.M.G., G.C.I.E. (chairman and managing director), presided.

The Secretary (Mr. F. J. Abbott) having read the notice convening the meeting and the resolution,

The Chairman said:—Gentlemen, on July 3 the company held three meetings, at which the resolution just read by the secretary was passed. It is necessary that this resolution should be confirmed at the extraordinary general meeting which we are holding to-day, and if it is your pleasure that we should take the resolution as read it will save me the trouble of reading it again. Is that your pleasure? ("Agreed.") I beg to propose, therefore, "That the resolution passed at the extraordinary meetings held on July 3 be now confirmed" and I will ask Sir Montagu Turner to second it.

Sir Montagu Cornish Turner: I have much pleasure in seconding that resolution.

The Right Hon. Sir Fortescue Flannery, Bt., M.P.: I think it would be rather a pity, if I may say so, that even at this confirmatory meeting so important a change should take place without some observation from the shareholder side of the table. I noticed in the report of the original meeting that no shareholder took any part in the proceedings except to ask a question, and therefore I have come here to-day, my lord, for the purpose of saying how cordially I for one—although only a comparatively small holder of deferred stock—and I believe the stockholders generally, and also the public, will endorse this policy of the board. The board are doing much the same as the Chancellor of the Exchequer has just completed doing with regard to national affairs; that is to say, funding cash obligations and substituting stock for cash, precisely the same transaction. And just as there was a perfectly sound reason—an overwhelming reason—for performing that operation in national finance, so I think there is an equally important reason in reference to this, the premier, or one of the premier, steamship companies of the world. We feel, as you said, my lord, in your speech a fortnight ago, that the supremacy of British shipping is not in jeopardy, but threatened with very serious competition. The only figures I will refer to are the number of berths in the United States and in this country for building ships. Roughly, they are as 600 in the United States to 200 in the United Kingdom. That is to say, the present power of production of tonnage in the United States is something like three times as great as the power of production in the United Kingdom; and so long as the price of tonnage continues at its present enormous figure, so long will our friends at the other side of the Atlantic continue to build in competition with us. Well, my lord, that shows we—shareholders and the public alike—must support enterprise in this country wherever we find enterprise. We certainly find it here, and we certainly think that the board, in desiring to make every item of the company's funds available for increasing the tonnage of the P. and O. fleet, are acting wisely. I believe the shareholders and the public alike will most thoroughly and cordially support that policy in the national interest—which, as a matter of fact, it is, as well as a matter of business necessity, prudence, and good judgment.

In answer to a question by Mr. T. W. Stevens, a preferred stockholder, the Chairman said: I explained, I think, on July 3 what the position was with regard to the preferred stockholders, and I mentioned that their position would be substantially improved if the company husbanded its assets. In regard to giving the preferred stockholders an increased dividend, that we could not think of entertaining for a moment.

The resolution was then put to the meeting and carried unanimously.

The proceedings then terminated.

MORTGAGE COMPANY OF EGYPT.

Prosperous Economic Position.

The eleventh annual general meeting of the Mortgage Company of Egypt (Limited) was held on July 23 at Cannon Street Hotel, London. Sir Henry Babington Smith, K.C.B., C.S.I., (the chairman), presiding.

The Secretary (Mr. R. H. Eggar) read the notice convening the meeting and the certificate of the auditors.

The Chairman, in moving the adoption of the report, said: Egypt during the war has been in a singularly fortunate position. Her territory served as a base and training ground for large forces, but, though her frontiers were threatened in the early part of the war, no operations took place in Egypt proper. There has been no increase in the national debt, and very little addition to taxation. The obstacles attending the supply of coal and other imports created serious difficulties, but, on the other hand, the products of the country have been sold at very high prices, with the result that there has been a large addition to the accumulated wealth of the country. There can be no doubt that, broadly speaking, the economic position of the country is one of great prosperity. The political situation can hardly be regarded with equal satisfaction. In the course of the autumn an inquiry into the cause of the disturbances and the condition of Egypt generally will be conducted by a Commission, of which Lord Milner will be the head

Cotton Crop.

The cotton crop of 1917-18, which amounted to 6,293,000 cantars, had a value, at the average price of 38½ tallaris per cantar, of 48½ million pounds Egyptian, to which must be added 4½ millions for the cotton seed, making a total of 52¾ millions. The corresponding figures for the crop of 1918-19 are not yet available, but it will be remembered that the British and Egyptian Governments agreed to purchase the whole crop at the price of 42 tallaris per cantar for the standard grade. The yield was less than in 1917-18, since the area was restricted; but as the price was higher, the total value was not very far short of that of the preceding year's crop. For the crop of 1919 the area is unrestricted, and, provided nothing exceptional happens, it should be a fairly good one. Owing to unusually cold weather in April and May it is somewhat backward in development. The scheme of Government purchase no longer applies, and the market will be free. There seems, however, no reason why the demand and the price should not be good, perhaps better than last year's.

The observations made by Mr. Foster last

year concerning the effect of these prosperous economic conditions on mortgage business apply with equal force this year. Borrowers have been able to pay off arrears and to reduce their debts, and there has been very little demand for new loans Land has been in some request, and there has been a substantial rise in the value of good agricultural property, but the demand has not been so active as might have been expected, having regard to the large amount of capital that must be in the hands of farmers and landowners awaiting investment.

Balance Sheet.

You will see the result of these conditions in our balance-sheet. Our investments in first mortgages, which in 1915 amounted to £3,481,000—that was the highest figure reached—have now been reduced to £2,756,000; while the loan on current account from the Agricultural Bank of Egypt, which at one time amounted to £1,080,000, has been reduced to £20,000. The instalments in arrear, which on March 31, 1916, amounted to £410,938, have now been reduced to £168,663, while the property acquired by foreclosure, which in March, 1917, had risen to £173,496, is now reduced to £117,592—a sum which we believe to be amply covered by the value of the property in question.

At the same time our reserves have been greatly strengthened. With the addition which we propose to make this year, the general reserve will stand at £180,000, and there will be a reserve for bad debts of more than £28,000. I think you will agree that the position of the company is a thoroughly sound one, and that we may look to the future with confidence and satisfaction. There is, however, one element which, in looking to the future, gives some cause for anxious consideration. The volume of our existing loans is steadily diminishing as the instalments are paid, and in present conditions in Egypt there is no demand for new loans to take their place or to employ further capital. Up to the present time this shrinkage of our investment has been met by the repayment of the advance which had been made to us by the Agricultural Bank of Egypt, but it is probable that we shall soon find ourselves in the position of being unable to employ in our normal business the whole of the company's own capital. All that I am able to say at the present time is that the board are giving careful consideration to the problem thus created. We have, as usual, written off £E1,500 from the value of our freehold premises in Cairo, and, having regard to the improved position, we think it will be sufficient to write off £2,700 from property acquired by foreclosure, £2,500 from instalments in arrear, and to make a further provision of £3,300 for bad debts. We propose to increase the general reserve by £10,000, and from the balance which remains to pay, as last year, a dividend of 8 per cent. on the ordinary shares. This enables us to carry forward to the current year a slightly increased balance.

Sir William E. Garstin, G.C.M.G., G.B.E., seconded the resolution, which was unanimously adopted.

The Imperial Bank of Persia has reopened its branch in Bombay.

Sir Thomas Barlow

writes:—"I do not smoke myself, but my friends say the 'De Reszke' Cigarettes are excellent."

Spencer Leigh Hughes, Esq., M.P. writes:—"I have tried the 'De Reszke' Cigarettes and can say that they have been in no way troublesome to the throat as other sorts have been."

Lawson Wood. Esq. writes:—"If everything that ends in smoke were half as good as the 'De Reszkes' what a glorious world it would be!"

Madame D'Alvarez writes:—"I find your 'De Reszke' Cigarettes most excellent and soothing."

IT is not easy to secure the praise of discriminating smokers. Only real merit can win such high approval.

"De Reszke" The Aristocrat of CIGARETTES

Sold at all Tobacconists, Stores, and Military Canteens.

COMPANY NOTES & REPORTS

Nedeem Tea.

The report of the Nedeem Tea Company for 1918 states that the crop totalled 6,606,479 lb. The balance brought forward, including a refund of £11,881 on account of excess profits duty paid in previous years, was £38,347. The revenue account shows a profit of £64,022. After adding £530 interest on investments and deducting £25,057 for income-tax there is a balance available of £77,841. The directors recommend dividend on preference shares of 5 per cent., less tax already paid, £9,619; interim dividend on ordinary shares of 5 per cent., less tax, already paid, £4,809; final dividend on ordinary shares of 20 per cent., less tax, making 25 per cent., £19,237; reserve account, £10,000; machinery and tramway account, £3,000; directors' additional remuneration, £2,000; carry forward, £29,175.

East India and Ceylon Tea.

The report of the East India and Ceylon Tea Company for the year 1918 states that the profit amounted to £22,369, making the balance available £24,318. Out of this the directors propose to place to general reserve account £6,270, to provision for income-tax £5,000, and recommend a dividend of 10 per cent (less tax) on the ordinary shares, leaving to be carried forward (subject to refund of excess profits duty) £5,518.

Makum Tea.

The report of the Makum (Assam) Tea Company for 1918 states that the profit, after providing for all charges and debenture interest, is £11,203. Add balance brought forward after payment of excess profits duty, £2,451, leaving £13,654. From this there has to be deducted interim dividend at 5 per cent., £2,500, leaving available £11,154. The directors recommend a final dividend of 15 per cent., less tax, amounting to £7,500, making 20 per cent.; and that £3,654 be carried forward.

Singlo Tea.

The report of the Singlo Tea Company for 1918 states that the net profit works out at £26,945, to which must be added the balance carried forward after deduction of excess profits duty and donations to war funds, £28,682, leaving £55,627. The preference dividend will absorb £6,825, and the directors recommend the payment of a dividend on the ordinary capital of 20 per cent., of which 2½ per cent. was paid on January 1, 1919, the balance to be carried forward being £27,802.

Pathini Tea.

The report of the Pathini Tea Company for 1918 states that the credit balance amounts to £18,789. The sum of £6,595 was received on account of excess profits duty paid in previous years, and, including this and sundry adjustments, the balance brought forward from 1917 is £44,717. Adding £718 for interest on investments and deducting £4,825 for balance of tax and directors' additional remuneration, the credit balance is £62,399. The preference dividend, of which 3 per cent has been paid, requires £1,860. Interim dividends have been paid on the ordinary shares amounting to £9,300. The directors now propose to pay a final dividend of 10 per cent., making 25 per cent. for the year, payable at once, £6,200; depreciation on investments, £1,000, leaving to be carried forward £44,039. An ad interim ordinary dividend of 5 per cent. on account of 1919 will be paid simultaneously with the final dividend for 1918. The investments account, after writing off £1,000 for depreciation, will stand at £14,606.

EGYPTIAN MARKETS.

The returns of the Egyptian Markets, Ltd., for the week ended July 10 were:—Cattle markets, £404; general markets, £485—total, £889; total for year, £32,340. The figures for the corresponding week in 1918, ended July 11, were:—Cattle markets, £170; general markets, £353—total, £523; total for year, £28,534.

The Chartered Bank of India, Australia and China announces the election of Mr. James Maxwell Grant Prophit as a director of the bank.

NEW COMPANIES.

Guardian Eastern Assurance.

The Guardian Eastern Assurance Company, Ltd., was registered on July 17 with a capital of £1,000,000, in £1 shares. The company is to carry on all kinds of insurance, reinsurance, and guarantee business in any part of the world, except (a) issuing bonds or endowment certificates by which the company, in return for subscriptions payable at periodical intervals of two months or less, contracts to pay the bondholder a sum at a future date, and not being life assurance business, and (b) the business of guaranteeing the sufficiency or repayment of any mortgage debentures or other security for any loan; and particularly to carry on fire, boiler, engine, motor car, accident, life, fidelity, marine, publicans' license and other insurance and guarantee business, with special reference to persons and property in, exports to and imports from, and all forms of trading with regard to Egypt, Palestine, Mesopotamia, India and other Eastern countries. £21,400 Five per Cent. War Loan 1929-47 Bearer bonds have been deposited with the Paymaster-General of the Court in respect of life assurance, and a like amount in respect to employers' liability assurance. pursuant to the Assurance Companies Act, 1909. The number of directors is not to be less than two nor more than seven. The first are:—A. I. Belisha, 63, Old Broad Street, E.C., stockbroker; T. G. C. Browne, Barnhill, Hayes Lane, Bromley, Kent, retired actuary; S. J. Cohen, 11, St. Peter Street, Manchester, merchant; P. L. Gell, J.P., Chaulk Hill, N.W.10; E. Hubbard, 17, St Helen's Place, E.C., Russia merchant; Sir Edward R. Henry, Bart., 29, Campden House Court, W.; Colonel Sir Herbert M. Jessel, Bart., 24, South Street, Park Lane, W.; N. Larki, Bridgewater House, Whitworth Street, Manchester, merchant; G. W. Reynolds, 11, Lombard Street, E.C.3, general manager of Guardian Assurance Company, Ltd. Qualification, 1,000 shares. Remuneration (except a managing director), £2,100 per annum, free of income-tax, divided between them. On a poll the Guardian Assurance Company, Ltd., shall have ten votes for each share and every other member shall have one vote for each share. Secretary, N. Westrop. Registered office, 11, Lombard Street, E.C.3

COMPANY RESULTS.

East Indian Railway.—Annual meeting will be held at the Cannon Street Hotel, E.C., on July 30, at 12.30 p.m.

The report of the Rupajuli Tea Company states that there is a profit of £4,638. The directors recommend a final dividend of 12½ per cent., making 20 per cent. for the year.

The report of the Ghoir Allie Tea Company states that there is a profit of £3,817. The directors recommend a final dividend of 60 per cent, less tax, making 90 per cent. for the year.

The report of the Borelli Tea Company states that there is a profit of £11,764, making available £14,661. Final dividend of 5 per cent., less tax, making 10 per cent. for the year.

The report of the Rajmai Tea Company states that there is a profit of £17,177. The directors recommend a final dividend of 15 per cent., less tax, making 25 per cent. for the year.

The report of the Ragalla Tea Estates for the year 1918 states that net profit is £7,830. The directors recommend a final dividend on the ordinary shares of 7 per cent., making 12 per cent.

Privileged Company to Protect Production and Trade in Currants Five per Cent. Sterling Loan.—Coupon No. 19, representing the half-year's interest due August 1, will be paid by Messrs. Erlangers, 8, Crosby Square, E.C.

EGYPTIAN DELTA LIGHT RAILWAYS.

The traffic returns of the Egyptian Delta Light Railways, Ltd., for the ten days ended June 20 amounted to £E6,884, as against £E6,302 for the corresponding period of 1918. The total receipts from April 1 amount to £E31,046, a decrease of £E28,781 in last year's figures.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market during the past week has been rather more subdued. Producers, however, have not lost any of their strength, and much indifference has shown itself as to the falling off in demand. Many producers rather welcome the slower pace. Trade has undoubtedly been affected by the labour outlook, and the difficulties connected with international exchange. There has been more discussion as to the probable course of prices in Egyptian cotton when control is abandoned at the end of this month. Many people seem to think that values will go higher. The acreage for the new season is expected to be about 1,550,000 feddans, as compared with 1,300,000 feddans twelve months ago. Egyptian yarns have been dearer. Producers are very busy, and the owners of some mills are trying to avoid booking fresh contracts until more is known as to future prices in the raw material. Bolton spinners have a very wide margin of profit. On the whole cloth demand for Egypt and the Near East has not been quite so active as recently. It is now also impossible for shippers to secure delivery this year. There have been offers about, however, in sized and bleached cloths. Inquiry for India and China has been of rather smaller dimensions. Printing cloths, however, have not been altogether idle. American yarns have hardened in price, but trading has been somewhat restricted. In export descriptions, however, inquiry has been extensive, there being an encouraging turnover for China, India and several outlets of the Continent. Egyptian cotton freights for the new season are said to be fixed at 70s. against 67s. 6d. at present.

TRADE WITH SOUTH RUSSIA AND THE UKRAINE.

In the House of Commons on July 17 Lieut.-Commander Kenworthy asked the Secretary of State for Foreign Affairs whether trade was permitted with Southern Russia and the Ukraine through Odessa and other Black Sea ports; and whether there were any British diplomatic and consular representatives in the Ukraine and the Caucasus respectively.

Mr. Harmsworth, who replied, said:—Trade is not permitted with those parts of Southern Russia or the Ukraine which are under the control of the Soviet Government. Trade is not only permitted, but is actively encouraged, by His Majesty's Government with part of the districts under General Denikin's control. For further particulars on this head, I would refer the hon. and gallant member to the official announcement which appeared in the Press on June 20. As regards the second part of the question, there are no diplomatic nor consular representatives of His Majesty's Government in the Ukraine, nor diplomatic representative in the Caucasus. His Majesty's Government are, however, represented by consuls at Novorossisk and at Batoum.

SMYRNA-AIDIN RAILWAY.

The estimated traffic receipts of the Smyrna-Aidin Railway for the week ended June 28 amounted to £5,106.

The period under which the export of cattle is permitted from Morocco has been extended to September 30.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated July 16:—

Good rain throughout except in north-west frontier where precipitation was local.

Bombay cotton market steady, fully good broach July-August quoted 590, eight annas. Piece goods market quiet but steady. Calcutta jute market firm though business limited. Hessians firm. Fair interest, advancing prices. Sackings quiet but steady, poor demand.

Ahmedabad Kapadvanj railway reconnaissance survey by Bombay, Baroda, and Central India Railway Co. sanctioned.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agriculture Department, dated July 18:—

Our telegram dated July 11. On account of good rainfall and agricultural operations, distress is generally decreasing except in affected areas, Madras. Improvement most marked in United Provinces and Central Provinces. Numbers relieved:—Bengal: relief works 4,279; test works, 2,222; gratuitous relief, 20,278. Bihar and Orissa: relief works, 4,491; test works, 115; gratuitous relief, 34,914. Feudatory States of Orissa: test works, 10,637; gratuitous relief, 22,082. United Provinces: test works, 10,978; gratuitous relief, 20,327. Rajputana: (incomplete figures) test works, 3,651. Ajmer-Merwara: test works, 419; gratuitous relief, 410. M. C. Jannet, Manager of the Crédit Foncier Bank returned to Cairo recently from Paris.

Mr. J. P. Simpson has been elected Vice-Chairman of the Madras Chamber of Commerce in place of Sir Bernard Hunter, resigned

The total value of imports into India from Japan was £22,404,000 in 1918-19. Only a small proportion of the imports were not manufactured goods.

M. K. Stoyanovitch and M. V. Yankovitch, former Serbian Ministers of Commerce and Agriculture, with M. Protitch, a Serbian lawyer, have been appointed delegates to the forthcoming inter-Allied Economic Conference in London.

An official stamp to guarantee the authenticity and quality of Moorish carpets has been instituted in the French Zone of Morocco. A Dahir, dated June 22, states that the mark shall be impressed in ink on the back of the carpet It represents a Solomon's seal with the letters M.A.R.O.C. in the angles.

The Secretary for India notifies that the Deputy Master of the Royal Mint at Ottawa has been authorised to sell immediate telegraphic transfers on India without limit of amount against the deposit at the Ottawa mint of gold coin and bullion at the rate of one rupee for 9.416ℰ grains of gold.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

In the early part of the week the activity and upward tendency continued in Egyptian securities, but during the last few days there has been a lull, and with the labour unrest here and the slackening in orders from Egypt the market has become weaker with certain recessions in prices here and there. In Government stocks Egyptian Unifieds are closing ¼ lower at 85¼, and there has been a similar decline in the 3½ Preference Loan to 72¼.

Amongst Bank shares National Banks, after jumping to 21⅜, buyers are finishing 3-8 higher at 21 5-8; but sellers remain scarce. There has been no change in either Agricultural Banks or Land Banks, but Anglo-Egyptians are 1-8 off at 17 7-8.

In Land shares Béhéras, after being 14 7-8 bid, were dealt in in a fairly large way at 14½, at which price they closed, being ¼ down. Delta Lands and New Egyptians, after the recent rise, have been subjected to a fair amount of profit-taking and are in each case 1s. 3d. down at 15s. and 24s. 9d. respectively. Sudan Plantations, after touching 7⅜, finish ¼ down at 7 3-8. A fairly large business has again been transacted in Consolidated Lands, which are closing, however, fractionally easier at 2s. 11d.

In Miscellaneous descriptions Alexandria Waters are 1-16 lower at 12 3-16, but Salt and Sodas finish 1-8 higher at 3½, after being as high as 3 5-8. Khedivial Mails, both Ordinary and Preference, have shed 1-8 to 5 7-8 and 4 1-8 respectively.

In Oil shares Anglo-Egyptians B. close ¼ down at 5 9-16, and Roumanians have dropped 1s. to 21s. 9d. Traians, after being down to 12s. 3d., close only fractionally lower at 12s. 6d.

In Greek securities a fair line of Monopolies changed hands in the neighbourhood of 57 5-8 and are now quoted round 57½—a drop of a ¼. The 1881 and 1884 Loans are both somewhat quieter round 73½—a drop of ¼. The 1890 Loan has been exceptionally weak, and is 1½ points down at 71½. The 5 per cent 1914 Loan has also been dull and closed 2 points down at 84. There has again been some business in Piraeus-Athens 4½ per cent Bonds round 68½.

THE SUDAN LOAN BILL.

The Bill authorises the Treasury to guarantee interest on a loan to be raised by the Government of the Sudan not exceeding an amount sufficient to raise £6,000,000, for irrigation and other works in the Sudan. The maximum period of the loan would be forty years, and the liability of the Treasury is limited to the interest, the amount of which will depend on the rate at which the Sudan Government are able to raise the loan. The Bill provides that the Treasury guarantee shall not be given until the Government of the Sudan have provided to the satisfaction of the Treasury and the Foreign Office for raising the loan, for establishing sinking fund, for charging on the general revenues and assets of the Sudan the principal interest and sinking fund payments of the loan, and for raising sufficient money to meet the above charges. Consequently, it is not probable that any charge will, in fact, fall upon the Imperial Exchequer in respect of the guarantee. The above guarantee takes the place of the guarantee of interest on a loan sufficient to raise £3,000,000 given under the authority of the Government of the Sudan Loan Act, 1913

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

NOTES OF THE WEEK.

The Balkan scaremonger is becoming more impartial in his outlook. He has manufactured so many risings and tumults in Bulgaria for France's edification that some of the shrewder observers were beginning to inquire what General Franchet d'Esperey and General Chrétien, who are together responsible for Bulgaria's observance of the Armistice, were supposed to be doing all this time. The same question may be asked when it is reported that Bulgarian soldiers attacked a "regiment of French troops as they were landing at Lom Palanka." The same mischief-maker now turns his attention to Yugoslavia. "A military revolt has broken out in the South Slav garrison at Marburg, and Croatian soldiers have in various towns proclaimed a republic." It is not true, of course; if it had been, we probably should not have heard of it. But it is a good sample of Balkan "news" that our pro-this or pro-that enthusiasts seize upon with avidity and make use of to confirm their preconceived ideas. Revolution-mongering is a favourite device of fishers in troubled waters. A fresh revolution in Bulgaria is also announced. As none of the others happened, we may regard this one with some scepticism. The pity is that our English newspapers publish these bogus reports.

The Allies could have saved themselves a considerable amount of worry and inconvenience in South-Eastern Europe if they had had any real knowledge of actual conditions in that part of the Continent. It would have hurt the feelings of none of the smaller States allied to Great Britain and France if at the outset they had been informed that in the interests of all concerned no Balkan troops would be used for occupation purposes outside the old boundaries of the States. The collisions between Italians and Yugoslavs, the friction between Serbians and Roumanians, and the troubles in Asia Minor would all have been avoided. In Hungary—or, rather, what is left of it as a result of the dismemberment of the Dual Monarchy—a British corporal's guard—or, at least, a British officer, with or without an escort, would probably have prevented the success of Bolshevism. The advance of Roumanians and Czecho-Slovaks galvanised the Magyars into self-defence, whereas nominal occupation by Great Britain or France would have brought home to them the futility of kicking against the pricks, and would doubtless have given them the lead required in the work of economic reconstruction that might have saved them from becoming a prey of Bolshevist theories.

Late in the day the Allies have decided upon drastic action against Bela Kun. He flouted the Armistice but they continued to negotiate with him. A fresh agreement was reached according to which Magyars, Roumanians, and Czecho-Slovaks were to withdraw their forces and leave a neutral zone separating the three armies. Again Bela Kun played false. This time the Allies have issued a declaration addressed to the "Hungarian" people (presumably "Magyar" is meant), pointing out that "if food and supplies are to be made available, if the blockade is to be removed, if economic reconstruction is to be attempted, if peace is to be settled, it can only be done with a Government which represents the Hungarian people, and not with one that rests its authority upon terrorism." A more practical step is the arrangement for a Franco-Serbian advance against Bela Kun's forces, which ought to have been undertaken long ago.

Some excitement was caused a few days ago by a statement, put forward by an Athens newspaper and cabled to London by a news agency, that Cyprus was to be handed over to Greece by Great Britain. According to the Athens journal, General Allenby had informed the Greek Diplomatic Agent in Cairo of the impending transfer, which was to take place on July 29. Naturally, the statement was received with considerable scepticism in this country, the more so as the *Times'* political correspondent, who is usually well informed, had written only a few days earlier:—"It is understood that the Government have decided that Cyprus shall remain under the British flag." The Foreign Office has since announced that the statement put forward by the Athens journal is wholly devoid of foundation; and on Wednesday Mr. Bonar Law informed the House of Commons that no decision had been taken as to the fate of the island, and that the Government would do nothing to commit the country without the knowledge of the House. London, therefore, was shown to be better informed on the subject than Athens.

King Peter of Serbia, whose return to his own country is chronicled this week by our Belgrade Correspondent, is reported by the *Petit Parisien* to be anxious to abdicate in favour of the Prince Regent, Alexander. In view of his Majesty's advanced age, and the experiences through which he has passed in the years of the war, which are known to have tried him sorely, such a report will surprise nobody. Should King Peter carry out his intention and retire to a monastery, he will be copying the example set by Stephen Nemanya

Digitized by Google

and other early Serbian rulers, and he will carry with him into his retirement the good wishes not only of his own subjects, but of many Englishmen and other Europeans.

The recent disturbances in Malta appear to have affected the island unfavourably in regard to the export of news. Nothing has reached us from our own Correspondent for several weeks, and news from other sources is very scarce. Piecing together such items as are available, we receive the impression that the island as a whole is suffering rather badly from the results of the general demobilization, and that a section of the population is also sulking over more or less imaginary grievances connected with the late riots. The most recent riot, by the way, occurred in the prison, and as a result thirty-eight of the convicts are to be tried by court-martial.

Possibly as a result of the numerous trials of spies, France appears to be suffering from a tolerably well-marked attack of nerves, and at the present time the French Press and a portion of the French public are accusing this country of intriguing in Syria and Palestine. Well-informed opinion across the Channel will recognise the baselessness of such accusations immediately, but, in view of the true facts of the case, it is deplorable indeed that such rumours should be allowed to become current. Great Britain has not, and never has had, any particular desire to go to Syria, and with the exception of wishing for a rectification of frontier that would make her position in Egypt more secure, her interest in Palestine is confined to seeing it freed from tyranny in any form and free to develop along natural lines. If Palestine and Syria feel that they should be placed under the same mandatory Power, Great Britain will raise no objection; but she cannot be expected to bring any pressure to bear on either country to induce it to ask for the mandate to be given to any particular Power, and it is certain that she has done nothing of the kind. That a good deal of uneasiness has long been felt in certain parts of Syria at the prospect of a French protectorate is notorious, but to attribute the feeling in any degree to intrigue on the part of Britain is as unjust as it is ill-informed.

One of the inevitable, but none the less deplorable, sequelæ of the war is the gun-running that must be looked for in various parts of the Near East. It was, of course, very far from unknown before the war; both shores of the Persian Gulf being familiar ground to the "runners," and certain ports on the Red Sea being no strangers to their operations. But Egypt, at any rate, had not proved a profitable field for the trade, for reasons that are too well known to need recapitulation. Now, however, the Bedouin are reported by the *Times'* correspondent to be smuggling English, German, and Turkish rifles from Palestine into Egypt across the Suez Canal. The correspondent adds that it is expected that this traffic will soon be terminated, and it would certainly seem that it should not be a difficult matter to achieve that desirable end. A mixed patrol of aeroplanes and motor-boats, adequately equipped with searchlights, should prove difficult of elusion, even by the Bedawi.

On Monday, at Buckingham Palace, the King and Queen received the deputation which, headed by Sir Sayed Ali El Morghani, has come to this country to offer the congratulations of the Sudan upon the conclusion of Peace. Appropriately, the deputation was accompanied by Sir Reginald Wingate, Field-Marshal Lord Grenfell, and Sir Edgar Bernard, who have all done good work on behalf of both the Sudan and Great Britain. The Address presented struck a less conventional note than is usual on such occasions, and was inspired by the same spirit of simple loyalty that characterised the Sudan throughout the war. With proud humility it spoke of the "poorest and youngest member" of the British Empire offering of that which it had with all its energy and zeal, and added that "the contribution of a poor but loyal people, small though it be in fact, is great in sentiment." It recognised the blessings which have been conferred on the Sudan under British rule, and referred to the Sudan's help in the war as "but the first-fruits of what your Majesty's Government has planted." The King in his reply recalled his visit to Port Sudan, and expressed his regret that the deputation had not been able to reach England in time to be present at the Peace celebration—a regret that will be shared by all who have followed recent events on the Nile. The ceremony concluded by Sayed Abdul Rahman, son of the late Mahdi, offering to the King, as a token of fealty, the gold "Sword of Victory" which formerly belonged to his father. His Majesty graciously accepted the historic weapon, but handed it back to Sayed Abdul Rahman to hold on his behalf as a proof of his "acceptance of the loyal submission of you and your followers." Subsequently the deputation was received by the Prince of Wales at St. James's Palace.

The Afghan Peace Conference opened at Rawal Pindi on July 26, but, according to telegrams received since last Thursday, fighting of sorts went on at several points along the Afghan frontier up to the very eve of its first meeting. The Ameer's influence and prestige have probably been shaken considerably by recent developments, and he may find it easier to order fighting to cease than to make his orders respected by his subjects and allies. An apparently trustworthy report has it that he was, about a fortnight ago, attacked by two soldiers of a Kabul regiment while riding with his staff. He came through the experience safely, if unmajestically, "the bullet passing," we are told, "through his breeches," but the incident is not without significance.

The opening of the Conference at Rawal Pindi was not entirely auspicious. After Sir Hamilton Grant had made a dignified and moderate, but firmly worded, statement of the British view of the situation and the causes leading up to it, Sirdar Ali Ahmed Khan, the leader of the Afghan delegation, delivered an oration of a somewhat surprising kind. He denied that the Afghans had first sought peace; stated that if the war were to end, there must be forbearance on both sides; and suggested that each side must avoid the appearance of dictating to the other. He hinted very broadly that the British, though powerful and in many respects superior to their opponents, might yet be vanquished, as the Germans, similarly placed, had been; and warned the Indian Government not to suppose that the Afghans were a sleepy and ignorant people. Finally, after remarking that the European war had aroused the aspirations of all nations, he showed that he had no objection to borrowing a hint from Europe, by making vigorous play with the bogey of Bolshevism, his line of argument being that a British victory over Afghanistan would let a flood of Bolshevism into India.

That argument is not easy to follow, and, having regard to Afghanistan's recent coquetting with the Bolshevists, it is a remarkable one to be put forward from such a direction. On the other hand, no competent critic would be any more likely to call the Afghans sleepy than he would be to call them backward in stating their own virtues or merits. Upon the whole, it is possible that Sir Hamilton Grant may not have had to revise his estimate of the Afghan quite so radically as the Sirdar appeared to think might be necessary. But the latter's speech was, if not instructive, distinctly interesting.

Official opinion in India is not likely to quarrel seriously with the views of the Government of the Near East stated by Major Ormsby Gore in the article we published last week. India has quite enough on her hands as it is, and it is a question of lightening the ship rather than taking fresh cargo on board; even the loss of Aden would probably be borne with entire equanimity, though we have heard of officers who like to be stationed there, because it is so easy to get away.

Digitized by Google

What passes for public opinion is so very erratic just now in India that prophecy regarding it is dangerous; it is quite possible that the severance of Aden might be represented as "cutting off the nose of the mother-land," or something equally reprehensible, but seeing that its connection with India is only about 80 years old we may hope that such sentiments will not be held so widely as to cause serious political difficulty.

Whatever be the fate of Aden, and whatever form of authority may be established in Arabia and Mesopotamia, we trust that arrangements will be made for the prompt handling of questions affecting the relations of those countries with India. Even before the war Aden and the Gulf played an important part in Indian commerce, and a very great extension of business is confidently expected in the new conditions: If every question that arises between, say, Bombay and Busreh, is to be referred through Delhi and Baghdad for settlement by two co-ordinate offices in Whitehall, then commercial interests are bound to suffer; and, apart from commerce, there are such matters as pilgrimages, difficulties regarding which can best be settled by men thoroughly familiar with the local conditions. Administrative heads are notoriously averse from short-circuits, so that it is all the more important that the necessary arrangements should be provided from the outset.

The constitution of the Commission to investigate the administration of the Indian Army has been announced with tolerable celerity as such matters are handled nowadays, and the list of members will probably be accepted as on the whole satisfactory. Lord Esher was almost inevitable as chairman, while the two civilian members are adequate representatives of the important interests of recruiting and finance. Of the five Generals, two belong to the British Service and three to the Indian Army, the latter including officers with recent experience of Whitehall and Simla; so that if substantial unanimity should happily result from the inquiry the public will have the satisfaction of knowing that various schools of experience have contributed. It is rather a relief to find that no time-limit is imposed by the terms of reference, for the subject is exceedingly complex, but we may assume that the winter will be spent in India, and that if nothing goes wrong the report will be ready some time in the course of next spring.

Unlike the Army Commission, the Joint Committee on the Government of India Bill is working under an inelastic time-limit, and the chairman had to announce last week that they could hear no individual witnesses, and only a limited number of representatives of important interests. A good many busybodies have been disappointed by this ruling, but it was obviously unavoidable in the circumstances, and those interests which are properly organised are assured of a hearing. We should, however, like to know more about the interests which are not organised, particularly the greatest interest of all, the two hundred odd millions of peasants whose future is about to be decided; very little seems to have been said about them in the evidence taken so far, and we have not yet heard of anyone being summoned who is specially qualified to represent their point of view. Are they going to be left out? By a curious coincidence, some exceptionally well-qualified representatives of the peasantry are in this country just now, in the shape of the Indian Contingent, which unfortunately arrived too late for the Peace celebrations. Could not the Committee, or some of its members, find time to have a talk with a few of these peasant-soldiers and hear their opinions absolutely at first-hand? They would learn many things which the regular "deputations" are not likely to mention, and incidentally they would gratify visitors to whom the country owes a heavy debt; men, too, who rather enjoy talking when there is no serious work on hand. We suppose, however, that the time-limit will stand in the way, and that the gentlemen of the white robes have the first claim on the attention of the Committee. *Cedant arma togæ.*

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 5.

Bolshevism and Islam.

It will be news to many that Bolshevism is older than Islam and originated in Persia, where its tenets were spread by Zoroaster the Fire Worshipper. The story of how the first Bolshevists grew and multiplied and rose against the Magian Kings is told in a remarkable *Fetva* issued by Sheikh Mohammed Bakhit, the Grand Mufti in Cairo, in which the learned and venerable Doctor shows how contrary to Islam are all the teachings and doings of the disciples of the revived creed of Bolshevism, if indeed such a negation of all creeds of religion and mortality can itself be styled a creed.

Sheikh Bakhit has always been distinguished for his erudition and for the liberal trend of his mind, and during the recent "unrest" in Cairo, when the Mosque of the Azhar was a seething hotbed of intrigue (to call the doings there by no harsher name), his position was by no means easy or enviable. His counsels of moderation, offered whenever a fair occasion was presented, naturally led to suspicions of his independence; and it was even rumoured that the Sheikh had received some enormous bribe from the British Government to induce him to hold aloof from the popular and largely fanatical movement that had its centre in the great Moslem University. However, as he had never been a rich man, and as no appearance of his sudden accession to wealth was observed, the orthodoxy of the Grand Mufti and his independence of thought were not long called in question.

A Reminder to Moslems.

The *Fetva* that he has just issued, condemning in the most emphatic terms every principle put into practice by latter-day Bolshevists, will come as a very timely reminder to careless and loose-living Moslems the world over, especially as there has lately been a resolute attempt on the part of the Bolshevists to curry favour with Moslems, although it is difficult to conceive two theories of life more radically and diametrically antagonistic to one another than the Islamic and the Bolshevist.

It is not more than a month or two ago that Sheikh Bakhit promulgated another practical *Fetva*, enjoining punctilious cleanliness in the face of the somewhat alarming spread of infectious diseases, and quoting the Holy Koran in its continual insistence on the necessity of cleansing the body as being one of the first duties of a godly Moslem. The *Fetva* on Bolshevism shows a real perception of where there is a need for guidance and stimulus, and though perhaps Egypt, in her prosperity, is not immediately threatened with the new world-plague, it is all the more meet and fitting that instruc-

tion and command should issue hence with authority to less favoured and more exposed Islamic lands.

The Strike Fever.

The general tendency to syndicate in protection of corporate rights, or claims to what are put forward as rights, is becoming very marked in all departments of Government administrations and in trades of every description. This, in a country like Egypt, is, perhaps, one of the inevitable consequences of the Great War. Before the cataclysm that has shaken to the foundation all that appeared formerly most solidly established, Egyptians had never realised that there was any possibility of bettering the position of any class by the modern weapon of striking. Very possibly also, ten years ago a strike would have had a very poor chance of success, as against a moral certainty of painful failure. Now, however, we have altered all that; and coachmen and scavengers, lamplighters and shoeblacks are encouraged by Nationalists, and possibly more still by Socialistic foreigners, to consider themselves, in an unconsciously Bolshevist spirit, entitled to anything they may choose to ask. With Orientals this is always the great danger—the lack of sense of proportion. A British, French, or German Socialist has generally a very shrewd idea of the power that is on his side and the Powers that he has got to fight—and formulates his plan of campaign accordingly. The Egyptians, however, as has happened with the Young Turks before them, as soon as any vista of something new and better opens in front of their eyes, lose all focus.

This has been the deplorable error of Saad Pasha Zaghloul and his deluded followers, who, without attempting to reason for themselves, or listening to reason when talked to them, have caused incalculable loss and damage, both material and moral, to the too credulous and ignorant masses.

The Syndicate movement, though not directly traceable back either to Saad Zaghloul's Utopian ideas, or to impalpable, but none the less real, moral waves of Bolshevism, is only another sign of the times. It does not yet constitute any danger, but is a putative element in the composition of the sort of national dynamite that is lying about all over the globe.

Great Britain and Egypt.

Egypt cannot expect to be free from all danger of a sudden explosion, and although there is temporary calm, this does not mean that all the fires are out. They are, in the opinion of many experienced observers, merely "banked," and it will depend on the line of policy followed in the immediate future, and the success that may attend it, whether those fires will be finally extinguished, or whether they will burst out afresh from under the ashes with which the British and Egyptian Governments have temporarily damped them down. Far be it from the writer to prophesy evil; but nobody can pretend that the furious appetites of the Nationalist Extremists have been in any way satisfied, or are ever likely to be; neither is it possible to claim that any sensible impression has, so far, been created either on the leaders, or on the masses, by the policy hitherto pursued. There is really no attenuation of the spirit exhibited during the public processions on the day that permission was granted to Egyptians to travel; and that was a spirit that had never before been shown in Cairo. The only difference perhaps is that the same creed and programme has, since then, been propagated sedulously, and apparently successfully, from one end of Egypt to another. The riff-raff no longer dance through the streets with obscene gestures and insulting cries; but the sentiment of Egypt has not changed for the better—and there are not wanting those who declare that the change, if any, is rather for the worse.

In the hurly-burly of Paris, and among the thousand and one questions that demand instant attention, Egypt seems to have been pigeon-holed. It has always been so comparatively easy for England to deal with any transitory trouble here, that the Powers in conference appear content to occupy themselves with any and every other problem first. And the Powers are quite right, because the Egyptian Question is a British question. Whether, however, the shelving of Egypt by the Power principally concerned till the autumn, or possibly later, is calculated to make for tranquillity before and after, events alone will prove.

There is a saying prevalent in India that "the patience of England is long as a summer day; but the arm of England is long as a winter night." It appears as if Egypt is going to serve as an object-lesson, or illustration of this apophthegm. Certainly our patience has passed the patience of Job in dealing with the Nationalist Extremists. They have yet to learn the length and strength of the British arm.

"Nile Projects."

Sir W. Willcocks has just published a last word on "Nile Projects." This good-sized pamphlet reproduces all the documents and the correspondence in the old dispute with Sir Murdoch Macdonald as to the preferential rights of Egypt, as against those of the Sudan, to the Blue Nile water.

The whole question is now brought up-to-date and Sir W. Willcocks seems to be hopeful of good results from the latest developments, particularly from the utilisation of vegetable refuse as fuel, after the system discovered by Mr. J. Wells.

Those interested in the subject will find "Nile Projects" both instructive and diverting reading. The writer has the knack of clothing the driest of bones in attractive dress.

CYPRUS NOTES.

(From a Correspondent.)

"Union with Greece."

Both the Press and town politicians now speak in a far less confident tone regarding the movement for union with the "Mother-Country," and reports from the deputation in London are presumably less encouraging. This change follows very closely on the self-congratulations of those who were "counting their chickens" rather prematurely. One of the Greek papers recently announced in large type that, according to the Athenian paper *Politeia*, an Envoy-Extraordinary had already left for Cyprus, with the approval of the British Government, in the person of the Consul, M. Khalikopoulos; also that persons arriving from Piræus had brought news that the Deputy, M. Gondikas, had been appointed Governor-General, and was about to proceed to the island; and that other officers of high rank, both military and civil, would shortly arrive, in order to arrange with British officials the details of the transfer. Island advocates of the cession are beginning to realise that the other side of the "question" involves far greater imperial and international considerations than those to which they desire to confine attention.

The Cost of Living.

The increasing cost of living is bringing about another crisis. To begin with Government officials, meetings have been held at which it was decided to present an application for increase of salaries all round to meet the difficulties that press upon all, especially the lower grades of the service. At Limassol (which has the unenviable distinction of being by far the most expensive district of the island) Major Bolton, O.B.E., the Commissioner, proceeded to Troodos to confer with the Chief Secretary. Local papers strongly support the claims. It is pointed out that in Egypt, besides the liberal increases granted during the war, the salaries of all officials have been again raised this year, being in some cases doubled. Misgivings are expressed throughout the island as regards the coming winter. The hardest lot is perhaps that of the village schoolmasters, whose pay is in many cases "less than that of field-watch-

men and muleteers." The plight of teachers appears to be much the same in Greece; and M. Venizelos is said to have sent a promise from Paris that the matter shall receive the earliest consideration on his return, and the teaching body be placed on a better footing. Strikes have not yet come into being in the island, but foremen and workers on the Government railway are now clamouring for an increase of wages, as is but natural.

The King's Message.

The King's Proclamation and His Majesty's Message thanking the members of the Colonial Service for their work during the trying years of the war are published in the official *Gazette*. It is announced that July 19 is to be a public holiday. Te Deums and services in the churches have been celebrated.

ROUMANIAN LETTER.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, June 15.

The Case of the Banat.

There are three subjects which have spread anxiety and even aroused indignation among all classes in this country. They are the treatment of the question of the Banat, and the clauses of the Peace with Austria, which refer respectively to the question of the ethnical minorities and that of free transits. It is felt that the first of these, the territorial question, has been dealt with in a superficial and unstatesmanlike manner, by which the terms of the treaty of August, 1916, and the principles laid down by President Wilson have alike been disregarded. According to Roumanian opinion, there were two alternative courses open to the members of the Peace Congress. The one was to respect the terms of the Treaty; the other, to apply the principle of self-determination by means of a plebiscite of the whole of the Banat, under the strict control of Allied forces. Instead of either of these courses having been adopted, the province has been simply cleft in twain without regard to the interests of its inhabitants as a whole, and one portion handed over to the Serbs, without the Congress having pronounced its final sentence in the matter. It is now reported that the Five have put off their final decision to an ulterior date; and this has in some degree released the local tension by allowing the hope to arise that the subject may yet be studied in detail, and that impartial authorities may be called upon to say their word before an act of foolishness is committed which the Powers will probably have ample occasion to regret. A little judicious statesmanship should suffice to avoid the creation of a source of perpetual conflict between two nations whose mutual good relations have never been troubled in the past, thanks to the natural and efficient geographical boundary separating them. It may be said that the present more than strained relations between Roumania and Serbia are attributable in the first place to the attitude of the Powers. Only in a minor degree can the blame be laid at the door of those immediately concerned. The Roumanian people are united in their resolution not to concede voluntarily any portion of the Banat, and the Transylvanians have taken up a particularly resolute and intransigent attitude in the matter.

The Minorities.

With regard to the clauses aiming at the protection of the minorities, there is reason to consider that M. Clemenceau was ill-inspired when he invoked as a precedent the decisions of the Congress of Berlin, presided over by Bismarck. The principle is looked upon by many in Roumania simply as a measure created by the Great Powers for exploiting in their own interests those "with limited interests." This view is no doubt rather far-fetched; none the less, the great fault of the measure is that it lacks the character of reciprocity. It represents a general principle which is not receiving universal application. If M. Clemenceau will condescend to allow the German minorities in Alsace to benefit by it, he may be assured that by so doing he will rapidly dissolve all opposition in Roumania. Any measures tending to assure equality of rights to all nationalities, in conformity with the principles of modern democracy, are quite acceptable, provided they are universally applicable; but any one-sidedness throws doubt on the purity of the motives that have dictated them. We can even conceive, short of this universal application, the natural desire of the Powers to obtain some kind of guarantee in the case of a newly created State, of one particularly whose very existence is dependent on their goodwill; but the unilateral application of the principle of foreign interference in the case of a pre-existing sovereign State is quite another matter. Roumania is in some respects in a situation analogous to that of France. She, too, has her Alsace-Lorraine. No one doubts that France's ethnical minorities will enjoy equality of treatment, and only those who know nothing of Roumania and her people can for a moment entertain the doubt in her case. And this applies, if possible, with ever greater force in the case of the religious minorities. The truth is that Roumanians, with all their faults, are in this respect the most liberal people in the world, and singularly free from the Chauvinist spirit. Those who know them will bear me out when I say that their tolerance, if anything, goes too far. It is a fact that Roumania has shown herself eminently capable of resolving her own problems without foreign interference. The solutions found for the Agrarian and Jewish problems, the introduction of universal suffrage, the ready recognition of the broad autonomous rights demanded by the newly acquired provinces, all point to the truth of the foregoing statement.

In their application to Roumania the provisions in question aim primarily, it may be assumed, at the protection of three ethnical elements, the Jews, the Magyars, and the Saxons. Recent legislation confers the rights of citizenship on the Jews living within the old frontiers of Roumania, so that they, who already play such a prominent part in the national life of the country, have nothing to gain by foreign interference, for presumably it is not intended to create a privileged class enjoying international protection in addition to equality of civil and political rights. And in the provinces which have united themselves with the kingdom, as M. Maniu recently pointed out, there has long obtained the principle which demands absolute political equality for the Jew. This principle is here firmly established, and can suffer no modification or improvement as the result of protective clauses.

There remain the Hungarian and Saxon minorities. The former, dispossessed of the political ascendancy held so long in virtue of political principles that are regarded to-day as effete, will obviously not resign themselves easily to the new state of affairs, which introduces, apart from considerations of a national character, a regime of democracy incompatible with their reactionary tendencies. The situation is unfortunate, but inevitable, and by no means unique. The conciliatory action of Time can alone ameliorate it. Meanwhile, in spite of their suppressed hostility, they enjoy equality of political and civic rights with those who form the numerical majority. Of this subject I speak with first-hand knowledge, gathered on the spot. My observations have taught me that there is another factor which forms the strongest guarantee that the Hungarian minorities will be exposed to no depreciation of their rights, and that is constituted by the peculiar situation which renders a conciliatory attitude incumbent upon the Roumanian authorities. Under the old regime the Roumanians of Transylvania were practically excluded from every form of administrative and official activity, so that to-day, in spite of their great numerical superiority, they have not the technical qualifications which would permit of their supplanting the Hungarian officials, even if the clauses of their Act of Union permitted. Not a single State employee of Magyar nationality who has taken the oath of fealty (demanded of every employee in Roumania, of whatever nationality) has lost his employment, if we except the instances where they have been involved in some deliberate act of hostility, such as destruction of railways, or other interference in the public services.

What has been said of the Hungarians holds good to a greater degree in the case of the Saxon minorities, who held a privileged position in the former Magyar State, and have lost nothing by the change. They form highly civilised colonies enjoying a great measure of independence, and have in the past exercised a beneficent civic influence, appreciated by their Roumanian and Hungarian neighbours alike. Their manifesto, published in the columns of THE NEAR EAST, by which they claimed recognition as Roumanian citizens, and urged the other nationalities to follow suit, speaks for itself.

Free Transit.

The question of free transit is the third of the subjects which have elicited general disapproval, in spite of data being absent for forming a correct appreciation of the significance of the clause referring to it. Perhaps it is its very vagueness, and the uncertainty as to its full import, that have aroused mistrust. It must be remembered that Roumanians have before their eyes the example of Yugoslavia, which has become the economic vassal of a foreign power. There is some excuse if they regard indeterminate measures, possibly concealing or masking real intentions, with suspicion. To accept the clause with regard to free transit in its present form might be to expose themselves to the action of the thin edge of the wedge. And Roumanians, who know from sad experience that economic servitude is followed closely by political subjection, fight shy of anything that savours of those conditions from which they freed themselves, at so great a price, in 1916. So far as I can gather, neither M. Bratiano, nor M. Take Jonesco, nor M. Maniu will run the risk of disposing of the economic independence of their country by inscribing their names at the foot of a blank form.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, July 22.

A Cabinet Crisis.

A political crisis, which at one time appeared likely to have serious results, has been averted by the counsels of good sense and conciliation. On Friday, June 20, when the Cabinet was discussing the measures to be adopted to protect the country against Bolshevism, the President of the Council and Minister for Foreign Affairs, Mr. Stoyan Protich, and the Minister for Food and Reconstruction, Dr. Koroshets, did not see eye to eye. Gossip relates that the latter recommended harsh measures which the President said Serbs would not tolerate, adding that if his colleagues took that point of view they could no longer collaborate. Dr. Koroshets took affront at the President's manner, which he considered dictatorial and insulting, and at once tendered his resignation, with which his countryman and colleague, Dr. Gostinchar, Minister of Social Reform, associated himself.

Dr. Koroshets, who is a Roman Catholic priest, is an accomplished man, of great mental calibre, who carries considerable weight with his fellow-Slovenes, especially with the students and in the universities. Dr. Gostinchar is a very influential Slovene, leader of the Christian Socialist party in Liubliana. It was very strongly felt that nothing should be left undone to avert a Ministerial crisis at such a moment, especially when the personal equation played so large a part in it. In this respect the incident recalls the famous occasion of the fall of "The Tiger" in Paris some eight or ten years ago. The loss of these two prominent Slovenes was to be especially deprecated, as it would give the country's enemies reason to believe that there was feeling between these two branches of the Yugoslav people, which is in reality far from being the case; for the Slovenes, who are an uncommonly solid and determined people, are in close sympathy with the "Serbiantsi," or Serbs of the Old Kingdom; they are in too close proximity to the Italian aggression to think of anything but close union with Serbia. Dr. Koroshets had, however, another motive; he was unwilling to associate himself with a treaty that was to hand over two hundred thousand of his co-nationals to Italy, and for that reason was not unwilling to escape this responsibility.

The Crown Prince hurried back from Subotitsa, and the Bishop of Liubliana, a great and influential patriot, came specially to Belgrade, and at once had a long audience with the Regent. A Cabinet Council was held, to which the two Ministers who had resigned were invited. It was pointed out to them how undesirable was a crisis at this juncture, when it was so necessary to present a united front to the world. Meanwhile, the Bishop had exerted all his great influence on his fellow-countrymen in the cause of unity, pointing out that half a loaf is better than no bread, and a treaty that liberates the greater part of the people is better than none at all, even if it does leave two hundred thousand under alien dominance; and that it was better to bow to the inevitable. After mature consideration Drs. Koroshets and Gostinchar listened to these arguments, and consented to remain in the Government, and so the crisis was averted.

An Unsupported Strike.

The international strike that was to show the solidarity of Labour on July 21 provoked only a feeble response in Yugoslavia. The Dalmatians and the sturdy Christian Socialists of Slovenia declined flatly to have anything to do with an avowedly anti-national movement, for their patriotism is of the finest kind. There was a partial strike in Croatia, but in Serbia it was confined to a minor element of the population of Belgrade, beyond which there is no proletariat in this land of small yeoman farmers. The electric light and tramways ceased working; but the boats, trains, postal services, and water-supply were unaffected, while the smaller craftsmen, such as the tailors and bootmakers, continued to carry on their peculiarly lucrative work. The few strikers seemed to consider the day merely as an extra Sunday and an opportunity for strolling about the town. There were no signs of disorder; a few extra police were hardly noticed, and, but for the stoppage of the tramways, to which the population of Belgrade is already accustomed, and the absence of light at night, it required a close observer to know that there was a strike on.

Bolshevist Propaganda.

The Bolshevists have been endeavouring for some time to get a footing in the Serbian capital, but without success. A quantity of Bolshevist literature and eighteen million dinars' worth of various foreign currencies, including English and Russian, are said to have been confiscated in one house; but Messrs. Lenin and Bela Kun must be sadly disappointed at their misplaced attempt to propagate their peculiar form of political disease among this contented and individualistic people, where it excites only derision.

There is a feature in the Serbian temperament called "*inat*," which their friends call sturdy independence, but their foes truculence. As a matter of fact, it may appear in the form of either of these extremes. It was *inat* that made the Serbs show a united front in the boycott of Austria before the war, in spite of their domestic wranglings, and it was *inat* that kept alive their strong national feeling through the Turkish days, and finally enabled them to throw off the yoke without outside aid. It was well developed in the liberators themselves, Kara George and Milrosh Obren. It was *inat* that maintained them through their long exile at Salonika, and eventually enabled them to clear their country once more, and it is *inat* to-day that makes them appear intransigent in their demands for the entire fulfilment of their national aspirations; it is *inat* that makes them irreconcilable to their open enemies, the Bulgars and the Magyars, and unyielding towards their somewhat jealous neighbours and allies, Italy and Roumania. Westerners who cannot see below the surface may deprecate their truculence, but it is this very *inat* which has made this wonderful people what they are, and brought them through suffering into their present proud position.

King Peter's Return.

King Peter has returned to Serbia, from which, in spite of advanced age and severe rheumatism, he retreated with his army through the snows and mountains of Albania in the terrible winter of 1915. After resting three and a-half years in the balmy atmosphere of the Greek isles, he has returned to his faithful people, who idolise the old warrior who has never let slip an opportunity of fighting his country's natural enemy. It is a well-known story how in '70 he fought in the French army, was wounded, taken prisoner, escaped, and decorated; but it is less familiar how, under the name of Petar Mrkonjich, he headed a band of insurgents against the Austrians and Herzegovina in 1878; the romantic story of his appearance among his men in the trenches in 1915 has been often told, and how his presence inspired the weary and dispirited troops with such enthusiasm that they rose and swept the enemy out of the country at one rush. His return has been delayed until the line from Salonika was completed, and at last the old king is back in Serbia, at Arandjelovats, where, unfortunately, he arrived two days too late for his birthday celebrations.

His Telegram to King George.

To King George's cordial telegram to King Peter, congratulating him upon his birthday and upon the signature of peace, King Peter has replied as follows:—"The hearty congratulations which Your Majesty has been good enough to send me on the signature of peace have deeply touched me. I hasten in my own name and in that of my people to offer Your Majesty my most sincere thanks. The people of the Serbs, Croats, and Slovenes, which has at last realised its independence at the cost of such great sacrifices, will ever remember that the soldiers of Your Majesty fought shoulder to shoulder with our own, and that in the days of suffering it has always found the precious help and assistance of Your Majesty and hearty sympathy of the British people. With that sentiment of deep gratitude, my people unite with me in begging Your Majesty to accept our most sincere wishes for your personal happiness and for the advancement of Great Britain.—Peter."

A Meat Shortage.

Serbia is threatened with two meatless days a week. The country has been so depleted of stock that serious steps are being taken to import large quantities; and the Allies, Great Britain in particular, are taking important steps to help. Consequently it has been felt that it is necessary to economise such stocks as remain in the country, especially as Serbs are large meat-eaters. The export of cattle, and of horses too, has been forbidden.

ROADS IN PERSIA.

(From a Correspondent.)

Owing to her geographical position, Persia has probably suffered more in the past from international rivalries than any other country. Situated as she is on the flank of India, it is to our interests that Persia should be prosperous and independent, and it has always been England's rôle to help her to become so.

Prior to the *rapprochement* between Russia and England there was intense rivalry and suspicion between the Consular and other officers of the two countries, and Persian politicians, who are past masters in the art of intrigue, took care to exploit to the utmost every possible cause of misunderstanding. In order to remedy this state of affairs and to remove possible causes of friction, an agreement was arrived at which defined the spheres in Persia in which Russia and England considered that their interests were paramount. As Persia is divided by nature into two halves by the band of desert which runs from north-west to south-east, this should not have been difficult, and the 34th parallel of latitude at once suggests itself as the true solution. The actual demarcation in its disregard of facts somewhat reminds one of the arbitrary alignment of the Petrograd-Moscow Railway by the Tsar Nicholas. The line runs from north-west to south-east past Ispahan and Yezd, both these towns being left just inside the Russian sphere, while the large provinces of which they are the capitals lay in the southern sphere. Such a demarcation was sowing the seeds of misunderstandings and pinpricks with a vengeance. As a matter of fact, the line as laid down, if correctly drawn on the map, passes some few miles north of Ispahan; but we let this go by default. The Russians always claimed Ispahan as within their sphere, and we acquiesced.

To understand what this means it must be remembered that the Bakhtiaris are the dominant race in the Ispahan region, and that it always has been and always will be the most cherished ambition of the Bakhtiaris to rule Ispahan. As has already been said, the Persian is a past master in the art of intrigue; but the Bakhtiari beats him. Owing to the war, Russian and British officials worked together in perfect harmony, and there was no friction, but if this had not been so there would have been endless difficulties. If we had tried to protect Southern Persia with a suspicious Russia in Ispahan city, our position in Ispahan province and the Bakhtiari country would have been impossible, and the Bakhtiaris would have had a most congenial time in playing off one nation against the other.

As the Russian sphere was the half of the country north of the line Ispahan—Yezd, it would be expected that we should have claimed that our trade interests were paramount in the area south of that line; but this was not so.

The British sphere was defined as the south-eastern portion, the south-western—presumably as a sop to German jealousy—being proclaimed a neutral sphere! As a result of the war the significance of the spheres has disappeared, and the only object in referring to them is to point out the mistakes which have been made in the past with a view to their avoidance in the future.

Broadly speaking, there are five possible routes for Anglo-Indian goods to enter Persia. Taking them from west to east they are:—(1) By the Tigris to Baghdad and thence to the Persian frontier at Khanikin; (2) up the Karun River from Mohammerah to Ahwaz; (3) and (4) through the Persian Gulf ports of Bushire and Bunder Abbas; (5) overland from India by the Nushki route through Baluchistan. There are, of course, other small ports on the Persian Gulf littoral such as Lingah, but these are of minor importance.

The first of these five routes, via Baghdad, entered Persia in the Russian sphere, the road traversing a region occupied by turbulent Kurd tribes, past Kerind and Kermanshah to Hamadan. The Russians enjoyed a practical monopoly in supplying the needs of Northern Persia, and therefore could not regard with equanimity the opening of this route, which would have challenged their trade supremacy. In order to prevent undesirable competition, the Russian Consular officers saw to it that this road never was safe. The Russians constructed a metalled cart-road as far west as Hamadan, and this has recently been continued to our railhead at the Mesopotamian frontier.

The Mohammerah-Ahwaz route has many advantages, but from Ahwaz to Ispahan the road is a mule track through the high mountainous country of the Bakhtiaris, and in winter it is often blocked by snow for weeks at a time. The Bakhtiari *charvadars*, or muleteers, have an unpleasant custom of accepting more goods than they can carry, and on reaching a certain stage they unload their mules, stocking the goods by the roadside and going back for fresh loads: the process being repeated as often as necessary. This, of course, means damage from exposure to inclement weather, in addition to loss from theft and breakages, considerable delay, and an impossibility of ever knowing when the goods will be delivered. A practicable cart road, passing south of the Bakhtiari country, from Ahwaz to Ispahan, has been surveyed. This route, like that from Bushire, lay through the so-called neutral zone.

There are two tracks from Bushire to Shiraz. The first and shortest passes Kazerun and then ascends to the Persian Plateau by a series of five very difficult passes. The other and more easterly route via Firuzabad is considerably longer, but is decidedly easier, and is even practicable for camels; there is a possibility that it could be improved into a cart road.

Sir Percy Sykes realised, when raising the South Persia Rifles, the importance of communications with the coast, and at once set about improving the roads from Bundar Abbas to Shiraz, and also to Kerman, and at making them available for wheeled traffic. It is now possible to motor from Bundar Abbas to both the above places.

On the last route, from India via Nushki, the railway has now been extended to the frontier, and its eventual continuation through Kerman and Yezd to Ispahan would present no great engineering difficulty. The worst problem would probably be to cope with drifting sands in the neighbourhood of Yezd. In the solution of this the experiences of the Russians when constructing the Trans-Caspian Railway could probably be studied with advantage.

At the present time Persia is suffering from a great shortage of transport animals, due mainly to commandeering and the wastage of war. This, of course, will right itself with time, but pack transport is always slow, and never cheap, and the crying need of the country is cheap, rapid, and reliable transport. In the west of Persia inexhaustible supplies of cheap petrol are available, and, given good metalled roads, the motor lorry is bound to exert a great influence in developing the country.

It is proposed, in a future article, to discuss the main routes in Persia in greater detail, examining their applicability for mechanical transport and their value for import and export trade.

THE CLAIMS OF PERSIA.

Speaking on Sunday at a meeting in West Hampstead of people interested in Eastern problems, Mr. Marmaduke Pickthall said it would have been wisdom on the part of the British Government to change the whole direction of its Eastern policy when Tsardom fell. It was no exaggeration to say that if the Turkish Empire was to be condemned on moral grounds, our late Ally, Tsarist Russia, deserved to be condemned far more; the massacres by Cossacks in the Caucasus alone during the last hundred years, if advertised as Turkish massacres had been, with Russian money, would have been sufficient to excite the indignation of all Europe and America. A million and a-half of Circassians had been forced to flee into Turkish territory in sixty years. Tsarist Russia had never kept faith with her own subjects, much less with foreign Powers. In 1907 we had made a pact with her, meaning to safeguard Persia's sovereign rights; but she had followed this by a series of invasions and outrages against the Persian territory and people.

The claims which Persia now put before the Peace Conference fell under three heads; the first was the claim for political, juridicial and economic independence. Persia claimed that the Anglo-Russian accord of 1907 should be definitely considered as void, and that all restrictions on her independence should be removed. She felt that she must have jurisdiction in her own territories, the right to choose her own advisers, or she would have no chance of progress and free development. Her second claim was for the restitution of certain territory. There was not in this case any pretext of a discontented Christian population to justify the depredation; for the people were predominantly Moslem and well affected towards the Persian Government. Nor was there the least pretence of liberating them; they were simply transferred from a despotism which was congenial and akin to them to another which they loathed. In 1828 an important tract of territory had thus been torn from Persia, and, later, she had been robbed of all Trans-Caspia. This and the district of Suliemania, ceded to Turkey in 1847, formed the subject of the present claim. There was also mention of Turkish Kurdistan, the principal inhabitants of which had expressed a preference for Persian suzerainty rather than any other, in case the Turkish Empire were to be destroyed. Persia's third claim was for reparation. Russia, by the presence of her armies, had violated the neutrality of Persia, which thus became a theatre of war, and, although a neutral country, had suffered more than some belligerents. These claims of Persia had been laughed at, but there was nothing laughable about them from the Persian point of view, and they were founded on principles for which the Allies had been fighting. Further, quite apart from principles of justice, it would be good policy for us to give our best attention to the Persian claims, for they had Asiatic sympathy behind them.

PRESS ON THE NEAR EAST.

The Balkan Question.

The Times of July 26 contains an interesting leading article on "The Settlement in the Balkans." It says:—

There is no part of the world in which or about which passions run so high as the Balkans, and no question of international politics has been so warped by propaganda. It is extraordinarily difficult to achieve anything like detachment of view, especially at the end of a war, when one has to combine justice with generosity to Allies who have suffered in the common cause. There have been no sufferings in this war comparable to those of Serbia, and there has been no believer in the Allied cause quite so persistent against powerful opposition in his own country as M. Venizelos. These sufferings, this persistence, must be given a high place in our thoughts. On the other hand, Bulgaria, by joining our foes, dealt us a very shrewd blow, and, whatever our anxiety, to be just to her, there is no doctrine quite so demoralising to a nation as that which would give wickedness and bad judgment the rewards of political virtue and loyalty.

It then proceeds to support a project which has been repeatedly put forward in these columns—a federation of the Balkan States.

The passion for territorial sovereignty, based on racial arguments, must be governed by the League of Nations—a governorship under which a peace based on political justice and reason may be gained. The article concludes:—

Wrongly handled, and in a spirit of vindictiveness, the Balkan settlement, like that of the Treaty of Bucharest, will contain the seed, only too fruitful in this soil, of future war. If it is rightly handled, the Balkans will no longer be the slum of European politics, but a decent and prosperous thoroughfare of human progress.

Armenia and America.

Much has been heard in England of the suggestion of giving to America the mandatory of Armenia. It is interesting, therefore, to have an American view on the suggestion. In the *New Armenia* for June, Mr. Henry W. Jessup writes on the "United States as League Mandatory." He is decidedly of the opinion that America should accept the mandate; in fact, his reasons do not differ much from those put forward by Englishmen. He says:—

In respect to pecuniary responsibilities, one of the reasons for selecting the United States would be its disinterestedness. It is probably the only Power that could at the present time assist the new Government with a loan and be trusted not to exploit the resources of that land, great as they are, at the expense of the ward. One of the first temptations confronting a new mandatory in assuming such a tutelage will be the rush on the part of its own citizens to secure concessions in the new country and to exploit the mineral and other resources of the land for their own advantage. The utmost honesty is required of a trustee. He must not profit individually by his trust, and it would be the chief function and the highest glory of the American Commission or Provisional Government to see to it that the resources of Armenia were so handled that they would produce for the new nation a permanent and well regulated source of income that could put it upon a self-supporting basis, if what we have been told as to those resources is in any degree true, in less than twenty years.

One of the principal objections urged to the United States' accepting such a mandate has been that it might necessitate American soldiers being sent to a point far away from home for an indefinite period. Such an objection is considered almost final by those who urge it. As a matter of fact, the Armenian army, properly officered, did wonders in the early part of the war when they were fighting with the Russians, or later when they were fighting with the British against the Turks and Germans, and it might be sufficient to provide temporarily officers for their army. But the important thing, and the thing which would most speedily bring the tutelage to an end, is that the manhood of Armenia—such as is left after the deportations and massacres that have taken place, should get back to the soil, should get back to the loom, should get to work in the new mines, and be available for the development of the rest of the resources of that fertile land. Some system of constabulary police and militia is necessary in any country situated in that part of the world and with such neighbours. Hence a brigade of American troops may well be essential at the outset.

He proceeds to argue that the United States, which was largely responsible for the League of Nations, cannot well be the first to refuse a mandate from the League.

But, in the selection of those to whom the exercise of power will be confided, whose instructions must of necessity be general, and whose administration will be far from Washington, and upon the honesty and success of whose administration the future of this people will depend, the controlling principle in the selection of the personnel of this provisional government must be that *politics shall have nothing whatever to do with it.* It may be that among the great missionary heroes who have perilled their lives in the midst of this people during the war may be found one whose administrative abilities have already been tested, and who can be trusted (having a knowledge of the language and living among the people, and having consecrated his life already to their service) to undertake such a duty.

The equipment of a provisional government must not be on a niggardly basis. There must be the appearance of power as well as its existence. The head of an Oriental administration must entertain, and he must entertain like a ruler. Many difficulties disappear over the dinner table. Under a suitable governor, with a capable, expert council, and with an adequate military constabulary, or army, if you please, to safeguard the first troublesome years, we can trust to the patriotism of the Armenians, to their undying determination to achieve independence, to their thrift, industrious habits, and to the untold resources in their mines, forests and fields to bring to a speedy end, without financial loss to this country, the first great experiment under Covenant XIX. of the League of Nations.

Woman in the Near East.

The *Moslem World* for July contains an interesting article on "Women in the Near East," by Basil Mathews. The penetration of new ideas into the Near East is in some districts marked, and, though it is impossible to dogmatise on the future lines of development, yet, says the writer of the article,

There are, however, certain processes, both of destruction and reconstruction, that are already quite clearly in evidence, and that seem in the very nature of things bound to continue. In relation to the life of woman, the first of these is the gradual breaking of some of the shackles with which Islam has cramped the personality of woman. The veil, polygamy, and compulsory ignorance are three successive rows of entrenchments that are being "taken" by the powerful influences of the West.

The movement in this direction has already found such highly-qualified leaders as Madame Ulviye Hanoum, the leader of Turkish Feminism, trained, it may be recalled, in the Constantinople College for Girls, established by American missionary enterprise. Madame Hanoum is a leader in the society for the defence of the rights of women, which has a sevenfold programme. The aims of this society are: (1) To transform the outdoor costume of Turkish women; (2) to ameliorate the rules of marriage according to the exigencies of common sense; (3) to fortify woman in the home; (4) to render mothers capable of bringing up their children according to the principles of modern pedagogy; (5) to initiate Turkish women into life in society; (6) to encourage women to earn their own living by their own work, and to find them work in order to remedy the present evils; (7) to open women's schools in order to give to young Turkish girls an education suited to the needs of their country, and to improve those schools already existing. The society has a weekly illustrated paper, called *Kadinler-Dunyassi*.

This movement mainly appeals to those in the higher grades of social life in what was the Turkish Empire—the Lydias and Pricillas of to-day; and it is significant of the recognition paid by Government that such a development should, so far from being quelled, be helped to develop itself on regularised and orderly lines, for during the war the Government had set up in Beirut the beginnings of the organisation of a great Turkish Women's College, Moslem in basis, but committed to a progressive policy.

A similar development is certainly going on, though in a slower way and by different processes in the lower grades of society. The comparatively small development of industry on factory lines before the war had already called a number of girls and younger women to work of that order; while by an earth-shaking concession some Turkish girls had actually been introduced into the Telephone Exchange in Constantinople. But the work of the mill, the office, the factory is quite certain to develop. The over-work and under-pay of women in industries in Turkey was gross in pre-war times. The effect of this evil was relatively small then, but with the widespread development of industry that will almost certainly sweep across Asia Minor, Syria and Palestine, and up the Tigris and the Euphrates after the war, such conditions of labour as have prevailed would be calamitous if accepted; and if an attempt is made to impose them, they will almost certainly lead to severe social and industrial dislocation.

Articles to Note.

"Egyptian Nationalism," by Sir Malcolm McIlwraith, K.C.M.G., K.C., in the *Edinburgh Review* (July).

A White Paper was issued on July 28 showing that an additional sum of £170,000 is required on the original estimate in the Post Office vote to complete the Government wireless stations at Leafield (near Orford) and Abu-Zabal (near Cairo), thereby establishing direct wireless communication between England and Egypt.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB. J.P.
Vice-Chairman—Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

"GREAT BRITAIN AND THE NEAR EAST."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Most of those, I think, who have done work of a political nature in the Near East would support the proposals made by Major Ormsby-Gore in your issue of July 25. The mere fact of the bitter rivalry between Mecca and Riyadh, to take one instance out of many, shows the desirability of placing our relations with Eastern and Western Arabia under the control of a single authority.

In the last paragraph of his article Major Ormsby-Gore raises the question of including Zanzibar, Uganda, British and ex-German East Africa within the sphere of the proposed Ministry of the Near East. I should like to emphasise the importance of this question from two points of view.

1. Whether Pan-Africanism, encouraged by Pan-Islamism, is likely to become a serious danger in the future or not, it is certain that throughout Eastern Africa the Arab or Arabized Mohammedans have great influence with the Pagan natives, and that the loyalty of these Mohammedans is a matter of great importance to the stability of our East African Empire. It is eminently desirable, therefore, that the leading officials concerned with its administration should, as far as possible, be men who have had experience of Mohammedans in general and of Arabs in particular. Such men are rare among the Colonial Office authorities, who have hitherto shown but little interest in Islamic questions. Egypt and the Sudan, on the other hand, could supply a considerable number of Arabic and Islamic experts, whose services would be invaluable in the direction of East African policy.

2. There is little doubt that Eastern Africa generally, having no civilisation of its own, will eventually fall under the influence either of the North or of the South, and that the policy either of Khartoum or of Pretoria will prevail from Abyssinia to the Zambesi. It is clearly in the interests of the natives that Anglo-Sudanese influence should spread southwards rather than that South African influence should spread northwards. The Sudanese Administration is a model of what the government of primitive peoples should be, while South African native policy is more reactionary than that of any other part of the Empire. The proposal, therefore, to include Eastern Africa in the sphere of a Near Eastern Department should be supported by all who believe in the just treatment of the African races.—I am, etc.,

LELAND BUXTON.

Balavoulin, Pitlochry, July 29, 1919.

The Cairo correspondent of the *Morning Post* writes on July 26:—A number of British officers in ten Ford cars, with specially equipped radiators, have left Cairo on a journey to Damascus and Baghdad. There is no record of this journey having ever previously been accomplished.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Turning over the pages of an old notebook the other day I came across a strange story that I jotted down when it was told me, a good many years ago, in Turkey, by an American. It concerns another American, a doctor, whose name is—or was some twenty years ago—well known all over Asia Minor; but for the purposes of this tale he had better remain nameless, since one never knows how the Oriental may regard such things, even after the lapse of many years; and I hope the doctor may be still carrying on his good work in Turkey.

***

At the time the incident took place he was stationed at a certain city set amidst hills in which wild beasts, four-footed and otherwise, were numerous; and the citizens never cared to go about alone in the winter, and if forced to do so always carried a stout club and, at night, a light. Now, the doctor was the head of a training college, and it so fell out that he earnestly desired a body for dissection, for the instruction of students. In spite of all we hear about the lawlessness of Turkey, such a thing proved difficult to obtain. Perhaps the Hakim might have hired an assassin for a few *paras* to "do in" a living man, but he could not get a dead man at any price. So, sad to say, he fell before temptation!

***

(Handy things those asterisks: they indicate so much—in this case the approach of deeds of darkness. At the critical hour of temptation an Armenian was buried in the cemetery one day, and that same night the doctor and two of his best-trusted assistants went down to the place and exhumed the body. Needless to say, they had no light. However, they accomplished their purpose safely and expeditiously—for graves are always far too shallow in Turkey. Then, placing the corpse near by, they rapidly filled in the grave. But when they sought the reward of their ill-doing they found it not. It had apparently vanished into thin air. They searched in vain, feeling and groping everywhere—as they thought—but had at last to give up the search in despair, and to depart bewildered and not a little anxious.

***

The next day the mystery was solved. Very early news reached the doctor that a body had been found in the cemetery, with part of the face eaten away, evidently by a hyena. The animal must, they concluded, have come down within a very few feet of them as they refilled the grave, and contrived to drag the body some little distance. A great stir was made in the town—naturally enough—by the relatives of the dead man and the officials. But though suspicion settled on the college and the doctor, nothing was ever proved against them, and in all probability the affair was ultimately attributed to the *efreet*.

NEAR EAST BOOKSHELF.

GLASS HOUSES IN THE BALKANS.

Two reports on the Bulgarian occupation of Eastern Macedonia have been issued in pamphlet form, one by an Inter-Allied Commission and the other by a Committee of the Athens University. In the former body Great Britain was represented by Captain R. Strologo. In the eyes of anyone unacquainted with the history of the Balkans the evidence of these two reports will make the Bulgarians appear sinners above all other nations in Europe, and will place them virtually outside the pale of civilisation. The story of the occupation is sufficiently indicated by the cross-headings: Famine, Cases of Rape, Kidnapping of Children, Destructions, Deportations, in the one report; Outrages, Murders, and Plunders in the other. It may all be perfectly true; but, unfortunately, there is nothing new about it as far as the Balkans are concerned, and the only effect that the two reports can have on those who know the history of the Near East will be to make them more than ever resolved that this must be the last time when such things can be done in Europe.

The reader is instinctively reminded of the last report on these enemy occupations in the Balkans. It was based on an investigation of what had happened during or after the two Balkan Wars of 1912-13, and was the work of the Carnegie Commission. That report was a bulkier compilation than either of the two documents now published; but it tells the same story, with a change of names. For those who have not read the American volume we publish a few extracts side by side with extracts from the report of the Inter-Allied Commission:—

Report of the Inter-Allied Commission, 1919.	Report of the Carnegie Commission.
p. 18. The number of witnesses leaves no doubt as to the occurrence and frequency of acts of rape (*i.e.*, by Bulgarian troops).	p. 105. From Kukusk to the Bulgarian frontier the Greek army devastated the villages, violated the women and slaughtered the non-combatant men.
p. 21. Ninety-four villages have been totally destroyed . . . besides this, many thousand properties are reported as demolished or seriously damaged (*i.e.*, by Bulgarian troops).	At Serres the Bulgarians destroyed 4,000 houses in the conflagration which followed the fighting in the streets. The ruins of this considerable town has impressed the imagination of the civilised world. Systematically and in cold blood the Greeks burned one hundred and sixty Bulgarian villages and destroyed at least 16,000 Bulgarian homes.
p. 30. Neither can it (the Bulgarian Government) escape the direct responsibility as regards arbitrary arrests, tortures officially inflicted on persons in prison, and the deaths and injuries which resulted therefrom.	p. 146. In the appendix will be found the names of the persons killed and tortured for the sake of their money, and women outraged at Vinitza (*i.e.*, by Serbians).

Is it too much to expect of the League of Nations that it should take note of these happenings in the past, should try to understand the inevitable rancour that exists between the various peoples who have been so treated by one another, and should make up its mind that it will take the necessary steps to prevent the recurrence of Balkan excesses? There is, however, only one way of preventing their recurrence; it is by so regulating the settlement of South-Eastern Europe that neither Greeks nor Serbians nor Bulgarians shall remain under the jurisdiction of either of the others.

If these two reports bring home this point to the Paris Conference and to the Allied peoples, their publication will have served a useful purpose.

BOOKS RECEIVED.

"Historic Monuments of Cyprus." By George Jeffery, F.S.A. (Nicosia: Government Printing Office. 7s. 6d. net.)

BOOK NOTES.

We have received a small pamphlet called "Palestine Restored" (London: Hodder and Stoughton, 6d. net). It is written by Albert Hiorth, C.E., Kristiania, and is concerned with the colonisation of Palestine. Stress is laid on the point that "the only possibility for a new agriculture lies in an efficient irrigation," and details of such an irrigation are given.

Another volume in "The Religious Life of India" series is being published immediately by Mr. Milford. The title of it is "The Ahmadeya Movement," and it is written by the late Mr. H. A. Walter.

"The Baroda Library Movement," by Sanardan S. Kudalkar, has been published by the Central Library at Baroda at the price of 3s. 6d.

The firm of Heinemann has published, at 10s. 6d. net, a non-technical history of Europe, 1870-1914 A.D., called "Armed Peace." It is written by W. S. Davis, in collaboration with W. Anderson and M. W. Tyler.

PAPYRI FROM PALESTINE.

The volume of the "Annales du Service des Antiquités de L'Egypte" issued for 1918 gives some particulars of another marvellous acquisition of papyri of the Greek era. Some of these offer to students what has always been so much hoped for in the shape of writings from Palestine and Syria. The moisture in these two countries renders it almost impossible for such fragile and delicate relics as papyri to remain preserved there, and hence scholars have looked to Egypt as the place in which such treasures might be found, as have many Hebrew manuscripts from Asia of the Middle Ages been obtained from the Synagogue Geniza of Cairo.

Some few years ago the archives of a Ptolemaic official whose career was mostly at Theadelphia, some fifty miles south of Cairo, were unearthed by the fellaheen. His name was Zeno, and he evidently treasured up his correspondence, all the items found being carefully docketed and dated.

The mass of material was immense. Many pieces have unfortunately been scattered, but the majority of them are now in the Cairo and Italian museums. The special interest in Zeno's *dossier* arises from the fact that several of the papyri texts concern transactions in Palestine or its immediate neighbourhood. For Zeno for some period acted as an official there in the third century B.C., under the second of the Ptolemy Pharaohs.

Mr. C. C. Edgar, of the Egyptian Department of Antiquities, has published three essays relative to the Zeno manuscripts that are stored in Cairo, and Italian scholars have edited some two hundred of those in their possession. In his last printed essay Mr. Edgar commences a preliminary copy, in ordinary Greek type, of a series of the Cairo collection, with a short commentary upon each, and amongst the first ten of the documents are two which emanate from beyond Egypt.

The most important of these is relative to the purchase, by Zeno himself, of a girl slave, and is a deed and acquittance for her value, which was only 20 drachmas. It was drawn up and executed at a place called Birta, in the land of Ammon—that is, the country immediately to the east of the Jordan.

Among personages mentioned in the transaction is a certain Loubias, a name which in the Old Testament is especially assigned to an Ammonite. There are about twenty-two lines of text, fairly legible, from each one of which important details may be derived.

The second papyrus preserves a letter in which the correspondent relates the result of his having, as requested, endeavoured to recover a sum of money or obtain equivalent reparation from a Jew named Jeddore. This wily Semite, as might be expected, declined to give either, but assaulted and insulted the applicant instead. Although the affair occurred more than twenty-two centuries ago, it throws some light, perhaps, upon the opposition of many present Palestinians to their native land becoming a home of the Zionists.

JOSEPH OFFORD.

According to information which has reached this country from Montenegro, the revolt of the Montenegrin people against the Serbian troops of occupation is spreading all over the country. The Montenegrins have killed several representatives of the Serbian authorities, and the Serbian Government has proclaimed a state of siege at Podgoritza. The insurgents demand the withdrawal of the Serbian army from Montenegro.

One of the most interesting war stamps issued concerns King Peter of Serbia. Before the *débâcle* in Serbia that country had prepared a new series of stamps, bearing a picture of the King sitting upon a boulder. He is accompanied by his Staff, and is watching a battle in progress among the hills. Only two denominations of the stamp got into legitimate circulation. The stock of the other denominations was commandeered by the Austrians after the Serbians had evacuated Nish.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. August	1919. July		1337. Julkada.	5679. Ab.
1	19	Friday	4	5
2	20	Saturday.....	5	6
3	21	Sunday	6	7
4	22	Monday	7	8
5	23	Tuesday	8	9
6	24	Wednesday	9	10
7	25	Thursday	10	11

General and Lady Allenby are leaving Egypt very shortly for England.

Major Venizelos, the son of M. Venizelos, the Greek Prime Minister, left London on July 23 for Paris.

Lord and Lady Barrymore have left London for Fota Island, where they will remain for several months.

Canon F Newham, Chief Inspector of Schools, Cyprus, is in England on three months' leave.

The Sultan of Egypt has conferred the Grand Cordon of the Order of El Kamal upon Lady Allenby.

The Metropolitan of Trebizond visited the Archbishop of Canterbury on July 26.

The Governor of Madras will probably make a tour of the West Coast in October on his way to Madras from the hills.

Mme. Misu, the wife of the Roumanian Minister, has left London for Eastbourne.

Relations between the Ukraine and Roumania having been resumed, M. Matzjevitch, ex-Minister of Foreign Affairs, has been appointed to represent the Ukraine in Bucharest.

Archdeacon Beresford Potter has returned to England from Cyprus after a long absence, during which he wandered far on land and sea in a previous attempt to reach these shores.

The King has been pleased to confer upon Mr. H. C. Norman, C.S.I., C B.E., Counsellor of Embassy in his Majesty's Diplomatic Service. the rank of Minister Plenipotentiary in that Service.

Among the passengers on board the Manora, which recently arrived at Bombay, were Lady Chelmsford and the Maharajah of Bikanir.

General Sir Julian Byng has been appointed chairman of a new organization to dispose of the canteen profits of the war for the benefit of past and present soldiers and their dependents.

Lieut.-General Sir Herbert Vaughan Cox, Military Secretary, India Office, and Brigadier-General E. W. Costello, V.C., General Officer Commanding, India Contingent, had the honour of being received by his Majesty on July 29.

Major-General Sir C. H. Burtchell, Army Medical Service, is appointed Director of Medical Services in India, and Major-General F. Moore, Army Veterinary Service, is to be Director of the Veterinary Service in India.

The Secretary of State for India held a reception at the India Office on July 30 of Indian officers of the Indian Contingent which recently arrived in England in connection with the Peace celebrations.

Sheikh Abdulla bin 'Isa Ali al Khalifah, C.I.E., son of Sir Sheikh 'Isa bin Ali al Khalifah, ruler of the Islands of Bahrein, is now in London. He was received on July 30 by the Secretary of State for India at the India Office.

It is announced that Colonel Wilfred Thesiger, D.S.O., brother of Lord Chelmsford, the Viceroy of India, has been appointed Consul-General to New York. He has been in the Consular and Diplomatic Service for twenty-two years, and from 1909-14 was Consul-General for Abyssinia.

Prince Nicholas and Princess Marie of Roumania, attended by Colonel Arion, Military Attaché to the Roumanian Legation, and Miss Milne, left Victoria on July 30 for Paris on their way to Bucharest. Their Royal Highnesses will return to England in September.

The marriage was celebrated on July 21, at Ilketshall St. John's, Bungay, by the Rev. W. Wright, M.A., between Colonel G. F. Francis, Indian Army (retired), and Eleanor, widow of Harry N. Evans, of Pensthorpe, Fakenham, sixth daughter of the late Joseph Robinson, of Lewnis, Edenbridge, Kent.

A marriage has been arranged, and will shortly take place, between Captain (Acting Major) A. G. Copeland, 5th Cavalry, second son of Mr. D. P. Copeland, O.B.E., and Winifred Ida, youngest daughter of Colonel R. C. Onslow, Indian Army, and Mrs. Onslow, of 6, Queen's Gardens, Poona.

The engagement is anounced of Nicholas Robin Udal, Assistant Director of Education, Sudan Government, youngest son of his Honour J. S. Udal, late Chief Justice of the Leeward Islands, and Mrs. Udal, to Margaret Ruth, younger daughter of Mr. and Mrs. Roderic Oliver, of Orlestone, Kent.

The marriage was celebrated on July 5, at the Cathedral, Vancouver, between James Daziel Baker, only son of Robert J. Baker, of Stanley House, Exmouth, and Anna Colquhoun Colvin, daughter of the late Clement Sneyd Colvin, C.S.I., and granddaughter of the late Sir William Shelford, K.C.M.G.

The engagement is announced between Rowland Huntly, only son of Colonel C. W. Muir, C.B., C.I.E., and Mrs. Muir, of Lowbrook, Cox Green, Maidenhead, and Beatrice Sydney, youngest daughter of the late James Russell and Mrs. Russell, late of Auckland, New Zealand.

The marriage was celebrated on July 26, at the Private Chapel of the Palace, Armagh, by the Lord Primate of All Ireland, between Major Mervyn Doyne Vigors, D.S.O., M.C., 9th Hodson's Horse, only son of C. D. Vigors (late Ceylon Civil Service), Gowran Castle, Gowran, and Daphne Stewart, second daughter of James Wilson, of Hockley Lodge, Co. Armagh.

A marriage will shortly take place between Major Walter Kingsmill Cook, Indian Army, son of the late Surgeon Major-General Henry Cook, M.D., I.M.S., and Mrs. Alicia Anne Kingsmill Cook, Greycliff, Bonchurch, I. of W., and Joan, daughter of the late Rev. and Mrs. A. W. W. Woodruff, of North Waltham Rectory, Hants.

The marriage was celebrated on July 1 at the Garrison Church, Citadel, Cairo, by Captain the Rev. C. C. Thacker, assisted by Captain the Rev. H. Lloyd, M.C., between Major Nelson Rooke, Highland Light Infantry, younger son of the late Dibney Rooke, Esq., and Mrs. Edith de Chair, to Marjorie Leslie, elder daughter of Sir Alexander and Lady Wood Renton.

The marriage was celebrated on June 11 at All Saints' Church, Srinagar, Kashmir, between the Honourable Major-General W. R. Edwards, C.B., C.M.G., K.H.P., I.M.S., Director-General, Indian Medical Service, and Nell, widow of Lieutenant-Colonel R. Bird, C.I.E., M.V.O., I.M.S., and daughter of the late Lieutenant-Colonel R. Dewar, R.A.

The marriage of Mr. Wilfred Francis Herbert Watson, Egyptian State Railway, of Ballingarrane, Clonmel, County Tipperary, eldest son of the late Lieutenant-Colonel Watson, R.A., and the Hon. Mrs. Watson, and Evelyn Irene Hamilton, only child of the late Arthur J. H. Wills and of Mrs. Macculloch, took place at St. Paul's Church, Knightsbridge, on July 26. The Rev. W. Marshall Selwyn, of St. Simon's Church, Chelsea, officiated.

The marriage was celebrated on July 24, at St. Peter's, Cranley Gardens, Kensington, by the Rev. C. S. Woodward, between Sydney C. Woodhouse, M.B.Lond., M.R.C.S.Eng., Temp. Surgeon Lieut., R.N., youngest son of the Rev. J. T. and Mrs. Woodhouse, Teignmouth, Devon, and Erica, younger daughter of the late Donald and of Mrs. Ferguson, of Croydon, formerly of Colombo, Ceylon.

A marriage has been arranged, and will shortly take place, between Colonel E. A. P. Hobday, C.M.G., Royal Artillery, son of Lieutenant-Colonel T. F. Hobday, Indian Staff Corps, and Katharine Mary, only child of William Dixon Jollands, of Buxshalls, Lindfield, Sussex, and widow of Lieutenant-Colonel Dudley Sampson, late 9th Bengal Lancers (Hodson's Horse). J.P. and D.L. for Sussex.

The Secretary of State for India announces that by the courtesy of the Office of Works, the House of Lords stand, which was erected for the Peace Celebrations Procession on the 19th, and which has accommodation for just under 1,050 persons, will be left standing, and placed at the disposal of the India Office for the procession of the Indian contingent to Buckingham Palace on Saturday, August 2. Will any officer of the Indian Army on the active or retired list, or any civil officer, active or retired of any Indian Service, or any relative of the above, who wishes to view the procession from the stand, apply to the Military Department, India Office, Room 310, stating the number of tickets that he or she requires?

Our Cyprus Correspondent writes:—

Mr. George Wilson has been recognised as American Consular Agent in Cyprus.

Mr. C. S. Cade, Commissioner of Nicosia, will act as Chief Inspector of Schools during the absence on leave of Canon Newham.

Major G. C. Bayly, Acting Chief Commandant of Police, acts as Commissioner of Larnaca from June 24.

Mr. H. Simms, M.V.O., will act as Director of Public Works pending the appointment of a successor to Mr. Nicolls.

Major Bolton, O.B.E., has been presented with the Order. The Acting High Commissioner, Mr. Stevenson, came from Troodos for the purpose, the honour being conferred on the principal Law Court.

Digitized by Google

We are indebted to a Persian correspondent for the following notes:—

Princess Azizieh Sabit and her husband, Mohammed Bey Sabit, have arrived in Paris from Egypt.

A marriage has been arranged between Prince Said Halim of Egypt (only son of Prince Mehmet Ali of Egypt, and Princess Mehmet Ali of Egypt, née Jélal Pasha), and Princess Maria Carracciolo de Brienza.

Princess Kadrié Jemalleddin (daughter of the late Sultan Hussein of Egypt) and her husband, Jemalleddin Bey, have arrived in Switzerland from Egypt and France.

Prince Eumer Farouk, Prince Nourreddin, and Prince Charafeddin of Turkey, who have been in Switzerland since the signing of the Armistice, left Lausanne on July 10, returning with the Ottoman Peace Delegation to Constantinople.

APPOINTMENTS, PROMOTIONS, &c.

M. GAVRILOVITCH.

The appointment is announced of Monsieur Michel Gavrilovitch as Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James's for the Kingdom of the Serbs, Croats, and Slovenes. Monsieur Gavrilovitch is an outstanding figure in the Serbian Diplomatic Service. He has represented his country at the Vatican, and during the recent absence of M. Protitch in Paris was acting Prime Minister. M. Gavrilovitch, who speaks English, can count on a cordial welcome in Great Britain. The Yugoslav Government could hardly have made a more felicitous appointment.

The Council of Armstrong College, Newcastle, on July 25, appointed Lieut.-Colonel Sir Theodore Morison, K.C.I.E., K.C.S.I., Principal of the college.

The King has been pleased to approve the appointment of Mr. C. G. Todhunter, I.C.S., to be a member of the Executive Council of the Governor of Madras in succession to Sir A. G. Cardew, K.C.S.I.

OBITUARY.

The death occurred on June 26, at 1, Rue des Fatimites, Alexandria, Egypt, of Michel Sinadino, President of the Greek community in Alexandria, in his 65th year.

Our Cyprus Correspondent writes:—

The death of Mr. Hatton Richards will be regretted in Cyprus, where he was for many years assistant to the Chief Secretary. Much sympathy will be felt for Mrs. Hatton Richards in her bereavement.

Mrs. Mavrogordato, who has recently died in England, was the widow of the late Mr. T. Mavrogordato, who was for some time a Local Commandant of Police in Cyprus, and afterwards served in the police in South Africa.

A Reuter message from Pekin states that Colonel Wright, of the Eighteenth Infantry Regiment, Indian Army, commanding in North China, has been drowned while bathing at Shanhaikuan.

Major C. H. G. Mansfield Clarke, M.V.O., late Rifle Brigade, died on July 27. He served in the Nile Expedition, 1898, and received the Egyptian Medal.

Major-General Charles Louis Raikes died at Cheltenham on July 25. Son of the late Henry Thomas Raikes, Judge of the High Court, Calcutta, he entered the Madras Army in 1855. He was afterwards appointed to the Indian Staff Corps, and retired with the honorary rank of Major-General in 1887.

The death occurred on July 26 of Major-General John Ruggles (Retired List, Indian Army). Born in 1827, he was present at the siege and capture of Fort Kanysu in 1846, and in 1857 was one of the gallant Lucknow garrison in the Indian Mutiny. After much service in China, he was made Colonel of the 19th Punjabis. Some years ago he published his experiences in India under the title of "Recollections of a Lucknow Veteran."

General Sir Henry Grant, K.C.B., C.B., G.C.V.O., son of the late Field-Marshal Sir Patrick Grant, was accidentally killed while out rabbit shooting on July 28 in the neighbourhood of Laggan Lodge, Inverness. Sir Henry was 71 years of age, and entered the Army, 7th Dragoon Guards, in 1868. He served in the Nile Expedition (1884), Sudan (1885), and commanded 15th Division, Southern Command, and was Inspector-General of Cavalry. He was Governor and Commander-in-Chief of Malta, 1907-9.

The *Times of India* states:—An extraordinary bathing fair is being held at Allahabad owing to the confluence of the rivers Ganges and Jumna shifting to Balughat. This is due to the increase in the current of the former by the over-flooding water of the latter remaining stationary. The popular mind attaches special significance to this, because in one of the sacred books it is stated when the Ganges begins to flow towards the west the world would come to an end. This is the first time the confluence has travelled up so far.

NEWS IN BRIEF.

A mail service has been established between Baghdad and Bulgaria.

The *Basrah Times* states that a post office has been opened at Haditha.

The next big airship flight is expected to be made by R 33 to Cairo and India.

Owing to demobilisation of the naval forces, the French naval bases at Galata, Constanza, and Corfu have been abolished, and the Naval Delegation at Messina has also been withdrawn.

By the explosion of an ammunition dump containing from 40,000 to 50,000 kilogrammes of dynamite, great damage was caused at Samsun, in the vilayet of Trebizond.

In Afghanistan the population declines to accept the money issued by the Soviet power, and the peasants are full of animosity towards the Bolshevists.

A message from Moscow states that Admiral Koltchak has directed a part of his forces to assist the English troops operating in Turkestan. Another message suggests that the English have entered into an alliance with the Khan of Khiva.

A correspondent in Switzerland informs us that the ex-Khedivah Ikbal of Egypt has arrived in that country from Germany. Also that Prince Abd El-Kadir of Egypt, second son of the ex-Khedive Abbas Hilmi, has died in Berlin at the age of 17.

A Commission to inquire into the disturbances of June 7 in Malta is to be composed of Judge Parnis, the Acting Chief Justice, who will preside, two senior military officers, who are to be sent from England, and two leading Maltese citizens.

In a written answer to Major Waring, Mr. Churchill states that the total strength of the British Constantinople Command on June 28 was 84,000, made up of 37,000 British and 47,000 native troops, including 20,000 Indians.

The Ottoman League (Ligue pour la défense des droits des Ottomans, Geneva) asks us to state that there is no truth in certain statements published lately in a London daily newspaper regarding its activities. The League wishes it to be known that it is in no way connected with the Orient League.

The work of the American Red Cross Society in Egypt, Syria, and Palestine will henceforth be carried out by the "Near East Committee," which consists of civilian members bearing special brassards, and enjoying the same privileges that were granted to the members of the Red Cross.

FRIDAY, AUGUST 1, 1919.

ANGLO-FRENCH RELATIONS IN THE EAST.

The dilatory procedure of the Paris Conference is responsible for, among many other things, a distinct strain upon Anglo-French relations in the Near East. But inasmuch as the close and cordial co-operation of Great Britain and France in all parts of the world should be an axiom of the foreign policy of both countries, the wisest course to pursue is to encourage a frank discussion of all outstanding points, with a view to effecting an amicable settlement and to eliminating any permanent sense of grievance on either side. The secret of the Anglo-French entente, it must be remembered, is that it is something more than an official agreement between Governments; it is based on a complete understanding between the two peoples, and its success in the future depends on the retention of this feature. Nothing is more calculated, however, to overshadow the good-fellowship cemented by the war than an attempt to hush up points of difference that must inevitably arise in the complicated settlement that the two countries have to reach. An early decision on the part of the Paris Conference would have presented both peoples with the *fait accompli*, and their good sense would have prompted them to accept it; and as each side would have found some item not altogether to its liking, both would have set themselves to make the best of the compact. The delay in the settlement has allowed the controversialists in one country or the other full scope for the exercise of their ingenuity, or worse, in attempts to influence the ultimate verdict, and, as generally happens in such instances, the protagonists are inclined to exaggerate their case in the hope that, if they do not obtain all that they ask for, they will at least secure the more important part. Accordingly, while the relations between the two Governments remain strictly correct, a certain amount of ill-feeling is engendered in less responsible circles by the extremists. It is characteristic of the British public that it has chosen to nurse its grievances and say nothing for fear of seeming to do violence to the spirit that has brought the two peoples through the war. The French, on the other hand, do not hesitate to reveal their feelings, and in the circumstances this may prove the more practical method to adopt.

For the moment France, or, at least, the French Press, is troubled over the Syrian question. This was one of the problems which an attempt was made to settle during the war, but, unfortunately, on a wholly artificial basis. In the Sykes-Picot agreement the only instructions which seem to have been given to the British representative—for which the Foreign Office is understood to have been in no way responsible—were that he was to come to an agreement at all costs with the French. So literally was this injunction carried out that the French themselves were probably surprised at the ignorant and undiscriminating surrender to French claims. The two things not appreciated across the Channel were Britain's satiety of territorial possessions, as well as her readiness to make sacrifices, if necessary, for the sake of an ally. Other people, however, besides the two contracting parties were interested in the Sykes-Picot agreement, and the Arabs soon showed that they were far from being inclined to imitate Great Britain's accommodating spirit. Whatever may have been the arguments used by the French to convince the British Government that their claim to Syria and parts of Arabia and Asia Minor was justified, it is evident that they were invalidated by facts subsequently brought to light. Both Governments realised that a fresh stock-taking was necessary, but they have delayed to clear up the difficulty, and in the meantime there has been a very vigorous unofficial canvassing of French claims. To clinch their arguments, these extremists are now talking of British "intrigues" in Syria and Palestine, presumably to account for the discovery that French popularity in these parts is not as pronounced as they had been led to suppose. They can spare their laments. Intrigue abroad implies a definite foreign policy, and clearly the British Government has none. If it has, it certainly does not envisage Syria as part of the British Empire. The truth is that France's popularity is restricted to a comparatively small section of the Syrian population, and among the Arabs it is non-existent. If we might venture a friendly suggestion to our allies, it would be that seekers after popularity in the East are well advised to do nothing to court it. Certain it is that both French and Americans have worked very hard in the Near East since the Armistice, unofficially, if not officially, to win popularity, and the orders and concessions that are supposed to go with it. In regard to the latter, they have achieved a greater measure of success than in the matter of popularity, if appearances can be trusted. Great Britain, on the other hand, having done nothing to push herself into the good books of the various peoples, stands to gain popularity, orders, and concessions, if she will stretch out only one hand to help herself.

Clearly the three Powers stand to lose more than any one of them is likely to gain by quarrelling among themselves for the *beaux yeux* of the Near Eastern peoples. If our allies will try to appreciate the sturdy independence of the latter, they will realize that in the long run it is a better asset to the world in general, and consequently to the Powers themselves, than the subservient spirit which their present policy suggests that they would like to find in the Easterns. One result would be an immediate improvement in international relations all round. The French would no longer consider it worth while to handicap the British postal service in the hope of stealing a march on possible trade rivals, and they would not desire to impose their mandate on any territory where they were not sure of a welcome, or at least of being tolerated. The United States Government would not waste time in trying to bring in more territory under its mandate, but would accept the situation as it finds it, and not seek to force it to conform with some artificial standard of national dignity. Every day's delay in the final settlement tends to aggravate the position. The United States, it is understood, are still inclined to consider the question of a mandate in the Near East, but would seem to be associating mandates with what is to be got out of them by the mandatory Power, and for that reason are wondering whether their jurisdiction might not be made to include Mesopotamia as well as Asia Minor. Such an attitude was bound to make France still less willing to forgo Syria; consequently it has been necessary to suggest an investigation on the spot by an Inter-Allied Commission in regard to the wishes of the population of Syria and Palestine. An American Commission has already explored the ground, and has decided that the people would prefer an American mandate, but, failing that, would accept British control. There is no reason to doubt the accuracy of the verdict; but it remains to be seen whether the French will abide by it. It is to be hoped that it will not encourage the United States Government to press further its claim to have Mesopotamia within its mandate, and thus to protract the negotiations indefinitely. A final decision on the subject is urgently required, and should be pressed for by the Paris Conference.

BULGARIA REVISITED.

[The following article, by a military correspondent, describes a visit paid to Sofia some little time after the close of hostilities. The conditions depicted are those ruling at the beginning of the year, and in some respects they have been changed—for the better—as later observers have testified in our columns.—ED.]

It was with feelings of no little curiosity that I found myself again approaching Sofia, the little-known capital of Bulgaria. Much had happened in the interval. Bulgaria had been drawn into the Teutonic net. Emperors and Kings from Central Europe had passed through the city on their way to and from Constantinople or the Macedonian front; German and Austrian officers had strutted about the streets, and had doubtless made themselves at home; Sofia had been the base of an army that had stubbornly resisted the troops of some five or six nations of the Entente for three years; and it had been reported in the English Press that King Ferdinand had been deposed, King Boris had fled, and that a Republic now reigned supreme. Bulgaria, the home of a truculent, self-centred people, proud of their independence, was in occupation by foreign troops. How would they bear themselves in their misfortunes?

A New Railway.

Sofia is now connected direct with Salonika by means of a Decauville railway and a motor road, both of which follow the rocky Struma valley. The railway was made by the Bulgars during the wars as their main line of communication to the Salonika front, and the road is now being kept in excellent order. Consequently those who are fortunate enough to secure a seat by motor-car or lorry choose this line of approach, and I was delighted to find myself one of that number.

After a somewhat lengthy but uneventful journey, during which I had ample time to enjoy the beautiful scenery, I chanced, while walking up a pass, to meet a Bulgarian non-commissioned officer, looking smart and wide awake. In broken Bulgarian I asked him how far it was to Sofia. "Sixty-two kilometres," was the immediate response.

Evidently an intelligent fellow! thought I; so I ventured another question—namely, why his country had fought against us. "God knows, you were on one side, we were on the other. We wanted Macedonia. We went to war against the Serbs, who robbed us of it in 1913, not against the French or English. But we had to defend ourselves." "Did you have a bad time?" I asked. "No, there was plenty of food in the trenches, not so much now, though"—and with that he saluted and went his way. No trace of hostility in this man, no cringing and no truculence. He seemed to take it all in the day's work!

Along the road I had noticed some traces still remaining of the retreat of an army—skeletons of horses, ruined motor-lorries, masses of barbed wire, and debris of all kinds. Here and there were monuments bearing testimony to Bulgarian prowess, and to the eternal friendship existing between German and Bulgar, a friendship evidently made in Germany!

Darkness closed in before I reached my journey's end, but at last the welcome lights of Sofia seemed to promise much-needed food and rest. Alas, however, Sofia was no exception to the general rule: hotels full to overflowing; every house in the town occupied; and it was by a lucky chance that I was furnished with a bed.

Sofia After the War.

Sofia by the light of day presents no great alteration: the same houses, the same regular and somewhat monotonous streets, the same but rather dirtier, and still more out of repair; the same sea of mud; nothing new. Building has been at a standstill during the war. Nevertheless, Sofia has now 200,000 inhabitants; while before the war there were little more than half that number. Refugees have flocked in from all sides, especially from Macedonia. There are said to be well-nigh 200,000 Macedonian refugees in Bulgaria, and some 60,000 or 70,000 of these were in the army. Many of the leading generals and statesmen are Macedonians.

But to return to Sofia—the shops, always somewhat meagre, look much the same as usual. A visit to the market shows that there is still plenty of food to be had for those who can pay for it. Honey, cheese, and vegetables are conspicuous. Meat is scarce, so are ham and goose flesh; but they are obtainable, at a price. And the prices are fabulous! Never mind, there are prenty of millionaires, I am told, in *levas*. The *leva* used to be worth a franc, but is now about fourpence! However, even the poor people don't look starved, as yet.

I enter a café. Somehow, I hardly know how, I find myself in the company of politicians, and being presented to some conspicuous orator. I then remember that in Bulgaria all men and most women are politicians, and all without exception are orators. And yet the men are men of action, too. In other countries one hears such expressions as "deeds, not words!" "Dogs that bark don't bite!" These are inapplicable to Bulgaria, I fear. My new acquaintances at once accost me. "Why do you treat us like enemies?" they ask. "We got rid of the Germans as soon as we could. We were dead sick of them, and of the war too. Our men had begun to go home. They wanted to cultivate their fields. Then you broke through our line. We marched on Sofia, fought a battle with the Germans, and in spite of German efforts to restore the situation, we sent Ferdinand packing!"

The New King.

"But where is your republic?" said I. "We were told you had a republic." "No," was the answer. "We have a constitutional sovereign, like your own. King Boris has nothing to do with his father. He is a Bulgarian born, of the Orthodox faith, and there is no one more democratic. We can get along with him all right.

"Do you not know that our first act was to get rid of all German influences? As soon as King Ferdinand accepted his fate and left the country our revolution came to an end. We are not Bolshevists. Why, then, do you blockade us, prevent food from coming into the country, and stop our trading with you? Matters are worse with us now than when the war was going on. We are getting hungry!"

"You seem to forget," said I, "that you have been fighting against us, your old benefactors, for the last three years, and that you are still our enemies."

"But whose fault is that?" said they. "We have done nothing so bad as your friends the Greeks! Why did you not force us into the war like you did the Greeks? You landed against their wish at Salonika. Why did you not land at Dedeagatch in the same way in 1915? You had asked the Serbs to give us back our Macedonia. Why did you not see that they gave it to us? Besides, have you not heard that in 1915 the great majority, in fact, all the parties except that of Radoslavoff, then Premier, came together and presented a petition to the King to enter on the side of the Entente. The King listened to them with attention, but tricked us with his sphinx-like attitude; and a few days later declared a mobilisation directed against Serbia. Then you all went away. The Bulgarian nation was helpless in the matter. We were under martial law and had to obey. Then, however, thoroughly committed to fight, we did our duty. We have fought three wars to free the Bulgarian Macedonians, and we have defended our own country! None of our divisions went across to the enemy, there was no treachery. We never liked the Germans. We thought we might make use of them, but they made use of us!"

Then almost before I could get a word in edgeways, they were upon me again.

"You call yourselves our benefactors! Of course, we know that Russia liberated us. Who says we are not grateful? Have we not erected a statue to the Tsar liberator, and called a main street after his name And had the Tsar no '*arriere pénsée*' in this famous liberation? Was it not Beaconsfield or Salisbury that broke up Greater Bulgaria after the Treaty of San Stefano, which gave us our Macedonia and Eastern Roumelia, and all that we are now asking for?

"Did you not teach us to beware of Russia when it suited your politics to do so, and did you not afterwards turn round in 1906, when you had made an alliance with Russia, and assure us that the Bear had ceased to hug? Did you not in 1915 promise Constantinople to that same Russia, whom you had taught us to fear like death? No, we are simple people. We learned the lesson you had taught us and we could not unlearn it. We did not wish Russia to have Constantinople nor to sound our own death knell."

"What strange views these poor deluded people seem to take?" thought I. "Surely they must have known who were their real friends, and how wicked it was of them not to support them through thick and thin, and then I seemed to hear the words of Lord Roberts: "Right or

CROWE & STEVENS,

Steamship Agents and . . .
Commercial Representatives,

PATRAS, PIRÆUS, ATHENS,
SALONICA.

Digitized by Google

wrong, my country!" and I bade them good-bye hastily, and sallied out into the residential part of the town.

Soon I spied a French flag over a doorway, and beneath it, mounting guard, the stolid face and figure of an African negro in uniform, "a Black Frenchman," as the Boche would say, and not a bad-looking specimen either. No one appears to take any notice of him. Bulgars are evidently already becoming accustomed to the novel sight, and perhaps reconciled to a foreign occupation. This it appears is the residence of the officer commanding the Allied troops. A little further on is a large building gay with bunting and many flags. What is this? An inter-Allied Officers' Club, it seems from the inscription over the door. This also is something new. Officers of all the Allied nations can meet here, dine, read the papers, play billiards, and even give musical soirees. Again, a little farther on the familiar Stars and Stripes are floating over the new American Legation.

Impassive Tommy Atkins.

Farther still, and the sight of the grand old Union Jack warms one's heart, and, best of all, there stands honest Tommy Atkins, smart as new paint, with every button shining like gold, and sublimely indifferent to the looks of curiosity (are they not also of admiration?) from the loitering Bulgars, as he smartly brings his rifle to the present before a passing officer.

Soon some Bulgarian soldiers come slouching along, saluting nobody, a sullen look on their faces. Their physique is good, so is their clothing; but gone is the smart, soldier-like air of old. Lack of discipline, lack of *moral*, clearly tell the tale of three years of unsuccessful war. Bulgarian officers are not so bad, but even they, to some extent, share the same characteristics.

I wend my steps towards the Boris Garden, where all the world and his wife were wont to take the air. Italian officers and men, a few French officers, and an occasional Englishman are met. Several Bulgarians, chiefly young men and girls, are strolling about. They appear to be happy; the girls seem better dressed, and the type is improving in appearance. Peasants are returning home from market along the Constantinople road in their picturesque costumes, precisely as they have done for ages past, the wife carrying her purchases and the husband riding on a donkey in front of her. Suddenly, round the corner comes swinging a company of cadets from the Military School—nice, clean, well set-up lads, spick and span, even, perhaps, a little smarter than they need to be. Is this, perhaps, the result of the German goose-step? I do not know, but there is no sign of demoralisation. Clearly the youth of Bulgaria is as yet untouched by the war, and full of confidence—the sublime confidence that youth imparts.

Changing Character.

A few more days spent in Sofia convince me that a certain change has come over the people. Closer contact with other Europeans has not been without effect. People hanker more after amusements and society. One or two new theatres producing plays in the style of Viennese light opera are crowded to overflowing nightly.

It is whispered that morals in the towns are laxer than they were. It would be strange, indeed, were they not. But in the country, I am assured, the old peasant virtues still remain, and there the people are still the same sober, honest, hardworking and strictly moral race that one had known before.

Thrifty, obstinate, suspicious of foreigners, entirely selfish, the man in the street has not yet begun to think of what the consequences may be to him personally and to his country for having espoused the losing side. The great European War was for him merely an incident and an opportunity for settling his private Balkan quarrels. He regrets another failure for his arms, and thinks he has already suffered amply for his mistake. What will happen when he realises that he is only at the beginning of his troubles, that he may be expected to make good the losses sustained by Serbia, Greece, and Roumania? That may be a new idea to him. He is still brooding over the wrongs he believes he suffered in 1913, and looks to the Peace Conference to make this good. But the statesmen? They must know, and I wonder how they are supporting the long-drawn-out agony of suspense?

They are a sturdy, sensible, sober people, these Bulgars, never grasping more than they can reasonably hope to hold, never letting go a resolution formed. What will be their attitude to the Bolshevist tempter? A few such there must be in Sofia, and in one or two of the larger towns, who will strive to overturn the Government; but let us hope that the common sense and conservatism of the ideal peasant proprietor State of Europe will withstand the shock and prove a solid obstacle to the further spread of anarchy.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Egyptian Education. July 24.

Mr. HARMSWORTH, replying to questions by Captain W. Benn, said:—Amounts expended on public education in Egypt are as follows:—(a) By Ministry of Education: 1900, £E109,091; 1910, £E333,377; 1918, £E410,753. (b) The creation of provincial councils in 1910, with power to impose taxation up to a maximum amount equal to 5 per cent. of the local assessment of the province to Land Tax, has resulted in the expenditure of considerable sums on elementary education. In 1912 the total amount devoted by provincial councils to education was £E240,746.

Being asked by Captain W. Benn for the details of those employed in the Education Department, Mr. HARMSWORTH said: The number of officials employed in the Ministry of Education (in July, 1919) is as follows:—Egyptians, 1,337; non-Egyptians, 242. These figures do not include temporary officers or servants, who are all Egyptians.

Greeks' Behaviour at Smyrna.

Mr. CECIL HARMSWORTH, replying to Lieutenant-Colonel Aubrey Herbert with regard to the reported massacres in Smyrna and Aidin by Greek troops, said:—The incidents to which the hon. member refers, regrettable as they are, do not appear to have been exactly on the scale indicated in the question, though there can, unfortunately, be no doubt that there has been a considerable loss of life. A certain amount of damage seems to have been done to British interests during the disturbances, and the claims arising therefrom are being examined. The Peace Conference at Paris has decided to send immediately a special commission of inquiry into the alleged atrocities in the territories in question, upon which each of the four Great Powers will be represented by an officer.

Lieutenant-Colonel A. HERBERT: Can the hon. gentleman give an assurance, although the fact is well known here and recognised in other parts of the Empire, that we have no responsibility for these massacres and repudiate them?

Mr. HARMSWORTH: The hon. and gallant member may accept my assurance that no British troops had anything whatever to do with them.

Mr. CECIL HARMSWORTH, replying to Lieutenant-Commander Kenworthy on the same subject, said: While at least one village near Aidin has been partially burnt, no information as to the murder of its inhabitants has reached me. There have undoubtedly been excesses in the other districts mentioned, excepting possibly Manissa, but these are not necessarily traceable to the Greek military forces. While the state of war exists, the appointment of diplomatic and consular officers is impracticable. In addition to the British naval representative at Smyrna, the British High Commissioner at Constantinople has his own representative at that place. There are also naval representatives at Aidin and Aivali, and two naval missions have recently visited Aidin and other places, and I am informed that their presence has exercised a marked restraint upon the attitude of both parties. As I informed the House on the 22nd inst., the Peace Conference are doing their utmost to prevent the recurrence of such disorders by an arrangement strictly defining the limits of the Greek military occupation.

Topics in Parliament.

The subjoined headings are those given in the Official Report.

INDIA: Kut Defence (Awards).—Industrial Commission Recommendations.—Karachi Troop Train Incident.—Government of India Bill. EGYPTIAN GOVERNMENT. INDIA: Uncovenanted Services (Pensions).—Union Parliament (Legislation Affecting Asiatics). (July 21.)

BRITISH SALONIKA FORCE (LABOUR CORPS). PRISONERS OF WAR, TURKEY (OFFICERS' CLAIMS). INDIA: Press Act (Proceedings).—Rice (Hoarding). (July 22.)

INDIA: Karachi Troops' Train Incident.—Army Officers (Pay, etc.).—Panjaub and Delhi.—Officers on Leave (Medical Advice).—Government of India Bill.—Home Administration (Lord Crewe's Committee). CEYLON. PERSIA (TROOPS AT KASVIN). MACHINE GUN CORPS (DRAFTS FOR EGYPT). AFGHANISTAN (PEACE CONDITIONS). INDIA: Sangor School (Officers' Pay).—Disorders (Suppression).—Defence of India Act (Operation). (July 23.)

BRITISH REPRESENTATIVES, EGYPT. DEMOBILISATION: SALONIKA. INDIA: Troops (Heat Stroke). (July 24.)

WAR CABINET (EASTERN COMMITTEE). ARMIES OF OCCUPATION: Egypt (Coast of Offence).—Mesopotamia. ASIATICS' TRADING AND LAND BILL, SOUTH AFRICA. (July 28.)

MONTENEGRO.

A meeting called by the Montenegro Committee was held at the Caxton Hall, Westminster, on July 17, to hear an address by Mr. Alexander Devine on "The Present Crisis in Montenegro." The chair was taken by Sir Robert Kennedy, K.C.M.G., formerly H.B.M. Minister in Montenegro, and there was a large attendance.

In an introductory speech the Chairman referred to the enemies of Montenegro. He said that some of them—many of them—could be found in Serbia. There were many among discontented Montenegrins. Every country had discontented people, and many Montenegrins who had emigrated to America, had imbibed democratic, anti-monarchical views. Enemies could also be found in the Foreign Office, from which safe retreat they ejected poisonous gas upon gallant little Montenegro and its brave sovereign.

Mr. Alexander Devine, speaking of King Nicholas, said:—"He is the maker of modern Montenegro, and he and his people helped Serbia and Greece to win the Balkan War. And now to-day he finds his State in peril of annexation and swallowed up by the very sister country and ally, Serbia, whom he has always stood by so strongly and gallantly. When Austria declared war on Serbia he did not hesitate for a moment. Small as Montenegro was, and unlike the Greece of King Constantine, Montenegro, the champion of Slav liberty, promptly took her place by the side of Serbia, and defied the armies of Austria and Germany. Montenegro declared war against Austria on August 6, 1914, and against Germany on August 9. This is set forth also in the memorandum handed by the German Delegation to the Peace Conference, in which memorandum Montenegro is accused of having been the aggressor against the Central Powers, and consequently not entitled to a war indemnity. The formal proof of her chivalry towards Serbia is that one-third of the Montenegrin army fell on the battlefields. At the moment when the Serbian army, disbanded and disarmed, were running away across Montenegro, the bulk of the Montenegrin army fought against the right wing of Mackensen's army, thus assuring the retreat and safety of the Serbian army."

He proceeded to say that it was Serbian Imperialism disguised under the name of Yugoslavia that had involved and would involve her in deadly conflict with Greece, Roumania, Italy, and Albania, which she was treating similarly to Montenegro.

He then announced another grave fact. Why, it might be asked, did not the King of Montenegro return to his own people upon the Austrian evacuation? The time had come for plain speaking. The King of Montenegro and his Government wished to return to their country, but were confronted, to their amazement, by a communication from the French Government to the effect that France would break off diplomatic relations with Montenegro if they returned at the present moment. In spite of the protest of the Montenegrin Government, Montenegro was being administered by Serbia, that very Serbia which was always talking about self-determination when it affected her claims upon Fiume. But Serbia was the friend of President Wilson, and incidentally a concession had been granted by the Yugoslavs to an American corporation for the construction of docks, warehouses, and railways to connect with the interior at any and all points on the Dalmatian Coast ceded by the Peace Conference to the Yugoslavs.

Referring to the mission sent by the British Government to Montenegro, he said: "Mr. Harmsworth, the Under-Secretary of State for Foreign Affairs, says the Government of Montenegro were not consulted as to the appointment of this mission, and that they have made no protest with regard to it. This is simply not correct. The Government have protested. They protested that no mission had been sent to Serbia or Italy or Roumania, and why should one be sent to Montenegro? As to a plebiscite, there had been none on the restoration of Belgium or Serbia or invaded France. Why Montenegro? Montenegro must be restored. A plebiscite imposed on Montenegro would mean the annihilation of her sovereignty and violence to her honour. She must be restored without a mission, without a plebiscite, and her own people, free from either Austrian or Serbian domination, must settle their own affairs."

In conclusion, he said that all we as Englishmen could do was to ensure that the Balkan peoples should be free to determine their own fates. If Montenegro wished to be absorbed by a Great Serbia, well and good; if she wished her old King to return to her, well and good; if she wished a republican form of Government, well and good; but she must be free to settle these matters herself, and until the Serbians evacuated the country missions or plebiscites or self-determination were a farce.

The Secretary of State for India announces that, in view of the number of applications already received for temporary appointment to Queen Alexandra's Military Nursing Service for India, no more applications can be accepted at present. If and when further applications are desired, another announcement will be made.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

UNION OF ORIENTALISTS.

Agreements entered into during the war provide for close and practical co-operation between the great Oriental societies of the chief Entente countries. The union will be celebrated in the first week in September by a joint session in London of the Royal Asiatic Society, the Société Asiatique of France, the American Oriental Society, and the Scuola Orientale of the University of Rome. The war shattered the internationalism in the republic of letters and scientific research which found expression in periodical congresses at various centres on the Continent and in this country. Its full restitution, with Germany again a prominent participant, may take years to accomplish, and meanwhile the Orientalists of Britain, France, America, and Italy have worked out agreements for co-operation in work, and for the interchange of facilities for their various members. There are to be annual joint sessions, and the first of these will be held on September 3 to 6 (Wednesday to Saturday) in the rooms of the Royal Asiatic Society.

INDIAN REFORM.

At Prince's Galleries a reception was held on July 28 under the auspices of the European Association of India. Among those present were Sir Stephen and Lady Finney, Sir Alfred Welby, Sir George Forbes, Sir Wilfred Collet, Mr. W. Joynson-Hicks, M.P., and Mrs. Joynson-Hicks, Mr. and Mrs. T. Earle Welby, and several Indians representing important interests.

Mr. Ramarayinga pointed out that opposition to the Montagu scheme of Indian Reform did not proceed solely from the British in India. The European Association had, on certain important points, the sympathy of non-Brahmin Indians. He besought the British public, if they meant to go forward with the scheme, to do so with a full understanding of its real nature. If they believed in oligarchy, and thought it the best thing for India, let them go forward with the Bill in its present form. But let them not mock the intelligence of the Indians he represented by pretending to them that oligarchy was democracy.

Mr. Welby emphasised the fact to which Mr. Ramarayinga had drawn attention, that opposition to the Bill was not racial. He impressed upon the audience that the European Association of India included British men and women of the most diverse schools of political thought. But the one thing common to all its members was Indian experience, and it was in the light of that that they condemned the present Bill.

THE INDIAN CONTINGENT.

The whole of the contingent which was to have represented the British Army in India and the Indian Army in the Peace celebrations has now arrived in England, and is encamped at Hampton Court. His Majesty the King has consented to review the contingent in the grounds of Buckingham Palace at 3 p.m. on Saturday, August 2. The contingent will arrive at Waterloo from Hampton Court by train, and will march in procession to the Palace, leaving Waterloo at 1.45 p.m. The route will be Westminster Bridge, Parliament Street, Admiralty Arch, the Mall, Victoria Memorial.

The procession will be headed by a group of distinguished Generals on the active list of the Indian Army who commanded Indian troops in one or other theatres of war. Banners, crowned with laurel, and bearing the names of the various fronts on which Indian troops have fought, will be carried. The contingent numbers about 1,800, and comprises, besides British troops, detachments of every unit in the Indian Army as well as of the Imperial Service troops of the native States. Every martial race in India will be represented—Sikhs, Punjabi Muhammadans, Pathans, Gurkhas, Dogras, Garhwalis, Rajputs, Jats, Mahrattas, and others. It is hoped that Londoners will turn out and give a rousing welcome to these brave soldiers.

THE ARMY IN INDIA.

The Secretary for India, with the concurrence of the Secretary for War, has appointed a Committee to inquire into the administration and organisation of the Army in India. The terms of reference are: (1) To inquire into and report, with special reference to post-bellum conditions, upon the administration and, where necessary, the organisation of the Army in India, including its relations with the War Office and the India Office, and the relations of the two Offices with one another. (2) To consider the position of the Commander-in-Chief in his dual capacity as head of the Army and member of the Executive Council, and to make recommendations. (3) To consider and report upon any other matters which they may decide are relevant to the inquiry. The composition of the Committee is as follows:—President, Viscount Esher. Members: Sir M. O'Dwyer, late Lieutenant-Governor of the Punjab; Sir G. Fell, late Financial Adviser, Military Finance Department, Government of India; Lieutenant-General Sir H. V. Cox, Indian Army, Secretary, Military Department, India Office; Lieutenant-General Sir C. W. Jacob, Indian Army Commanding 2nd Army Corps, Army of the Rhine; Lieutenant-General Sir H. Hudson, Indian Army, Adjutant-General in India; Lieutenant-General Sir J. P. Du Cane (late R.A.), late Commanding XV. Corps, B.E.F.; Major-General Sir W. Gillman (late R.A.), recently Chief of the General Staff in Mesopotamia. Secretary, Brigadier-General C. M. Wagstaff. The Committee will meet first in London, where two months' work is anticipated. Later they will proceed to India to examine witnesses and conditions on the spot.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Sudan Loan Bill, which is the subject of a White Paper which is given elsewhere in this issue, passed its second reading on July 28. Mr. Harmsworth, who introduced the measure, explained that the irrigation would be worked out, he understood, on the lines that the Sudan Government will be responsible for the construction of the main irrigation works, and for the provision of the necessary land, while the Sudan Plantations Syndicate will provide the minor irrigation works, buildings, ginning factories, offices, and the like. The syndicate, he stated, will have a run of ten or fourteen years, during which time they are to reimburse themselves for their main expenditure, the cost of buildings, etc., being on revaluation repaid to them by the Sudan Government. One-third of the 300,000 feddans or acres will be under cotton each year, another third being under leguminous crop, while the remaining third will lie fallow. Of the proceeds of the cotton, 40 per cent. will go to the native cultivators, 35 per cent. to the Sudan Government, and 25 per cent. to the syndicate. In addition, the total proceeds of the leguminous crop will go to the native cultivators.

***

The importance to Lancashire of the extension of cotton cultivation, which the scheme has in view, received full recognition in the debate. Lancashire, as all those who are *au courant* of the question know, depends mainly on America for her cotton supply. The unsatisfactory nature of the position is well brought out in a lecture by Mr. de Segundo, which will be found on page 132. Conditions in America apparently are such as to hold out little prospect of increased production, and it does not need a particularly vivid imagination to picture a time when, if adequate measures have not been taken to increase cotton-growing within the British Empire to a sufficient extent, Lancashire will actually have to go short of cotton. That contingency is not to be contemplated. "We cannot take risks with Lancashire," said Mr. Harmsworth in the debate, and that sentence aptly summarises the position.

***

The continued rise in the price of silver brings within the bounds of possibilities a further increase in the exchange value of the rupee. The rupee at 1s. 8d. is roughly equivalent to silver at 53d. per oz., but silver now stands fractionally above 55¼d. per oz., which means that India will lose in any further transactions in the metal for currency. The whole question of Indian currency is now, of course, being considered by a Commission, and it will be interesting to see what line it takes on the question of the exchange value of the rupee.

***

The Indian mail papers show that at the present time there is a remarkable outburst of industrial enterprise in the country, evinced in the formation of new companies on a most extensive scale, many of which are purely indigenous undertakings. As in this country, war restrictions have had a considerable effect in bringing about what is aptly described as a "company promoting boom," but in the main its impetus is derived from the attention paid during the war to the question of the development of India's resources. A feature much commented on is the ease with which capital is obtained for any project. At home it is noteworthy, that despite the constant flood of new ventures the public has on the whole been well able to discriminate between promising companies, and those which are, shall I say, "just so so"? Needless to say, the apparent absence of this quality in India carries with it the seeds of future difficulties.

***

I note with extreme pleasure the strong line taken by the Bengal Chamber of Commerce in regard to subjects of countries which were ranged against us in this war. India proved a happy hunting-ground for the German trader before the war, and in few countries outside the Balkans was a more unscrupulous advantage taken of the opportunities afforded him. In short, he made out an absolute case for precautionary measures against him in the future, which precisely describes the action taken by the Chamber. At an extraordinary general meeting the articles of association were altered, three being substituted for the two existing classes of members. The classes are Chamber members, associate members, and honorary members. British subjects are alone eligible for election in the first class, while non-British subjects who are not subjects of enemy countries may be elected as associate members, who will not be entitled to vote, nor to hold office in the Chamber. Subjects of countries which took part in the war against us will not be eligible for election as associate members for ten years, and then only granted that at a meeting specially called for that purpose three-fourths of the members are in agreement. Further, any firm, whether a Chamber or an associate member is to be expelled if it takes an enemy subject as partner, director, agent, or manager.

***

I never had the slighest doubt that the Germans, if they were in a position to do so, would do their utmost to re-establish their old position in the Near East. From particulars given by our Constantinople Correspondent this week, it is evident that they have lost no time in taking the preliminary steps to find out how the land lies, and whether they are likely once more to have things their own way. This activity must not—and I do not think it will—be under-estimated by British traders, whose knowledge of the German trader and his methods is very different from what it was before the war.

The annual report on the maritime trade of Bengal throws an interesting light on the rapid development of Japanese trade with India. Japan's imports into Calcutta averaged Rs.148 lakhs for the five years ended with the year 1915-16. The total for 1917-18 was Rs.603 lakhs, while it reached the remarkable figures of Rs. 1,139 lakhs in the year under review, or roughly 18 per cent. of the total import trade of Calcutta. Unquestionably, Japan has taken the fullest advantage of the unique opportunity offered for the extension of her trade by the war; but whether her increased share of trade in India and elsewhere is permanent must be at least open to doubt.

***

Whether it would not have been well to have postponed for another year the removal of State control of Egyptian cotton when the market conditions of the world will more closely approximate to the normal must remain to be seen. With two classes in Egypt, the grower and the merchant exporter, the control has been far from favoured. The growers have received an excellent return, but their view has been that the control has prevented them obtaining the increased prices that might have been expected, as a result of the restricted acreage, while the fact that in reality the Government was the exporter, made the exporting middleman unnecessary. The attitude, of these two classes is, no doubt, an important factor in bringing about the removal of control. One great advantage of control from Manchester's point of view, was that it stopped gambling in cotton. Movements in futures in the last few days have been rather marked, which may, or may not, be significant.

***

Judging from an article in the *Ahaly*, the transfer of the Khedivial Mail to new ownership has not been altogether pleasant reading to Egyptians. "The Egyptians," says our contemporary, "still remember the time when they had steamships," and it goes on to emphasise the regret felt when the Government sold its steamers. The result of the present development has been, it says, to stimulate the wish "to restore a steamer service to the country." Most people who know conditions in Egypt will be of opinion that there are many other directions in which enterprise is first called for. Apart from that, the country is well served by existing British lines, and with the increased facilities that, it may be expected, the Khedivial Mail will provide in due course, the scope for a purely Egyptian service would be somewhat restricted.

CONSTANTINOPLE BUSINESS LETTER.

The Revival of German Trade.

(From Our Own Correspondent.)

Constantinople, July 5.

If there were any doubts as to the fallacy of the supposition that German industry is not in a state to begin operations at once, and that in spite of the restrictions which have been imposed, such doubts would at once be dissipated by the letters which have recently fallen into my hands. One of these letters, for instance, was from a firm of toy manufacturers at Nuremburg, and offered samples by return of post. This particular letter came to the British Post Office in an envelope bearing the name and address of the sender in large print, and had been censored by the Italian Censor. As one business man remarked, unless we wake up to the fact that the Germans are quite ready to begin about where they left off, we shall find them in the saddle again before the peace is three months old. All the same, it seems hardly the thing that the British Army Post Office should be used so soon for the reopening of German trade to the Near East. There is one other detail about the letter in question which is worthy of remark. Since it bears the date of May 2, 1919, how was it allowed through at all?

Strike of Bank Clerks.

The event of the week has been the strike of bank clerks for an increase of salary. The banks affected are the Imperial Ottoman Bank, the Credit National Ottoman, the Russian Bank, the Salonika Bank, the Bank of Athens, the Banco Commerciale d'Italia, the Banco di Roma, and the Crédit Lyonnais. Of all these the Imperial Ottoman Bank alone was able to keep going, although with the greatest difficulty and only with the help of a certain number of old employees who had retired on their pensions, and came forward to help in the crisis. The National Bank of Turkey is not affected at all, although all the clerks in the National Bank belong to the union, as the bank has been paying their salaries in gold, which gives them more than the increase for which their less lucky confrères are striking, and they felt that it would not only be utterly foolish but also the basest ingratitude to strike.

The strikers demand an increase of 300 per cent. in salaries, and the bank managers replied that as they also were no more than employees they could not agree to such a demand without first having the authority from their several headquarters. The union did not consider this to be a satisfactory reply, so on Wednesday the clerks struck work. According to one manager, the banks were already about to accord of their own free will a certain increase of salaries, when they found that the union was using "des moyens de pression les plus condamnable."

On July 3 the union published a statement to the effect that if certain banks maintained their uncompromising attitude, the union would permit a certain number of employees to return to work in banks with which an agreement would be signed, in order that the "honourable clientèle" might be able to withdraw their deposits and re-deposit them in the banks which had yielded. The manifesto finishes up with a statement couched in truly Homeric language:—"The bank employees, calm, immovable, fully dignified and conscious of their rights, will wait as long as necessary for the triumph of their cause."

Trade with Russia.

The approaching downfall of the Bolshevists renews our prospects of doing business once again with South Russia. Even at the present moment there is a good deal of trade with the ports that are open to commerce. Drugs, especially aspirin, are in great demand at present, but there is a ready sale also for articles of clothing, especially hosiery and underclothing.

Exports.

During the last week or so there has been a fair amount of wool, mohair, and opium exported to England. A considerable amount of tobacco has been shipped to the United States. The result has been to send up the value of the Turkish paper money about 5 per cent. On the whole, however, business remains very quiet, the political situation rendering serious business out of the question. After all, Turkey's commerce depends to a very large extent upon agricultural pursuits, and as three-fourths of the country is in a state of chaos it is impossible for matters to improve until order and security are re-established.

OUTLOOK IN EPIRUS.

Trade and Resources of District.

Owing to constant political vicissitudes followed by the European war, the Province of Epirus, the British Vice-Consul at Janina points out in a recent report, has not yet had a chance of modern development. The country, mostly mountainous, has been chiefly used for sheep and cattle-breeding. Agriculture has been neglected and conducted on primitive lines. Available industries, such as dairy-work, tanning, spinning, and weaving, have not yet been developed by modern machinery. Exports embrace cattle, wool, cheese, and butter, olives and olive-oil (from the Prevesa district), hides and skins, valonea, etc. Exports to the United Kingdom have been nil. Some cheese and livestock and hides are sent to Malta, and butter to Alexandria.

The inhabitants, though intelligent and industrious, are not educated up to modern standards of enterprise and commerce, and large numbers have emigrated for lack of industrial employment and security. Spending capacity, before strictly limited, has improved since the war, and with settled conditions a certain rather slow and cautious development may be expected, and modern needs will form. Some of the local notables, who have considerable means, are now beginning to combine with the more enlightened and up-to-date business men to form companies for trade and exploitation. But anything like rapid development or exploitation will be seriously hindered for some time to come by the district's isolation.

Lack of Communications.

Janina, the chief town of Greek Epirus, standing, roughly, in the centre of the province, is at present practically isolated from the outside world. It has no railway communication, and the only metalled road (at present in very bad repair) connecting it with the rest of Greece is that to Prevesa, the port sixty-seven miles away on the southern port of Epirus, at the entrance to the Gulf of Arta. The Greek Government maintains a very indifferent motor service between Janina and Prevesa. The journey by cart takes two days. There are three small harbours on the western coast of Epirus, available for coasting trade by local steamship companies, but they have no road communication with Janina. The Greek Government are preparing to make a road from Janina to the port of Doumenitsa, about sixty miles away, on the Corfu Straits, and to use this port to replace that of Santi Quaranta and supplement that of Prevesa. Janina will also, as soon as possible, be connected by road, and eventually, doubtless, by rail, with the rest of Greece in an easterly direction, thus allowing for communication with Volo and Salonika. But there seems little prospect of these improvements being rapidly effected. Direct imports from the United Kingdom must be shipped to Piræus, or Patras, or Corfu, and thence transhipped locally to Prevesa. British steamships have not hitherto called regularly at Prevesa.

Trade Position.

An accurate survey of trade possibilities in this district is out of the question in the circumstances noted above, and in view of the confused political situation both during and after the war in this part of the world. Trade in the district has been at a standstill during the war, with the exception of a few imports—mostly indirect—from Italy, Spain, and the United States of America. Italy was the chief importing country in the past, and there is no doubt that her competition will be very serious. The geographical group representing Austria is placed next on the list of estimated competing countries. France will presumably be the third, with the United States of America or Spain next in order.

The United Kingdom has hitherto held a firm position in textiles and metals which should be retained in spite of the competition of Milan. The local population are strongly pro-British. The moment is psychologically most favourable to British trade expansion. There is a general conviction in the market that British manufactures are the best, and increased spending power should lead to their being preferred to the cheap stuff with which local needs were before satisfied. This Vice-Consulate has for the last six months been working hard to supply a general demand for facilities to learn the English language, and it is hoped that the initiative undertaken will result in the establishment of some form of English school in Janina. At present only one local firm is able to correspond in English.

It is recommended that advertising should now be done in the following lines:—Building materials, chemicals, bedsteads, window-glass, cutlery, metals, wire goods, nails, locks, hinges, water-supply fittings, boots, agricultural machinery and implements, dairy appliances, small motor-engines, paint, groceries, rubber goods, sporting requisites, textiles, cycles and accessories (including motor-bicycles), photographic apparatus, paper and stationery goods—inks, fountain pens. It would be useful for firms sending representatives to Greece in connection with agricultural machinery, engineering, mining, and public works, to let them visit this district and study local conditions. British insurance work might also be undertaken.

Various properties are being purchased at Rabat, Morocco, for town improvements.

The seaborne trade of Bengal for the year 1918-19 amounted to over Rs.206 crores, which represents an increase of Rs.35 crores over the figures of 1917-18. The increase in the case of imports is 16 per cent. and in the case of exports 21 per cent.

THE NEW SUDAN LOAN.

Irrigation and Railway Estimates.

A note giving the reasons for doubling the amount of the Sudan Guaranteed Loan has been issued as a White Paper. The note states:—

By the Government of the Sudan Loan Acts 1913-14 it was provided that the Treasury should guarantee the interest at a rate not exceeding 3½ per cent. on any loan raised by the Government of the Sudan for the purposes set out in the schedule to the 1914 Act not exceeding in the aggregate an amount sufficient to raise £3,000,000. The schedule to the Act is as follows:—

	£
I.—Works for the purpose of irrigating the Gezireh Plain	2,000,000
II.—Extension of the Sudan Railway system	800,000
III.—Other irrigation works and contingencies	200,000
	3,000,000

The schedule to the Bill now before Parliament is as follows:—

	£
I.—Works for the purpose of irrigating the Gezireh Plain, including the repayment of any temporary loan raised for those works under the Government of the Sudan Loan Acts 1913 and 1914	4,900,000
II.—Extension of the Sudan Railway system	700,000
III.—Tokar irrigation and railway extension	400,000
	6,000,000

Item I.—The Gezireh plain is situated between the Blue Nile and the White Nile immediately south of Khartoum and the works for the purpose of irrigating it comprise a masonry dam or weir near Sennar on the Blue Nile, some 170 miles south of Khartoum, to hold up the level of the river, a main canal to carry the water by free flow from the dam to the land to be irrigated, and a system of subsidiary canals to conduct the water throughout that land, the area of which, as the scheme was originally designed, was to be 100,000 feddans, a feddan being for practical purposes the same area as an acre.

In January, 1914, the sum of £500,000 was advanced to the Sudan Government by the National Debt Commissioners against bonds issued under the 1913 Act to enable a commencement to be made with the Gezireh irrigation works pending the amendment of the Act and the flotation of the loan. The works were begun, and when war broke out in 1914 arrangements were on foot for issuing an instalment of the loan, but no issue was ever made, and the £500,000 advanced as aforesaid has now been expended on the work which has been carried on slowly during the war upon the main canal and certain other portions of the scheme.

Further study of the scheme in view of the altered conditions attributable to the war showed that the area to be irrigated had to be increased to make the scheme financially a safe enterprise for Government, while it should not be too large for the population and resources available. These considerations fixed the area to be irrigated at 300,000 feddans instead of the 100,000 feddans originally contemplated. Owing to the immense increase which war conditions have produced in the cost of all materials and labour, and to the higher price of money, the estimates for the scheme, including interest during construction, now amount to £4,900,000. When the works were going to cost only £2,000,000, and money was a great deal cheaper, it was intended that the Sudan Government should provide out of its revenues the annual interest and sinking fund payments in respect of the loan. This is no longer possible in view of the enormously increased annual charges in this respect, and the strain thrown upon the Sudan Government's Budget by present conditions. It has therefore been necessary to include in the loan £1,000,000 to provide for interest during construction of the works, and until the time when it is anticipated that the receipts derived by the Government from the scheme will be sufficient to support the annual charges.

It may be mentioned that criticisms have from time to time been launched against the scheme on certain grounds. These criticisms were the subject of investigation by the Commission appointed by the Foreign Office to consider them, and the Commission decided that the criticisms were entirely without foundation, and should never have been made. The burden of the criticism was that Egypt would suffer by the abstraction of water from the Nile to meet the needs of this project in the Sudan. As a matter of fact, in any one year the Nile always carries more water than is now required for Egypt, even in the years of the very lowest supply, but unfortunately the flow is so variable that at some periods water has to be wasted to the sea, while at others there is an actual shortage. To eliminate as much as is necessary of this irregularity in the flow, Egypt is now undertaking further works of control. These works will secure her position absolutely for many years to come, and at the same time allow development in the Sudan to a much greater extent than is contemplated by the present scheme. But the latter will not affect Egypt, even without the construction of the new control works now in hand on her behalf, as the bulk of the water required by the Sudan will be abstracted at a time when there is ample water for all purposes in the river. It is true that for some time in the spring of each year the Sudan will be obtaining water which Egypt might require in years of very poor supply, but this is met by the fact that the dam at Sennar will provide a reservoir where sufficient water will be stored from the preceding period of high supply to irrigate Sudan crops while allowing the low water supply to pass on to Egypt without diminution. In short, the Sudan can be developed to the extent contemplated by this Bill without in any way prejudicing Egypt.

Item II.—The second item in the Schedule to the Act of 1914, viz., "Extension of the Sudan Railway System, £800,000," was intended to provide for the repayment to the National Bank of Egypt of the advance of £800,000 which they made to the Sudan Government for the building of the extension of the Sudan Railways from Khartoum through the Gezireh to El Obeid. Since that time the Sudan Government has been able to make provision out of revenue for the reduction of the debt to £700,000, and this constitutes the second item in the Schedule to the new Bill.

Item III.—The Tokar cotton-producing area is situated about sixty miles from Suakin and is flooded annually by the flood of the River Baraka. Cotton has been grown there for many years and the average annual yield is about 4,000,000 lb. of ginned cotton, but the industry is capable of improvement and development by the construction of a modern irrigation system and the provision of railway transport from Tokar to Port Sudan, the port of export of the country, by extending the line from Suakin to Tokar, a distance of about sixty miles. In the schedule to the Act of 1914, these items were not specifically provided for, but an item of £200,000 for "other irrigation works and contingencies" was included in it. The development and improvement of the Tokar cotton-producing industry for which, of course, railway transport is essential, is a work of some importance, not only to the Sudan but to British cotton interests. The present schedule provides for these works the sum of £400,000, which includes, in addition to the estimated cost of the works, an allowance for interest during construction for the reasons given above in the case of the Gezireh scheme. It will be seen from the foregoing that, although the amount of the loan originally sanctioned is to be doubled, no new schemes are involved. The necessity of applying in Parliament for additional financial assistance is due to the conditions resulting from the war.

In conclusion it may be mentioned that the experimental cotton-growing areas in the Gezireh have been at work for a number of years and have produced a very valuable and satisfactory type of cotton which has sold at high prices in the Liverpool market. The Sudan Government bases its estimate of the financial prospects of the scheme upon a sale price of cotton of 10d. per lb., which is the average price for eight years prior to the outbreak of war, whereas Sudan cotton has recently been sold on the Liverpool market at 31d. per lb. The yield has been taken at 300 lb. of ginned cotton per feddan, which is less than the actual yield obtained in the worst year from the experimental stations, and much less than the average yield, which is 417 lb. per feddan. The Sudan Government believes that the results obtained from these experimental stations are a true index of the yield which may be expected from the whole area. Full publicity has been given to this and all other schemes of the Irrigation Service in the annual reports of the Egyptian Ministry of Public Works.

The following is the estimate of the annual receipts and charges involved in the Gezireh scheme:—

Receipts (after the first five years for which loan charges are provided out of capital)	£1,250,000
Charges (including loan charges)	1,107,000
Balance	£143,000

CABLES IN CODE.

With reference to previous announcements respecting the abolition of the censorship on British-controlled cables and wireless telegraphs, the Post Office notifies that the restrictions on the use of codes (whether public or private) and registered abbreviated addresses have been withdrawn by practically all countries outside Europe, except the Argentine, Siberia, French, Italian, and Portuguese possessions, and the territories formerly controlled by Germany. As regards Europe the censorship restrictions have not yet been withdrawn in Bulgaria, Malta, North Russia, South Russia (including the Caucasus), Roumania, Turkey, or by the Governments of France, Italy, Portugal, and Switzerland, and the regulations hitherto in force in connection with telegrams for those countries, as regards the use of plain language, must be maintained for the present. All restrictions have been withdrawn as regards telegrams for Germany and German Austria, except that telegrams for the parts of Germany in Allied occupation must be in plain language—English, French, or Italian.

ENGINEERING NOTES.

Bulgarian Railways.

It is reported that representatives of American syndicates are in Bulgaria in connection with the construction of new railways which the Bulgarian Government had in view before the war. The American proposals, it is said, are very tempting, and details of them may be made known as soon as peace is quite settled. Bulgaria had, as far as is known, two schemes for the extension of her railway net; but as the one was more or less of a character that present political changes would not support, it is probable that the American syndicate is interested in the other, which will serve home districts. This project includes a line from Radomir, via Dupnitza, to Lumaja, with a branch line from Dupnitza to Bovordol, together about 90 kilometres; another from Plevna to Lovetch, about 53 kilometres; and another from Gabrovo to Sevljievo, 30 kilometres. These lines are very useful for the country from an economic point of view, and their construction may lead to further extensions or branches. As to the advisability of Bulgaria's hurry to dispose of the contract for the construction of these lines, it can only be said that from a technical and economic point of view it would be to her greater advantage if tenders were invited when her political and industrial troubles are entirely over.

Roumania's Chemical Industry.

The war undoubtedly had a beneficial effect in regard to the future development of certain industries in the Balkan States, which, either owing to lack of the necessary administrative experience or to political complications, had hitherto made more or less spasmodic and inadequate progress. Thus important industries which might have been great sources of wealth to the states, in general, remained, in spite of good prospects, in a state of atrophy, which, of course, was very favourable to the neighbouring German States. The war gave ample opportunities to those concerned in the development of certain industries for realising not only the great value of those industries, but also the fact that most of the needed raw materials, which hitherto had had to be brought from distant countries and from Germany, could be obtained locally. There is great scope, for instance, for the chemical industry, as the means for its development exist in nearly all the Balkan States. With the exception of Greece, however, which in recent years has made great strides in the production of chemicals for agricultural and general purposes, the Balkan States have not made the progress which they could have made. Roumania's chemical industry was more promising that that of her neighbours; and although of comparatively recent origin, and still in the course of development, its progress is remarkable; but it was impossible for interested firms to take steps fully to control their own market and to enter the neighbouring Balkan markets during the Balkan wars and the recent European war. The Germans used to say that Roumania lacked the necessary raw materials, machinery, and technical men; and that, above all, she was lacking in alkalies, caustic soda, ammonia, soda, and potash, together with mineral acids, as the land was still unable to meet the domestic requirements; moreover, that the chemical industry was in many ways dependent upon the imports of Spanish and Portuguese pyrites, the supply of which during the wars had become so irregular that the mineral acids branch had had to introduce restrictions in working. All these discouraging arguments were absurd. It is well known that abundant supplies of the necessary raw materials can be obtained in various parts of the country. Better class and more efficient machinery than that of any foreign origin can be obtained at a few weeks' notice from England; while the intelligence and aptitude of the Roumanians in anything pertaining to science is a guarantee that there will be no lack of technical men for the purpose. The alkalies which it might be necessary to import will certainly not cost more than they cost to other continental countries. It is possible therefore for the Roumanians, by their own individual energy and enterprise, aided as much as possible by the State, to establish their chemical industry on a modern basis—free from German interference, and thus to create an industry which will probably prove one of the principal sources of wealth in the country.

Refrigeration of Provisions.

Our note on the refrigerating plants for preserving meat, fruit, etc., in last week's issue has apparently been of much interest to a party of shipowners and captains from the Eastern Mediterranean, who have come to England on the chance of finding ships for sale. The writer has been asked a number of questions on the subject, and as it is probable that the question is in the mind of many others in the Near East, some further reference seems called for in the hope that British makers of refrigerating plants will give the necessary attention to a very promising market for such machinery now that shipping is reorganised, and the application of modern methods for transporting food, etc., is recognised as indispensable.

For preserving provisions on passenger steamers, steam yachts, making ice, etc., a small type of machine is generally used, consisting of a single vertical steam cylinder and a compressor, both secured to a casting containing the condenser coils. Behind this casting is another secured, containing the evaporation coils, the whole making a very compact and accessible design. This type of machine is very simple, and can easily be worked by a person of ordinary intelligence. Brine services are fitted for producing the temperatures required in the meat, vegetable, butter, and fruit rooms, as well as for making ice and for water cooling. These are controlled from the refrigerating machine, which may be placed in any available corner in the main engine-room, where it comes under the eye of the engineer on watch.

EGYPTIAN DELTA LIGHT RAILWAYS

The traffic returns of the Egyptian Delta Light Railway for the ten days ended June 30 were £E7,331, making the total for the year £E38,377. The figures for the corresponding period of 1918 were £E6,457 and £E66,284.

Lieutenant-Colonel Du Cane, a representative of the well-known engineering firm of Sir John Wolfe Barry and Partners, has been recently inspecting and studying the condition of the ports of Tuticorin, Negapatam, Cocanada, and Mangalore on behalf of his firm, and subsequently went to Ootacamund to confer with Government before returning home to make his report to his firm.

SHIPPING INTELLIGENCE.

Moroccan Merchant Shipping Code.

The *Bulletin Officiel* of the French Zone of Morocco of May 26 contains a Dahir, promulgating a "Code de Commerce Maritime," a "Code Disciplinaire et Pénal de la marine marchande chérifienne," and a "Reglement sur la pêche maritime." The "Code de Commerce Maritime" specifies what vessels are to be considered Moorish, the conditions being that they must have been built at a port in the French Zone or, if built elsewhere, at least three-quarters of the shares must be owned by French or Moorish subjects. The registration, survey, and measurement of ships, ships' papers, sails, nationality, and flag are also dealt with. The Code further provides that, in order to command an ocean-going or coasting vessel of more than twenty-five tons under the Moorish flag, the master must hold a certificate issued in France or the French Zone. The French Decrees of February 21, 1897, November 9, 1905, and May 7, 1914, as regards collisions at sea, now apply to Moorish vessels. Some of the penalties imposed in the Dahir for infractions of the regulations will apply to British ships after the abolition of the capitulations. The law in regard to merchant ships, their sale, mortgage, seizure, and forced sale, affreightment, liabilities, etc., is also laid down. It is further provided that a mortgaged vessel cannot be sold to a foreigner, and that the mortgages, whether entered into abroad or in the French Zone, are not effective as regards third parties until they have been filed at the port of registry of the vessel. The articles regarding seizure and sale of vessels will not apply to British vessels until after the abolition of the capitulations. The third and last portion of the Code deals with the law in regard to marine transport, sea risks, and casualties, and marine insurance.

The regulations regarding fishing in Moorish territorial waters, defined as extending to a distance of six nautical miles below low-water mark, does not appear to contain any provision to exclude other than French or Moorish ships from fishing, though the grant of concessions for certain waters seems to be contemplated. A licence has to be obtained in order to fish in territorial waters, and an annual fee, varying according to the size of the vessel, is imposed. Restrictions are imposed as to the nets to be used. The use of explosives is prohibited.

OPIUM MARKET.

Messrs. Barker Bros., Smyrna, report as follows under date July 2:—Our market here has been quiet for over six weeks, but within the last 5/6 days local speculators came forward and bought about fifteen cases of fine druggists' manufacturing material at prices ranging from 15s. to 20s. per lb. as to quality. No arrivals of new crop opium have as yet reached this market, but we learn that very little opium has been sown this year in the low lands, so we depend on what the upper districts will give, which are, however, always a month to six weeks later in maturing.

It is announced that the Government of India is considering improved machinery for assessing the income tax in that country and preventing evasions therefrom.

COTTON SEED UTILISATION.

Importance of Increased Empire Cotton Production.

An interesting lecture was given by Mr. E. C. de Segundo at the British Scientific Products Exhibition on July 23 on the utilisation of cottonseed and the importance of increasing cotton production within the Empire.

The world's average annual production of cottonseed, he said, was probably about 11,000,000 tons, of which rather more than half was grown in the United States. This quantity of seed contained, potentially, about 2,000,000 tons of oil and about 8,000,000 tons of feeding-cake for cattle. Of course, the whole of the world's production of cottonseed could not be brought to market, but in the United States, where the cottonseed oil and feeding-cake industry had been developed practically up to the limit of the annual production of cottonseed, the value of the cottonseed produced in that country in 1917 was between £60,000,000 and £70,000,000 sterling. On the American system the seed was split open in a decorticating machine and the kernel of the seed extracted, the latter alone being crushed for the manufacture of oil and feeding-cake. A crop of 6,000,000 tons of cottonseed in the United States would yield about 900,000 tons of crude oil, over 2,000,000 tons of decorticated feeding cake, and over 2,000,000 tons of seed-remains, or decorticated cottonseed hulls, as they were called. The proportion by weight of residual cotton fibres of American cottonseed to that of the actual shell of the seed was 1 to 3, so that about 600,000 tons, or about 10 per cent. of the original weight of the cottonseed consisted of short residual cotton fibres, which until a few years ago were looked upon as practically a waste product.

Residual Fibres.

Proceeding to discuss the question of the utilisation of the residual fibres, Mr. de Segundo explained that of the derivatives from the cottonseed, which were constantly being added to, this product might be said to be one of the most important, as it related to a question which it was no exaggeration to say was of supreme, indeed vital, importance to the future of our economic position in the world, namely, the question how the problem of an adequate supply of cotton for the world's present and future requirements was to be solved. Such fibres were looked upon as a waste product until about seven years ago, when he was fortunate enough to work out a machine which successfully separated them out from the decorticated hulls of the cotton seed produced under the American system of manufacturing cottonseed oil. These machines had been at work in the United States commercially since the autumn of 1913, and a good many thousand tons of such fibre in the form of explosives were used by the Allies during the war. About five years ago he was led to attempt the solution of a somewhat similar problem involved in removing these residual fibres direct from the cotton seed, and this machine removed from the woolly varieties of cottonseed such of the residual fibres as were not recoverable efficiently or economically by existing devices, and delivered them in a form so free from the dirt and debris always present in the cottonseed of commerce that the highest grades of paper, artificial silk, vulcanized fibre, and other commodities could be manufactured from the product of this machine, which was termed "seed-lint" to distinguish it from the "hull-fibre" recovered by the other machine. "Seed-lint" was, of course, identical in its characteristics with "hull-fibre," but was superior in quality, being exactly the same material but removed from the seed before decortication. Apart from the industrial value of these residual cotton fibres, the removal thereof from the seed concomitantly resulted in a considerable improvement in the seed for the purposes of the production of oil and feeding-cake, and in a corresponding increase in the market value of the seed.

The Cotton Supply Problem.

He had said that the results achieved by this machine bore upon a question of vital importance to the Empire, namely, upon the question of an adequate supply of the raw material for their great cotton spinning industry. Now, it was not generally known—except by those whose business it was to know such things—that Lancashire was, and had been for years past, dependent upon the United States cotton crop for about 75 per cent. of the raw cotton needed by their spinning mills. Lancashire drew annually about three and a-quarter million bales of cotton (about 800,000 tons) from the United States. From Egypt she obtained about 15 per cent. of her annual requirements, or about 150,000 tons; from India about 6 per cent., or about 72,000 tons; and the remainder from other parts of the world. This dependence for so large a proportion of raw material upon one source of supply (the United States) was clearly an unsound policy.

In the year 1907 a cotton conference was held at Atlanta (Georgia, U.S.A.), at which American and European cotton manufacturers were assured by American cotton growers that they could rely with confidence upon the American cotton belt furnishing all the cotton required by the world's ever-increasing demands, and that therefore the opening up of other cotton fields was wholly unnecessary. At the same time it was made clear that the United States intended to develop the cotton-spinning industry within their own borders, because the Director of the United States Bureau of Agriculture told the delegates at the same conference that he looked forward to the time when the United States would work up the greater part of the cotton crop instead of exporting it, and thus retain the enormous profits arising out of the further manipulation of this valuable commodity. Let them note what had happened to the cotton crop in the United States since 1907. Whereas up to 1890, about 30 per cent., on the average, of the United States cotton crop was absorbed by the textile industries in that country, a gradual increase took place between 1890 and 1910, and from 1910 to 1918 the increase had been very rapid, the proportion of the crop now spun in American mills having reached nearly 60 per cent. The prognostications of the Director of the Bureau of Agriculture had been realised so far as spinning the greater part of the United States crop in American mills was concerned, but where was the promised increase in the American production which was to have provided for the world's needs? The size of the crop referred to at this conference at Atlanta in 1907 was 13,500,000 bales. In 1909 the crop was about the same, in 1912 there was a bumper crop of 16,000,000 bales, in 1913, 1914, and 1915 the crops were 14,000,000, 14,500,000, and 15,000,000 bales, respectively. In the years not mentioned the crop was smaller than that of 1907. In 1916 the crop fell to 12,800,000 bales, in 1917 to 12,700,000 bales, and in 1918 to 11,800,000 bales.

The British Cotton Growing Association had already proved the existence of enormous areas in our possessions and protectorates in Africa where climatic and other conditions were favourable to the cultivation of the American variety of cotton, but the labour question and the question of transport stood in the way of any rapid materialisation of what otherwise would be most eminently desirable projects. Uganda appeared to be the district in Africa whence they were most likely to make rapid progress in cotton cultivation. In 1904 only a few bales were grown. In 1908 the shipment of cotton was 4,000 bales, and in 1911 the shipments had increased to 20,000 bales. Had the war not broken out, it was estimated that Uganda would have sent us about 40,000 bales in 1914. Similarly, rapid progress was reported in South Africa. While these figures were encouraging, this quantity was but a drop in the ocean compared with the world's needs, and there seemed little doubt that they must look to India as the source whence they might most readily and speedily obtain the supplies of cotton for the maintenance of the spinning industry and bring about the much-needed stabilisation of prices.

The Outlook.

Enough had been said to enable them to realise that they were faced to-day with a very grave and difficult problem in regard to adequate supplies of the raw material. The rapid increase in the proportion of the American crop taken by American mills was alone a serious menace to the prosperity of the spinning industry; and the fact that not only the American crop, but the world's production had fallen continuously for the last four years meant that the very life of Lancashire's chief industry was now most gravely threatened. One remedy was to extend the cultivation of cotton throughout the Empire in the most rapid manner and in the greatest measure possible.

The changes brought about by the war had seriously affected cotton growing conditions in the United States. At the present moment there seemed little doubt but that the production of cotton in the United States would continue to decline unless the present situation was grappled with, and the prevailing conditions altered in such wise as to making cotton a paying crop in competition with other crops under a considerable reduction in the present price of cotton.

They had seen that with the best will in the world their American friends had not been able to make their production keep pace with their own demands and also with theirs as was so confidently expected at the Atlanta Conference in 1907. The aphorism "charity begins at home," applied to nations as well as to individuals, and they could not expect the United States to curtail the development of their spinning industry in order that they might be able to maintain theirs.

The Hon. & Rev. James Adderley writes:—"I am glad to have the opportunity of recommending the 'De Reszke' Cigarettes, which are quite excellent. I remember how popular they were in France when I used to sell them in our hut in 1916."

Sir John Lavery, A.R.A. writes:—"Sir John Lavery's friends smoke the 'De Reszke' Cigarettes and like them very much."

Nevil Maskelyne, Esq. writes:—"I find your 'De Reszke' American Cigarettes are of the same high quality as your Turkish blend."

"DE RESZKES" are popular with smokers of the discriminating type. These cigarettes possess a quality that wins admiration from everyone.

"De Reszke" The Aristocrat of CIGARETTES

Sold at all Tobacconists' Stores, and Military Canteens.

TRADE ENQUIRIES.

EGYPT.—ALBERT J. HALFON.—P.O. Box No. 1182.—ALEXANDRIA, British Agent, in touch for twenty years with the best clients of Egypt. Complete and unique organisation (also for visiting the provinces). Highest references. Would like to secure serious REPRESENTATIONS. Correspondence invited.

ROUMANIA.—S. N. Iancovici, Bucharest, Str. Academiei 6, desires to obtain English agencies. English correspondence. First-class references.

NEAR EAST. — Gentleman having important trade relations with Roumania and Balkan States, shortly proceeding to the Near East, invites correspondence with Manufacturers and Merchants for the development of business. Principals only. No cash required.—Box 1,005, Leathwait and Simmons, 5, Birchin Lane, E.C.3.

NEAR EASTERN PRODUCE.—British Trading Company established in Egypt with Offices in Jaffa and Beirout and opening in Smyrna and Mesopotamia, is open to represent importers of eggs, onions, cotton, seed and all other Near Eastern products.—Interview can be arranged with principal, now in England.—Write Box B 473, Lee and Nightingale, Advertisement Offices, Liverpool.

Digitized by Google

It was clear that the world was short of cotton. The prices they had to pay to-day for cotton goods was sufficient proof of that. More cotton must be grown, and it was a matter of simple common sense that the cotton they needed for the maintenance of their spinning industry should be grown, in as large a measure as possible, within the Empire. In the course of the discussion which followed a lecture he delivered before the Royal Society of Arts in February last. Professor Todd said that "there were many countries in the world in which cotton could be grown, but the question was whether it could be made to pay in competition with other crops. One of the factors in that question was the by-products that could be realised, and he thought the by-products obtained from the cottonseed by means of the author's machine might just turn the scale in many cases in favour of cotton. The importance of those by-drcts could hardly be exaggerated." They certainly did not wish to see "nationalised cotton," nor did they wish to produce "Empire cotton" at the expense of "Empire cereals" or at the expense—direct or indirect—of the taxpayer. It was therefore of moment that the cultivation of cotton should be "self-supporting," and should pay in competition with other crops. Thus the additional revenue derivable from turning industrially to account the hitherto neglected residual fibres on ginned cotton was a factor in cotton economics which they could not afford lightly to neglect.

NEAR EAST MARKETS.

Sudan Produce.

Gum.

The C. E. B. report for May states that during the month 815,580 kilos of hashab gum, of the value of £E22,471, 23,776 kilos of bleached gum, of the value of £E787, and 94,730 kilos of talk gum, of the value of £E1,853, were exported via Port Sudan. Exports via Haifa amounted to 59,750 kilos of hashab gum, of the value of £E1,647, and 28,409 kilos of talk gum, of the value of £E399. 9,247 kantars were sold in El Obeid Market, as against 23,945 kantars in the same month last year, at an average price of £E1.002 m/ms per kantar of 100 rottles. Arrivals from Nahud were 1,918 kantars, as against 5,683 last year. At Um Ruaba 1,517 kantars were sold, at an average price of 940 m/ms per kantar, as against 3,815 kantars last year. Arrivals were short during the month owing largely to the exceptionally dry season and low prices. In the Upper Nile Province 407 kantars of hashab gum were exported during the month from the Northern District.

Cotton.

Red Sea Province.—Tokar.—Only about 4,400 kantars (315 rottles) arrived in the cotton market during the month. The crop apparently cannot now exceed 11,000 kantars. Prices have increased, a maximum of P.T.880 per kantar having been reached.

Kassala Province.—The cotton season is almost over, and not more than a further 254 kantars are to be expected before the market closes on June 5.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The tone of the market has continued quieter. There have been no indications, however, of spinners and manufacturers losing any of their strength, and late rates have been well held. The people interested in Egyptian cotton have discussed the probable course of values when Government control comes to an end. It is generally believed that values will be higher. The outlook, however, is very uncertain. Mixed reports have again been received relating to the prospects for the new crop. There has recently been some improvement, but the growth as a whole does not seem to be doing very well. Business in Egyptian yarns has been considerably checked by the disposition of spinners not to sell until the course of prices in the raw material is more definitely defined. Many firms have withdrawn quotations for the time being. Engagements, of course, are very extensive. Shipments of piece goods to Egypt continue on a large scale, but rather less buying in Manchester is now taking place. Shippers are quite in the hands of makers, and for anything wanted full prices have to be paid. Some fair lines have been mentioned for Greece. Other Near Eastern outlets have not been by any means idle. Irregular operations have occurred for India, but moderate lots have been sold for Calcutta in grey shirtings and light bleaching cloths. China has bought standard makes for delivery next year. Although manufacturers as a body are not now selling very freely, their position tends to be strengthened. In American yarns for home use buying has been rather limited. Twists remain much stronger than wefts. Extra hard yarns and coarse counts generally have been in healthy request for the Levant. India and China have bought twofold qualities. Supplies are wanted by several European countries.

EGYPTIAN MARKETS.

The returns of the Egyptian Markets, Ltd., for the week ended July 17 were:—Cattle markets, £362; general markets, £513—total £875; total for year, £33,215. The figures for the corresponding week in 1917, ended July 18, were:—Cattle markets, £288; general markets, £432—total, £720; total for year, £29,254.

GOOD HARVEST IN YUGOSLAVIA.

Our Belgrade Correspondent writes (July 22):—"The harvest appears to be a fairly good one in spite of the scarcity of labour, but there is a serious shortage in Montenegro. The requirements there are 7,700 wagon-loads, but the harvest has only produced 5,400 wagon-loads, so that there is a shortage of 2,500, which must be made good from outside."

Average crops are anticipated in Morocco, and it is stated that the grain will be of good quality.

ROUMANIAN CONSOLIDATED OILFIELDS.

New Issue of Shares.

A circular has been issued to shareholders of the Roumanian Consolidated Oilfields, stating that since the destruction of the wells, machinery and stocks in Roumania in 1916, followed by the enemy occupation down to November, 1918, the company's title-deeds have been recovered, and the managing director and leading members of the staff are now back in Roumania, and have succeeded in resuming possession of the oil properties. The company's claim in respect of the destruction of its wells, machinery and stocks was made up from a valuation of every item and based upon the audit of and certified by Messrs. Harmood Banner and Son. This claim amounts to £1,270,725, and was sent in to the British Government in 1917. As all overtures with the object of inducing the Government to settle proved unavailing, the directors, with great reluctance, took proceedings by petition of right to recover the amount of the claim, and have been advised throughout by Sir Edward Carson, K.C., and other eminent counsel. The case has been set down for trial for some months past, but it is very improbable that it can be reached before the autumn. The directors also hear from Roumania that the rents, royalties, etc., accruing during the enemy occupation, and the sums which the company is required to pay in respect of administration, the value of the oil extracted by the enemy, and other items, will, together with a sum for compensation and the increased cost of the machinery and plant, all form the subject of a further claim which is to be made through the Roumanian Government, and will be quite independent of the company's main claim above mentioned. Steps have been taken under competent advice in Roumania to formulate this further claim. The directors have no reason to doubt that the company's claims will eventually be recovered, and, having regard to the information coming forward from Roumania that already a substantial output of petroleum is being obtained, which the additional plant and machinery now being purchased will largely increase, they have every confidence in the future of the undertaking. In the meantime it is urgently necessary that the company should be provided with funds for the purchase of a considerable quantity of new machinery and plant, and for proceeding with the work of development, and the directors have decided to offer 300,000 £1 shares to the existing shareholders for subscription pro rata with their present holdings. They have also agreed with the Oilfields Finance Corporation, Ltd., to underwrite 200,000 shares of this issue at a commission of 1s. per share, together with the call at par until December 30, 1920, of the balance (if any) unapplied for of the 300,000 shares.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—July 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 3,580,000 francs, against 1,940,000 francs.

NEW COMPANIES.

Commercial Aviation Company (Ceylon).

A Commercial Aviation Company has been formed in Ceylon. The objects of the company are to carry on the business of dealers, manufacturers, hirers, repairers, etc., of aeroplanes, balloons, airships, and flying machines of all kinds, to establish and maintain lines of regular service of aircraft of all kinds; to establish aerodromes, etc., for the reception of aircraft, to enter into contracts for the carriage of mails, passengers, goods, etc., by the company's own aircraft or by any other means. The nominal capital of the company is Rs.15,00,000, divided into 15,000 shares of Rs.100 each. The first directors are Major-General Sir W. G. Brancker, Mr. G. Holt Thomas, the Hon. W. H. Figg, Sir James Thomson, Mr. R. Reom and Mr. R. Elliott.

Anglo-Eastern Shipping & Trading

The Anglo-Eastern Shipping and Trading Co., Ltd., has been registered as a private company, with a capital of £100,000 in £1 shares. The objects are to carry on the business of shipowners, shipbrokers, steamship agents, managers of ships and shipping companies, coal and coke merchants, importers exporters, timber merchants, and commission agents, etc. The subscribers (one share each) are E. Furness, Furness House, Billiter Street, E.C., shipowner; S. J. Forster, Furness House, Billiter Street, E.C., company secretary.

Anglo-Balkan Trading.

The Anglo-Balkan Trading Company, Limited, has been registered as a private company with a capital of £10,000 in £1 shares. Objects: To enter into an agreement between E. A. New and this company for trading in the Balkan Peninsula and elsewhere, and to carry on the business of manufacturers of and dealers in manufactured and other merchandise, provisions and live stock, miners, explorers, metallurgists, etc. The subscribers (one share each) are: J. C. Scrivener, 24, College Street, E.C.4, surveyor; R. V. Flower, 21, Keith Grove, Shepherd's Bush, W., solicitor's managing clerk. The subscribers are to appoint the first directors. Solicitor: M. Moseley, 20, Bucklersbury, E.C.

Indian Mines Development.

The Indian Mines Development Syndicate was registered as a private company on July 14 with a capital of £20,000 in £1 shares. Objects: Prospectors, explorers, financiers, miners, searchers for minerals and precious stones, etc. Subscribers (two shares each):—M. Low, D.L., J.P., 22, Roland Gardens, S.W.7; R. Taylor, 6, Queen Street Place, E.C., M.E.; V. H. Smith, 62, London Wall, E.C.2, merchant. M. Low, R. Taylor and V. H. Smith being respectively directors of the Gold Fields of Mysore and General Exploration, the Nundydroog Company and the Ooregum Gold Mining of India, are the first directors, and each may retain office while he continues to be a director of his above specified company. Qualification: The holding of shares and/or Debentures of the company. R., E., H. C. and A. E. Taylor, trading as mining and civil engineers at 6, Queen Street Place, E.C., as John Taylor and Sons, are to be the managers and consulting engineers of the company.

SHIPMENTS TO SOUTH RUSSIA.

The Agency in London (Empire House, Kingsway, W.C.2) of the Ministry of Commerce and Industry at Ekaterinodar has informed the Department of Overseas Trade that the task of the Ministry, which is doing everything in its power to promote the exchange of goods between this country and South Russia, will be facilitated if British merchants and exporters will advise the London Agency of any proposed shipments to South Russia. The Agency will then telegraph particulars to the Ministry of Commerce at Ekaterinodar, which will take measures to secure every facility for the goods as soon as they reach port in Russia.

An Anglo-Russian Chamber of Commerce was recently formed at Ekaterinodar for the territory which is under the rule of General Denikin, the Commander-in-Chief of the forces in South Russia. The Chamber was constituted at Ekaterinodar, and Mr. Lebedeff, the Minister of Commerce, was elected President. The Chamber occupies an official position under the Ministry of Commerce.

The directors of the Hyderabad (Deccan) Company recommend a final dividend for the year 1918 of 1s. per share, less income-tax, making with the interim dividend already paid 2s. per share for the year.

The preliminary forecast of the Indian jute crop gives 2,749,120 as the total acreage under cultivation, being an increase of 182,037 acres in Bengal, 53,501 in Behar and Orissa, and 13,200 in Assam. The percentage of increase is 9.9 above that of last year.

COMPANY NOTES & REPORTS

Jokai (Assam) Tea.

The report of the Jokai (Assam) Tea Company for 1918 states that the profit amounted to £107,360, which with interest received on investments, etc., £1,670, and the balance brought forward, £29,243, makes £138,274, less Income-tax, etc., £14,315, leaving £123,959. An interim dividend of 3 per cent. has been paid on the Preference shares, and the directors now recommend a final dividend of 3 per cent., also a final dividend of 11 per cent. (less Income-tax at 5s. 9d.) on the ordinary shares, making 16 per cent. for the year, to transfer to staff provident fund £1,000, to reserve fund £5,000, and to carry forward £71,959, subject to excess profits duty estimated at £35,500. The balance, which it is proposed to carry forward, is intended to meet the additional expenditure for labour, machinery, and buildings required to replace the shortage which could not be made good during the war.

Parambe.

The report of the Parambe Rubber and Tea Company of Ceylon for 1918 states that the profit, after writing off depreciation on factory and machinery, amounts to £3,465, which with the amount brought forward makes £10,191. The company's liability for Income-tax and excess profits amounted to £4,713, leaving £5,478. The directors propose to pay a dividend for the year of 7½ per cent., less Income-tax, and to carry forward £3,378.

Looksan Tea.

The report of the Looksan Tea Company for 1918 states that the result of the season's working is a balance at credit of revenue account of £1,104. Dividends on investments and profit on sale of investments amounted to £1,498. The amount brought forward is £3,908, including £616 refund of excess profits duty, and after providing for Income-tax £1,301 there remains an available balance of £5,210. The directors propose to deal with this as follows:—Preference dividend of 5 per cent., less tax, already paid, £445; ordinary dividend of 10 per cent., less tax, £1,781; carry forward, £2,983.

Pindenoiya.

The report of the Pindenoiya Rubber and Tea Estates for 1918 states that the undivided profit at December 31, 1917, was £7,500, less dividend of 5 per cent. paid March 1, 1918, which absorbed £3,159, leaving £4,341. Profit was £3,153, less coast advances, £520, making £6,975. The directors recommend a

LONDON COUNTY WESTMINSTER & PARRS BANK LTD.

EXECUTOR AND TRUSTEE DUTIES UNDERTAKEN.

Digitized by Google

dividend of 5 per cent., to place to general reserve £2,000, and to carry forward £1,816. In order to round off Rencastle Estate a plot of 11 acres of planted rubber has been purchased for £760, which the directors consider reasonable.

Badulipar Tea.

The report of the Badulipar Tea Company for 1918 states that the balance brought forward, after adjustment and provision for excess profits duty, amounting to £1,946, was £26,809. Revenue account shows a profit on working of £14,328, to which has to be added £444 for dividends on investments. After deducting Income-tax, £9,344, there remains a balance at credit of profit and loss of £32,237. The directors recommend a final dividend of 15 per cent. (less Income-tax) on the ordinary shares, payable at once, making 20 per cent. for the year, and to carry forward £22,048. In view of the heavy expenditure incurred in recruiting new labour and the necessity for providing new machinery it is not considered advisable to pay the bonus which has hitherto been paid at this time.

Alliance Bank of Simla.

The year ended June 30 was a very successful one for the Alliance Bank of Simla, and the working shows a profit which, including Rs.2,77,000 carried forward from last year, amounts to Rs.13 lakhs. The directors propose a dividend of 14 per cent., plus a bonus of 3 per cent., making 17 per cent. for the year. One lakh is added to the reserve fund, making it Rs.38 lakhs. One lakh is set aside to form the nucleus of a pension fund for the staff, and Rs.1,87,000 is carried forward. The annual meeting of the shareholders will be held on August 11.

Bank of India.

The net profit of the Bank of India for the half-year ended June 30, 1919, including the sum of Rs.42,692-11-11 brought forward, amounts to Rs. 5,91,780-9-9. The directors have resolved to declare an ad-interim dividend at Rs. 3 per share, that is, at the rate of 12 per cent. per annum, free of income-tax, on the paid up capital of Rs.50 lakhs, which will absorb Rs.3,00,000, and to carry the balance of Rs.2,91,780-9-9 to the next account.

Bank of Baroda.

The net profit of the Bank of Baroda for the half-year ended June 30, 1919, subject to audit, including the sum of Rs.76,792 brought forward, amounts to Rs.2,78,506. The directors have resolved to declare an ad interim dividend at the rate of 10 per cent. per annum, free of income-tax, on the paid-up capital, which will absorb Rs.1,00,000, and to carry the balance of Rs.1,78,506 to the next account.

Benares Bank.

The net profits of the Benares Bank for the half-year ended June 30, after making all provisions, amount to Rs.52,711. Adding to this the sum of Rs.11,408 brought forward from the previous half-year's accounts, the divisible balance amounts to Rs.64,120. The directors recommend a dividend at 8 per cent. per annum to the shareholders, which will absorb Rs.40,000. The sum of Rs.12,500 is to be transferred to the reserve fund, increasing it to Rs.4,00,000. After providing Rs.9,459 for the contingency funds, the rest will be carried forward to the next half-year's accounts.

SUGAR PRODUCTION IN INDIA.

Special Department Advocated.

The Agricultural Research Institute at Pusa has issued a pamphlet on the progress of the sugar-cane industry in India, in which it is pointed out that the extension of sugar-making in India is handicapped by the extremely poor character of the canes grown, by the unequal competition of *gúr* where it has a steady and satisfactory market, by the relative cost of initiating *gúr* and sugar-making, by the extreme subdivision of the land, which renders it impossible to work a factory economically, and by the competition of crops already on the land and which can be easily and profitably grown. To encourage the industry on commercial lines it is necessary, where the price of *gúr* is low, where the land is not fully settled, and where it is possible, to introduce a better class of cane varieties.

The formation of a Sugar Department for India is recommended, under the Agricultural Adviser to the Government of India, which should include among its functions (1) the collection into one office of the scattered information recorded regarding the character of the sugar-cane tracts in India, the varieties grown, the methods of cultivation, and of making the finished product; (2) the collection of similar information regarding all previous attempts at founding sugar factories, with the reasons for their discontinuation; (3) a continuation of the work on improving the class of canes growing in different parts of the country; (4) an organised investigation into the local practice of *gúr*-making throughout the country, with the object of introducing improvements according to the local conditions; (5) a special study of the possibility of starting a sugar-making industry in the various tracts where sugar-cane is grown.

The following experts, it is suggested, should be attached to the department: (1) A sugar-factory expert, who should be thoroughly acquainted with the conditions in India as regards factory work, labour difficulties, general cultivation, and the use of by-products. It would be an advantage if he had a working knowledge of the factories and plantations in Java, where the conditions are somewhat similar to those in India; (2) an engineer, for the study of existing installations and the preparation of new models and combinations for *gúr* and sugar-making; (3) a chemist, for the study of the cane juice and fibre, to conduct ripening tests and manurial experiments, and to assist in the factory work; (4) an agriculturist, whose main duty would be to study the local conditions of soil and climate as affecting the need of irrigation and drainage, the proper times for planting and reaping, and the relative period of growth in different tracts; (5) a botanist, for the study of the numerous varieties existing, the transference of varieties from place to place, and the raising of new seedling canes for each tract.

The total approximate gross earnings of Indian State railways from April 1 to June 14 show a decrease of Rs.1,80,055 on the figures for the corresponding period of last year.

The Burma Ruby Mines, Ltd., have received a cable informing them that a ruby weighing 42 carats, of exceptional beauty and great value, has been found in their Magok mine; it has been named the Peace Ruby.

ON 'CHANGE.

(From Our Own Correspondent.)

The weaker tendency for Egyptian securities which set in during the latter half of last week has continued this week; and, although there has really been no pressure to sell, the slackening in buying orders, and the reduction here and there in limits, have caused a general slight set-back in the prices of certain securities. Egyptian Unifieds have dropped ½ a point to 84¾, and Egypt 3½ per cent. Prefs. have receded ¼ to 72.

In Bank shares National Banks have remained a fairly firm spot with hardly any sellers, and are quoted nominally ¼ lower tonight at 21½. Agriculturals have receded 1-16 to 6⅛. Anglo-Egyptian Banks have dropped back ⅜ to 17½, and Land Banks are nominally quieter at 7.

In Land shares there has been nothing doing this week in Beheras. Consolidated Lands are 2d. down at 2s. 9d. New Egyptians are fractionally quieter at 24s. 6d. On the other hand Union Foncières have remained a firm spot at 3⅝, and Sudan Plantations have, exceptionally, improved 3-16 to 7 9-16.

Amongst Miscellaneous descriptions Alexandria Waters are 1-16 quieter at 12⅛, but, whilst buyers will not give more than 12, sellers will not reduce the price of 12¼ which they are asking. Salts and Sodas have been dullish the last day or two, and close 3-16 down at 3 5-16.

In Oil shares Anglo-Egyptians B, after being higher and lower, close 1-32 better at 5 19-32. Roumanians have dropped 1s. to 20s. 9d., and Traians 6d. to 12s.

In Greek securities the 1889 and 1890 loans are about half a point down at 54 and 71 respectively, while the 1914 loan is about two points lower at 82. There is still some demand for Piraeus-Athens 4½ per cent. bonds round the current level.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated July 23.

Good rain throughout except in North-West Frontier Province.

Bombay Cotton market revived interest better tone. Fully good Broach July August quoted Rs. 635. Piece Goods market improving, feeling optimistic. Calcutta Jute market very firm though business limited. Hessians firm with strong demand advancing prices. Sackings also firm with moderate inquiry.

PORT CONGESTION AT CONSTANTINOPLE.

H.M. Commercial Secretary at Constantinople, cabling on July 24, advises United Kingdom merchants to pack their goods in as small bales as possible, in order to facilitate unloading at Constantinople. At present there is great congestion at the port.

The Burma seaborne trade returns show an increase of seventy lakhs compared with 1918.

At the Calcutta monthly opium sale on July 1 300 chests of Benares opium were sold for Rs.12,66,700, the average being Rs.4,222.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

NOTES OF THE WEEK.

The friction that has for some time existed between members of the Serbian Government increased instead of diminishing, as it was hoped it might do, and, becoming acute at the end of last week, has now brought about the resignation of the Cabinet. In tendering his resignation to the Prince Regent, M. Protitch stated that the differences between himself and the Ministers of the Interior and of Agrarian Reform rendered useful collaboration for the service of the State impossible. Only two weeks ago, it will be remembered, our Belgrade Correspondent reported that M. Protitch and the Minister for Food and Reconstruction had found it impossible to work together, and that the Minister of Social Reform had sided with the latter. The letter which we publish this week from the same correspondent reports that this particular difficulty was overcome; but the root of the matter was not, apparently, reached; and now the strain has proved too great to be supported. The Ministers will, however, remain in office until their successors are appointed.

It is proverbially dangerous to swap horses while crossing a stream, but it is to be hoped that Yugoslavia will effect the operation with no more serious result than a slight wetting, at worst. Indeed, if certain reports are to be trusted, she may even benefit by the change, by the substitution of a Minister who is prepared to recognise that there are two sides to every question for one who has apparently not yet made that discovery. Unhappily the situation seems to be complicated by something like religious rivalry. At any rate, M. Protitch gave as one reason for his resignation the distortion by the democratic journals of representations made by the Cabinet to the Vatican regarding the nomination of a new Bishop of Jakova; and Belgrade is somewhat resentful of the action of the Vatican in making the appointment without reference to the Yugoslav Government. In the days of Austrian rule, when a bishopric fell vacant in Croatia the provincial Government nominated three candidates, from whom the Vatican made its selection, and the Yugoslav Government had expected the same proceeding to be followed on this occasion.

To the outside world the incident may not appear to be of any great importance; but the young Kingdom of the Serbs, Croats, and Slovenes may well be pardoned a certain amount of self-consciousness—which is apt to make nations as well as individuals ready to imagine a slight where none is intended. Moreover, it would appear that if the Vatican considered the present moment a suitable one for abolishing a custom which it may have regarded with some disfavour, it would have saved soreness if it had notified Belgrade in advance of its intentions. That, however, is by the way. We can only trust that the incident does not mark the extension of the secular bitterness between the Orthodox Church and the Church of Rome, and that in no case will it be allowed to cause any lasting ill-feeling between the newly united peoples of Yugoslavia.

We have been told so often that the Fiume problem was on the point of being solved only to be told subsequently that it still remained unsolvable, that we must confess to feeling a little sceptical regarding the latest rumour of the kind. It is, however, a very modest one. The *Petit Journal* announces that the troublesome problem "is entering a stage which entitles one to hope that a satisfactory solution of it will be reached very shortly." That, after all, does not impose a great strain upon our optimism, and it is at the same time encouraging. Signor Tittoni, to whom the improvement in the situation is largely due, is reported to have "accepted proposals which safeguard the interests of the opposing parties," and he is to confer with Mr. Lloyd George on certain details which still remain unsettled.

Friends of Turkey who are anxious regarding the dismemberment of the Turkish Empire are working hard on her behalf, and, whatever may have been the case a short time ago, it cannot now be said that the Moslem point of view has not been placed before the Paris Conference. A new and influentially signed memorial was last week forwarded by them to Mr. Lloyd George, from whom it will doubtless receive the careful consideration it merits as expressing the hopes and fears not only of the majority of the King's

Digitized by Google

Moslem subjects, but of many other subjects of his Majesty who own no allegiance to Islam.

The memorial contains no arguments likely to be new to readers of THE NEAR EAST, but it does protest that the Indian Moslems' interest in the maintenance of Ottoman sovereignty over Constantinople is not newborn and factitious, as has been alleged. It also emphasises the services rendered to the British Empire by Indian Moslem soldiers; and refers to the pledges given by the Prime Minister regarding the maintenance of Ottoman sovereignty over Constantinople. The fine work accomplished by Indian soldiers is not likely to be forgotten by any responsible Englishman, especially at the present time, when London has so recently had an opportunity of showing its admiration for these gallant troops; but there is another side to this question, and we doubt whether the memorialists would be well advised to lay too much stress on this point. Mr. Lloyd George's pledges are quite another matter. It appeared to us, and it still appears, that there could be no misunderstanding about his meaning when he spoke of leaving Constantinople under the Turks, and it is quite certain that Moslems regarded his words as a pledge. It must be remembered, however, that the Prime Minister did at the same time specifically declare that "Arabia, Armenia, Mesopotamia, Syria, and Palestine are in our judgment entitled to a recognition of their separate national condition."

Trustworthy information regarding the situation in Turkey as a whole is rather harder than usual to obtain just now, though news of what is going on in Constantinople is not lacking. In the Smyrna region there have been numerous little affairs between Turkish irregulars and Greek troops, and the Turkish exodus from the area in Greek occupation continues. In the East the intentions of Mustapha Kiamil Pasha continue to provide a subject of interest—and anxiety—for the Porte, and along the Turco-Persian border there are numerous indications that fresh trouble may break out at any moment. Meanwhile, in Constantinople the American section of the International Commission on Mandates has been gathering information from the very numerous parties represented in that city. Genuine Turks of the old school, if any such there be left to-day, can hardly find the outlook for their country anything but painful.

The Bolshevists of Budapest, after achieving a very short-lived success against the Roumanians, have now met the fate that they deserve—or something like it. Bela Kun is a prisoner and Szamuely, his lieutenant, or rival—it is really immaterial which—is credibly reported to have been shot. What Government will be eventually established at Budapest is not yet clear, but the present Cabinet is obviously unlikely to continue long in power. Since Hungary falls outside the field of THE NEAR EAST our interest in the situation is confined to the part played by Roumania in bringing about the satisfactory development of affairs there. For it was undoubtedly the successful counter-attack launched by the Roumanians, in reply to the Hungarian offensive, that brought about the fall of Bela Kun and his associates. Unleashed at last by the Allies, the Roumanian troops soon forced their way to the outskirts of Budapest, and on Sunday that city was occupied by three Roumanian divisions. The next day French troops followed them, and on Tuesday British and American contingents were added to the garrison of occupation. The Roumanian Commander has presented to the Hungarian Government an ultimatum, the terms of which certainly do not err on the side of leniency. The Hungarians can, however, hardly expect very tender consideration from a people to whom they never showed any consideration in the days of their own prosperity.

At the critical moment when it seemed that Spain was bent upon "making good" in her zone in Morocco and giving Raisuli a much-needed lesson, a political crisis in Madrid brought about a change in the situation, and the considerable force that had been collected to cope with his reinforced army was dispersed. Doubtless heartened by this turn of events, Raisuli continued his attacks upon isolated posts, and scored several successes, the Spanish forces opposed to him being too small and quite inadequately equipped to make headway against him. For the time Spain contented herself by issuing official reports of an optimistic character. Another change has now taken place, and she seems bent upon vigorous action. General Silvestre was lately appointed to the command of the Ceuta district, and, in view of his record, it is generally anticipated that a forward policy is to be pursued once more. The Spanish forces have been strengthened, and are said to be favourably placed for a resumption of operations against Raisuli, and if only Madrid will determine to see the thing through at all costs the Spanish zone may ere long be reduced to order.

The Indian Peace contingent received its due welcome on Saturday, when the small but eminently representative force marched from Waterloo to the Palace under a sun which for the moment seemed to have borrowed some measure of the real Indian heat. The crowds were enthusiastic, but we take it that the Palace meant more than the streets, and the large gathering of the Royal Family must have gratified the men of Indian race as much as any feature of the proceedings except the King-Emperor's speech. It would be as unbecoming to praise as to criticise the utterances of Royalty on such an occasion, but the opening words, in which his Majesty expressed his pride and gratification in welcoming the contingent in his home, struck a chord which will in due time echo through the villages of India. It is a long way from the postern-window at Delhi to the private gardens of Buckingham Palace, but the distance will be bridged by Indian insight and imagination.

Criticism of the composition of the Indian Army Commission has been directed mainly to two points—one personal, the other of a wider import. The personal matter is, of course, the inclusion of Sir Michael O'Dwyer, against whom some of the Indian politicians now in this country are pursuing their vendetta with remarkable assiduity and some skill. It does not matter to them that Sir Michael is exceptionally well qualified to represent the interests of the classes from which the Indian Army is mainly drawn. In his time he has said some unpleasant things about politicians, and the politicians are paying him back with interest, calculated at Indian rates. Possibly some of the mud may stick, but it has certainly soiled the hands which threw it, and the exhibition of so much petty spite is making ordinary people ask what India will be like when the politicians have been sorted into Ministers and Opposition, and are free to pay similar compliments to one another.

The other point on which criticism has fastened is the preponderance of military officers on the Commission. It is argued that the higher administration of the Army is so intimately bound up with the Government of the country that the Commission will have to examine the working of the Viceroy's Council, and that it should be strengthened for this purpose on the constitutional side—an effective phrase which signifies, we understand, the addition of a few eminent Indian lawyers to the list already announced. We imagine, however, that the constitutional aspect of the question is reserved for Mr. Montague. The Commission will give him an idea of the arrangements which the Army would like, and then he will settle the matter, either alone or with the help of such advisers as the labours of the Joint Committee may provide.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 14.

Peace Celebrations.

The last week has been to the public eye almost entirely absorbed by preparations for celebrating the great peace, and the celebrations themselves. The beginning was made at Alexandria, when the High Commissioner and Lady Allenby received the representatives of officialdom and society of all nations at the Ramleh Residency. This was followed by a similar reception at Kasr-el-Doubara in Cairo on Thursday the 10th. Nearly double the usual number of invitations to Egyptians were issued on this occasion, and apparently almost all of them were accepted, to judge from the predominance of the wearers of national headdress over all the foreign element united. General Sir Edmund and Lady Allenby received their guests at the head of the steps leading down to the lovely garden, and had to stand there for more than an hour before the stream commenced to thin down.

A more ideal setting for an evening *fête* could scarcely be imagined than the grounds of the Cairo Residency, with the broad sweep of turf, kept soft and elastic as green velvet, the feathery palms, the borders of flowers flinging their delicate perfume on the night air as soon as the sun has well set; and on the other side of the low terrace the sleepy waters of the Nile silvering under the full moon. Few receptions can rival those of Cairo in the rich variety of the costumes of the inferior sex. The dresses of the ladies, of course, do not require mention, being always infinite in their combinations, but there are not many places where so many styles and colours can be seen on the men as at a function like this. Besides the uniforms of the British and every European Allied Army, worn by officers stationed, or on leave, in Egypt, there are the uniforms of the Indian, Egyptian, and Hejaz armies; of Sheikhs from Syria and Mesopotamia, from India and Arabia; and the no less gorgeous raiment of the Sheikhs and notables of the country.

At the Kursaal.

On Friday the High Commissioner returned to Alexandria, and Cairo gave itself up to the hands of electric light fitters, flag-hangers, and the usual band of professionals entrusted with the toilet of a city. Already by Saturday many large establishments and places like the Ezbekieh Gardens and the Ghezireh Sporting Club were rehearsing their illuminations, and on Sunday evening Cairo was in gala dress for the Gala Performance at the Kursaal. This was an international and inter-Ally *fête*, and places were only to be had by invitation. General Gorringe, who is taking over the Egypt Command, occupied the British box, and next to him was M. Gaillard, the French Consul-General and Representative. All the other Allied representatives in Cairo were also there, and the house was crammed. About half the places had, however, quite rightly, been reserved for the troops, who formed a very appreciative and enthusiastic audience. On Monday, July 14, the combined *fêtes* of the Peace and the French Republic were ushered in by a thunderous salute of 100 guns at 7 a.m., and parenthetically by one of the hottest and most furious *khamseen* winds of the year.

Dinners and Dances.

But notwithstanding the sweltering and Turkish-bath-like temperature, the holiday crowds thronged Luna Park at Heliopolis and the Ghezireh Sporting Club grounds from four o'clock onwards. At the former centre there were the usual switchback scenic railways, water chutes, and all the popular "attractions" made familiar to Londoners at the White City, whilst at Ghezireh fathers and mothers brought the rising generation of Allies in their thousands to partake of tea and sweetmeats and romp to their hearts' content. Boxing went on in the evening at both places, and the French especially occupied the Ezbekieh Gardens after dinner till midnight.

Shepheards gave a special dinner and dance, and its historic balcony was a vantage ground to watch perpetual processions of soldiers and civilians mixed, carrying their country's banners and fraternising boisterously in song. There were no Italian flags waving in Cairo, owing to the unfortunate views taken by Italy of her rights and wrongs, but this did not at all prevent her festively-minded sons and daughters from unobtrusively joining in the general merrymaking.

Echoes of the Riots.

So much for the outward and visible happenings of the memorable week. Besides these brilliant and noisy accompaniments to the "European Peace Week" a very big move forward was made towards the pacification of Egypt. Over fifty of the accused men before the military courts in connection with murder and outrages in March had been condemned to death. Mohammed Said Pasha pleaded earnestly with G.O.C. Egypt, and obtained the remittal of a few of these; but not content with this measure of success he again applied to the Commander-in-Chief. Sir E. Allenby once more went carefully into the cases and remitted another six, reducing the final total to thirty-six, who have since been duly executed. Greater clemency than this could not by any stretch of sane imagination be expected for the unprovoked, abominable, and cowardly assassinations of unarmed British officers and civilians by a mob of bloodthirsty savages. But as well as lightening many sentences passed by the military courts the Premier persuaded the High Commissioner to suspend all the Military Courts except for offences of violence against members of the force in Egypt as from July 15.

This should go a long way with the Egyptians, who desperately dread a British court-martial, and would far rather take chances of uneven justice at the hands of native judges, who, as they say, "understand" them and the circumstances surrounding the alleged crimes, better than Englishmen ever can. It is possible that they are right to a certain extent, but the lack of complete grasp of Egyptian atmosphere and mentality that may beset a court-martial is generally more than compensated for by its discrimination between real and sham evidence and its stern impartiality—two qualities which are not always conspicuous in an Egyptian criminal court.

The Labour movement is still increasing in strength all over the country, and before another six months Egypt will probably not need to envy Paris in any respect so far as Syndicalism goes.

Cairo, July 21.

Heat and Politics.

The increasing heat appears to have a somewhat tranquillising effect on the spirits of the Extremists. With the thermometer moving about the 100-degree line all day it is not easy to work up much enthusiasm, or to do anything beyond the absolutely necessary minimum. It is true that cricketers, tennis players and golfers continue to disport themselves much as usual; but it is not so difficult to play as to work, and Ministries and Public Departments are already showing the strain of half a summer behind them.

Retiring Advisers.

Messrs. Haines and Dunlop, respectively Advisers to the Ministries of Interior and Education, have gone

home this week on leave, at the expiration of which they both retire on pension. The important position thus vacated at the Interior will be temporarily filled by Morice Bey, for several years past Director-General of Public Security; but he also retires from the service in the autumn, and it is generally stated that General Sir G. Clayton is "designate" to succeed Mr. Haines. However, until the Royal Commission has made its reports it is scarcely probable that any definite new appointments will be made. The functions of British high officials, like advisers, may be sensibly modified by extension or reduction in their scope, and until the new conditions of Egyptian administration under the Protectorate are fixed, the whole situation and future of British officials may be considered, to use an expressive phrase, as being "in the melting-pot."

Although very indefinite replies were made to the sarcastic questions put in the House as to the composition and date of arrival of the Commission, it is tolerably certain that it will be here before the end of October, and arrangements are already being made for its comfortable installation in the Semiramis Hotel, close to Kasr el Nil Bridge.

The Azhar.

From now onwards the Nationalist orators will have to seek new quarters, as it is stated that the Azhar will be definitely closed to all but a few of the regular old pensioners, for the next few months. It has been discovered that the University-Mosque is much in need of repairs, and it will no longer be lit after sunset, and will be handed over to masons and engineers, whose labours will be guarded from interruption by sufficiently armed sentries and patrols. The Rector, or Sheikh el-Islam, has been several times to visit the Prime Minister at Alexandria, and also the Sultan, in this connection, as has also the Grand Mufti, whose *Fetva* against Bolshevism is going to be published in the course of the next day or two. Although there has been no open manifestation yet of Bolshevism, under that name, in Egypt, it cannot be doubted that some poisonous fumes from the Bolshevist cauldron have reached and are hovering about the country. Consequently the *Fetva* comes very appropriately as a warning. The genuine and pious Moslem, however, could never join or sympathise with practices so alien to the precepts of Islam, and this is very clearly pointed out by the Mufti in his *Fetva*.

Seditious Leaflets.

There have scarcely been so many seditious leaflets published lately, but what they lack in quantity they make up for in quality. Two especially violent and flowery effusions have just come out with reference to the executions of the murderers of British officers and civilians, who are addressed as the holiest of innocent martyrs. It is characteristic of the Nationalist mentality and method that no allusion has ever been made in their publications to the atrocious and unspeakable brutality exhibited in the doing to death of unarmed and quite unoffending Britons, but the most bloodthirsty ruffian convicted of participation in these crimes is extolled as a patriot and a hero.

Your readers may be interested in one of the two leaflets just alluded to. First, there is the usual threat and abuse of the English:—

Do not rejoice in what you have won. Your victory is not of God, but of the Devil. Be sure that your illuminations and decorations are black in the sight of the Egyptians, because of your despotism, and that the flags you hoist over your houses and buildings will not be waved by our sad and silent Egyptian breeze, but only by the hand of oppression. Make yourselves ready, and do not demobilise your defeated armies, you malicious ones, for every soul is mobilised against you.

It then goes on:—

And as for you, O Martyrs! Go into the mercy of your Lord. Sleep in the shadow of His Paradise, and entreat Him to hasten the punishment of the infidels. . . . You were buried in our hearts before you were joined to the grave. Live a long second life—for your first one was short and wretched! There, in the everlasting Paradise, where rivers flow, you will wear bracelets of gold and raiment of pure silk. You will claim our complete independence (!) Rest in peace. You have striven for your Egyptian country and glorious will be your reward.

What can be the state of mind of a writer who can pen such an elegy to the most vulgar assassins, and what of the perverted intelligence of those who can read and enjoy such an upside-down presentation of murder and its punishment?

Journalistic Developments.

The Extremists have lately purchased a Cairo newspaper named the *Efkiar*, after having failed in an attempt to resuscitate the famous *Moayyad*. Another change in the journalistic world is the sale of the *Ahaly*, a Moslem Alexandria sheet, to the Oriental Publicity Society, which already controls the *Bourse Egyptienne* and the *Egyptian Mail* and several other local organs. Yet another development is the formation of an Egyptian Journalists' Association, which is said to have just submitted the following requests to the Premier, as a start:—(1) Suppression of all censorship on newspapers, now that there is no longer any need for controlling military information, for which reason censorship was established; (2) Suppression of censorship in letters and telegrams sent to papers; (3) Suppression of the Press Law; (4) Suppression of the law which refers journalistic offences to the Assize Courts; (5) Not to deal with crimes of opinion according to existing laws, but to adopt the laws in use in enlightened and constitutional countries. Lastly, that journalists be allowed to travel on Egyptian Railways at half rates, that their telephone subscriptions be reduced by half, and that the postage on newspapers be reduced. This is a good beginning, and augurs well for the future activities of the Association, which will evidently never fail to obtain favours for want of asking.

CYPRUS NOTES.

(From Our Correspondent.)

Locust Destruction.

Figures recently published show the amount spent last year in fighting the pest, viz., £3,842. A small locust tax is still levied. Receipts included a balance from the preceding year of £20,737 and the locust tax brought £4,923. A balance of £25,686 was carried forward to the Locust Fund for the present year. The almost complete silence maintained in Blue Book reports regarding locust work is to be regretted, as the narrative of operations, which in the early years gave full details, would still be useful as well as interesting. The species which clings to Cyprus still breeds in such numbers as to render an annual campaign necessary, and spraying with an insecticide is now relied on as the principal method of destruction. Cyprus is always threatened with invasions of fresh swarms from Syria and Asia Minor. In the former some damage has been done, in addition to the devastating scourge of the war; but few, if any, batches have migrated to the island from that region. From Asia Minor there has apparently been no information. It is fortunate that island expenditure can be kept as low as it is, and that alien swarms have not appeared in any formidable quantities of late years.

Quarantine Precautions.

Quarantine precautions are still observed against the danger of plague and cholera in Asia Minor, against plague in Egypt, and against plague and typhus in Greece. All third-class passengers arriving must undergo medical inspection, with disinfection of clothing and effects, at Larnaca, Limassol, or Famagusta. No alarm is felt as regards any of the countries named, but the Government is strict in all matters of quarantine, and has in this the full approbation of the people. As regards dogs, no importation is at present allowed. Any dog landed from a ship must be at once replaced on board or destroyed, as the Commissioner of the District may direct.

Summer Visitors.

Summer visitors are dropping in as the limited means of access to the island permit, and more are expected, especially from Egypt. Steam communication is still deplorably bad. Travelling in the island, while still unsatisfactory, has improved.

DEPARTURE OF THE SUDANESE MISSION.

The members of the special mission from the Sudan, which came to London to present a loyal address to the King, concluded their visit on August 4, when they left Victoria by the Continental boat-train. Sir Robert Synge (representing Lord Curzon), Sir Edgar Bernard, and a number of the officials who had been attached to the deputation during its stay, were at the station to bid farewell to the visitors. The head of the mission, speaking for himself and his colleagues, expressed the intense delight of the whole party at the reception they had had in England and the kindness shown them throughout their stay.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, July 28.

The Ministerial Crisis.

There is not much to record from Belgrade this week; the Ministerial crisis has passed over, although there are vague rumours that the matter is only patched up temporarily. It is earnestly to be hoped that these rumours are not true, for the young United Kingdom needs the co-operation of all its best brains in the difficult task of settling down under the new conditions.

The Serbs, Croats, and Slovenes have been for so long separated that they have almost forgotten each other's little idiosyncrasies, like brothers who have been parted for many years. Fundamentally they are the same, but Austrian policy for centuries, and more particularly for the last hundred years has laboured to alienate the three branches of the Yugoslav people, and this policy has been so far successful that the Serbs and the Croats know as little of each other in fact as though an ocean, and not a river, divided them, for it is a fact that the Serbs have been in more intimate contact with the Greeks, and even with the Turks, than they have with their brothers across the river. History has reacted on the Serbian temperament as well as on that of the Austrian branches of the race, and oppression and the constant pressure of enemies have developed their sturdy independence and impatience of interference, while the Croats and the Slovenes have become accustomed, in spite of themselves, to the methods of the Hapsburg tradition. Fortunately, both sides are showing a good deal of common sense, and realisation of the difficulties of a new kind which the young kingdom has to face, and it really looks as though parish pump politics will be suppressed in the wider sphere which is now open to them. The smaller parties, which were so active, or at all events so noisy, in the old kingdom of Serbia, are melting away, if they have not already disappeared, and fusing with the larger; so that there is crystallising out a division into two parties of approximately equal strength, which is always a healthy sign.

Making Good the War Damages.

Signs of the war are being slowly obliterated; gradually buildings are being reconstructed, though a long time must elapse before all signs of the bombardment of Belgrade can be washed away. The special units, such as reinforcement regiments, are being disbanded; veterans of the Salonika front over the age of 38 have been released on indefinite leave, and Belgrade is full of demobilised officers in mufti. The sappers have completed their task of erecting temporary bridges along the railway lines, where the Austrians did an immense amount of mischief on their retreat. The through service to Salonika is announced to begin on August 1, which will make a great deal of difference, especially to the commercial world. There is a daily train service to Vienna, and telegraphic and telephonic connection is organised between Belgrade, Zagreb, and Serajevo.

An evil legacy of the war is the looting and stealing which is not yet stamped out on the railway in Croatia. There is a gruesome story that recently a party of thieves found a very heavy box in an unguarded truck, which they at once took away, thinking that the contents of so weighty a package must be of great value. But, when they had removed it to a safe distance from the line and opened it, to their horror they found the body of a senior and distinguished officer, which was being sent to Belgrade for burial. The authorities are taking strong steps to stamp this scandal out, and a corps of special railway gendarmerie has been organised; two of these will accompany every train, like the Guardia Civil in Spain, and others will patrol the lines; they have already justified their existence by reducing the amount of thieving, and by arresting a gang of armed desperadoes dressed up in military uniform.

A Disturbance at Novi Sad.

There have recently been some minor disturbances at Novi Sad, which has for years been a centre of Serbian intellectual culture. The minority of enemy subjects who remained there lay very low at first, fearing reprisals for the behaviour of their own troops during the occupation. Perhaps they judged others by their own standards, but when they saw the rather contemptuous, good-natured tolerance of the victorious Serbs, they raised their heads a little. Their refusal to remove portraits of the Hapsburg family from a theatre roused the anger of a party of Serbian students, who took offence at the public exhibition of these enemy symbols on the very eve of the visit of the Crown Prince, and proceeded in a party to remove them. For a moment there was a panic in the theatre; but the students quietly removed the offending pictures, and the performance proceeded. There is no doubt that enemy propaganda has seized this ebullition of youthful spirits to make a case and proclaim Serbian intransigence and intolerance, so it is advisable to let the true story be known.

The Climate and the Harvest.

Serbia is, unfortunately, imitating one of Great Britain's weakest features. It is every Englishman's privilege to grumble at his climate. Out here the local English residents have the privilege of grumbling at the Serbian climate. It is certainly first cousin to the English one. Not only did we have almost incessant rain all through April and May, leading to heavy flooding and great damage, but even in July there has been a succession of such heavy rain that the floods are growing again, and the crops have suffered accordingly. The plum harvest threatens to be a poor one, and corn has suffered from flooding along the river valleys, especially in the Morava. Serbs all complain that such a summer is an unheard of phenomenon, but this is probably a legitimate exaggeration, as Huxley said in the Canary Islands about the oldest inhabitant telling the usual lies about the perpetual sunshine.

Miscellaneous News Items.

Women in Government employment will receive the vote.

Agrarian reform is proceeding slowly; the peasants this year will get double the quantity of land to work that they had last year.

A Polish Consulate has been opened at Zagreb, to perform the usual Consular duties and promote friendly intercourse between the two friendly Slavonic States.

The new bank-notes, made in Zagreb and Prague, will be issued in August, when the krone will be recalled.

ALBANIA.

We have received from Miss Edith Durham, Hon. Sec., Anglo-Albanian Society, the following information:—Ever since the beginning of this year terrible accounts have been reaching the Society of the ill-treatment of the Albanians of those districts of the North which are in Serbian occupation. Miss Durham has received "from a reliable source" the news that at Ipek a Bey was wounded three times, and spoiled of 1,800 pounds Turk and 21 cases containing clothing. Another Bey's house was pillaged, and an Ipek merchant was assassinated. The villages of Plava, Gusinje, and Vunthai, states Miss Durham, have been razed and pillaged, and many victims burnt alive. Thirty villages of Drenitza have been reduced to cinders; and the tale of pillaging and razing is true of many villages in the neighbourhood of Ipek and of the Rugova district. Miss Durham concludes by asking whether the Albanians are to be left alone to be extirpated.

Owing to the withdrawal of British troops from Transcaucasia, serious fighting has broken out between the Armenians on the one hand and the Tartars and Kurds on the other. Turkish officers are assisting the Tartars. Individual British have been fired upon, and it is reported that casualties have been caused. British representatives are endeavouring to arrange a cessation of hostilities.

TWO LETTERS FROM TIFLIS.

(From a Correspondent.)

The following is a translation from a letter received from Tiflis, dated February 28, 1919, from a prominent landowner in the Elisavetpol Government. The writer, a former officer in the Imperial Guard, the son of a well-known Russian general, is by birth an Armenian, and the only Christian landowner in the district, where for years he has lived on most friendly terms with his Tatar neighbours. He writes:—

"First of all, I will give you the sad news that I am totally ruined, that my beloved Geok-Tapa does not exist any longer. Exactly a year ago organised bands of robbers and scoundrels made a sudden attack on the property, and put it to fire and sword. I was just lucky enough to effect my escape, with my wife, brother-in-law, and ——. It is hard indeed to tell you of our anxieties and suffering before we succeeded in reaching Baku. We were unable then to get to Tiflis, as they were murdering Armenians in the trains.

"All buildings on the place have been razed and everything movable carried away. The house itself and some outbuildings were burnt down, and the rest smashed up and utterly destroyed; in a word, Geok-Tapa has been converted into a desert. The entire vineyard and the beautiful park have been hacked down. Thirty thousand *vedra* of good wine have been destroyed, the fruit of three harvests, as, owing to the prohibition on wine, I had not been able to send any away.

"You may well ask what was the cause of all this disorder, especially when you know the friendly terms on which I lived with my Tatar neighbours and my popularity in the district. Alas, the cause is those accursed Germans and the German-Turkish policy in the Caucasus, with the object of exterminating the Armenians as a people that has determinedly been true to Russia and to our noble Allies.

"We all hoped that the English would advance from Baghdad and reach the Caucasus in time to keep order. But, alas, this was not to be, and the Pan-Turkish movement was free to work its wicked will, and the Armenian massacres began. I was the first to suffer, as the most prominent representative of my race, and then all Armenian villages in the lower part of the Elisavetpol and Baku Governments were destroyed, where the Armenians were in a distinct minority. In our district of Aresh alone, out of thirty thousand Armenians hardly a thousand have escaped massacre, and the villages are entirely destroyed. There is a fine result of the famous Revolution, with its talk of freedom and self-determination!

"At last the conquering English came, and all respectable elements in the population turned their glances hopefully towards them, in the expectation that they would restore order and organise our existence. Unfortunately, this was no light task. The wild Asiatic tribes, the Georgians and men of Azerbaijan, accustomed to the doctrine of force and submission, had tasted the sweets of licence, and would not surrender their position easily. Your command at Tiflis and Baku has the task of curbing the elements of force and carrying out a great policy to prevent collision between the numerous tribes with their highly-diversified population. Especially violent are the Georgians, whose arrogance has exceeded all moderation. They invited the Germans, but in their stead there arrived the English. Naturally they are disgusted, and cannot conceal their hatred of your compatriots.

"I have recently been busy in collecting materials and working out my losses, which, they say, the English will make the Turks pay for. My losses exceed two and a half million roubles, at 1914 values. If I do get any compensation, I could settle in some other district, as I could not bear to return to the Tatars. But this would only be possible in the event of a strong British occupation, for I have no confidence in the early restoration of a strong government in Russia. . . . In a word, all our hopes rest on England. So come hurrying to Tiflis to help in the good work."

The following extracts are from a letter dated May 5, 1919, written by a Russian in Tiflis. The writer is a member of the scientific staff of the Caucasus Museum at Tiflis:—

". . . . Life in Russia in general, and in particular in Georgia, has become almost intolerable. During the years of war we did not feel great deprivations, but after the revolution things became so bad that you could scarcely believe it unless you saw it with your own eyes. It is enough to say that for the last two years we have been living in such conditions that every day we have been obliged to worry about to-morrow's dinner; we are literally hungry. The price of all products has risen from one to two hundred per cent. compared with pre-war prices, but earnings only three times, and the value of the rouble has fallen so that it has almost lost purchasing power. That is one side of the picture. Besides that, we are isolated from Russia for more than two years, and have no knowledge of what is going on there. We only know one thing, and that is that if Russia is ever restored it will not be for a long time. So there is nothing left to do but to try to work and live in Georgia. Here the local attitude towards Russians, after the declaration of the independence of Georgia, is very bad; the Russian language is proscribed, and even scientific works have to be written in Georgian. So you will understand how all better-class Russians are gradually leaving the country whenever they get the chance. . . ."

There is at present on exhibition at the Leeds City Art Gallery a symbolic picture, entitled "The Dawn of Yugoslavia," painted by Miss Emily Ford. After being shown in Leeds, the painting is to come to London, when the Serbian Legation will decide as to its future.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Military Headquarters, Constantinople. July 29.

Major Waring asked the Secretary of State for War for what purpose he maintained a military headquarters at Constantinople; whether this was an independent Army Command and of how many troops did it consist; and whether the expenses connected with this force were defrayed by ourselves or the enemy?

Mr. Churchill: A military headquarters is maintained at Constantinople for the command and administration of the British Army of the Black Sea, which forms part of the Allied Army of Occupation required to enforce the terms of the Armistice. An independent Command is necessitated by the fact that the British force is scattered in detachments from the Dardanelles to the Caspian Sea, and Egypt and Baghdad are too far away to maintain effective control and communication with forces dispersed over such a wide area. The total strength on June 28 was 84,000, made up of 37,000 British and 47,000 native troops, including 20,000 Indians. The expenses of the force are defrayed by the British Government. I am at present unable to say whether the Peace Treaty with Turkey will provide for any of these expenses being recovered from the enemy Government, as in the case of the Peace Treaties with Germany and Austria.

Greek Activities in Asia Minor.

Major Glyn asked the Prime Minister whether the Government had any further information in regard to Greek activity in administering certain portions of Asia Minor; whether British shipping and trading interests were receiving fair treatment; and what steps the Government had taken, and were taking, to re-establish the British prestige in Asia Minor, Cyprus, and Syria?

Mr. Harmsworth: Decisions as to the scope and the sphere of Greek activity in Asia Minor lie with the Allied Conference at Paris. Information has reached the Conference to the effect that the Greeks have taken over control of the shipping and Customs at Smyrna, but the Allied Powers have not recognised this action, and inquiries are being made of the Greek Government at Athens. I need not say that his Majesty's Government will take all necessary measures to secure fair treatment for British shipping and trading interests. In regard to the last part of the question, information received from all sources is far from confirming the impression that British prestige stands in any need of re-establishment.

Elections in Bessarabia. Aug. 5.

Sir S. Hoare asked whether the Roumanian Government proposed to hold in Bessarabia elections for the Roumanian Chamber; if so, whether the Allies had yet determined the future of Bessarabia; and, if the Allies had not yet determined it, whether they would arrange with the Roumanian Government to abandon their intention to hold the elections.

Mr. Cecil Harmsworth: It is understood that the elections for the whole of Roumania and Bessarabia will be held in the early autumn. It is probable that by that time the Peace Conference will have decided as to the future status of the province, and there is no reason to suppose that the Roumanian Government will not loyally respect the decision of the Conference.

Topics in Parliament.

The subjoined headings are those given in the Official Report.

Cyprus Mission. Demobilisation: Constantinople Troops. (July 29.)

India: Punjab Rebellion (Courts Martial).—Rowlatt Legislation.—Army Officer Prisoners (Pay).—London School of Tropical Medicine (Treatment of Officers).—Government of India Bill (Select Committee).—Discharged British Officers (Employment). Italy: Pro-German Propaganda. Fiume. Cyprus. India: North-West Frontier Expedition (Cholera).—Ali Masjid Camp (Water Supply).—Army Medical Arrangements. (July 30.)

Cyprus. Egypt (Lord Milner's Commission). Procession of Indian Troops. Troops at Salonika (Dysentery). Band Boys (Service in India). Sir Rabindranath Tagore. (July 31.)

Montenegro. Egypt (Milner Commission). Demobilisation: Troops in India. Asia Minor (Massacres). Military Command. Aidin. Demobilisation: Royal Army Medical Corps, Egypt.—Troops in India. (Aug. 4.)

CANELLOS CANELLOPOULOS
IMPORTER.

The Leading House for Ladies' Materials, Woollen Goods, Cottons, Silks, Linens, etc. Latest Styles and Fashions; Fancy Goods, Table Wear; Lingerie; Bed Linen. The best selection of Muslins.

PRESS ON THE NEAR EAST.

Sultan Mehmed VI.

The Constantinople correspondent of the *Morning Post* has written in the issue of July 26 a report of a very interesting interview with Sultan Mehmed Vahed-ed-din. A few notes on the Sultan's career are informing:—

Mehmed VI. on ascending the Throne last year immediately showed that he was made of different stuff from his brother. During the reign of Abdul Hamid he had been shut up with his brother in a place on the Bosphorus, and even after the accession of his brother he did not become heir-apparent until his cousin, older than he, Prince Youssouf Izzedin, elder brother of the present Prince *heritier*, committed suicide or was killed—no one will know which. He was then brought from retirement, and during the war for eight months was attached to the German General Headquarters, though his sympathies were entirely against Germany and always pro-British, and he was always and ever an opponent of the Committee of Union and Progress.

On reaching the Throne he immediately took his grandfather as his example. He had his Coronation robe made, stitch by stitch, according to the model of that of Mahmud. He used Mahmud's sword for the ceremony, girding on the sword. He adopted Mahmud's National Anthem, written for him by the younger Donizetti. He appealed to the public sympathy to get rid of the Committee of Union and Progress in the same way that Mahmud in a rougher age appealed to the public to get rid of the Janissaries, the power behind the Throne. Always suspected by the Committee of Union and Progress of being a spy of Abdul Hamid, there was no love lost between the new Sultan and the Committee.

Arab Sentiment in Palestine.

The issue of July 26 of *Palestine* comments on the recent gun-running between Palestine and Egypt. Of the Arab political attitude it says:—

Arab political sentiment is not easy to analyse. Of the great masses, whether Feliahin or townsmen, it may be said that they have no political understanding or tradition, but are liable to be worked upon by the Effendi, particularly when an appeal is made to their religious passions. Among the upper classes there are numerous parties, and it is perhaps not unjust to say that there is more party and more of personality than patriotism about them. The American Commission has been in Palestine trying to sound the Arab mind; the only subject upon which there seems to be agreement among the Arabs is distaste for French rule. Even the Christian Arabs share this with the Moslems, which is a little surprising after the great efforts the French religious missions have made. For the rest there are those who want Palestine to be attached to the Hedjaz, those who want it to be attached to Syria, those who want Pan-Arab Federation, those who want independence, those who want English rule, those who want American rule, those who want Turkish rule. There has been a great deal of anti-British agitation and even anti-British conspiracy; agents travel between Damascus, Ammam, Jerusalem and Egypt. During the Egyptian troubles, efforts were made to bring about an outbreak in Palestine, and there is a certain amount of loose talk of the same kind now in progress.

However, it has no fears for the future, and a strong line, it says, will set all straight.

As a military or a political problem all this boils down to very little. The Arab is effervescent, and he has profound respect for the accomplished fact. When the British Government and the British Administration in Palestine make it quite plain that they are going to carry out the policy of a Jewish Palestine, and that they mean to stand no nonsense, these political emotions will subside and disappear. All but a very small handful of Arabs will bow to reality, and that small handful which is disinclined to bow will constitute no severe task for the administration. All this is quite well understood by those in charge in Palestine, and it fortifies the argument, strong on so many other grounds, for an early, precise, and emphatic announcement of policy by the Conference and the British Government. If the question of the political settlement of Damascus were disposed of quickly, that would also help to sweep away illusions. Damascus is bound to be a source of trouble and intrigue so long as its political destiny remains undetermined, and that in spite of the Emir Feisal himself. The Emir is a statesman, and is no party to the bickerings and the manœuvres of the Effendis, but he is not, and cannot be, fully master in his own house until it is known for certain whether that house is really his. He cannot organise a State and an Administration, put down disorderly persons and instil prudent principles into his subjects until his own authority is placed on a solid basis.

The Balkans.

The *New Statesman* of July 26 contained a well-informed and impartial article on "The Settlement in the Balkans." That universal panacea, self-determination, is inapplicable in the Balkans, and, the writer says, "the only solution is to be found in a spirit of broad tolerance and compromise."

There must be mutual give and take. That is the first and the hardest principle to apply in our Balkan policy. Whenever rational compromise is proposed we are met by the objection that Bulgaria has been defeated in the war, and that any settlement which gives her what she is entitled to treats her as though she were a victor. That, if justice is to be done, cannot be avoided, for it is the fact that Bulgaria, though she entered the war on the wrong side, entered it with certain just territorial claims. But if there is to be any settlement of the Balkans, all this talk about the rewards of victory and the punishment of defeat must be ruled out as irrelevant. The only tests are: Is the proposed settlement just? and, Will it last?

No settlement will last which does not give Bulgaria two things: union with the Bulgars in Macedonia; and, secondly, a good port on the Ægean. One hesitates to embark on the ethnical problems of the Balkan Peninsula, complicated as they are by a policy of systematic massacre, pursued by each of the three dominant races in the Balkans, whenever a chance has offered. If Balkan politics stink in the nostrils of decent people, it is because of the mass of disgusting literature that Serbs and Bulgars and Greeks have put out, each accusing the others of nameless atrocities. It is impossible to distinguish between the degrees of culpability. The charge brought by the inter-Allied Commission against the Bulgarian army of occupation, that it deliberately pursued a policy of extermination of other nations than its own is probably true. But it is true also of Greeks and Serbs. The wise man will dismiss this campaign of atrocity mongering, and, regarding all three races as equally guilty, will set himself the practical task of removing the causes which have produced this mass of horrible literature.

The statements are made that Serbia can easily afford to grant Bulgaria's just claims in Southern Macedonia and equally easily Greece can afford to give Bulgaria a good port on the Ægean. Of Roumania the writer says:—

Roumania will acquire, at the expense of Austria, a great new territory in Transylvania, and friendship with Bulgaria is cheap at the price of territorial concession in the Dobrudja, paid as they will be in a currency which just now is heavily inflated. The argument that a settlement such as we have outlined gives Bulgaria in defeat everything that she could hope to gain by victory does not influence us at all. Here in the Balkans there is a chance of doing what was difficult, almost impossible to do, in the case of Germany, namely, to obliterate the memories of the war, and to think only of a settlement that would have been just if the war had never taken place. Will Serbia, whose military exploits have been so inspiring an epic, consummate them by a display of statesmanship and generosity to the defeated? Will Greece revive Venizelos' old ideals of Balkan unity, and thereby strengthen her claim to succeed to her old glories at Constantinople? It is for the Powers in conference to work for these humane ends.

Articles to Note.

"The Turks, Cardinal Newman, and the Council of Ten," by the Very Rev. Canon William Barry, D.D., and "The Fortunes of Egypt," by Dr. A. J. Butler, in the *Nineteenth Century* (August).

"Eastern Nights—and Flights," Chapters V. and VI., by "Contact" (Alan Bott); "Two Sepoys": I., Prataprao, by C. A. Kincaid, C.V.O.; II., Abdul, by W. C. S.; and "The Armenians," by Edmund Candler, in *Blackwood* (August).

"The Case for the Rowlatt Act in India," by Ernest D. Lee, in the *Fortnightly Review* (August).

INDIA'S PEACE CONTINGENT.

On August 2 London gave a great welcome to the Indian troops who should have been present to take part in the Victory March of July 19, but could not arrive in time. The contingent, which consisted of 1,800 British and native troops, marched from Waterloo to Buckingham Palace, where the Parade was addressed by his Majesty. He expressed the thanks of the Empire for the services in the war of the Indian Army, and afterwards conferred decorations, including a V.C., on several officers and men. Great cheering greeted the procession, for the meaning was plain of the legends on the blue banners carried by native officers—"France," "Palestine," "East Africa," "Egypt," "Mesopotamia," and "Caucasus." All the fighting troops of Hindustan were included in the column, which thus worthily represented the very gallant troops who have fought so loyally for their King-Emperor. On their return from Buckingham Palace to Waterloo Station the troops were again cheered by great crowds, and they must have recognised the occasion as a truly memorable one.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

A correspondent in Egypt sends me the following pathetic pleasantry, which may throw some light on the methods which have prevailed during the recent outburst:—"A little incident of Egyptian prison administration is typical, and might form the *piéce de résistance* of a comic opera. During the recent troubles, the rioters who were captured in a certain town were tried by court-martial, and sentenced to various terms of imprisonment. The senior officer of the court thought the ringleader deserved a bigger punishment than he had power to inflict, so he called for a higher court, which after inevitable delays, met on a certain day. The high officers who were to act as judges arrived, the police officials came, the witnesses were brought, the interpreter came, and last, but not least, the escort came. The court sat down, and with due solemnity told the interpreter to tell the escort to bring the prisoner in. 'Oh,' said the interpreter, 'there isn't any prisoner.' 'Why?' said the court, majestically. 'Because he escaped from jail eight days ago,' replied the interpreter. What the court then said will not be recorded, as the censor of morals and language will not pass it."

***

Most Englishmen are full of pride in their Empire, but they are not so full of knowledge concerning our overseas possessions. Doubtless we all have improved ourselves, geographically-speaking, during the war; but we are far from perfect yet. It is only two days ago that I betted with a well-informed Welshman that he could not tell me in which continent Cyprus was to be found, and he backed a loser! This reminds me of a story of a friend of mine who, inquiring for rates of insurance, wrote to two firms asking whether Cyprus was covered by European insurance, and received answers both in the affirmative and the negative! Now, I do not dare to suggest that any one of my readers does not know the precise continental situation of Cyprus, but if they choose to start a little gamble of their own on the matter, it's an exciting probability that there'll be some money lost by somebody.

***

Quite seriously (it's so very jolly to be serious sometimes), the ignorance of this country about Cyprus is absolutely unjustifiable. Is not Cyprus a British possession, and should we not know the elementary facts concerning it? I warrant that there are not many questions on the island which children in Greek schools could not answer, but what of children in our own educative centres? *Apropos* of this subject, a school inspector tells a story which is a most refreshing exception to the general rule. He was touring round the semi-barbaric parts of the North of Scotland, and at one of the schools asked the question: Where is Cyprus, and what is it? He was amazed to hear a budding Caledonian sage reel forth the correct answer, including the number of the population, the exports, the natural scenery, and so forth. This is a quite true story, but one which could not be told of many schools in the British Isles. It is an example which should be emulated by all those who are early informed of the greatness of Britain and of her possessions.

***

Although Peace with Turkey has not yet been signed, the Turk appears to have quite a number of friends in this country. But there can be no doubt that he has lost not only the friendship but even that half-amused liking which many Englishmen felt for him in the old days before the war. And this is due not so much to the war itself, or to his methods of fighting us—for, on the whole, the opinion of our actual fighting men seems to be not unfavourable to him—but to the things that he did under cover of the war, so to say. The worst of these things was his treatment of his own subjects, the Armenians, the Nestorians, the Chaldeans, even the Arabs and the Syrians. The unrestrained brutality of his methods of doing away with the Armenians certainly cost him the goodwill of a number of Britons who, during their captivity in his hands, had the opportunity of seeing something of the horrors that were perpetrated on the upper Euphrates. Some time ago I talked with some of the Englishmen who were made prisoners at Kut, and while they had no complaints to make regarding the treatment meted out to them personally, they spoke with the utmost indignation of what they had seen of the treatment of Armenians. And this week another Englishman, an ex-prisoner, went over the same ground in the same way. He concluded: "I used to hold a brief for the Turk in the old days, but now——. Well, he has got to go."

CORSAIR.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

Obtainable at HARROD'S, SELFRIDGE'S and all the leading Stores.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

RAHMI BEY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—As you are no doubt aware, a number of Turkish officials of the old regime have recently been transported to Malta for trial. Amongst these is the late Vali of Smyrna, Rahmi Bey.

I have just received a letter dated the 7th inst. from a correspondent in Smyrna, and he asks me to make known, if possible, the feeling of British and French residents in Smyrna towards the late Vali. The writer has been out in Turkey since the early sixties, and Rahmi Bey has been the Governor of Smyrna for quite a number of years. Though the writer does not know this gentleman personally, he expresses the firm conviction that all British and French residents owe very much to him, and they are to be considered highly fortunate that this man was Governor in their district during the war. They all know how Rahmi Bey was urged by the German generals to deport all British and French residents from Smyrna. This was done repeatedly. Rahmi Bey just as regularly refused to obey their instructions, and thereby saved many of our friends the horrors of internment in some camp in the wilds of Asia Minor.

I understand that a petition in favour of Rahmi Bey has been signed by all who have benefited through his kindly action. I have no doubt this petition will have been forwarded to the right quarter, but the wish of the British Smyrna residents is, that as much publicity as is possible should be given to the facts in the hope that these points in Rahmi Bey's favour will be taken account of at the trial.—I am, etc.,

GRATITUDE.

July 31, 1919.

"GREAT BRITAIN AND THE NEAR EAST."

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Major Ormsby-Gore's suggestion for the formation of a new department to deal with British interests in the Near East is, indeed, an admirable one. I have no intention of inflicting a long letter on the subject upon you, for I could add nothing of value to Major Ormsby-Gore's arguments. But an illustration of the evils that exist under the present system may not be out of place. Our Consul at Busreh is appointed by the Foreign Office, but the Consul-General at Baghdad is appointed by the Indian Government. Yet, I understand, Busreh is subordinate to Baghdad. The Consuls and Consular-Agents up the Persian Gulf are—or were—all appointed from India.—I am, etc.,

August 2, 1919. JIGSAW.

[Other letters on this subject are unavoidably held over owing to pressure on our space.—ED.]

INDIAN CIVIL SERVICE.

The following are recommended by the Civil Service Commissioners to the Secretary of State for India for acceptance as selected candidates for the Indian Civil Service, subject to their being found eligible in point of health, and on the result of any other inquiries he may desire to make. The names are given in order of merit:—1, Nethersole, N. H. B.; 2, Peddie, J.; 3, Stanford, J. K.; 4, Ryan, C. F. M. N.; 5, Donaldson, J. C.; 6, Pinnell, L. G.; 7, Cooke, G. H.; 8, Douglas, R. O.; 9, MacEwen, A. R.; 10, Waugh, H. R.; 11, Dunlop, W. N. U.; 12, Courtney, W. E. L.; 13, Lacey, W. G.; 14, Pawsey, C. R.; 15, Hands, A. S.; 16, Porter, N.T.

NEAR EAST BOOKSHELF.

"ALBANIA, PAST AND PRESENT."*

Apart from Mr. Wadham Peacock's well-known study, the number of books which can be said to give a comprehensive account of the Albanian question is small, and we are, therefore, grateful to M. Chekrezi, himself an Albanian, for covering the whole ground in this work. We need not discuss his historical section, which, barring some perhaps inevitable prejudice against the Greeks, appears to be fair and impartial; we note, by the way, that he makes the interesting point that the existence of Albanian Moslems is due to many of his countrymen deliberately preferring freedom to religion. As Albanian Christians they would have been persecuted by the Turk; as converts to Islam they were free.

There will be no disposition to quarrel with his account, half-humorous, half-tragic, of the events which led up to the brief and inglorious reign of Prince Wilhelm of Wied; more to the point is his statement of the future claims of Albania, whose status and territory have not yet been decided by the Peace negotiators or procrastinators at Paris. M. Chekrezi first claims "the districts of Hoti and Gruda, the populations of which successfully withstood every attempt of King Nicholas of Montenegro to incorporate their territory in his realm," as "one of the simplest and most elementary acts of reparation"; he proceeds to a more important demand, based on the fact that "during the two years of Serbian domination the million Albanians of Kossova, Dibra, and Ochrida have made three sanguinary rebellions to free themselves of Serbian rule." He holds that there can be no friendly relations between Albania and Serbia while this continues. Thirdly, "on the Albanian-Greek frontier, a new delimitation must be made so as to include in Albania the district of Tchamouria, inhabited by Moslem Albanians, and the region of the Pindus Mountains, where the Roumanian-Wallachian population, as well as the Albanians of Konitsa, are clamouring for union with Albania." It may be noted that the Greek claim to Northern Epirus is also dismissed by the author as "delirious and absurd raving"; and he suggests "a plebiscite to put an end to the Greek wailings and yellings," always provided that the territory shall be first occupied by a neutral Power and that steps shall be taken to avoid any gerrymandering. The author has no fear of the result, for "the Albanians are neither barbarously Chauvinistic, like the Greeks, nor brutal like the Serbians and Bulgarians"; indeed, after this emphatic expression of the golden rule, one is not surprised to learn in the next sentence that "in Albania, tolerance, religious and political, is a recognised principle." The Pharisee also gave thanks that he was not as the Publican, but that was a very long time ago, and such things are simply not done in the Near East in these days.

There is no space in which to express an opinion on M. Chekrezi's claims; these citations are made merely to illustrate the rapid progress of peace and concord in the Balkans.

A. W. T.

THE SEPOY.†

There are few writers better qualified than Mr. Candler to deal with the different classes of the sepoy. He has an intimate knowledge of his subject, and his power of sympathetic observation alone gives high value to whatever he writes. Of familiar and unfamiliar things alike he deals most pleasantly. He can, for instance, add much to the already considerable public knowledge of such types as the Gurkha and the Sikh; and equally easily he can enlighten us on the subject of such little-known types as the Punjabi Mussulman and the Hazara. One very necessary point the author makes, and with great success—the differences in temperament of these various types. It is true, as he himself observes, that one must be a regimental officer really to understand the sepoy; nevertheless, he does contrive very skilfully to present the peculiar mentalities of particular types. In a large measure he achieves this by the use of interesting incident, by showing how, that is, certain sepoys in certain circumstances act in a certain manner. He could, in fact, have improved his book by the inclusion of more incidents, for those which he does give are extremely good. But for the information he has supplied, and the careful enthusiasm with which it is given, those interested in the sepoy should indeed be grateful to the author.

* "Albania, Past and Present." By Constantine A. Chekrezi. (Macmillan. £22s.)

† "The Sepoy." By Edmund Candler. (London: John Murray. 7s. 6d. net.)

ECHOES FROM THE WILDERNESS.*

It is something in these days to find a book of verse tastefully produced and lacking realistic vulgarity. Therefore we give praise to Mr. O'Connor for having written and published his book in a refined manner. But that must be the extent of our praise. For though some of this verse is invested with a cloak of Catholic mysticism, the echoes of Crashaw, Francis Thompson, and the rest of our religious poets are very faint. There is here none of their intense feeling, none of their heavenly flights, none of their rich visions. This picture, for instance, is not poetry:—

> The transports thread the valleys wide,
> Or climb the ridges stern and bare.
> Egyptians on tall camels ride,
> And azure tunics do they wear.

And here is a redundant echo of Swinburne, in which the passion is hard to find:—

> I would throw to magnificent doom
> White roses at her feet.
> Should she tread out the life of each bloom,
> What fate could be more sweet?

We should have thought that Mr. O'Connor's temperament and experiences would have produced something of ringing vibrancy, of coloured majesty, or of restrained ecstasy. But it is not so. He has not the "élan vital"; and when he says—

> I would that my verses had wings to each line!
> They then might be Angels, a fluttering throng,
> To sing of a saint in a heavenly song,

he utters a very common wish, which, however, is very uncommonly granted.

A SOLDIER-THEOSOPHIST.†

Here is a slight book composed of letters written by Lieut. G. H. Whyte, M.C., and edited by his wife. It is an unpretentious record of this officer's experiences in France, Salonika, Malta, Egypt, and Palestine. The things seen and described are neither new nor rare, but they are coloured with theosophic idealism. While this book does not alter our conviction that war experiences should be the subject rather of conversation than of writing, yet it is good to read in it of such things as the sunset on Mount Olympus, the beauty of the strait between Malta and Gozo, and the crocuses and the daffodils growing between the rocks beyond Jerusalem, where the author was killed. But it is certainly better privately to remember in the heart the sad and joyous things of war than publicly to learn them by heart.

THE LITERATURE OF PASSIVE RESISTANCE.

We have received for review a bundle of the leaflets issued in April and May by the well-known Mr. Gandhi in furtherance of the campaign of *satyagraha*, or passive resistance, by way of protest, which had such deplorable results in various parts of India. There is not much to be said about them at this time of day; Mr. Gandhi appears as a very unpractical visionary, who supposed that, having aroused the passions of the mob, he could control them by the stopcock of such leaflets as these, and there is nothing to show that he has been effectively disillusioned. An expert in the letting out of water, he has far too little knowledge of hydraulics to regulate its flow, and if there were the slightest prospect of his listening to advice, we should counsel him to impose on himself the discipline of silence in regard to matters which he does not understand.

BOOKS RECEIVED.

"Hygiene and Disease in Palestine in Modern and in Biblical Times," by E. W. G. Masterman, M.D., F.R.C.S., D.P.H. (London: Palestine Exploration Fund. 2s. 9d.)

"Cecil Spring Rice: In Memoriam." By Sir Valentine Chirol. (London: John Murray. 6s. net.)

BOOK NOTES.

"The Peculiar Major," by Keble Howard, is a war story published by Hutchinson, being concerned, among other things, with Turks and Palestine.

A story of English life in Burma, written by "Bokwallah," is published by Melrose, with the title "The Leopard's Leap."

* "A Singer in Palestine." By Armel O'Connor. (Ludlow, Shropshire: The Mary's Meadow Press. 2s. net.)

† "Glimpses of the Great War." (London: Theosophical Publishing House 3s. 6d. net.)

Lord Oranmore and Browne has left London for Ireland.

Mr. C. Salvago, of Alexandria, is now in London on a short visit.

General Sir Charles and Lady Townshend have left London for Norfolk.

M. L. Politis, Secretary to the Greek Legation, left London on August 3 for Paris.

Lt.-Col. Granville Baker, D.S.O., who recently visited Belgrade, is now back in London.

Dr. Pagonis, the Great Archmandrite of the Greek Church, left London on August 1 for Alexandria.

Brigadier-General R. H. Storrs, C.M.G., Governor of Jerusalem, is now in England on a short visit.

Brigadier-General G. F. Clayton, C.B., Chief Political Officer, E.E.F., is at present in this country, on leave.

Mr. H. Boutigny, proprietor of the *Egyptian Mail* and several other Egyptian newspapers, is now in London on a short business visit.

Ebrahim Khan Gharogozlou, who has been appointed Secretary to the Persian Legation, has arrived in London from Teheran.

At 10, Dorset Street, Marylebone, on July 22, the wife of Mr. W. Stanley Hollis, United States Consul-General, gave birth to a son.

The marriage was celebrated on July 30, at Bombay Cathedral, between Major R. S. Godkin, D.S.O., I.M.S., and Beatrice Seacome.

King George sent a congratulatory message to King Alexander of Greece on the occasion of the birthday of the latter on August 2.

Lieutenant P. S. Taylor, G.S.I., who has been spending a few weeks in England, on leave, is returning to Egypt on the 9th inst., accompanied by Mrs. Taylor.

The Archbishop of Trebizond concluded his visit to London on August 4, and left for Paris, where it is his intention to spend a week before returning to Trebizond.

Colonel Rossetti, who has been acting as liaison officer between the French, British, and Roumanian Military Headquarters, has arrived from the Continent.

The Bishop of Bombay, whose eyes were injured by glare in Kashmir a year ago, has improved under the treatment of specialists at home, and is to return to India in October next.

The marriage was celebrated on July 30, at St. Margaret's, Westminster, between Major Wm. C. Ross, of the Indian Medical Service, and Mary, daughter of Mrs. J. M. Hogge, 1, Fountain Road, Upper Norwood.

Dr. Masterman having resigned from the post of Honorary General Secretary for Palestine of the Palestine Exploration Fund, Dr. Percy D'Erf Wheeler will represent the interests of the Society in Palestine.

The marriage was celebrated on July 28, at St. Paul's Church, Knightsbridge, by the Lord Bishop of London, assisted by Prebendary Leith Boyd, between Cedric Lindsay, only son of Mr. Brereton, C.I.E., late I.C.S., and Mrs. Brereton, and Leila Macdonald, second daughter of the late Edward Henry Horsey, M.D., M.P., Canada, and Mrs. Horsey, 55, Albert Hall Mansions.

The engagement is announced of Richard Godfrey, second son of Mr. and Mrs. J. Westcott, North Gate, Regent's Park, London, to Dorrit, eldest daughter of the late Mr. and Mrs. Charles T. Barber, Ramleh, Egypt.

Our Belgrade Correspondent informs us that Major Deroc, who commanded the Motor Transport of the Serbian Army at Salonika, and who has many English friends, has been decorated with the Legion of Honour.

In connection with the Palestine Exploration Fund, it is stated that Miss Frances E. Newton has consented to be the Local Honorary Secretary for Haifa-under-Mount Carmel; and that Colonel Pirie-Gordon has been elected a member of the General Committee of the Fund.

The American School of Oriental Research in Jerusalem, which has been closed since the end of 1914 on account of the war, will reopen under the directorship of Prof. William H. Worrell, of Hartford, Conn. With him will be associated Prof. Albert T. Clay, of Yale University.

The marriage was celebrated on July 30, at St. Paul's, Knightsbridge, between Lieut.-Colonel Walter Edward Wilson-Johnston, C.I.E., D.S.O., 36th Sikhs, and Edith Maud, daughter of the late Captain Francis Gilbert-Jones, R.N., and Mrs. Gilbert-Jones, of 55, Lime Grove, New Malden, Surrey.

The engagement is announced between Captain John Weir Russell, eldest son of S. Russell, retired I.C.S., and Mrs. Russell, of St. Heliers, Eastbourne, and Lucy, only daughter of the late Frederick Mead, of The Moorings, St. Albans, and of Mrs. Mead, New Century Club, Berkeley Square.

Miss Robina Annandale has received the King's unrestricted permission to wear the Cross of the Fifth Class of the Order of St. Sava conferred upon her by the King of the Serbs, the Croats, and the Slovenes, in recognition of her services while employed with the First British Field Ambulance for Serbia in 1915.

The Government of India have awarded the two State scholarships available in the current year for the scientific study of Sanskrit abroad and the similar scholarship which remained vacant in 1917 to Mr. S. Uniti Kumar Chatterjee (Bengal), Lala Mangal Deva Shastri (Punjab), and Mr. Ananta Prashad Banerjee Shastri (Bihar and Orissa).

A marriage has been arranged, and will shortly take place, between Major J. R. Lloyd, Royal Army Medical Corps, third son of Lieutenant-Colonel J. Hayes Lloyd, late Indian Staff Corps, and Mrs. Lloyd, of Braeside, Palace Road, Streatham, and Elsie Beatrice, third daughter of Mr. and Mrs. A. J. Brandon, of Redfields, Church Crookham, Hants.

The marriage was celebrated on July 31, at St. Peter's Church, Harrogate, by the Rev. E. A. Chard, M.A., vicar of St. Mary's, between T. Ian Sutherland Mackay, I.A.R.O., attached 3rd Sappers and Miners, second son of the late Rev. G. Sutherland Mackay and Mrs. Mackay, Doune, Perthshire, and Rachel, elder daughter of Mr. and Mrs. J. G. Chapman, The Oaks, Beech Grove, Harrogate.

The Serbian Red Cross Society in Great Britain are appealing for donations on behalf of their three funds—the Serbian Disabled Soldiers' Fund, to provide surgical aid, artificial limbs, and proper vocational training; for Serbia's Widows and Orphans, to provide necessaries for the destitute; and to provide Roadside Dispensaries. Contributions with which to carry on these funds are urgently needed, and should be sent to the secretary, Mr. Frank Hastings, 9, Ennismore Gardens, S.W.7.

A correspondent in Switzerland sends us the following notes:—

Queen Olga Constantinovna of the Hellenes has arrived in Lucerne. She is upon a visit to ex-King Constantine and ex-Queen Sophie of the Hellenes.

The Marquess of Milford Haven and Lady Louise Mountbatten are visiting Prince and Princess Andrew of Greece in Lucerne.

Sefa Bey, Turkish Minister in Sofia, has been appointed Under-Secretary of State in the Ministry of Foreign Affairs at Constantinople in place of Izzet Fuad Pasha, resigned.

Rechad Haliss Bey has been appointed Turkish Minister in Berne, Fuad Selim Bey having been recalled.

Rifaat Pasha, Turkish Ambassador in Berlin, and Hussein Hilmi Pasha, Turkish Ambassador in Vienna, have been recalled.

Noureddin Ferouk Bey, Secretary of the Turkish Legation at The Hague, has been appointed Turkish *Chargé d'Affaires* at Madrid in the place of Ibrahim Zia Bey. Madame Noureddin Ferouk Bey is the sister of Tewfik Bey Kibruzli, A.D.C. to General Nazim Pasha (who was Generalissimo during the Balkan War), who was assassinated with the General by Enver Pasha on the *coup d'état* at Constantinople in January, 1913.

Our Cyprus Correspondent writes:—

Among the British officials who are taking a well-earned leave is Mr. W. Williams, Acting Director of Public Works, whose service in Cyprus dates back to 1878. His earliest work was as surveyor with the R.E. on military roads. During the first years civil works were under the charge of military officers. Mr. Williams became a Divisional in 1898, and First Divisional Engineer in 1903; and has for several periods acted as Director of Public Works. Those who remember the Indian and Colonial Exhibition of 1886 in London will recollect some of the excellent water-colour landscapes which were due to him, and also the interesting model of the locust war operations, for which he gave valuable aid.

APPOINTMENTS, PROMOTIONS, &c.

Signor Menzinger has been appointed Civil Governor of Tripoli.

M. Abel, Deputy for the War Department, has been appointed Governor-General of Algeria, in place of M. Jonnart, who recently resigned.

Lieutenant-Colonel A. J. O'Brien has taken over charge as Deputy Commissioner, Umballa, Punjab, from Mr. B. B. Whitehead, I.C.S.

Mr. L. Robertson, I.C.S., has been nominated as an additional member of the Bombay Legislative Council, in place of the Hon. Mr. G. G. Keatinge.

Mr. F. St. J. Gebbie is nominated as an Additional Member of the Bombay Legislative Council, in the place of Mr. F. G. Pratt, I.C.S., resigned.

Mr. Justice Abdur Rahim has been appointed to act as Chief Justice of the Madras High Court. Messrs. Krishnan, L. C. Moore, and J. C. Burn will act as judges.

Mr. M. C. Raja, Secretary of the Adi Dravisjana Sabha, has been nominated a member of the Madras Legislative Council, the first member of the Panchama ("depressed community") to be appointed to any Legislative Council.

The King has appointed General Sir Herbert Charles Onslow Plumer, G.C.B., G.C.M.G., G.C.V.O., and General Sir Edmund Henry Hynman Allenby, G.C.M.G., K.C.B., to be Field-Marshals. These promotions are dated July 31, 1919.

The question of making preliminary arrangements for the census of 1921 is under the consideration of the Madras Government. It is understood that Mr. G. T. Boas, I.C.S., who is now on leave, will on return be appointed as Provincial Census Superintendent.

Our Cyprus Correspondent writes:—

Mehmet Halid Bey has been appointed Judge of the District Court at Famagusta.

Mehmet Izzet Effendi has been appointed Judge of the District Court, Papho.

Mr. M. E. Jelajian, of the Land Registry, is retiring from the service, after long and very able work in that department.

OBITUARY.

The death occurred on August 2, at Westwood, Carshalton, Surrey, of Percival Attamont, only surviving son of the late John Dennis Browne, of Mount Browne, Co. Mayo, and Captain (retired) Bombay Staff Corps, aged seventy-eight.

Colonel Edward C. Stanton, late Royal Engineers, died on July 28 at Merton Park, Wimbledon, ac the age of sixty-two. He served in the Afghan War of 1878-80, when he received the medal. He served also in the Sikkim Expedition of 1888, when he was a recipient of the medal with clasp.

Lieutenant-Colonel Edward Harvey, late Royal Engineers, who has died in his eightieth year, had a distinguished career. In 1872, after the Looshai Expedition, he was mentioned in despatches, and received the thanks of the Indian Government. He won other honours in Indian punitive wars, and was with Roberts in the Afghan War of 1879-80.

News from India states that Commander W. R. B. Douglas, Deputy Conservator of the Port of Madras, was drowned in a yachting accident outside that port. In the New Year's Honours List of 1917 his name appeared among the C.I.E.'s, and a month later he was selected as Marine Liaison Officer to the Government of India. He remained in Delhi till November, 1917, and then went to Kidderpore Docks, Calcutta, as Senior Marine Transport Officer. In February of the following year he was appointed Captain Superintendent of Kidderpore as a temporary measure, and on relief was placed in command of the R.I.M.S. Northbrook. On May 29 this year he was made Deputy Conservator of the Port of Madras.

NEWS IN BRIEF.

The monsoon is now practically normal over the major portion of India.

Serbia's provisional Chamber of Representatives has adjourned until the Government crisis is ended.

A rising is reported in the Tirana district of Albania, and all the roads in that region are stated to be closed.

Turkhan Pasha has, for health reasons, relinquished the Presidency of the Albanian Delegation at the Peace Conference.

When Serbia's provisional Chamber of Representatives met on August 4 the President, M. Pavlovitch, reported the resignation of the Cabinet.

Direct railway communication between Belgrade and the Serbian interior has now been re-established, and the direct route to Salonika is open.

Bands operating in the mountains of Montenegro, according to a Serbian statement, continue to receive reinforcements which have been armed and equipped abroad.

A formal protest has been made by the British Committee of the Indian National Congress against the employment of Indian troops as an army of occupation in Mesopotamia.

Talaat Pasha, the fugitive ex-Grand Vizier of Turkey, and the ex-Sheikh-ul-Islam are reported by the Berlin *National Zeitung* to have been seen at a Berlin railway station.

The court-martial on the first batch of those implicated in the disturbances in Malta on June 7 and 8 has just concluded. Out of 31 accused persons three were acquitted. The sentences on the remainder have not yet been promulgated.

The King received at Buckingham Palace on Wednesday Sheikh Abdullah bin Isa el Khalifah and Sheikh Mohammed bin Abdullah, son and grandson of the ruling Chief of Bahrein, Sheikh Sir Isa bin Ali el Khalifah. The visitors were presented by Colonel Sir James Dunlop-Smith, Political Aide-de-Camp to the Secretary for India. The visitors presented to his Majesty a sword, which has been in their family for generations, and which they offered as a memento of the recent victory of the Allies. The weapon was encased in a modern gold scabbard studded with pearls. His Majesty received his visitors most cordially, and presented them with a signed portrait of himself in a handsome silver frame.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

FRIDAY, AUGUST 8, 1919.

CENTRIFUGAL FORCES IN THE NEAR EAST.

The new nations which owe their existence to the war are beginning to find out, what so many individuals discover in everyday life, that the things worth having must be worked for. They have sacrificed much, it is true, in order to achieve national unity, only to learn that it is even harder to live up to an ideal than to die for it. So long as they were fighting for political union a single goal was in sight, and their line of action lay straight ahead; it is when this goal has been reached, and no other that can make an undivided appeal to the nation has been evolved, that the centrifugal force of individuality comes into play. Every nation is passing through the same experience; the unity that the war commanded is being shattered under the stress of peace conditions. In the case of the new countries the phenomenon is the more serious, as the disruptive tendency threatens to undo in part what the war and the long years of preparation brought into being. It is easy, however, to overestimate the danger, for its timely recognition should suffice to place the peoples concerned on their guard. Perhaps the most interesting experiment in national unity is provided by Yugoslavia, where the Serbs, Croats, and Slovenes have to arrive at a *modus vivendi* which will satisfy the different characteristics of the three peoples. From the Cabinet crisis that has arisen in Belgrade it may be inferred that the process of finding a workable resultant between the military vigour of the Serbs and the political experience of the Croats and Slovenes is already in operation. Fortunately everything points to complete success, provided that no single unit strives to assert itself at the expense of the others. As far as any outside observer can judge, the admitted intellectual superiority of the Croats and Slovenes—the outcome of environment—is combined with a spirit of unquestioning loyalty, and the frankest recognition that the Serbs, in the achievement of national unity, have borne the heat and burden of the day. The latter, therefore, have no need to fear ultimate supersession in the new kingdom, if they recognise that their own particular contribution to the common stock—their vitality—will still be required as an essential part of the administration when in regard to political education and intellectuality they have caught up the other elements of the Yugoslav State. Conditions in regard to Roumanian unity are somewhat similar to those prevailing in Yugoslavia, with possibly this difference—that the Transylvanians may prove less tolerant than the Croats and Slovenes of the political backwardness of their compatriots. The Arab world presents a different problem. Here the doctrine of nationality was sown with a lavish hand, but the seed, as might, perhaps, have been expected in Arabia, fell upon a rock, and as soon as it was sprung up it withered away, because it lacked moisture. The earlier visions of a united Arab Empire have deserted even the most optimistic, and all that is left is the hope that no artificial lines of cleavage will be super-imposed upon the obstacles that already prevent any wide union of the Arabs.

The surest way of counteracting the centrifugal forces that are apt to jeopardise the existence of the young States is to avoid the least strain upon the principle of nationality. A wholehearted union of two, three, or four territories is far better than the incorporation at the outset into one State of six or more that do not all see entirely eye to eye with one another. The solidarity of the former body can safely be relied upon sooner or later to attract the lesser body or bodies to itself, whereas the premature inclusion of discordant elements will inevitably retard the development of the State, if it does not actually wreck its existence. If the wisdom of this course could have been appreciated in South-Eastern Europe, the Paris Conference would have found the path leading to the Near Eastern settlement much smoother. Sooner or later the rough-and-ready methods that have done duty in the past for determining the national aspirations of various Balkan communities will have to be abandoned. The League of Nations will offer, it is to be hoped, a tribunal always accessible to distressed nationalities, and no country will be able to practise injustice in perpetuity, even if the Paris Conference, through ignorance, has authorised it. On this principle the only sound solution of the Macedonian problem is to grant some measure of autonomy to the debatable territory, until it has had time to learn its own mind and to appreciate the precise significance of incorporation in one or other of its big neighbours. To prevent autonomous Macedonia during this period of probation from becoming the unhappy hunting-ground of rival propagandists, it will have to be placed under a foreign Governor, who will embody the guarantee of the League of Nations that the Macedonians are to be left to work out their own salvation. Any alternative to such a course must inevitably lead to permanent intrigue and unrest in the Balkans. For whether Macedonia be given wholly to Bulgaria or be split up between Serbia and Greece, the Government in power will be so eager to consolidate its authority in the territory that the result, as well as the process, is likely to be distasteful to the population. The disappointment felt by all the three neighbouring States will soon be compensated for by the removal of a bone of contention, if not a *casus belli*, between them.

CYPRUS.

A variety of circumstances has contributed to keep Cyprus prominently in the public eye since the Armistice. Although its future is not the concern of the Paris Conference, the possibility of the fate of the island being linked in some way or another with the Peace settlement in the Near East gained wide acceptance, with the result that several attempts have been made at a premature disclosure of the British Government's intentions with regard to this particular possession of the Crown. We have now Mr. Bonar Law's authority for the statement that the Government has not yet made up its mind on the subject, and that in any case the future of Cyprus will not be settled definitively before it has been referred to the House of Commons. It is only possible to reconcile this announcement with the confident assertions previously made in many quarters by supposing that with the lapse of time caused by the protracted negotiations in Paris the British Government or influential members of it have had occasion to modify their opinions regarding Cyprus. There would be nothing strange in such a course. No argument can be adduced for the retention of Cyprus by Great Britain or for its surrender to Greece which cannot be countered more or less satisfactorily. The contention that it was a simple question of justice in view of the preponderance of Greeks on the island fell to the ground after the Greek occupation of Smyrna and the incidents attending the advance of Greek troops inland. No assurances on the part of the Greek islanders can convince the British authorities that there will be no danger of bloodshed if Cyprus is handed over to Greece. A few Turkish hotheads in Smyrna caused the whole series of regrettable incidents that have followed the occupation.

The future of Cyprus, we may take it for granted, now depends on a number of factors which can hardly be known in their entirety to anyone outside the Inner Cabinet. One of these may well be the desirability of not adding to Greece's difficulties by giving her juris-

Digitized by Google

diction over more territory than she can at present administer. It may be conceded that in the abstract the union of Cyprus with Greece is desired by both the Greeks of the island and those of Greece proper; but it does not necessarily follow that details of an administration could be elaborated that would satisfy both parties. When Greece has gained further experience in regard to Smyrna she may be in a better position to combine union with autonomy in the case of other territories as well. Certain it is that the Greek delegates from Cyprus who have now been many months in England, have made many friends in this country, and have created a good impression by the correct, if energetic, way in which they have pleaded their cause. If they have to return to Cyprus with the question still unsettled or settled against them, no blame attaches to them. Those whom they represent have every reason to be satisfied with, and proud of, the way they have discharged their mission, and may rest assured that, if the question had been really arguable, the delegates' presentation of their case would have won the day. When they return to the island and submit their report the people of this country will hope to receive from the Greeks of Cyprus some such message as this: "You have given us a fair hearing, and in that you have 'played the game.' We are naturally disappointed, but we intend to show you that we can 'play the game' too." After all, they can remind one another that a decade or so is a brief span in the lives of the island, of Greece and of Great Britain.

EX-KING CONSTANTINE.

WILL HE RETURN TO GREECE?

(FROM A CORRESPONDENT.)

In view of its obvious sincerity, THE NEAR EAST *publishes the following communication, without, however, accepting responsibility for the premises or the deductions of the writer.*

Your studied impartiality and your obvious concern for the welfare of the Balkan Peninsula as a whole prompt me to unburden myself on a matter which has been exercising my mind for some time. At first sight the mere suggestion that ex-King Constantine should ever return to Greece seems too fanciful to be entertained; but as things are in this topsy-turvy world, I am by no means satisfied that the possibility does not merit some consideration.

Let me clear the ground by saying that I write as a profound admirer of M. Venizelos, and that I am convinced that, although the world and Greece will one day have to get along without him, it is undoubtedly to the interests of both that he should continue to direct the destinies of Greece as long as possible. On the other hand, I should be sorry to hold a brief for ex-King Constantine. His record during the war, to my mind, carries with it its own condemnation, and, if I were a Greek and studied my own feelings only, I should have no desire to see him back on the throne. I am, however, not a Greek, and it need not evoke surprise that a Greek and a non-Greek view of things, or a Greek and a non-Greek estimate of a man, should differ. What has surprised me is the discovery—to which, if I am not mistaken, the pages of THE NEAR EAST have in some measure, perhaps unknowingly, brought confirmation—that so many Greeks still feel attached to the person of the ex-King. A foreigner is hardly in a position to analyse this attachment. It may be due in part to the personal popularity of Constantine, or to the unquestioning loyalty that so often hedges a throne, on the principle that "the King can do no wrong," or, again, to personal bias against the present regime. Possibly it will be urged that the expression "so many Greeks" begs the whole question. I admit that it does. My remarks are prompted by the supposition, based on such evidence as I have been able to collect, that parties in Greece are much more evenly divided than most outsiders seem to realise. The information may be wrong. It may be all to the good if it is; in any case I believe that no harm will be done by the ventilation of a subject which must have presented itself to many minds both inside and outside Greece.

My premise is that the situation in Greece is far from satisfactory. If anybody in particular is to blame, it is the Paris Conference for the unconscionable delay in settling the conditions of peace in the Near East. Not a single Government of the Allied Great Powers has been able to view with complacency the indefinite absence of its actual Head, and it is no reflection on Greece that the prolonged stay of her Prime Minister in Paris—where his presence was, no doubt, absolutely essential from the Greek point of view—should have had an injurious effect on the situation in Greece. M. Venizelos has not yet returned to Athens, and it is impossible to say whether, as is hoped in so many quarters, his presence will be sufficient to set right everything that is at present at all wrong. If it should be, well and good. The alternative—and this brings me to my main point—is not pleasant to contemplate.

I cannot believe that it would be in the interests of Greece, or of the Balkans or of the Allies, that M. Venizelos should on his return be forced into the political wilderness. If such a thing were to happen, it would be, as I have already said, largely the fault of the Allies, who have detained him for such a long time in Paris. His Government has been deprived to a great extent of his wise direction; it has not been possible to bring his personal influence to bear upon numbers of "Constantinists," who would possibly have accepted the logic of events, if some consideration had not prevented them from associating themselves with the Venizelists. One need not attempt to inquire what form such considerations may have taken, for they may be anything from the labour unrest to a purely personal matter. Politics, it must be remembered, are practised with some determination in Greece, and possibilities loom large when fortune keeps your chief rival out of the country for months on end. If on the top of all this some disappointment is in store for Greece in regard to the Peace Terms, the position of M. Venizelos might be made quite difficult.

The problem seemingly resolves itself into one of numbers. If the Venizelist party occupies an unchallengeable position, there is no need for actual anxiety. On the other hand M. Venizelos is too good a patriot and too shrewd a statesman to wish to perpetuate a state of affairs that deprives the country of the support and intellect of a considerable section of the community. Can he by sheer force of character and by the success of his administration heal the breach that now divides the country into two camps?

Here is the crux of the situation, and my object in writing to you is to suggest that as we can hardly expect M. Venizelos to make the first move, the British and French Governments ought to inquire whether he requires their help in the matter. After two years he will be able to form an opinion as to his chances of bridging the gulf between his followers and the "Constantinists," or of carrying on the government of the country permanently without the latter. If he is confident, there is no need for heroic measures. If, on the other hand, M. Venizelos believes that the existing

division among Greeks is prejudicial to the future interests of the country, he may be glad of a solution, which could only be brought about by the Powers which removed Constantine from Greece. The attitude of Great Britain and France in such a matter would be quite straightforward. While the war was on they decided that King Constantine had it in his power to be a dangerous enemy, and they caused him to be removed. The war is over, and the source from which the King derived his inspiration and worse has been to all intents and purposes eliminated. His future (they might go on to argue) is mainly the concern of Greece, and if a sufficient number of people in that country decide that, all things considered, they would prefer bygones to be bygones, and to have King Constantine back, the two Powers must be content to insist upon such safeguards as will protect their interests or the interests of those on whose behalf they are entitled to act.

The chief difficulty would, of course, be the personal antagonism between ex-King Constantine and M. Venizelos. Could the two Powers trust him, as they could M. Venizelos, to "play the game" and honourably to bury the hatchet? Are the Venizelists satisfied that their treatment of the Constantinists has been so scrupulously correct that only the fate of the ex-monarch stands between their complete reconciliation and future co-operation for the good of their country? These and other questions would have to be considered. The sole object to be kept in view would be the maximum benefit for Greece, and that is a question which the Greeks must decide for themselves.

It may be, of course, that the existing state of affairs rests on a more settled foundation than is apparent, that the country accepts the situation and does not view the division into two camps so tragically as the foreigner may, and that even a disappointment in its Peace expectations, such as the withholding of the Thrace littoral, will not affect M. Venizelos's hold upon his countrymen. If so, no harm will have been done by taking stock of the position, facing the facts, and letting the strength of the existing position, and its superiority over all possible alternatives, be known to the whole world.

During 1918-19 595 persons sought advice, as against 426 in the year previous, at the Burma Pasteur Institute, while the number of persons bitten by animals of proved taint who submitted to full course of treatment fell from 183 in the previous year to 105 in the year under review. There were no deaths during the year from hydrophobia amongst those who submitted to treatment, whilst at least four deaths from this cause are reported to have occurred amongst thirty-four individuals who declined to undergo treatment.

TURKISH PRISONS.

A "Report on Conditions in Turkish Prisons" (Cmd. Paper 260), issued last week, gives a vivid and painful picture of conditions in those buildings as the Allies found them. "All hope abandon ye who enter here" might, indeed, have been inscribed over the entrance to any of these places of horror, for as one of the English officers who inspected them wrote: "To condemn a man to a long term of imprisonment here is to condemn him to a lingering death." How could it be otherwise when we read also: "No clothing is issued; facilities for washing are given once every three to four months, and the floors are cleaned about as often. The nominal food ration is 6 ozs. of inferior bread daily and 3 ozs. of bulgur, a native soup of coarse wheatmeal. The prison officials, however, often leave the prisoners without either the bread or soup for a day or more at a time"?

Here are some extracts from another report:—

"The squalor and filth of these dens, the indescribable stench arising from them, the gloom even at midday, relieved by tiny windows high up near the ceiling, and the total lack of ventilation, all these features formed a scene which I am not likely to forget. Of the miserable creatures lying or sitting about on the ground and floors, subsequent medical examination showed that between 80 and 90 per cent. were suffering from the mange (scabies). Quite a number have become consumptive through starvation and malnutrition, and many forms of illness, chiefly typhus and syphilis, were raging among them. There was not even a pretence of their being given any medical attention.

"Their diet, which consisted of a very coarse and indigestible bread, is augmented once daily by a cupful of so-called soup, so repulsive in taste and smell that even the prisoners in their ravenous hunger often turned away from it in disgust. I smelt it, and the stench was overpowering; to taste it was impossible.

"The sanitary arrangements, or rather the lack thereof, are best left to the imagination. The authorities seem to have no concern as to sending the sick prisoners at this place to any hospital. Lying behind the door of one of these noisome dens I saw a man in a peculiar attitude, and it only required a second glance to see that he was dying, probably from typhus. In a dark corner in the same room were four forms; two of these were just able to move, while the others showed no signs of life. It is not difficult to conjecture their condition."

What makes the Report still more painful is the fact that many of the victims were awaiting trial, and that some of them had been over two years in that state. The misery is a legacy of the past, and the Report bears testimony to the "energy and goodwill shown by the present Grand Vizier, Damad Ferid Pasha.—"An amnesty decree was passed on the 26th March, under which all those not yet tried and all those condemned for offences other than murder have been released, with the exception of those accused of participation in the deportations and massacres of Christians, and also war profiteers. Consequently the Constantinople central prisons, which contained over 450 prisoners a week ago, to-day [April 6, 1919] have only 107 inmates, and the Galata Serai prison, which had 67 inmates, now contains only 17 prisoners; moreover, although detailed reports have not yet reached me from the provinces, I have reason to believe that the same measures of liberation are being taken there."

The reports of the Inter-Allied Medical Mission, which are signed by Drs. F. G. Clemow, W. Hérrison Laparre and Zeri, are perhaps the most satisfactory items; because they show how much progress has been made under the instructions and supervision of the Allies. But in spite of improvements, it is obvious that much still remains to be done.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Reports I have heard to the effect that the Government was about to take steps to guarantee British exporters in trade with countries who neither have, nor are in a position to create, sufficient credits in this country are confirmed by a statement in *The Times* from its Parliamentary correspondent, who says:—"The Government have come to an important decision affecting our trading relations with the new States which have been set up on the Continent of Europe and with parts of Russia. They have decided to set aside £25,000,000 as a guarantee to British exporters against loss in their trading operations with these lands, which at the moment have neither a satisfactory currency nor enough goods to exchange for British exports to them."

***

I assume that the scope of the Government's guarantee will be found to be much wider than is indicated in this announcement, and that it will cover trade with the Near East as a whole. Anything short of that would be unsatisfactory, while were the guarantee confined to the regions mentioned, Turkey—where the exchange question is particularly difficult—would be omitted altogether, and the importance of Turkey as a market for British goods needs no emphasis. As a matter of fact, the question of the establishment of Turkish credits in this country has figured most prominently in the representations made regarding the effect of the exchange difficulties on trade with the Near East.

***

The reasons why this guarantee was absolutely essential if the openings for British trade in the Near East are to be taken full advantage of may be briefly stated. The calls on British manufacturers in all parts of the world are immense, and at this time, of all times, they are not willing to tie their money up indefinitely in the development of trade where they consider, in view of the exchange rates, that an undue element of risk is attached. The guarantee gives them the certainty that if they need payment before they could receive it in normal circumstances, they will be able to get it. In all probability the Government will never be called upon under the scheme, but it gives just that sense of security that was needed, and the result will be that trade with the Near East will now go rapidly ahead provided merchants do their part.

***

I would urge British firms interested in trade with Greece to become members of the British Chamber of Commerce for Greece, which, founded at Athens just over a year ago, is now in a position to give them all the advice and assistance they require in regard to trade matters. In view of the Chamber's recent establishment a few particulars concerning it may not be out of place. It consists of two sections: the All-British section and British Club—which embraces British firms and institutions trading in Greece and British firms in the United Kingdom—and the Greek section, which consists of the principal Greek firms who are associate members of the Chamber. Associate membership does not include the right to use the British Club, and associate members are not eligible to serve on the committee. The subscription for British firms is £1 per annum, which entitles members or their representatives when travelling in Greece to the use of the British Club and Chamber of Commerce without further charge. It goes without saying that representatives of British firms will find it a great convenience to be able to use the reading and social rooms of the club when in Athens, and to be able to receive their clients under comfortable conditions.

***

Of the ways in which the Chamber of Commerce will pursue its objects of furthering British commercial and other interests, it may be mentioned that all possible information will be supplied to British manufacturers regarding the requirements of the various markets in Greece, local conditions, tariffs, etc., so as to enable them to market their goods with the greatest facility. It will further supply information regarding the commercial standing of Greek firms, will put Greek consumers in touch with the markets of supply, and British firms in touch with suitable people in Greece to handle their lines. A general interest will be taken in all matters affecting British commercial, shipping, and manufacturing interests, and all questions and conditions affecting British trade will be reported on. Finally, assistance will be given to Greek merchants in placing their orders in the United Kingdom. The Chamber, I would point out, is anxious to form a library of catalogues of British manufacturers and exporters, which will be available for reference by Greek merchants, and will welcome and display all catalogues which British firms may care to forward.

***

I note with interest that Sir Arthur Steel-Maitland has accepted the invitation of the Federation of British Industries to become a member of its overseas committee. Sir Arthur accomplished sterling work as head of the Department of Overseas Trade, and it is very satisfactory to learn that he will thus be continuing his efforts on behalf of the trade of the country.

***

I may point out that of the belligerent States in the Near East Bulgaria is in a specially satisfactory position at the present time. In the spring there was some doubt whether the harvest would be the expected success on account of weather conditions; as a matter of fact, it has come well up to expectations, and Bulgaria is so fortunate as to be able to export as much of her produce as before the war.

***

The Sudan has suffered from high prices no less than other regions, and this has led to an interesting development there in the formation at Khartoum of the Sudan Co-operative Society, Ltd., which will aim at promoting through co-operation the welfare of its members. All pensioners, salaried employees, and persons engaged in professional work in the Sudan are eligible for membership—in other words, those sections of the community which invariably suffer most from high prices. The progress of the society will be watched with interest in this country.

***

The report of the East Indian Coal Company, which has just been issued, shows a further marked increase in earnings in the half-year ended April 30. The net profits amounted to £16,800, as against £10,400 for the corresponding period of the previous year, and the final dividend of 12 per cent. makes the return for the twelve months 21 per cent., as against 17 per cent. for 1917-18. The influenza epidemic affected the output for the first half of the year, but there was a striking increase in the second half, and the figures for the year were 736,900 tons, as against 698,100 tons.

***

Up to the present the Indian Currency Commission, the president of which is Sir H. Babington Smith, has taken evidence on fifteen days. Sir Lionel Abrahams, Assistant Under-Secretary of State for India, and Mr. Gubbay, a member of the committee, have been the official witnesses, while evidence has also been given by Sir William Meyer and Sir David Barbour. The Exchange Banks Association have been represented by Mr. Preston, of the Chartered Bank, and Mr. Chalmers, of the National Bank of India, while Sir B. Cokayne, Governor of the Bank of England, and Mr. F. T. Rowlatt, Governor of the National Bank of Egypt, have also been examined. Among the other witnesses have been Mr. J. M. Keynes, Fellow of King's College, Cambridge, a member of Mr. Chamberlain's Commission of 1913-14: Sir Edward Rosling, on behalf of the Ceylon Association; Mr. F. I. Kent, of the Federal Reserve Board of the United States; and Mr. M. de P. Webb. The committee has now adjourned for a brief interval pending the arrival of further witnesses from India.

Constantinople Business Letter

Rise in Turkish Paper.

(From Our Own Correspondent.)

Constantinople, July 12.

On Monday, July 7, Major Kennard, Trade Commissioner for the Levant of the Federation of British Industries, addressed a well-attended meeting at the British Chamber of Commerce. After giving a short account of the origin and development of the F.B.I., Major Kennard went on to describe the preparations which British manufacturers had been making, even during the war, for the purpose of pushing British commerce overseas the moment hostilities ceased, and he asserted that not only could British manufacturers supply everything their old customers had been in the habit of buying from them in the past, but could also supply them with those goods which Germany and Austria formerly supplied. After touching upon the Athens Exhibition and the co-operation between the British Government and the F.B.I., Major Kennard expressed his opinion that the majority of trades required a middleman, and admitted that, in the past, British manufacturers had so far neglected the Near Eastern market that there had been serious danger of losing it altogether. With regard to business and national interests he insisted upon the necessity of combining the two, and pointed out that such a combination was not only possible but profitable.

In reply to questions, Major Kennard made the important statement that the Marconi Company are taking active steps towards getting wireless stations erected as quickly as possible in various parts of the Near East, which, of course, would help considerably to relieve the present congestion of telegraphic communications.

French Aeroplane Post.

On July 9 the French, in order to facilitate the civil postal service between Constantinople and France, inaugurated a bi-weekly postal service by aeroplane between Constantinople and Bucharest, whence the Orient Express takes the mails direct to Paris. A rapid censorship has been specially devised, and letters get through to Paris in six days. Later on, when the aeroplane service is extended direct to Agram, letters will get to Paris in four days. The weight of letters is limited to 50 grammes and there is an extra charge of one franc per letter. Moreover, it is hoped that this is only the beginning of a network of aerial postal services embracing the Balkans and Western Asia.

While congratulating the French upon their energy and enterprise, we may be perhaps permitted to ask what *we* are doing to facilitate the postal communications between Constantinople and England. Letters take at least fifteen days at present, and that is a severe handicap in business. We have the planes and we have the men. If the French find it worth while, they doubtless have reasons which are not far to seek.

The Strike of Bank Employees.

On June 10 the management of the Imperial Ottoman Bank, acting in the name of all the banks whose employees are on strike, with the exception of the Banca Commerciale Italiana, which preferred to reserve its liberty of action, informed a delegation of the Bank Employees' Federation that according to a communication received from Paris, the banks in question cannot recognise the Federation. On the 12th the employees of the Imperial Ottoman Bank returned to their posts, but the other strikers are still out, although they also will probably return to work very soon. The leader of the strike, who had been arrested, has not yet been released, and has been twice interrogated. However just the claims of the employees may be, we cannot help feeling that they made a big mistake in striking without giving the managers time to get a reply from headquarters. And although the strike leaders strenuously deny all Bolshevist ideas, the fact remains that the strike bears a good deal of resemblance to the "lightning" methods of the syndicalists. But the little Constantinople bank clerk is not the sort of man to be able to carry through schemes of that kind, and the strikers will be well advised to get back to work and study the first half of the old maxim "Suaviter in modo, fortiter in re," before they strike again.

The Customs.

The Entente Powers have made certain representations to the Turkish Government with a view to the restoration of the pre-war customs tariff of 8 per cent. and 12 per cent., but so far the matter has not yet been settled, as the Turks are too hard up for money to give way if they can possibly help it.

July 20.

The outstanding event of the past week has been the sudden and rapid rise in the value of Turkish paper money. In a few days the English £1 Treasury note dropped from 380 to 328 piastres. Other foreign paper money has dropped in like proportion. The chief reason for this sudden change seems to be the ratification by the Germans of the Peace Treaty, which contains clauses whereby the German Government will be obliged to fulfil its financial engagements to the letter. According to these clauses, the German Government is obliged to remit to the Allies as soon as each issue expires, the value in gold of the Treasury Bonds at the Public Debt, deposited as security for the various emissions of paper money since 1914. This does not mean that the Turkish paper will be redeemed necessarily for Turkish gold. The Allies are obliged to think of reinforcing their own reserves of gold first. In all probability the Turkish paper will be redeemed with French francs at the rate of 22.725 to the £ Turkish, and sterling at the rate of 110 piastres. Thus, Turkey becomes a debtor to the Entente, and the question arises as to how she will pay. Here two points occur:—Is it certain that all the paper falling due at a certain date will actually be presented for redemption once the Entente Powers have assumed payment? And is the 154 millions in circulation more or less than is necessary for the needs of the population? It is quite certain that the 51 millions of gold and silver money in circulation before the war will not reappear for some time, as there will for a long time be a premium on gold in every country in the world. In any case, the heavy difference in the prices of everything would render it impossible for all the gold and silver money formerly in circulation to suffice for present-day needs. Probably if only half the money now in circulation were withdrawn there would be a crisis, and it is considered that a simple declaration on the part of the responsible Powers that the paper will be redeemed in francs and sterling will be sufficient to calm the public. Meanwhile the main thing is to restore as quickly as possible the shattered industries of the country, so that there may be a more favourable adjustment of the balance of trade.

Foolish Methods of Business.

Last week I came across an almost incredible instance of carelessness on the part of a British firm of crockery manufacturers. They sent their price list to a firm of commission agents, and informed the agents that the terms of business were cash with order. The agent collected orders for about £1,000 and got cheques for that amount. To the agents' astonishment and annoyance, they received a reply from the manufacturers returning the cheques, and stating that they could not deliver until next year! Why could they not have said so at first? Comment is needless.

The Customs Tariff.

In my last letter I mentioned that the Allied Powers had approached the Turkish Government with regard to the re-establishment of the pre-war tariff of 12 per cent. ad valorem. It appears that the matter has been dropped for the time being. The present system is that of payment of dues according to weight, except in the case of a few articles, which pay in most cases 25 per cent. on the value. It is rather interesting to learn that in most cases the system is all to the advantage of the importer, for the rates were arranged during the war to suit the convenience of the Germans, and low-priced German stuff had to be lightly taxed under the payment by weight system. The consequence is that now that prices are very much higher the actual percentage ad valorem works out to a much lower figure than that arranged with the Ottoman Government before the war, when the tariffs were last revised. The Government prefers the present system because it leaves less room for speculation.

INDIAN FLOSS FOR LIFEBELTS.

During the war the proper provision of life-belts and other life-saving appliances on ships became of vital importance owing to the submarine menace. One of the most widely used appliances was a life-jacket stuffed with "kapok" or floss. This floss has very great buoyancy, a jacket containing 24 oz. of the fibre being capable of supporting an adult in the water.

According to the existing official regulations the only kapok that may be used for this purpose is Java kapok, and consists of the long hairs surrounding the seeds of a tree which occurs abundantly in the Dutch East Indies.

A similar material is, however, obtainable from India, but from a different tree, and this Indian floss cannot under the existing regulations be used for life-jackets. The results of trials made at the Imperial Institute, details of which are given in the current number of the "Bulletin" of the Imperial Institute, have shown that the Indian floss can fully satisfy all the requirements as regards buoyancy and freedom from water-logging. It is, therefore, suggested that the use of Indian kapok should be officially permitted for life-jackets. Inquiries made by the Imperial Institute showed that kapok, equal in quality to that used in the trials, is available in India in large quantities.

The India Committee of the Manchester Chamber of Commerce has been in correspondence with the Delhi Piece Goods Association respecting a few changes recently made in the printed text of the piece goods contract agreed upon three years ago—changes which were unauthorised so far as the Manchester Chamber were concerned. On examination the modifications proved not to be very important, and the India Committee of the Chamber have signified their assent.

BRITISH TRADE WITH SERBIA

(From Our Own Correspondent.)
Belgrade, July 28.

Gratification at the interest shown by Great Britain in their affairs is felt by the Serbians, especially among that large proportion of the nation who spent three years of exile in Macedonia, and learnt to know the British Army. The *Trgovinski Glasnik*, the leading commercial newspaper in Belgrade, has given prominence to an interview which their commercial representative in London, Mr. Chedomil Miyatovich, the distinguished historian, recently had with the Minister of Commerce (*sic.*) in London. The latter stated: "I authorise you formally to inform your Legation and everybody in Serbia that the English Government and all the English people is filled with sympathy for the Serbian people, and we are determined to show our sympathy in a practical way. We are considering the importance of the Yugoslav market, and are now working out a plan for the development of commercial relations between your country and ours. You may tell everybody freely that the English Government will do its full share in this task."

The Economic Mission.

The Economic Mission which has been studying every side of Serbian commerce and industry for the past five months, has nearly completed its task, and its report is awaited with considerable interest by both sides, for all Serbs feel that much depends upon their future relations with Great Britain, which can only remain firm and friendly if commercial intercourse is encouraged to develop freely. At the same time, British manufacturers and merchants must not wait for the report, but must set to work at once, and vigorously too, for competition is already in the field, which cannot remain open indefinitely, and they must be prepared to adapt themselves and their customs to a certain extent to the wishes and ideas of a people who are as conservative as themselves. The Serbs have been nursed on German methods, and to-day expect their new friends to maintain the good side of those methods. The first thing to do is to send out goods to be sold on the spot; it is no good merely sending catalogues, more particularly if they are in English, which not one Serb in a thousand can understand, with prices and measurements in the English system, which not one Serb in a million can understand; nor is it any use quoting them prices f.o.b. British ports. All that is waste of time. Serbs, like many other peoples, especially east of Vienna, do not like buying from catalogues, but like to see and handle the goods, or at least samples. This is apart from all question of credit and finance, for the Serbs realise as well as anybody else how the present exchange is stifling commerce, and how no credit can be given under prevailing conditions.

Competition.

Meanwhile competition is developing. The Americans are busy, the early arrival of a large shipment of American clothes of all kinds is announced, and the Ministry of Food and Reconstruction have stated that these will be sold under control to ensure the lowest possible prices, for the people are in need. French, Swiss, and even Italian competitors are at work, and Czecho-slovaks as well, and it will not be long before the enemy are at work, although there is less to be feared from this quarter, for the Serbs have long memories, to say nothing of the material difficulties that enemy competition will labour under.

The Serbian papers announce that the Ministry of Food and Reconstruction is negotiating a commercial treaty with Greece, Roumania, and Great Britain. The object of the treaty with Great Britain is to assure the indemnification against war losses by British subjects in Serbia and the recovery of pre-war debts, and the protection of Serbia's interests within the British sphere of influence.

EGYPTIAN DELTA LIGHT RAILWAYS.

The traffic returns of the Egyptian Delta Light Railways for the ten days ended July 10 amounted to £E9,474, making the total for the year £E47,851. The figures for the corresponding period of 1918 were £E6,655 and £E72,939.

ADEN SHIPPING CONDITIONS

In a recent American consular report it is pointed out that shipments may now be made direct from Aden to the United States, or vice versa. The Clan, Ellerman, and Bucknall joint service has recently restored its American and Indian line of direct steamers between the United States and India. The service is intended to be fortnightly, and the steamers both ways will generally call at Aden if cargo is offered. Since the beginning of the year Aden has been receiving an efficient shipping service to the United States by British and Italian steamers with trans-shipment of cargo in Europe. A greater share than usual of the shipments invoiced at this consulate have gone by Italian steamers via Italy. The year opened with freights still very high, the rate for skins being a little more than £20 (depending upon exchange) per measurement ton to New York. The last direct steamer to the United States, which called at Aden during the present month, took cargo at the rate of about £7 8s. (converting the rupee at its present high exchange rate) per ton of 50 cubic feet.

Importance of Aden.

As Aden is the principal collecting and distributing point for trade in the Red Sea district, its shipping connections with Red Sea ports and places which are not ports of call for large and main line steamers are also important. There has been an improvement in this respect, and there is now very little delay in getting shipments between Aden and these subordinate or smaller Red Sea ports and places. There is as yet only a fortnightly service between Jibouti and Aden, but it is probable that in the near future the normal weekly service will be reopened, unless there should be a further fall in rates.

The demand for space between Aden and Bombay on the one end and between Aden and Egypt on the other is also being well met, and the rates have also been reduced. The rate from Bombay to Aden at the beginning of the year was £4 12s. per measurement ton; it is now £3 2s. 6d. The rate from Aden to Suez at the beginning of the year was £4 16s. per measurement ton; it is now £2 19s.

The service of the Compania Trasatlantica (Spanish) between Spain and the Philippine Islands, the steamers of which called often at Aden, has not yet been restored, but an occasional small steamer of Philippine registry, flying the American flag, calls in at Aden to or from Spain and the Philippines.

The Aden Port Trust benefits considerably from the return to normal shipping conditions and the way will probably soon be open to several improvements in the port shipping facilities. While there was no considerable reduction in the number of ships calling at Aden during the war, an increasing number were operated by the Government, and did not pay the harbour and other dues paid by ships operated under private ownership. The Port Trust revenue accordingly decreased considerably, and only the absolutely necessary upkeep of the port facilities could be carried on.

SERBIAN RAILWAYS RUNNING.

Reuter's Belgrade correspondent states that the Serbian Press Bureau has issued the following statement:—"Direct railway communication between Belgrade and the interior, which had been broken off since the departure of the enemy, was re-established on Sunday. The first train to Nish left Belgrade at 7.0 a.m., and the first train from Nish arrived here at night. The direct route between Belgrade, Nish, Salonika and Athens is now open."

ADEN'S TRADE IN 1917-18.

Decreased Imports and Exports.

The Report on the Trade and Navigation of Aden for 1917-18 shows that there was a decrease in the total trade of the port for the year of £1,920,746. Foreign trade decreased from £7,079,026 to £5,400,612—merchandise by £1,395,007 and treasure by £283,337. Indian trade decreased from £2,833,537 to £2,600,924 — merchandise by £146,905 and treasure by £85,708. Land trade decreased from £139,724 to £130,005. Government Stores and Government treasure amounted to (approximately) £409,071, as against £140,123 the year before, showing an increase of £268,948. These figures cannot be considered as even approximately correct, and are far below the actuals. Although the number of packages handled is furnished, the value and other details are lacking.

The principal decreases in the general trade were in coal, cotton piece-goods, chemicals, dates, drugs and medicines, hides and skins raw, gums and resins, grain and pulse, ivory unmanufactured, metals, motor cars and parts, pearls, provisions, paper and pasteboard, sugar, soap, shells, tea and treasure. The chief increases are in respect of coffee, cotton twist and yarn, dyeing and tanning materials, jute bags, wax, articles per post, salt, seeds, spices and tobacco. The last four items, it may be noted, decreased in quantity, but increased in value.

Imports.

The sea-borne trade amounted to £8,001,536, as compared with £9,912,563 the previous year, a decrease of £1,911,027, or 19.28 per cent. Imports of foreign merchandise amounted to £1,921,441, as against £2,550,673, a decrease of £629,232, or 24.66 per cent. Imports of Indian merchandise decreased from £2,309,933 to £2,143,317, or by £166,616, or 7.21 per cent. Exports of foreign merchandise amounted to £3,117,127, as against £3,882,972, showing a decrease of £765,845, or 19.72 per cent. Exports of Indian merchandise increased from £292,337, to £312,046, or by £19,711, or 6.70 per cent. Imports of foreign treasure decreased in gold by £17,164 and in silver by £83,597. Exports of foreign treasure decreased in gold by £6,831 and in silver by £175,763. Imports of Indian treasure decreased in gold by £400, but increased in silver by £89. Exports of Indian treasure decreased in gold by £101,280, but increased in silver by £15,885.

Exports.

The total value of the export sea-borne trade of the port, exclusive of treasure, amounted to £3,429,175, as compared with £4,175,309 the year before, showing a decrease of £746,134. Treasure decreased by £267,991, in gold by £108,111, and in silver by £159,880. The total sea-borne trade, excluding treasure, amounted to £7,493,933.

The relative positions of the countries compared with the previous year are the same, but every group exhibits a decrease, and the share of the United States of America again decreased considerably.

The British Empire's total was £4,323,590, of which India's share was £2,456,750.

There was a great decrease in imports from and exports to the United Kingdom, and British Somaliland; imports from India and exports to Suakin. There was a large increase in exports to Egypt. Europe's total decreased from £193,280 to £121,440, chiefly in trade with Italy and France. The total for Africa decreased from £2,014,800 to £1,941,110, due principally to exports to Massowah, and the import and export trade with independent Somali ports. Trade with Jibouti decreased in imports but increased in exports. Asia's total decreased from £1,094,760 to £929,100, chiefly in imports from Turkey, imports and exports from Japan and the Red Sea ports and Arabian Gulf ports, and imports from Persia. As regards the United States of America, there was again a large decrease in imports of grey piece-goods, soap, etc., and in exports of coffee and skins, raw particularly.

Sudan imports in May amounted to £E416,316 and the exports to £E143,175.

According to *Misr*, the King of the Hejaz has instructed his Cairo agent to purchase agricultural lands for him in Egypt.

Engineering Notes.

American Factories in Greece.

Commenting on the machinery requirements of Greece, a leading technical contemporary states that Greece offers a good market for tractors of the light type, and also for British threshing machinery. Seeders are wanted in big quantities, and harvesting machinery of a specially light type. Makers of oil engines of all grades should also find the market very profitable. It asserts that several of the best-known British firms are on the spot, an example to be copied; and referring to the fact that the Germans sedulously overran the country with their travellers before the war, and will doubtless do so again, remarks that it has to be noted that there is a rumour of certain American houses commencing manufacture in Greece itself. This, with another previous rumour that American engineering firms are contemplating the establishment of engineering factories for the construction and repairing of agricultural machinery in Poland, and in one or two Scandinavian places for the same purpose, give an idea of the earnestness with which Americans work in carrying out their schemes for the capture of European markets.

Frozen and Chilled Meat.

Concluding the previous notes on British refrigerating plants for ships in the Eastern Mediterranean and farther East, an efficient and simple system may be mentioned. For the importation of frozen and chilled meat the size and type of the refrigerating machines depend on the quantity of meat to be carried, dimensions of holds of ships, length of voyage, etc. For maintaining the holds at 15 degrees F. for frozen meat, or 30 degrees for chilled meat, the brine system has proved the most advantageous. The brine, cooled by the machine in the engine room, is circulated by a small pump through iron pipes which are fixed on the underside of the deck over the hold or insulated space. The presence of the cold brine pipes at the top of each hold sets up a constant circulation of air; for as the air in contact with the pipes becomes colder, and consequently heavier, it descends, and is replaced by less cold air, which is cooled in turn. The pipes also have the effect of producing very dry cold air, any moisture in the air being condensed upon them, but not to such an extent as to impair their cooling efficiency. The large quantity of cold brine in the holds acts as a storage of "cold," thus maintaining the holds at a low temperature for a considerable period after the machine is stopped. In most cases it is, therefore, necessary to run the machine for only a few hours daily. For the importation of butter, some kinds of fruits, etc., where the goods require to be rapidly chilled when placed in the insulated holds of the ship, air coolers and fans are substituted by which the moisture abstracted from the goods during the process of chilling is rapidly drawn off. The air coolers consist of coils of pipes through which the carbonic anhydride is circulated, the air passing over these pipes being thus cooled and passing around the goods in the insulated holds.

Serbia's Mineral Wealth.

The article which recently appeared in the *Board of Trade Journal* under the title "Devastated Serbia," apart from its industrial bearing, makes really pathetic reading. Serbia, pre-eminently an agricultural country, is now gathering strength to "start afresh" after her experiences of modern vandalism which she bore with such fortitude. Fortunately, the bulk of her regions is excellent for grain production, fruit growing, and cattle rearing; and the soil scientifically cultivated could be made to render some tenfold what it supplied during the pre-war period. Co-operative systems of farming with collective peasant ownership were largely developed in Serbia before the other Balkan States thought of such systems; and had she been free from the tyranny of Austria she might have been another Switzerland in South-Eastern Europe. Apart from her great agricultural potentialities, Serbia has mineral wealth of immense value, which with a peaceful future assured may soon turn the country into a desirable field for European enterprise and investment.

Mineral Wealth.—It is the opinion of many independent mining experts, who in the course of years have visited various districts of Serbia, that beneath her rich soil treasures of great wealth are waiting to be unearthed. Silver, copper, lead, antimony, gold, iron, coal, and other known minerals are reported to have been found in the mountainous regions of South Serbia, and this has often been verified by consular reports from Uskub, Monastir and Salonika. But, of course, the absolute insecurity, the lack of roads, railways, and communications, and the well-known methods of the Turkish Government did not encourage those holding concessions to make any serious attempts at exploitation. Serbia is especially rich in copper, but before the recent Austro-German invasion only two mining companies were actually working. One of these was the French Companie des Mines de Bor. The company has extensive works, and since 1906 large quantities of copper have been produced. The refined metal averaged 99.62 per cent. of copper, and yielded from 24 to 30 gr. of gold and from 96 to 120 gr. of silver per ton. The output rose from 1,220 tons in the first year of working to 7,600 tons in the year 1912-13. It was stated that a profit amounting to three-fifths of the share capital was made annually in the last two years before the war. The company's principal mine is that of Cuka-Dulkan. A railway from the mines to the Danube port of Radujevatz was planned when the war broke out. The works and plant were badly wrecked by the Serbians in their retreat. Bor owes its rise to the excellent quality of its ores, which have a very large copper content. The ores separated by hand contain 6 per cent. of copper, and in deposits are very similar to those of Butte in Montana.

Copper.—Pyrites.—Antimony. Another important Serbian copper mine is that of Majdanpek, the history of which is closely interwoven with the political history of Serbia. From 1848 to 1903 the mines were worked spasmodically, the output being unimportant; but in the last-named year they were reopened on modern lines, and in 1904 the copper output of Serbia, which in 1901 amounted to 59 tons, increased to 1,164 tons. The mines of Majdanpek are of no great value so far as their copper yield is concerned. They are chiefly noted for their iron ore and pyrites. In West Serbia, in the Polye district, and near Rebelj and Wisch there are also copper ore deposits. In 1903, 3,820 tons of copper ore were mined at Wisch, out of which 151 tons of black copper were produced. There are many other copper, iron and pyrites mines in the country which have not yet been properly opened.

Antimony is found in various parts of Serbia, notably in the Podrinje Hills in the west, near Kostajnik, as well as in the mines of Zajald, which have been exploited by a French company since 1898. The antimony contents of the ore is 54 to 63 per cent. In 1910 the output of antimony was 326 tons, of a value of 1,888,000 francs. It will be obvious, therefore, that the potentialities of Serbia's mineral resources are as important as her agricultural potentialities.

AMERICAN MOTORS FOR CYPRUS.

Our Cyprus correspondent writes:—Although the state of the main roads is by no means what it should be between the district towns and up to Troodos, the public is invited to buy motors. An agent of the Ford Motor Company, of New York, advertises cars at moderate prices, the latest touring five-seater model being offered at £220, delivered in Cyprus. This affords another instance of American enterprise in the Near East.

RESOURCES OF SERBIA.

Mr. Dobra Zebitch, Serbian Consul for Belgium, Mr. Boguljub D. Jevtic, Secretary to the Serbian Legation, and Mr. R. P. C. Yseboot, visited Cardiff recently, and were entertained at luncheon on July 25 by the Lord Mayor, Mr. A. C. Kirk. Replying to the toast of "The King of Serbia," proposed by the Lord Mayor, Mr. Zebitch pointed out the great possibilities of trade between Serbia and the United Kingdom, and laid stress on the immense undeveloped resources of his country, which had been increased about three times in area and population since the fateful year 1914. About a third of the area was covered with timber, and the whole country contained minerals of all descriptions, which were almost completely undeveloped.

The traffic receipts of the Smyrna-Aidin Railway for the week ended July 19 amounted to £7,322.

NEAR EAST MARKETS.

London Produce Report.

Currants.

The market position is rather difficult at present. In the three months up to the end of July prices have risen from 65s. to 85s. The crop of currants being small—120,000 tons is the estimate—and Central Europe now being free to import, prices may be driven to a much higher level. In view of this contingency, the Food Controller is contemplating the resumption of the control of currants as well as of other dried fruit, in regard to which much the same factors hold good. Stocks here are large, but the distribution for the last six months has been enormous, because manufacturers, grocers, and confectioners have had to lay in stock for the simple reason that for the last two years very few currants have been imported into the country.

Sultanas.

A limited supply is available, and prohibitive prices prevail. The Smyrna sultana crop is estimated at only 20,000 tons, and it may prove less, judging by some reports, and the prospects as to supplies are very poor, because there will be a large demand from Holland and the Scandinavian countries as well as from Central Europe.

Coffee.

Imports in June amounted to 103,000 cwt., as against 175,000 cwt. in May, making the total imports for the half-year 686,000 cwt. Stocks in hand are in the neighbourhood of a million cwt. The demand has been good, and the market has favoured importers. Transactions for East Indian have taken place at 142s. 6d., 147s. 6d., and 143s., and for Costa Rica in the neighbourhood of 150s. The futures market has been fairly steady. Quotations for Brazilian for December delivery have been about 5s. less than the prices for coffee required within a few weeks. It is expected that good prices will be realised at this month's sales.

Sugar.

There has been a strong demand for raw sugar both for export and manufacture, particularly the latter, and prices have shown an advancing tendency. The market for refined has been steady. Molasses and all forms of treacle have been in strong request. Gluten feed and honey have also been in demand.

Seeds.

The demand for linseed has been greater than the supply, and the price has reached 55s. per cwt. Sales have been transacted for September between 48s. and 55s. Offerings of rape-seed have been practically limited to Indian varieties. Latest transactions have included Guzerat, 4s.; fine Toria, 49s.; bold Ferozepur, 47s. to 47s. 3d.; and brown Cawnpore, 39s. The cotton-seed market has been fairly active.

Oilcakes, etc.

Oils are making remarkable prices. Olive oil has been done at £145 per ton, a price which has also been reached by the finest American cotton-seed oil. Linseed oil has made £125 per ton, and soya bean oil £90. Linseed oil has been quoted at £115 for September and £112 for October. The great demand for margarine is apparently the underlying cause for the run on seed oils.

Linseed cake has realised 510s. per ton, soya bean cake 490s., coconut cake 390s., and ground nut cake, which is very scarce, 440s.

General Electrotechnical Society

"SVETLINA"

Sofia, Bulgaria.

All manner of Electrical Goods kept in Stock.

AGENT FOR ELECTRICAL FIRMS

Sudan Produce.

The following further particulars are taken from the C.E.B. report for May:—

Dura.

White Nile Province.—Dura has been very scanty in these markets, and has had to be rationed at most places; but there has been no actual lack. On May 7 the fixed price of the local ardeb of 384 rottles of Feterina dura was raised from P.T.192 to P.T.228 in the hope of attracting more dura to the markets. This represents, per ardeb of 300 rottles, an increase of 28 P.T. above last month's price. Five hundred tons of dura imported by Government are expected shortly, and should relieve the situation. In the Blue Nile Province 510 tons of Kantara dura arrived at Medani at the beginning of the month, and is stored in the Morada. This resulted in more dura being brought into Moradas. In the Sennar Province plenty of dura is coming in.

Wheat.

Haifa Province.—The wheat crop in the Southern Districts is disappointing.

Sesame.

Kordofan Province.—99 ardebs of sesame were sold in El Obeid market during the month, at an average price of £E4,800 per ardeb of 330 rottles.

Livestock.

Red Sea Province.—23 cattle and 7,499 sheep were exported during the month. Grazing, on the whole, is considerably better than last year. Some rain fell in Khor Anuit District during the latter half of the month. In the Sennar Province 44 head of cattle were imported, via Kurmuk, from Abyssinia.

NEW COMPANIES.

British-Palestinian Trading.

The British-Palestinian Trading Company, Ltd., was registered on July 18 as a private company, with a capital of £40,000 in £1 shares. The objects are to carry on in England, Palestine, and elsewhere the business of manufacturers, importers, and exporters of woollens, cottons, silks, clothing, boots, furniture, crockery, household fittings and utensils, etc. Subscribers (one share each):—E. Shock, 11, Queen Victoria Street, E.C.4, accountant; A. C. Ixer, 8, Ravensbourne Crescent, Manwood Road, Brockley, S.E.4. Subscribers to appoint the first directors.

Algiers Coaling.

Algiers Coaling Company, Limited. was registered on July 11 as a private company with a capital of £100 in £1 shares. Objects as indicated by the title. Registered Office, 66, Mark Lane, E.C.

COMPANY RESULTS, Etc.

Carolina Tea of Ceylon.—Interim dividend of 3 per cent., less tax, on ordinary shares for half-year, payable August 9.

Transfer books of the Doom Dooma Tea Company are closed until August 21. Warrants for dividend will be posted on August 20, and will be payable on August 21.

Nestor Gianaclis.—The Bank of Athens announces that Coupon No. 16, due August 1, will be paid on presentation at the London offices of the bank, 22, Fenchurch Street, E.C.3. Coupons must be left three clear days for examination.

EGYPTIAN MARKETS.

The receipts of the Egyptian Markets, Ltd., for the week ended July 24 were:—Cattle markets, £388; general markets, £480; total, £868; total for year, £34,083. The figures for the corresponding week in 1918 ended July 25 were:—Cattle markets, £319; general markets, £452; total, £771; total for year, £30,025.

Ottoman Railway from Smyrna to Aidin.—The one hundred and twenty-third half-yearly ordinary general meeting will be held at Winchester House, Old Broad Street, E.C.2, on September 30 at noon.

The British India trade returns for June show that the imports have decreased by £1,740,000 and that the exports have increased by £60,000 as compared with the corresponding period last year.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

Certain events in the market during the past week have caused an unsettled feeling to prevail, and business shows a falling off. The holiday season of the year is in full swing, and owing to the stoppages in Lancashire towns production is very irregular. Violent fluctuations have occurred in American cotton quotations in New York and Liverpool. After a rise in values as a result of the unfavourable Government report there has been a slump, and at the time of writing the course of values is very uncertain. Most advices relating to the Egyptian growth are rather more favourable, but the crop is still late. The yield for the past season is given as 4,826,000 cantars, against 6,315,800 cantars in the previous year. Prices advanced on control coming to an end, but since then ups and downs have been experienced. The spot rate for fully good fair Sakellaridis has been put up from 27.09d. to 31d. per lb. Egyptian yarns are distinctly dearer on the week, and although the undercurrent of demand remains healthy, business has been checked. Producers are in a very strong position, and can afford to be independent. In cloth for Egypt a fair amount of inquiry has been dealt with, but trading has been less active. Healthy clearances, however, are reported in Cairo, and there is nothing to complain about as to the way in which remittances are being received from the other side. The outlets of the Levant are still in need of goods. India has not given very much support. Fewer orders have been booked for China. Not much has been heard of activity for South America. It has been difficult to secure concessions in price from manufacturers. American yarns for home use have been more irregular in quotation, and it has been possible to purchase at rather lower figures than a week ago, but trade has been limited. Export yarns continue in encouraging request. Bigger supplies are wanted by the Levant, but delivery difficulties are not easily overcome. A substantial business continues to be done for Holland.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated July 31:—

Rain throughout, except in N.W. Frontier Province, where precipitation was local. Very heavy falls Punjab and Gujarat.

Bombay Cotton Market irregular, owing to speculation. Fully good Broach, August delivery, reached 669; reacted 619, closed 648. Piece goods market firm, prices advancing. Calcutta Jute Market firm, with prices advanced. Hessians firmer, with good demand. Sackings quite firm, though little doing.

New sugar company floated for white sugar from Darbhanga cane, by Begg, Sutherland and Company, Cawnpore. Capital, 25 lakhs.

George Robey, Esq. C.B.E. writes:—"I hasten to tell you how much I enjoyed smoking your 'De Reszke' Cigarettes. I shall smoke them in future as I think they are excellent in every way."

R. Kennerley Rumford, Esq. writes:—"Many thanks for the 'De Reszke' Cigarettes. They are most excellent."

Frank Reynolds, Esq., R.I. writes:—"I think your 'De Reszke' Cigarettes very good indeed."

Robert Donald, Esq. writes:—"I consider the 'De Reszke' are the best American cigarettes on the market."

THE price of the best cigarette is such a trifle more than that of the mediocre kind, that it is surely worth paying the difference to obtain the extra satisfaction "De Reszkes" give.

"De Reszke" Cigarettes

Sold at all Tobacconists, Stores and Military Canteens.

ROUMANIA'S OILFIELDS.

The *Moniteur du Petrole Roumain* contains some interesting information as to the Roumanian petrol industry. The Germans, it states, put 432 soundings in a state of production out of a total of 962 existing on July 1, 1916, or a proportion of 45 per cent., and had succeeded in raising the yield to 75 per cent., which proves that they had concentrated their efforts on the richest bores. Since the departure of the enemy the number of wells has been increased to 508, and the number of borings has been reduced from 220 to 119, owing to lack of material. These figures show the great productive force of the petrol deposits of Roumania, which, although neglected during the past three or four years, have been able to maintain the production at a satisfactory level during 1918-19.

The gross production of petrol in 1917 was about 520,000 tons, or 35 per cent. of the normal, and in 1918 1,200,000 tons. In the first five months of 1919 it was 473,000 tons, or an average monthly output of 94,600 tons, or 63 per cent. of the pre-war volume. The production was interrupted by strikes and export difficulties, but the latter problem will be solved by the putting into working order of the Baico-Constantza pipe line and the improvement of shipping facilities via the Danube.

WAR MEDALS.

The following announcement has been made by the Board of Trade:—

His Majesty the King has been graciously pleased to signify his pleasure that the British War Medal, which has been granted to his Majesty's Forces, be granted also to the British, Dominion, Colonial, and Indian Mercantile Marine. In the United Kingdom the medal, in silver, will be given to those who can supply such evidence as may be approved by the Board of Trade of having served at sea for not less than six months between August 4, 1914, and November 11, 1918, inclusive; and those entitled to receive it will include licensed pilots, fishermen, and crews of pilotage and lighthouse authorities' vessels, and of post office cable ships.

His Majesty the King has also been graciously pleased to signify his pleasure that a Mercantile Marine War Medal be granted to the persons specified in the previous paragraph, who are qualified for the British War Medal, and who, in addition, can supply such evidence as may be approved by the authorities referred to in that paragraph of having served at sea on at least one voyage through a danger zone. For this purpose a voyage through a danger zone means:—(a) A voyage on a ship which entered or cleared a United Kingdom port, or a French port, or a Mediterranean port. (b) Such other voyages in other parts of the world as shall be specified in a further notice.

The medal will be in bronze, and the riband will be green and red arranged vertically, with a narrow white line between them. The authorities referred to in the first two paragraphs will determine whether any applicant is disqualified for the medals by reason of misconduct during the war.

Officers, men and women referred to in this announcement who, whilst serving at sea, were captured by the enemy or lost their lives through enemy action, or were precluded by disablement through enemy action from further service at sea, before being able to complete their qualifying service for one or both of the medals, will be deemed to have qualified. The medals earned by deceased officers, men, and women, will be issued to their legatees or next-of-kin entitled to receive them.

An important company is reported to have been formed for the exploitation of Egyptian films.

Mr. David Hugh Lindsay, of Elmstone House, Barham, near Canterbury, late general traffic manager of the Madras and Southern Mahratta Railway Co., left estate valued at £20,074.

It has been decided to hold an International Tea Congress and Exhibition at Batavia, Java, in May, 1921, with the object of studying the scientific, economical, technical and commercial questions concerning the tea cultivation and industry.

INDIA AND GOLD PRICES.

In the House of Commons on August 6 Mr. Stewart asked the Secretary for India whether his attention had been called to the fact that a higher price in sterling was now obtainable in America for sales of gold than was obtainable in this country; whether India was contemplating putting up the price she was prepared to pay for imported gold and, if so, by how much; and whether the present Currency Committee could be empowered to extend its inquiries to consider the problem of currency as a whole instead of approaching the question from a purely local point of view?

Mr. Montagu replied: I am not fully informed as to sales of gold for sterling in America. The second part of the question asks for a statement on a matter on which action, if taken at all, would necessarily be taken without previous announcement. The Chairman of the Indian Currency Committee informs me that in his opinion and that of his colleagues the terms of reference as they stand give all the scope necessary for conducting the inquiry and for making recommendations.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agriculture Department, dated August 1:

Our telegram of July 25. Condition and prospects of standing crops generally reported favourable, and distress is generally decreasing. Village works have been closed in Kaira and Broach districts of Bombay Presidency. Numbers relieved:—Bengal: Relief works, 5,140; test works, 641; gratuitous relief, 20,838. Bihar and Orissa: Relief works, 2,259; test works, 3,418; gratuitous relief, 27,898. Feudatory States of Orissa: Test works, 6,833; gratuitous relief, 16,221. United Provinces: Test works, 2,881; gratuitous relief, 20,625. Rajputana figures not reported. Ajmer-Merwara: Test works, 175; gratuitous relief, 32. Central India: Relief works, 7,500; gratuitous relief, 10,536. Central Provinces: Relief works, 14,720; test works, 9,042; gratuitous relief, 45,142. Bombay: Relief works, 22,510; dependents, 13,426; village and test works figures not received; gratuitous relief, 87,799. Hyderabad report not received. Madras: Relief works, 38,017; test works, 2,007; gratuitous relief (incomplete figures), 37,611.

GOVERNMENT'S ANGLO-PERSIAN INTERESTS.

In the House of Commons on August 6 Mr. Lambert asked the First Lord of the Admiralty what amount the Government invested in the Anglo-Persian Oilfield, and what was the market value of that investment to-day.

Mr. Long stated that the Government held Ordinary shares two millions, Participating Preference shares 1,000, Debenture stock £199,000. It was not possible to give any accurate estimate of the present value of the investment, as there was no Stock Exchange quotation for the ordinary shares. It was, however, undeniable that their value had considerably appreciated, and could not be judged merely by the dividend at present paid.

Commander Bellairs: Is this matter still under the direction of the First Lord of the Admiralty? Seeing that it is a financial venture of the British Government, ought it not to be under the Treasury?

Mr. Long said that was a matter of opinion. This was under the control of the directors of the company concerned, the Admiralty sending one representative. So far as he knew, the suggestion that it was under the direction of the First Lord of the Admiralty had no foundation.

COMPANY NOTES & REPORTS

Doom Dooma.

The report of the Doom Dooma Tea Company for 1918 states that the profit is £44,833; adding transfer fees, interest, etc., and the amount brought forward, £47,897, there remains £92,870. The directors recommend a final dividend of 7½ per cent. (making 12½ per cent. for the year), less tax, £11,756; income-tax at 5s. 9d., £4,744; bonus of 2½ per cent., less tax, amounting to £3,919; income-tax at 5s. 9d., £1,581; to carry to the fund for permanent buildings, coolies, etc., £5,000; to be carried forward, £20,057.

Bank of Bombay.

The Bank of Bombay's working for the half-year ended June 30 shows that the total profit was Rs.19,33,898, which has been applied as follows:—To dividend at 15 per cent. per annum free from income-tax, Rs.7,50,000; bonus at the rate of 4 per cent. per annum free from income-tax, Rs.2.00.000; transferred to reserve fund, Rs.5.00.000; transferred to pension fund, Rs.50,000; carried forward, Rs.4,33.898; total, Rs.19,33,898.

Bank of Bengal.

The Bank of Bengal for the half-year ended June 30 has an approximate profit of Rs.28.51,065, including about Rs.5,60,167 brought forward from the previous year. This sum has been disposed of as follows:—A dividend of 14 per cent. per annum free of income-tax, Rs.14,00,000; bonus to shareholders at 3 per cent. per annum free of income-tax, Rs.3,00.000; transferred to reserve fund, Rs.5.00.000; transferred to gratuity and pension fund, Rs.1.00,000; carried to next half-year, Rs.5,51,065.

Bogawantalawa Tea.

The report of the Bogawantalawa District Tea Company for the year ended March 31, 1919, states that the profit amounted to £25,057, add interest and balance from last year, making £36,223. The directors recommend a final dividend of 12 per cent., less tax, on the ordinary shares, making 15 per cent. for the year, £8,400; transfer to reserve, £2,500, carrying forward £12,751.

British Indian Tea.

The report of the British Indian Tea Company for 1918 states that the profit amounts to £24,301, less sundry adjustments, £4,921, net profit being £19,380; £14,232 was brought forward, less excess profits duty, 1917, £5,942, giving £27,670. Deducting preference dividend, interim dividend on ordinary shares, the transfer to working capital account of £2,000, to staff provident fund £200, there is left £22,821. The directors propose a final dividend of 9 per cent. (less income-tax) on the ordinary shares, making 12 per cent. for the year, and to carry forward £17,347, subject to provision for excess profits duty, estimated at about £6,800.

Attaree.

The report of the Rungajaun Tea Company for 1918 states that, including a profit of £17,638, there is a balance available of £22,351, from which falls to be deducted income-tax, £2,803, transferred to reserve for renewals £3,000, leaving £16,547. An interim dividend of 7½ per cent. was paid on January 25 last, and the directors recommend a final dividend of 12½ per cent., less tax, making 20 per cent. for the year, absorbing £13,349, carrying forward £3,198.

Dooars Tea.

The report of the Dooars Tea Company for 1918 states that the profit is £42,295, to which must be added balance from 1917, after deduction of £1,000 for war donations. The divisible balance is £70,338, of which the preference dividend absorbs £5,250. The directors recommend the payment of a dividend of 27½ per cent. on the ordinary shares, of which 5 per cent. was paid on January 1 last. This will leave to be carried forward £7,338, and to this will be added the amount of £9,837 recovered in 1919 under the excess profits duty Act, in respect of 1917, plus an estimated sum of £20,000 recoverable on account of 1918.

Bengal Dooars Railway.

The interim report of the Bengal Dooars Railway Company for the half-year ended March 31 states that the approximate net earnings for the six months ended March 31 were £32,069, which, together with £28,860 brought forward and £5,070 from interest and profit on exchange, makes an available total of £65,999. From this must be deducted £2,922 for interest on reserve account, £7,200 for six months' dividend on the preference stock, and £308 for Indian supertax, leaving a balance of £55,569. The Board has declared an interim dividend of 3½ per cent. on the ordinary stock on account of the year ending September 30, subject to English income-tax (less relief from Indian income-tax), which will amount to £14,000, leaving £41,569 to be carried forward.

Shahdara-Saharanpur Light Railway.

The report of the Shahdara (Delhi)-Saharanpur Light Railway, Ltd., for the half-year ended March 31, states that the earnings of the railway for the half-year were: coaching, Rs. 1,96,205; goods, Rs. 1,74,232; sundries, Rs. 1,790; making a total of Rs. 3,72,227; as compared with coaching, Rs. 1,85,035; goods, Rs. 2,15,199; sundries, Rs. 1,211; a total of Rs. 4,01,445 in the corresponding period of 1917-18. The enhancement of the third-class fares accounts for the increase in the coaching earnings, while the restrictions of bookings imposed by the adjoining railways and the controllers of civil supplies are responsible for the deficit in goods earnings. The working expenses of the line were Rs. 2,08,916 or 56.13 per cent. of the gross earnings. The net revenue for the half-year was Rs. 1,67,594, which includes Rs. 4,283 interest accrued on the surplus funds of the company. The board of directors record with deep regret the death of Sir W. A. Ironside, a member of the board. Mr. W. O. Grazebrook retires by rotation from the directorate but, being eligible, offers himself for re-election. The interest on debentures at the rate of 4½ per cent. per annum amounting to Rs. 60,104 and the London agency charges Rs. 2,0004 and income-tax Rs. 3,824 having been provided for, the balance remaining is Rs. 2,49,418. The directors recommend payment of a dividend (free of income-tax) of Rs. 3-8-0 per share equal to 7 per cent. per annum, which will absorb Rs. 52,500, and that the net balance of Rs. 1,96,918 be carried forward, provision having been made for the Government's moiety of surplus profits and the managing agents' commission.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Wednesday.

The weaker tendency has continued again during the earlier part of the week, but during the last twenty-four hours prices here and there have shown a slight tendency to harden.

In Bank shares National Banks have fallen slightly to 21¼.

In Land shares Union Foncières have picked up ½ to 3¾. Sudan Plantations have been exceptionally good, rising at one time to about 8½, but close to-night at 8 3-16, and Aboukirs have also been a firmer market, closing to-night at 25s., a rise of 6d.

Amongst Miscellaneous descriptions Alexandria Waters are again a little easier at 11 15-16, and Salt and Sodas have continued to be offered, closing at £3.

In Oil shares Anglo-Egyptians, although at one time marking as high as 5 11-16, have again come on offer, and close at 5 7-16. On the other hand, Roumanian Consolidateds have picked up to 21s. 3d.

A very useful book on British, colonial, and foreign income-tax, weights, measures, stamp duties, and coinage has been issued by the National Bank of South Africa, Ltd. Where possible, the matter has been illustrated with photographs, and many superficially puzzling facts and methods have been made clear. The work is of great value, and will be widely appreciated. It is to be regretted that the book is intended for complimentary circulation only, and is not available for the general public.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to May 31, 1919. (New Style, January 14 to June 13, 1919) :—

NOTES OF THE WEEK.

Some colour is lent to the rumours—to which we referred last week—regarding a settlement of the Adriatic problem, by an announcement made in the *Popolo Romano* on the subject. According to the Roman paper, Signor Tittoni has secured sympathetic consideration for the Italian claims, and a settlement outlined by the journal is assured of cordial acceptance by the American delegation; and "consequently it should receive the adhesion of the Powers signatory to the London agreement." While unable to follow the *Popolo's* logic, we shall cordially welcome the prospect of any settlement that is likely to be of a lasting character. If the *Popolo* is correctly informed, Zara and Sebenico are to be free cities; Fiume is also to be a free city; the port of Fiume, together with Susak, is to be internationalised, as is the Fiume-San Pietro Railway; and Albanian liberty and independence will be assured. All this is satisfactory; but when we are told that Italy is to receive in Asia Minor "the triangle Aidin-Konia-Adalia" we find it not strictly in accordance with those principles of justice to which gratified reference is made in regard to Albania. It is true that Italy would thus "enjoy possession of the rich valley of the Meander," but what becomes of self-determination and the question of nationalities? Such questions may be tiresome, but if they are ignored now, it is almost certain that as a consequence trouble will arise in the future.

Under the arrangement referred to Italy, says the *Popolo*, would be quite content to give up the Dodecanese, which is admittedly "completely Greek," and Smyrna, which would be "a centre of infection" for her. The wisdom of these views will be questioned by very few people outside Italy, and their expression will have been hailed with extreme satisfaction in Greece. Indeed, relations between Italy and Greece show marked signs of improvement, and one Athens paper has even gone so far as to appeal to Italy to head a federation of the Balkan peoples. Such a federation should undoubtedly tend towards European peace; and Italy, we suspect, is to-day not in the mood to exclaim, "*Timeo Danaos et dona ferentes.*" But we fear that a Balkan federation, to be enduring, must be the work of the Balkan nations themselves, brought about by the consciousness of common interests, and designed for the common benefit.

A section of the French Press continues to discuss the alleged intrigues of Great Britain in Syria, and there are symptoms that the uneasiness may soon spread so as to embrace the whole of the Levant. Where there is so much smoke there must almost certainly be some fire; but with every desire to avoid injuring French susceptibilities, we would suggest that the fire probably lies in quite a different direction from that in which our critics locate it. If French prestige in Syria is not now what it was before the war, that is in no way due to British influence—to say nothing of "intrigue." There can be no doubt that it suffered greatly as a result of the unfortunate incidents which led up to the discovery in the French Consulate at Beyrout of documents connected with what was known as the Arab Movement. That discovery cost many leading Syrians their lives, and by no amount of ingenuity could the resultant loss of popularity to the French be put down to British action. We will not refer to other incidents that are doubtless as well known in Paris as they are in London, Beyrout, or Damascus. But we are at one with the *Figaro* in thinking that frank speech is the best possible way of avoiding misunderstanding between our Allies and ourselves; and as the frank speaking could in this case be better done by the French Press than by the British, we trust that the French public may speedily be made acquainted with the facts of the case, whatever they may be. Vague talk of "intrigues" can do nothing but harm.

The omission of Lieut.-Gen. Sir George Milne's name from the list of honours and rewards that was published last week has given rise to much dissatisfaction amongst those who served under him with the Salonika force. That force was, indeed, always regarded by the public as a rather unimportant "side show," and the treatment meted out to it officially almost seemed to justify this opinion. In point of fact it was, of course, utterly unjustified. From the highest to the lowest every member of the force deserved as well of his country—and of his countrymen, which is not quite the same thing, be it noted—as did their fellows in any other theatre of the war; and it is very natural that they should be sensitive regarding the lack of recognition that has unfortunately been their lot. If little or nothing was done at Salonika at a time when much was expected, that was no fault of theirs. As one correspondent in writing to *The Times* puts it: "For three and a-half years the B.S.F. formed the backbone and the cement of the somewhat heterogeneous force known as the Allied Army of the Middle East, and Sir George Milne (although actually subordinate to a succession of French Generalissimos) was the keystone of the whole (and at times shaky) edifice."

Digitized by Google

In the circumstances it is not altogether unnatural that members of the British Salonika Force should feel that the omission of General Milne's name from the list referred to is only the latest in a series of unmerited slights, designed to show that their work was lightly esteemed. There can be little doubt, however, that the omission was due to quite other considerations, the fact being that General Milne was at the instant destined for further useful work, and that the Government probably decided to hold over the question of reward for the present. He has now been appointed by the Allied Supreme Council to command all Allied troops in Western Asia Minor "and to restore order in the Smyrna district." It is also reported that he will be charged with the delimitation of the line separating the Allied and Turkish zones. This is employment of a kind that few men would covet, but General Milne's experience at Salonika and his relations with the Greek Army will doubtless stand him in good stead. Nevertheless, if he succeeds in giving something like satisfaction to the parties concerned, he will indeed deserve exceptionally well of this country, whose interest it undoubtedly is to see the Near East settled.

Malta, like some other islands, is beginning to be interested in the subject which in our own Press to-day appears under the heading, "The Road to Ruin." At a meeting of the Council of Government, held on August 7, the Lieutenant-Governor took a gloomy view of the island's financial situation, and predicted a deficit of over £280,000. He held out some hope that the Imperial Government might come to the rescue; but he also indicated that an income tax might be called for, and spoke of the raising of a loan or the sale of Government property as alternative measures. Bread subsidies are to be continued, and the salaries of certain classes of civil servants are to be raised, but these are small mercies, and the island as a whole cannot feel very cheerful. Moreover, it has to pay for the recent disturbances, the local Government being called on to give compensation for damage done to property; while sentences ranging from three months' to seven years' imprisonment have been passed on the rioters who were arrested.

The Supreme Council at Paris has been discussing the question of the withdrawal of the British troops from Armenia; a withdrawal which, it is understood, our own Government had decided should take place on August 15. Should that decision be carried out, as seems likely at the time of writing, the Armenians will be left in a position of no little peril; for the "Young" Turks, the Tartar Government of Azerbaijan, and a considerable force of Arabs are said to be ready to combine to attack them; and, terribly weakened as they have been by massacre and disease, they are by no means in the best condition to defend themselves. America and Italy have both declared themselves unable to send troops to Armenia at present, and no other Power shows any readiness to step into the breach. It looks, therefore, as if Great Britain will have to choose between leaving her troops on the spot until she can replace them by others, and leaving the Armenians to face their peril alone. As there can be very little real doubt regarding America's eventual acceptance of the mandate of Armenia, it is to be hoped that she will take over this responsibility from Great Britain as quickly as possible.

Last Friday the remains of Pope Bey and of the seven British soldiers who were murdered in the Deirut train outrage were conveyed to Cairo, and there buried, with suitable honours, in the military cemetery. "An Egyptian crowd," we are told by *The Times* Cairo correspondent, "lined the route in complete silence." That is what we should expect of the Egyptian, who is an inveterate sightseer, but who, to do him justice, retains much of the Ancient Egyptians' respect for the dead. It is much to be hoped that the silent watchers gave some thought to the fate of their countrymen—or some of them—who were responsible for the death of those eight Englishmen, and that they resolved then and there to leave "Nationalists," the "Zaghlulites," and the Turco-German propagandists of all sorts to their own devices in the future. Happily these rogues are reported to be falling out among themselves; so that honest men—among whom we would include the Fellah—have a chance of coming into their own. On the other hand, the strike fever is threatening Egypt with a bad attack; the trams have ceased running, and agitators, native and imported, are endeavouring to bring about a general strike.

Peace with Afghanistan was signed last Friday, August 8. The terms are severe—but not too severe. The Ameer loses the privilege of importing arms and munitions of war through India; he is to receive no subsidy, and the arrears of the late Ameer's subsidy are confiscated; the Afghans accept the Indo-Afghan frontier accepted by the late Ameer; and they agree to accept such boundary as a British Commission, to be appointed, shall lay down for the undemarcated portion of the West Khyber. The head of the Boundary Commission has already been appointed, and the Commission will begin its work very shortly. The British Government has, in the Peace Terms, expressed its willingness to receive another Afghan Mission after six months—if "the Afghans prove their sincerity by acts and conduct" in the meantime—to discuss the re-establishment of the old friendship on a satisfactory basis. The position of the new Ameer and his advisers cannot be a very enviable one these days, but they have only themselves to thank; and having gambled and lost, they must expect to pay.

The conclusion of a definite peace with Afghanistan came as a pleasant surprise to a public habituated to the delays and disappointments associated with the progress of negotiations at Paris, though, of course, no comparison can fairly be drawn between the two cases. The issues at Rawal Pindi were really simple: India does not want Afghan territory, an indemnity could scarcely have been demanded with decency, and the needs of the moment are met by the provision of a definite frontier, and the imposition of punishment which is not vindictive, but is calculated to make a deep impression along the Border. The internal equilibrium of Afghanistan is so unstable just now that it would probably have been waste of time to negotiate on other matters on which the Treaty is silent: things may possibly settle themselves during the next six months, but the prospect must remain uncertain until the position is stabilised in the country lying further to the north.

We note with particular satisfaction that the demarcation of the remaining portion of the frontier is to be affected in a workmanlike way. Instead of another of those joint Commissions which have proved so unsatisfactory in the past, the line is to be laid down by a British Commission, with permission to an Afghan officer to watch the proceedings, and we may be confident that the operation will be carried out efficiently under Mr. J. L. Maffey, C.I.E., the Viceroy's Private Secretary, who has already been nominated as head of the Commission for this purpose. Private Secretaries vary so greatly in attainments and capacities that it may be well to recall the fact that Mr. Maffey has had long experience on the Frontier, where he was known, and feared, before Lord Chelmsford carried him off to Simla; he took part in the recent negotiations at Rawal Pindi, and in this undertaking he will be quite at home.

Last week's proceedings in connection with the Indian Reform Bill indicate that woman's suffrage is still a live issue, despite the recommendation of the Southborough Commission to postpone the question to a somewhat uncertain future. The members of the Parliamentary Committee can scarcely have failed to be impressed by the eloquent pleading of Mrs. Naidu, while Mr. Montagu's attitude towards a deputation of Indian ladies certainly gave the impression that in him they have a powerful friend at court, and such influences are likely to be more effective than the prac-

Digitized by Google

tical considerations urged by some of the official witnesses. The facts of the situation are, we take it, that at the present time the proportion of Indian women who want the vote is very small indeed, but those who feel the want are desperately in earnest, and, like their sisters in some other countries, they will probably give trouble if their demand is not granted.

In such circumstances there is something to be said for the view put forward by Mr. Malcolm Hogg, but rejected by his colleagues on the Southborough Commission, that while there is no general demand, there is no strong opposition, and that it would be better to start the new constitution without a sex-bar which, it is reasonably certain, would have to be removed later on. Let qualified women vote if they wish to, under the same conditions as men, but do not trouble to make special arrangements to enable them to vote in privacy; probably very few of them would vote at the outset, and in any case it may be better to let them vote than to risk an agitation of irrepressible suffragettes. The next few years of Indian politics are bound to be very confused, while electorates are finding their feet, and parties are being gradually sorted out; a feminist movement would add seriously to the confusion, and the question may fairly be asked whether in the circumstances resistance is worth while.

Little attention has so far been paid in this country to the remarkable despatch in which the Government of India give a formal and reasoned contradiction to statements of fact made publicly by Sir Sankaran Nair while holding the portfolio of Education. We commented recently on this gentleman's monumental ignorance of the history of his native land, and we have now the official assurance that in regard to quite recent events his authority has been lent to statements which his colleagues "cannot but regard as seriously inaccurate and calculated to produce an unfortunate impression if uncorrected." Sir Sankaran has, of course, resigned his seat on the Council, and we may take it that the incident is closed, but in the interests of the rising generation we trust that his successor will be endowed with a more effective grasp of facts.

Students of Oriental learning have welcomed the recent announcement of arrangements for close co-operation between our own Royal Asiatic Society and the corresponding bodies in France, Italy, and the United States. The field for research is so vast and the labourers in it so few, that the most thorough organisation is essential, if that labour is to be employed to the best advantage. At the same time a body of opinion is growing up which holds that external organisation will not suffice, and that the Asiatic Society might profitably take up the question of setting its own house in order. Both in England and in India people are beginning to ask whether any single Committee, however gifted, can continue to be responsible for the promotion of knowledge in regard to all the numerous and diversified civilisations—and barbarisms—which have flourished in Asia, and whether the existing unity of control might not be supplemented by a certain measure of specialisation of parts.

In giving currency to such questionings as these, we have no idea of passing an adverse judgment on the past activities of the Society, which, considering the scantiness of its resources, has done a wonderful amount of good work. Our suggestion is that the out-turn of such work could be increased both in quantity and in value, if arrangements were made to bring into closer association the scholars, and also the recruits, interested in particular sections of the area of research. Moslem India, for instance, has little in common with the Hittites, or the Accadians, or the earlier dynasties of China, and the grouping of working members according to their interests could scarcely fail to stimulate activity in every section in turn. The distinctive badge of the Society is the Banyan, each branch of which takes root as a tree, while remaining united to the parent stem, and that is the line of development which is indicated in the near future.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 28.

Irrigation Controversy.

The principal topics of local interest this week have, naturally, been the telegraphic summaries of question and answer in the House of Commons on the comparative claims of Sudan and Egyptian irrigation, and also speeches like that of the chairman of the New Egyptian Company.

To take the first-mentioned. It would indeed be a very complete fool who attempted to rush into the controversy between Sir William Willcocks and the P.W.D., of which the prudent ones are fighting very shy. It is on the subject of this dispute that the question of executing the schemes put forward by the Sudan Syndicate seems to hinge. These schemes appear to have gained the approval of the Egyptian and the British Governments, but in a recently published booklet entitled *Nile Projects*, Sir W. Willcocks—and Mr. John Wells behind him—claim that their alternative, or counter-scheme, for utilising the waters of the Gebel or Albert Nile in the Sudd region would give the Sudan all the water she needs without depriving Egypt of a cubic metre. On the contrary, the supply for Egypt would also be greatly increased, and all would be done for a comparatively small outlay (some six or seven millions) and, what is a capital point, would be done quickly. In the twentieth century time is of more value than it ever was before, and in the case of Nile water one may well say *bis dat qui cito dat*.

In *Nile Projects* Sir W. Willcocks again insists on his charges of concealment of pertinent facts against the P.W.D., several of which charges he declares have not only not been refuted, but have not even been examined by the Commission which was set up to judge between him and his opponents. In this pamphlet are two appendices of lectures delivered in November, 1918, and February, 1919, before the Sultanieh Society of Geography, and no reply, as far as the public knows, has ever been made to the facts thus published, and the statements thus made.

Possibly the other side have a complete reply to the persistent attacks of the distinguished engineer to whom Egypt owes so much; but, if so, has it not been overmuch delayed? Challenging accusations like these, made by a man like Sir W. Willcocks, cannot be left unanswered, at a time like the present, without creating an unpleasant impression, at least, amongst Egyptians. The whole matter is, however, essentially one for experts to handle; but even for this reason, if for no other, it seems a pity not to place the ignorant public in possession of more facts in the case than have

yet been adduced to combat the serious allegations defiantly made in *Nile Projects*.

If this business has aroused considerable interest in Egypt amongst those directly or indirectly concerned in the old quarrel and also in the future distribution of the water supply between Egypt and the Sudan, it has also caused great satisfaction to hundreds of thousands who have probably never heard of Sir W. Willcocks' and Sir Murdoch MacDonald's differences, and who care nothing for Nile water. For the last two or three months Egypt might almost have been erased from the map of the East, so little notice was taken in the world's Press of what was happening in this country. The reappearance in the field of an Egyptian question has, therefore, been hailed with universal pleasure.

The Administration of Egypt.

To turn to the remarks of the chairman at the meeting of the New Egyptian Company. They are replete with what Americans would call "horse sense." Mr. Baumann is a plain speaker, and most of us will agree with him when he says that we must either make up our minds to govern Egypt ourselves as it ought to be governed, or else give it over to the Egyptians to govern as it ought not to be governed. Mr. Baumann did not exactly say this, but it is what his words amounted to.

The advisory system has been allowed a fair trial, and the general opinion of the wise men is that it has not been an unqualified success. No successful system of government indeed, except perhaps individual autocracy, has ever been evolved without the theory and practice of personal responsibility. This is not the place to indulge in essay writing, but the war has taught many lessons in Egypt and elsewhere, out of which we may profit in peace. And one of these is that the man who has authority to advise a measure ought also to have authority to put it into execution and responsibility for the result, whether he be a Minister, an Adviser, or an Inspector. This principle has not been adhered to hitherto in Egypt, but now that Great Britain has proclaimed her Protectorate, an endeavour will presumably be made to establish the elementary basis for an effective constitutional Government.

The Syrian Question.

Such information as reaches Cairo from Syria and Palestine goes to indicate a very fixed determination on the part of the inhabitants to decline as far as they are able the mandate of any but an Anglo-Saxon Power. This appears to have resulted clearly from the experiences of the American Commission, who are said to have reported that the only districts distinctly in favour of a French mandate were Beyrout, part of the Lebanon, and a strip of coast north and south of Beyrout. There was marked unanimity amongst Moslems and Christians of all denomination against a Zionist Palestine, and a strong feeling that Palestine should enjoy the protection of the Mandatory Power, which will eventually watch over Syria and Mesopotamia. This at least is the accepted version in Cairo in the best-informed Syrian circles, and while I do not vouch for its absolute correctness it may probably be accepted as very nearly accurate.

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the Indian Bishops to carry on religious and educational work among these classes, upon whom so much depends.

H. P. K. SKIPTON, Secretary, I.C.A.A.,
Church House, Westminster, S.W.1.

FRENCH POLICY IN SYRIA.

(From Our Aleppo Correspondent.)

That the recent accusations which have appeared in certain sections of the French Press of British intrigue in Syria are the work of German propaganda is as certain as it is that they are groundless. The wily and unrepentant Hun is just as busy in his endeavours to create flaws in the union which five years of comradeship have cemented, as he was during the war. Having cast such covetous eyes himself on Syria and the Near East he cannot imagine that France and Britain are not ready to fly at each other's throats in a rough and tumble over such a rich prize. Moreover, the Near East is about the only theatre in which our interests are likely to clash, hence the adroit suggestion that perfidious Albion is up to its old tricks in trying to wrest from France one of the few new colonies which are her due reward for her heroic defence in the Western theatre. In other words, the dog in the manger wants to rob his poorer kennel companion in order to add to his already well-heaped trencher. As a matter of fact, this golden prize is rather like the stinging nettle. You must grasp it firmly or it will sting you, and the dangers which beset the picker of this prize are so many that the Great Powers, in a sudden fit of politeness, are each pressing the delicacy upon their neighbours. No, between France and Britain there never has been and never will be any misunderstanding—much less quarrel—over the question of Syria. France has claimed a mandate for the whole of Syria, and if the population had demanded her control, France's claim would have been pre-eminent, if only by reason of the work she has already done in Beyrout, Tripoli, and the Lebanon. Indeed, both to the fighting troops and the occupied enemy territory administration officials it was a foregone conclusion that the French would ultimately "take over"—the burning question was "when" would French troops relieve our advanced troops and permit them to withdraw to Palestine. The Russian thousands which rumour passed through England in the early stages of the war were not more numerous than the divisions which rumour embarked at Marseilles for the relief of our troops in Northern Syria. Far from intriguing, our commanders and liaison officers were indefatigable in furthering the French cause in the eyes of the Arab. Not a public dinner passed in Aleppo—and there were many—without reference being made to the stubborn courage of the French and their great victories in the West without which our successes in the Near East would have not been possible.

M. Georges Picot, the French Haut Commissaire, would be the first to acknowledge that the late Sir Mark Sykes and the late General Sir Harry Macandrew gave him every possible assistance in furthering the French cause. For some reason or another the French never attracted the Arab outside the Lebanon, and even there their popularity was endangered by a parsimonious policy in assisting the starving population of the Lebanon range. So parsimonious was it that at one meeting a local magnate is reported to have offered to double, on his own account, the munificent gift of the great French nation. It was not until the end of December that French troops in any numbers began to put in an appearance in Syria. To the disappointment of all, and to the consternation of many, the French adopted the somewhat dangerous: "See what you've-got-to-stick policy" of occupying the vilayet of Adana with the "Legion d'Orient," recruited almost entirely from Armenians. The writer was in Adana with the late Sir Mark Sykes on the arrival of these Armenian troops. Adana had been the site of a big Armenian massacre in previous years, and the Turk immediately jumped to the conclusion—or pretended to—that the Armenian would now get his own back, and murder him in his bed. Indeed, for a few days it was a case of skating over very thin ice, and needed only one Armenian soldier to misbehave himself in the bazaar to have brought about a very considerable conflagration. So ominous did the cracklings become that it was thought necessary ultimately to replace these

Digitized by Google

troops with a brigade of an Indian division, and to withdraw them to Mersina. There is no doubt that the employment of these Armenian troops damaged the French cause in the eyes of the Arabs. While employed as piquets guarding the railway from Adana to Aleppo there were unfortunate reports of their having held up train-loads of demobilised Arabs to extortion before allowing the train to proceed. There were even regrettable incidents of passengers having been wounded by sentries; wayfarers, whether Arab or Turk, being set upon, robbed and killed by the hot-heads in the Armenian convoys, which were being repatriated by the French. These incidents came to be associated in the Arab mind with the French, chiefly because all demands for inquiries and justice had to be put through the French *Officier de Liaison*, and invariably resulted in—nothing.

It was during his second visit to Aleppo that M. Picot, at a big meeting of the Arab Club, was prevailed upon to enunciate what the French Government, should they receive the mandate, were prepared to do for the new Arab Empire. Unfortunately, he omitted to allow them any outlet to the sea, and it was not until his attention had been drawn to this fact by Shereef Nasir, in a neat Arab simile, that he announced that France would be prepared to grant them a free port either at Beyrout, Tripoli, or Alexandretta. Had the French then, or preferably earlier, sent regular troops from France to replace ours, and had they selected experienced officers to replace the British officers who were assisting the newly-formed Arab Government to find its feet, all would have been well for them. Instead, the Arab saw only British troops and British administration, and has somewhat naturally voted for the sample in the window in preference to the unknown goods in the back of the shop.

BULGARIAN NOTES.

(From Our Own Correspondent.)

Sofia, July 19.

Last Saturday M. Henri, who is at present representing France in Bulgaria, officially notified the Bulgarian Prime Minister and Minister for Foreign Affairs that the Bulgarian Peace Delegates were invited to arrive at Enghien on the 25th inst. The following five statesmen are Bulgaria's delegates: M. Teodor Theodoroff, leader of the Narodniak (Old Conservative) party, Premier and Foreign Minister, President of the Delegation; M. Alexander Stambolisky, leader of the Agrarian party, and Minister of Public Works; M. Yanko Sakizoff, leader of the Moderate Socialists, and Minister of Commerce, Industry and Labour; Professor Venelin Ganeff, of the Radical-Democratic party, Minister of Justice; and M. Michail K. Saravoff, of the Tzankovist, or Progressive Liberal party. A staff of 25 councillors, secretaries and technical assistants accompanies the Delegation. The party leaves to-morrow, by way of Rustchuk, Giurgevo and Bucharest, and thence by special train for Paris and Enghien.

Whether the individualities of these delegates will have any perceptible effect upon the course of events in Paris remains to be seen, but readers of The Near East may be interested to know something of their past record. M. Theodoroff, the head of the delegation, was born in 1859; he was educated first at Nicolaieff (Russia), and afterwards at Odessa and Paris, where he studied law. Since 1886 he has devoted himself to politics, and has been at various times President of the Chamber, Minister of Justice and Finance, Vice-President of the National party, and head of the Delegation for the Peace negotiations with Turkey. In October, 1918, he became Minister for Foreign Affairs in the newly-formed Cabinet, and at the end of November Prime Minister.

M. Alex. Stambolisky is, perhaps, the most striking person in the Cabinet. Born twenty years after M. Theodoroff, at Slavoritza, he spent some of his youth in Germany studying agriculture and political economy, and on returning to Bulgaria was active in agrarian journalism. He first became a deputy in 1908, and in 1911 was elected deputy for the Great Sobranje at Tirnova, when, in the name of the Agrarian parliamentary group, he protested vehemently against King Ferdinand's presence there. In 1915 he was arrested and sentenced by court-martial to imprisonment for life on account of an interview with Tsar Ferdinand, September 4, 1915, when he declared himself strongly and vigorously against entering the war on the side of the Central Powers. For three years he was kept in close confinement, and was then released on the intercession of M. Malinoff. Invited to the Palace on the same day, he stoutly maintained his former opinion, and the following day left for the front. He was shortly afterwards declared an outlaw as an enemy of King Ferdinand, and had to go into hiding until amnestied by the Chamber last January. He consistently opposed the action of Bulgaria in lending herself to the intrigues of Germany and her allies.

M. Sakizoff was born at Shumla in 1861, and was educated there and in Russia. Afterwards he pursued his higher studies in Germany, London and Paris. Returning to Bulgaria in 1884, he founded the Socialist review, *Den*, and later, together with Blagoeff, founded the Bulgarian Social-Democratic Party. He took an active part in bringing about the fall of Stambuloff. Since then he has been almost always a member of the Chamber.

Professor Venelin Ganeff was born in 1880 at Rustchuk, and was educated there, and at Leipzig and Geneva. In 1908 he was appointed a professor at Sofia University. He has been a member of the Radical-Democratic party since its foundation in 1904, and joined the Cabinet in May this year.

M. M. K. Saravoff was born at Tirnovo in 1854. After graduating at Zagreb, he studied at Munich and Paris. He has been at various times Minister of Public Instruction; of Finance, Minister Plenipotentiary at Constantinople, delegate on various political missions, and Director of the Statistical Bureau. He was responsible for the first census of the Bulgarian population. Being opposed to M. Radoslavoff's policy, he held aloof from office from 1914 to 1918.

MALTA NOTES.

(From Our Own Correspondent.)

Normal Conditions. Malta, Aug. 2.

With the enervating sirocco blowing day after day, with families removed to the country, affairs in our military hothouse are only of the most ordinary and humdrum nature, and, with the exceptions of the vicinity of the Law Courts and the stuffy Marina, somnolence reigns. As regards the recent flash in the pan of the local riots, matters have again approached the normal, except for a few examples of unrest in anti-English and pro-Italian quarters. It has been noted that not a few have refused to hoist the Union Jack! This feeling, it should be said, is not the general spirit by any means. Business has had an extra spurt this week, as the Navy of all ranks have drawn their increased pay, and this has been spent, to the manifest advantage of the local tradesmen.

Schemes of Reform.

As with other small nations, Malta is clamouring for a reform in the constitution. The Island has been doing this for years. All kinds of suggestions are put forth, many fantastic, and even more foolish. Perhaps the best suggestion is that which has emanated from the Chamber of Advocates, namely, a bicameral system. It is thought that there is no public body in Malta more competent to deal with this ticklish question than the Chamber. At present the scheme as drafted by the above body has not been made public, but on its issue it will be dealt with fully in these notes. It is hoped by the intelligent section of the Island that some reasonable *modus operandi* be arrived at, as, for some considerable time past now, the legislative deadlock has been little more than a farce, and this, unfortunately, all to the disadvantage of the Island and its inhabitants.

Shortage of Food.

The Island is still feeling the food pinch; prices are still high, and, as regards some commodities, there is a greater scarcity than there was in actual war time. Many reasons are assigned to account for this, but probably the most important is that the merchants are "holding back," waiting for a fall in the markets generally. Still, the Government are doing their best to ease matters down, and to this end they have imported 1,009 bags of sugar and 150 bullocks, by the British ss. Norman Prince.

The Marina.

The Marina is assuming something of its old activity; the sailings are on the increase, and this at a rapid rate. The most notable arrivals have been the ss. Corby and the Italian ss. Primo Raffael, whilst the Norman Prince has left for Alexandria. A notable change is very marked. One after another the varied craft, which have figured so largely in the past war as sloops, trawlers, etc., are leaving Malta for good. The severance is felt by many, as in a way they had become part of the life of the harbour.

Island Prospects.

The presence of a fleet and a strongly maintained garrison have not proved altogether a blessing to Malta, for it

Digitized by Google

has stifled all attempts at the establishment of local industries, with the result that the Island is dependent absolutely on the Navy, Military, and Dockyard. Owing to demobilisation, which is proceeding steadily, the pinch is being felt rather keenly, whilst the outlook for the future is distinctly sombre. To grapple with this question is one of the most ticklish points confronting our local Government. A pamphlet has just been issued in Italian explaining the provisions which are being taken by the Government to relieve the working and lower classes of the Island. This, in itself, constitutes a very pointed hint as to the state of unrest which is smouldering in the ranks of the poorer section of the community, which, on the least puff, may develop into a serious conflagration of riot. It is to be hoped that an adequate and satisfactory solution will be arrived at.

Constitutional Reform.

A little more light has been thrown on the proposed constitutional reform in the publishing of the draft schemes proposed by the National Assembly along with that issuing from the Chamber of Advocates. There is much that is controversial in both schemes, and the pros and cons form materials for abundant club and café chatter. The main objection, and one which is looked on as a source of weakness, is that the bicameral system is excluded. This is a patent flaw if Malta is to have a system of self-government. It is freely stated that in future the Island is to have a civilian and not a military Governor. This would go a long way towards satisfying the aspirations of the nation. It cannot be gainsaid that the country would be best served if it acted on the suggestions of the Advocate Party, for it is in this body that enlightenment and reason are to be found. Nationalists are often too rabid in asking, or, rather, demanding reform, and Malta is no exception.

Cassar Torregiani.

The name of Cassar Torregiani will be remembered in connection with the recent riots, and the fact that Antonio Cassar Torregiani Esq., O.B.E., has resigned his position as Officer-in-Charge of Flour Control is an echo of the above.

Sailings.

There has been quite an influx of steamers from the East Mediterranean, and amongst them were H.M.S. Sedulous, Kipper and Fraserbough, whilst H.M.S. Heroic, which has done such excellent work as Fleet Messenger, has left for England to pay off.

JERUSALEM NOTES.

The Arab Conference.

The following were the chief resolutions passed by the great Arab Conference held in Damascus recently, when they discussed the future of the country. (These points are to be laid before the Inter-Allied Commission for Peace.)

1. United Syria to consist of Syria and Palestine. The boundary to be from the Taurus Mountains to Al Arish.
2. United Syria to be absolutely independent; if that be impossible at present, America to have the mandate; if she refuses, Great Britain to have the mandate. France to have no right in Syria or in Palestine.
3. The period of mandatory to be twenty years.
4. The country to be a Constitutional Monarchy, with Emir Faisal as first Sultan of United Syria.
5. The country to be divided into small States; these to govern themselves, and be under the supreme command of the Sultan.
6. Religion to be separate from the State, and the rights of the minority to be safeguarded.
7. The influx of the Zionists into Palestine to be prevented, but the Jews of Palestine who were in the country before the war to enjoy the same rights and privileges as others.

Journal.

Up to a month ago no publication was allowed in Palestine except the Army paper, the *Palestine News*. This, not being required any further by the Army, was sold. The Arabic and the English editions were bought by a French society, and are still being published by them in Cairo. The Hebrew edition was bought by the Zionist Commission and was transferred to Jerusalem, where it is now issued. An Arabic weekly magazine, both literary and social, is being published in Jerusalem, and another Arabic weekly newspaper will soon appear in Jerusalem. The Zionist Commission is undertaking to publish very shortly the *Daily Palestine Mail* in the Hebrew language, with weekly editions in Arabic and English. Many more have applied for permission to publish journals, but for various reasons their applications have not been granted.

CYPRUS NOTES.

(From Our Correspondent.)

Peace Festivities.

Peace festivities have outrivalled any celebration previously held on the island. In some towns salutes were fired in the early morning. The ringing of church bells was followed by parades of military police, and marches through the streets with bands playing. On the coast, regattas were held, and in the evening there were fireworks and illuminations; the municipalities, banks, clubs, and many private persons doing all they could to make the display worthy of the occasion. At Limassol, which boasts of electric lighting, the pier and quay were brightly lit up, and a dinner was given to 700 of the poor.

Greeks and Turks.

There has been no ill-feeling during the rejoicings, although many are of opinion that trouble would arise between Turks and Greeks if the island were abandoned by Great Britain and our garrison removed. There has been much less talk of "union with Greece," and interest has flagged considerably among the natives. The delay in appointing a new High Commissioner, and the absence of so many of the higher officials, are the chief causes of any gossip on the subject. Many town politicians and orators are absent, and the weather, so far very hot, has not been conducive to meetings and political discussion. Moreover, no news was received by the last mail from the Deputation in London, which is rather ominous.

As regards the Turkish communities, they do not demonstrate or make any fuss over rumours. But while treating matters calmly, they have always submitted strongly and carefully-worded protests against Greek claims and action. The Greeks have had many panics at various times, when rumours have got about that the island was to be given back to Turkey. There have been several such occasions. Thus, in 1902, e.g., there was such a commotion that the Government put out a notice in English, Turkish, and Greek, as follows:—

His Excellency the High Commissioner directs it to be notified for general information that he has received instructions from His Majesty's Principal Secretary of State for the Colonies, with reference to various telegrams sent from Cyprus to the Secretary of State, to announce publicly that His Majesty's Government have no intention whatever of handing over Cyprus to any country.—*By His Excellency's Command.*

Miscellania.

All camps and bungalows on Mt. Troodos are full. Hotel prices have risen, as was to be expected. The mail steamer is always crowded. On the last trip from Port Said there were over 170 passengers from Egypt, and many more are expected. The Royal Scots have left Famagusta for Egypt.

CHESS.

With the opening at Hastings on July 11 of the Victory Chess Tournament international chess has come into its own again after a lengthy interregnum. The Victory Tournament takes the place of the British Championship, which remains in suspension until next year, since it would have been impossible to hold the two competitions at the meeting of the British Chess Federation, and it was desired on this occasion to secure the participation of the leading Allied and neutral masters who would not have been eligible for the British Championship. Of the twelve players in the tournament the chief personality is, of course, the Cuban chess prodigy, Señor Capablanca, who has been called "a second Morphy," and is regarded as beyond question the best player in the world to-day. M. Kostitch, the Serbian champion, who distinguished himself by playing through two tournaments in America without losing a game, but afterwards, in a match with Capablanca, failed to obtain a point, is the most formidable of the Cuban's opponents, who include two Dutch representatives, M. Marchand and Dr. Olland; a Mexican, Mr. Conde; and some of the leading British amateurs, notable among them Mr. F. D. Yates, the British champion, Sir G. A. Thomas, and Mr. R. P. Mitchell. It is a matter for regret that the leading British exponent, Mr. H. E. Atkins, seven times champion, was unable to compete on medical advice.

The play, so far as it has gone, confirms expectations. Capablanca and Kostitch have both won their games without apparent difficulty, and it would not be surprising were the result of the tournament to depend on the individual encounter of these masters. A draw between them is not impossible, though it may be unlikely. At any rate, it can be said that Kostitch, provided he escapes bad luck against his other opponents, has quite a good chance of tieing with the great Cuban. At the time of writing three rounds have been completed, and only the two masters have obtained full points.

The Civil Service Commissioners give notice that an Open Competitive Examination for the Indian Civil Service will be held in London beginning on August 2, 1920. No person will be admitted to examination from whom the Secretary of the Civil Service Commission has not received, on or before June 1, an application, in the candidate's own handwriting, on a prescribed form, which may be obtained from the Secretary at once.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

At one time I used to wonder how many readers of THE NEAR EAST paid any attention to the Calendar of the Week that heads the Personal and General pages; or, to be more truthful, I used to suspect that nobody ever glanced at it! My scepticism has been rebuked and chastened, however, for I learn that it is regarded as a very useful thing by several regular readers, and that when (owing, no doubt, to that evilly disposed printer, against whom I have such a grudge) an error crept into it, the editorial staff heard *all* about it from more than one direction. I am not surprised, for a friend has suggested to me that since uninitiated readers probably have a monthly sweepstake on the apparent race between the "Arabic" and "Jewish" calendar; and, of course, that *would* lend interest to a much duller and less useful feature. I only wish I could find out where the sweepstake takes place!

***

But that is by the way! What turned my thoughts in this direction was a query regarding the meaning of the Arabic names of the months. Whether the information I have jotted down in a note-book is absolutely trustworthy I should hesitate to say; but at least it was given me by an educated Arab, a Government official and a Moslem. According to him, the present Arabic month Julka'ada, or, more correctly, Zu el Qa'ada, has preserved its name from pre-Mohammedan days, and it means the "sit-down" month; that is to say, it was the first of the three months in which the Arabs were forbidden to fight amongst themselves, and they had to "sit down" in peace together, so to say. The next month, Zu el Hejja, was, of course, the month of "Pilgrimage." The last of the trio, Moharrem (or Mu'hurrum), was the "not do" month, *i.e.*, the (last) month of not doing the forbidden things. My friend suggested that abstention from all manner of forbidden things was implied, and that it was what one would expect from anybody who had just made the Hajj. But whether he had any authority for the suggestion I know not.

***

About this time last year we had a hot spell of weather similar to that which we are now experiencing. I was in France at the time, and I remember well how, after the day's work, we used to have a bath and spend the rest of the evening in pyjamas, this being the coolest form of attire we could find. Now, this practice of wearing pyjamas out-of-doors has (I am told by those wicked ones who know) been practised even in this country; but a fresh example of it is provided by the news from Roumania. A certain nation recently sent to Turkish women in Roumanian villages a large consignment of pyjamas. These dainty habits were received with frenzied delight by the Turkish females, who promptly (but quite naturally) utilised the garments for outdoor use. How they looked I can but wistfully guess, but I daresay they compare very favourably with some sights which one does see (willy-nilly) in Western Europe. The Turkish woman has, at any rate, made up her mind (or had it made up for her) that the concealment of female charms is better for the world than their suggestion or exposure; and who will say she is wrong?

***

"The moral effect of the aeroplane on the tribes of Afghanistan must have been tremendous. It will probably save India scores of rupees and shorten what might otherwise have been a long war." Thus General Seely, in his defence of the Royal Air Force, quoting someone else, as reported in *The Times*. I have heard before of the close fistedness of India's keeper of the Purse Strings, and if he has drilled the spending departments into such a frame of mind that they rejoice over £2 or £3 saved—well, the sooner that spirit is introduced nearer home the better. Of course, it is left to the imagination whether the someone else, "whose knowledge of India was unrivalled," talked of "scores of rupees," and whether General Seely did. At all events, *The Times* did; but what the aeroplane really saved India was *crores* of rupees—a slightly different matter.

CORSAIR.

A marriage has been arranged, and will take place early in September, between Geoffrey Swinford Laird-Clowes, Egyptian Civil Service, only son of the late Sir William Laird-Clowes and of Lady Laird-Clowes, and Dulcie Evelyn, eldest daughter of George Glass Hooper, of 23, Kensington Court, W.8, and Bude, Cornwall, where the ceremony will take place.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Massacres of Armenians. August 12.

Mr. CECIL HARMSWORTH, answering Mr. Cairns, who asked him whether he had any knowledge of fresh massacres of Armenians by Turks and Tartars in Asia Minor and the Caucasus, said:—Recent disturbances in the Mosul area have resulted in the murder of a number of Christians, some of whom at least were probably Armenians. Massacres of Armenians in the Caucasus are reported, but have not so far been confirmed. There can, I am afraid, be no doubt that the present position of the Armenians is very far from satisfactory, and his Majesty's Government are anxious to see their future determined and a mandatory Power, if there is to be one, appointed at the earliest possible date.

Colonel YATE: Would it not be better to maintain the garrison in these territories until the difficulties have been settled?

Mr. CECIL HARMSWORTH: That is a question for the War Office.

Mr. THOMSON: Is it not a fact that the Allied representatives in Armenia have said that if the troops of occupation are withdrawn massacres of Christians on a large scale may be expected?

Mr. CECIL HARMSWORTH: The facts may be as stated, but I am not aware of that myself.

Mesopotamia, Egypt, and India.

Mr. CHURCHILL said: We have more than 100,000 men in Mesopotamia, of whom 20,000 are British. Nevertheless, there have been several risings, Kurdish and Arab risings, and every attempt to reduce this force is met by warnings and protest from the responsible officers on the spot. It is very easy to reduce the force to a point where disaster would occur. That would throw back fatally the whole process at once of the establishment of order and of demobilisation. It is a very serious thing to demand that a force shall be cut down below the limits of what those in the country consider is absolutely safe. It does seem, if we are ever to make our administration in Mesopotamia float in an economic sense, that we must contemplate military methods which will enable the country to be kept in good order without burdening it with the enormous charge of an Army of these dimensions. It never would pay if it had to support the expense of an establishment of that size, and the kind of inquiry on which we are now embarked is to see whether, by the use of armoured cars, by judicious arrangements of railways and aeroplanes, by Tanks of a very fast-moving kind, it is not possible to organise the kind of force which will maintain order in those wild regions without employing a large number of highly-paid British soldiers, as they will be in the future, and burdening the whole province with a charge under which it could never stand erect in an economic sense. We have more than 90,000 men in Egypt and Palestine. I am asking most urgently that they shall also be reduced to much less than half that figure by the adoption of methods similar to those which I have indicated as appropriate in regard to Mesopotamia. . . . Of the garrison in India Mr. Churchill said: We have at the same time on our hands the Army in India, and also the battalions and batteries which are forming to relieve the Army in India, and which are just beginning to go out. We have also behind them battalions and batteries forming to make the link cadres to feed the new battalions when they have gone out and taken their place as the permanent peace time garrison in India. All that is running at the same time. Until the end of the year, when we can bring home the troops from India, we shall be forced to maintain, as it were, a duplicate of the Indian garrison at home preparing to go out.

Topics in Parliament.

The subjoined headings are those given in the Official Report.

INDIAN ARMY OFFICERS IN FRANCE (PAY). PEACE TREATY: Bulgaria. GOVERNMENT OF INDIA BILL. MILITARY HEADQUARTERS, CONSTANTINOPLE. INDIA: North-West Frontier (Medical Arrangements). (August 5.)

INDIA: Army Commission.—Punjab Commission.—Currency.—Patel Hindu Intercaste Marriage Bill.—Hospital Arrangements.—Government of India Bill.—Afghanistan (Negotiations). MOROCCO (SPANISH ZONE). EGYPT (HIGH COMMISSIONERS). Palestine (Pre-War Revenue). ALBANIA. DEMOBILISATION: Men Detained in India. INDIA: North-West Frontier (Medical Arrangements).—Rupee (Rate of Exchange). (August 6.)

DARDANELLES COMMISSION: Second Report (Publication). SMYRNA DISORDERS. DEMOBILISATION: Troops in India. INDIAN CURRENCY COMMITTEE (EVIDENCE). (August 7.)

INDIAN ARMY (BRITISH OFFICERS' PAY). (August 8.)

FORCES OF INDIA (AEROPLANES). DEMOBILISATION: Men in India. LIEUT.-GENERAL SIR G. MILNE. CHANAK CAMP, DARDANELLES. EX-KING OF MONTENEGRO. ALBANIA. (August 11.)

Indian Army officers will be interested to learn that the petition which has been prepared under arrangements made by the Comrades of the Great War with regard to the amelioration of the present scale of pensions is being extensively signed. As soon as it is complete it will be presented to the Secretary of State for India, to whom, in the meantime, a copy has been submitted, with the request that he will be so good as to receive a deputation in connection with the matter after the Recess. All communications on the subject should be addressed to the General Secretary, Comrades of the Great War, 8, Grosvenor Crescent, S.W.

PRESS ON THE NEAR EAST.

The Future of Constantinople.

The *Morning Post* of August 7, in a leading article dealing with "The Future of Constantinople," takes up the view that England alone of the nations is suited to have the mandate for the present capital of the Turkish Empire. America, it says, has not the genius for the administration of an Asiatic country, and Greece does not yet command sufficient respect and popularity among the Turks:—

For it must be remembered that Constantinople cannot well be divided from Turkey. They who hold the city must rule the Empire. Both France and Italy are no doubt restrained by the consciousness of this fact from pressing claims which their resources could hardly support. Yet it is obvious that the Allied Powers require one of their members to do this necessary work of administering Constantinople and the Turkish Empire. Otherwise we shall be having the Bolsheviks using Constantinople as the centre and focus for their sinister plans in the Near East—plans which are closely related to German designs in those regions. Why should not England undertake it? We understand that our Government would fain pass the cup. They fear the burden of a new responsibility. They think the British Empire already overloaded, and they point to our recent great additions of territory in Asia Minor. But it seems to us that these additions are the best reason for adding to them. We had Egypt; we have now Palestine and Mesopotamia. Can we rest in those regions in peace if Constantinople is in alien and almost inevitably hostile hands? For if we do not accept it, let us be sure that it will pass under the influence of the Bolsheviks or the Germans. On the other hand, if we accept it, we simplify our problems in Egypt, in Palestine, in Mesopotamia, and in India. For in the immediate past Constantinople has been the radiating centre of trouble in all those regions. It is the key of the whole position. If we have not Constantinople we shall always find it difficult to hold most of the others. But if we govern Constantinople the rest become easy and obedient provinces.

There is another reason. We suppose that if we undertake this great work we shall be forced to undertake it as a mandatory of the other Powers—calling themselves, in our new phraseology, a League of Nations. That being so, let us be quite in the fashion and claim—as we may truthfully—the Turkish Empire, on the principle of self-determination. We have excellent authority for saying that the Turks desire England to intervene. They have suffered such terrible things from the Committee of Union and Progress and from the Germans, they see so little chance of re-establishing a solvent and acceptable native rule, that in despair they cry out for England. They have heard from Egypt and from India that England is easy, fair, generous, broad-minded, and tolerant; that she does not exploit and dragoon her subject races unmercifully, but grants them all reasonable franchises and liberties. Therefore the Turks desire to see England in Constantinople. Does anyone object? The Bolsheviks will object, naturally, but we do not value their objections. The Germans will object. But we pay no attention to them. Who else? The French are not likely to object, for they must desire a safe and friendly neighbour at the back of Syria. The Americans will not object, for they have ample experience of the fairness and hospitality of our rule in Asia. The Italians will not object, for they would prefer to see us there than certain other nations it might be invidious to mention. And the Greeks would not object for much the same reason. Therefore, upon the whole it is an acceptable solution—that England should occupy Constantinople and administer Turkey in Asia. It is a great responsibility, but in the past we have faced greater without flinching. We were then but a little group of islands; we have now a great Empire to assist in the work. And it is a work worth doing.

The C.U.P.

The Constantinople correspondent of *The Times* (August 7) has an informing article on "The Occult Power in Turkey." The writer is of opinion that the power of the Young Turks' Organisation is by no means at an end. He says:—

For it must be acknowledged and clearly borne in mind that, for all the crimes that have stained its record, the Party of Union and Progress is, for the thousands of those in whom it has implanted the once unknown love of country, the sole champion of rights which they have learnt to regard as sacred. For all the corruption and self-seeking of the bulk of its leaders, and however misguided their policy, there is no reason to believe that the patriotism they proclaim is other than a genuine feeling, or to doubt that this feeling, though so newly awakened, has become a passion with large numbers of the people—a passion that will not die out and may lead to unforeseen developments in the near future. The party no longer openly profess the religious unbelief in which they once exalted. That attitude was dropped when it was seen to be a serious obstacle to their political aims.

Their change of front in regard to religion is no less remarkable a proof of their astuteness than the way in which they have made political gain from the war:—

Incredible though it may seem, they have not only got themselves absolved from the blame of plunging the nation into a disastrous war, but have actually managed to glean fresh "kudos" out of the welter of humiliation in which their country lies. All the odium for the deplorable situation which has resulted from their acts they have cleverly succeeded in throwing on their political opponents, the group known as the Liberal Entente, to which belong the members of the present Cabinet. Many believe them when they accuse Damad Ferid Pasha and his colleagues of betraying the country by their tame submission to the harsh decisions of the representatives of the victorious Powers. The truth is that when the Armistice began few or none of the Turks realised the full gravity of their plight. The cataclysmal nature of the crisis in which their Empire was so deeply involved only began to dawn upon them after the ejectment of the Young Turks from power. And so, now more than ever, the latter pose as the sole true patriots, the sole possible saviours of the State. Aghast and bewildered by the succession of blows that are falling upon it, those Turks who still hope against hope once more look to them for guidance, not knowing where else to turn.

Egypt.

In the *Nineteenth Century* of July, Dr. A. J. Butler has an article on "The Fortunes of Egypt," in which he sketches his matter historically. What made certain, the writer says, the close connection of England and Egypt was the purchase of the Suez Canal shares from Ismail Pasha. Of this transaction he says:—

But it was French capital mainly and French engineering genius which had made the canal; and during Ismail's reign French and English influence were much on a balance, each Power having a Minister in the Khedive's Cabinet. Upon the fall of Nubar Pasha in 1879 the Governments of Britain and France acted together, and for the first time took the responsibility of dictating to the Khedive certain terms upon which it was made quite clear that the continuance of his rule depended. This was a new departure for British policy, and fraught with momentous consequences, for the principle involved was put to the test almost at once. Ismail had no intention whatever of sinking into a constitutional ruler. He had at command all the choicest phrases which adorned Western diplomacy. He could profess devotion to the interests of his people and chant the praises of justice and freedom in most moving terms.

Of Ismail's son, Tewfik Pasha, who was proclaimed Khedive of Egypt in 1879, the following picture is given:—

Tewfik Pasha was a man of very different character from his father. To say that he had a much finer moral sense than Ismail would be faint praise; Ismail had none. Tewfik was, in fact, a man for whom honour and conscience meant a great deal; with a high estimate of his duty as a ruler, he had the welfare of his people really at heart, not a mere phrase on his lips. But, while he had no taste for the picturesque iniquities of his father, the moral bondage and even fear of death under which his father had habitually kept him had not tended to endow him with a moral force equal to the measure of his responsibilities. These, however, were lightened when the British and French Governments together definitely assumed the control of the finances.

After giving the story of the interflowing of British and French influence, the writer refers to the British domination as being due to an irresistible purpose, working through the shortcomings of human intelligence for the good of the world.

For that, after all, must be the aim and the end, as it is the justification, of British rule in Egypt. Our dominion there is a great trust not merely for the peoples of the British Empire, not merely for the benefit of the ancient races settled there, but for the world. We have to see to it that Palestine and Syria, Mesopotamia, Armenia, and Arabia, now liberated by our arms, shall remain free from the barbarous oppression of the Turks, by whomsoever they may be governed. We have to see to it also that the work of progress and reform in Egypt, begun under difficult conditions, should, under the British Protectorate, be continued and extended, and that sound education, impartial justice, and freedom, religious and civil, be firmly established. The Capitulations must be annulled, so that the unjust immunities which they confer on Europeans resident in Egypt shall cease, and all persons and causes should receive equal, and no more than equal, justice under the law of the land. As between Muslims and Christians, there must also be equal treatment, and the two communities must be trained to work together in mutual respect and tolerance for the common weal, to the end that in time they may become capable of self-government, the Muslims meanwhile secure under the protection of the greatest Mohammedan Power in the world, and the Copts secure under the banner of St. George, their patron saint and ours.

Finally, in commenting upon the recent disturbances, he states:—

The task of training Egypt for self-government is not lightened by this ignorant and senseless outbreak. But one thing is more than ever clear—that Government must come before self-government. And it must be systematic government, British government, with real and full executive power entrusted to British officials directly responsible to a British central authority. The Protectorate now established must justify itself by sweeping away the crumbling fictions on which too much of our administration has hitherto rested. A really strong and just Government is the first necessity. With that, and with the goodwill of the people, progress, and ultimately self-government, may be achieved.

All persons visiting the new kingdom of Serbs, Croats, and Slovenes must have their passports visé at the Yugoslav Legation or Consulate in the country of which they are subjects.

Sentences passed on the persons implicated in the disturbances on June 7 and 8 at Malta range from seven years' to three months' imprisonment. The Governor has remitted fourteen minor sentences.

According to a message received from the Yugoslav Legation, the Peace Conference has definitely recognised, as part of the kingdom of Serbs, Croats, and Slovenes, the territory of Prekomurie, and has given consent to Serbian troops occupying it.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

GREAT BRITAIN AND THE NEAR EAST.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The interesting article by Major the Hon. W. Ormsby Gore, M.P. (THE NEAR EAST, July 25), is opportune: for although uncertainty still prevails regarding the disposal of various territories, and although surprise may yet be in store, discussion is valuable, as helping to form opinion on which Government decision so much depends. Many persons have good reason to be anxious as to British policy in the Near East. Whatever decision may be arrived at, whatever "zones of influence" may be created, it is certain that British responsibilities throughout the East will be largely increased.

The principal contention is that a new Ministry should be established to deal with all the Arabic-speaking countries which will form part of the British Empire, or will fall to our mandate as Trustees for the League of Nations. Major Ormsby Gore has, I think, elsewhere advocated that such a Ministry should be subordinate to a future "Secretary of State for Imperial Administration." The writer of the article makes out a strong case for such a Ministry of the Near (or Middle) East. Should his scheme be realised, the India Office would cease to control the eastern portions of Arabia, where British influence is paramount and large parts of the Arabic-speaking world, not—as Major Ormsby Gore points out—because administrative capacity is lacking in that office—far from it—but because the Indian and Arabic-speaking peoples differ so much that to make Mesopotamia a dependency of India would, he considers, be disastrous. India, again, has more than enough to do without governing the lands of the Nile, the Tigris and Euphrates, and the Jordan. This latter part of the argument is, I think, the strongest. Similarly, Foreign Office control would cease in Egypt and the other regions of Arabia and Africa where it is exercised. Assuming that neither office is (for different reasons) adequately equipped for the new task, it follows that the staff of the proposed new Ministry should be well qualified for its duties. To mention one point, the more the Arabic language is studied the better. In the School of Oriental Studies more officers have, I believe, been studying Arabic than any other Oriental language. Again, it is most desirable that those to be employed in the Near East shall have full sympathy not only with the problems to be faced, but also with the people, mostly Moslems, with whom they will have to deal. Much, indeed, could be said on this subject.

No reference is made to the Colonial Office except to say that the Dominions Department should soon be transferred to the control of the Prime Minister or the Lord President of the Council. Some of the countries, however, *e.g.*, Cyprus, that would come under the new Ministry, are now under that Office. With reference to the Colonial Office, it is clear that in the coming reconstruction, which apparently waits on ratification of Peace terms, the "palpable anachronisms" of which Lord Milner has spoken, such as that of concerning itself with Dominions "which we do not pretend to govern at all," will disappear also, perhaps the Colonial Office itself, as Major Ormsby Gore thinks it should, being merged in other Departments. Cyprus is just mentioned. The island, though generally regarded in England as a negligible quantity, may yet become of no little importance, in connection with the future of lands bordering on the Eastern Mediterranean. It is therefore to be hoped that Government will not commit an unpardonable blunder in ceding it to any other "Power." In the present state of affairs in the Near East such an act would be worse than foolish. There can hardly be two opinions about this, as there were not in 1915. Whatever tea-cup storms or difficulties have sprung up in the island are entirely due to British failure to steer a right course in our Mid-Eastern policy, as Sir William Ramsay has, amongst others, pointed out. East Africa should, as Mr. Leland Buxton advocates, be included in the new grouping.

It is much to be regretted that Lord Cromer, Sir Mark Sykes, and Lord Kitchener are not with us to-day. But there are many able men well acquainted with all the many inner problems of the Near East. Whatever the reorganisation of Ministries and Departments may be, the great need is to lose no time in promoting the development, under our British genius for the task, of the many patient and long-suffering countries in question.—I am, etc.,

August 11 [illegible] ROLAND L. N. MICHELL.

CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We are extremely grateful to you for the courtesy which you have extended to us up to now, and we shall deem it a favour if you will kindly grant us space for a few remarks upon your leading article on Cyprus which appeared in your issue of August 8. You are dealing in it with many important questions, and your arguments and conclusions can be fairly summarised as follows:—

(1) That the future of Cyprus is not the concern of the Paris Conference. (2) That the contention that the Cypriot question was a simple question of justice, in view of the preponderance of Greeks on the island, fell to the ground after the Greek occupation of Smyrna and the incidents attending the advance of Greek troops inland, and that there is danger of bloodshed if Cyprus is handed over to Greece. (3) That it is not desirable to add to Greece's difficulties by giving her jurisdiction over more territory than she can at present administer.

Allow us to deal seriatim with each of the above:—(1) We have always refrained from dealing with the point as to whether the Cypriot question does or does not concern the Peace Conference, as we had and still have unshaken confidence in the application of British justice. We left entirely to Great Britain the formal mode which that justice was to take. But it is a fact beyond dispute that up to the outbreak of war with Turkey Cyprus was occupied and administered by England as part of the Turkish Empire by virtue of the Anglo-Turkish Convention of 1878. The war with Turkey, the other signatory Power to that Convention, brought about an anomalous state of things with regard to Cyprus, and the British Government have then taken a temporary measure by issuing the Order in Council of November 5, 1914, annexing Cyprus to His Majesty's Dominions in order that a "proper provision may be made for the government and protection" of the island. Now that these troubled times are over and the complicated problems connected with the ex-Turkish Empire are being seriously considered by the Paris Conference, it is evident that the definite solution of the Cypriot question becomes imperative. But we have not allowed ourselves even to entertain the thought of adopting any other course than that of applying directly and solely to Great Britain, which we implicitly trust. (2) It is beyond our scope to contradict or explain the incidents which it is rumoured have attended the Greek occupation of Smyrna. It is not, however, unknown that many underhand practices preceded the occupation, that the Greek Army was seriously provoked, and that a number of occurrences were purposely exaggerated by the rivals of Greece. But the fact that Greek justice has mercilessly dealt with the few who have committed any wrongful acts is, we think, an asset for establishing not mistrust, but confidence in the Greek administration. The conditions in Cyprus are quite different from those prevailing in Smyrna. The Moslems in the island have enjoyed for a long period equal privileges of citizenship with the Greeks. There is no sharp racial or religious contrast between the two elements; they live in very friendly relations, and strong ties of common financial interest unite them. Consequently, not only there will be no danger of bloodshed, but not even of any disturbance when the union of Cyprus with Greece is effected. The change in Smyrna was great. There the Moslems, from rulers, found themselves subjects. The solution of the Cypriot question is not based only on the "preponderance of the Greeks" in the island. If we are asking for our national freedom on that ground, it does not follow that Great Britain had no duty to perform both towards us and towards the nation with which she had fought in common—namely, the duty of applying to Cyprus, without any demand, the principles of self-determination. (3) Cyprus has had the advantage of good and partial administration for a period of fifty years. If the island is ceded to Greece, not only she will not hamper the Greek Administration, but, on the contrary, both Greeks and Turks will be in a position to give valuable assistance to the Greek Government. We venture to suggest that this ought not to be overlooked by the friends and supporters of Greece, particularly by Great Britain, which no doubt is one of them.

In conclusion, allow us, Sir, to thank you for the complimentary terms in which you have referred to our work in London. But nothing succeeds like success, and we cannot conceal our impression that more attention and weight are given to a more or less imaginary discontent among the Moslem minority in the event of Cyprus being ceded to Greece than to the positive despair of the greatest majority of the Greek Cypriots in the event of a gross injustice being done to their case. But we do not believe that Great Britain is capable of committing such an injustice.—We are, etc.,

"THE CYPRUS DEPUTATION."

2, Lancaster Street, W.2, August 11, 1919.

MONTENEGRO.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—At a time when the gallant rearguard action of Montenegro that held General Mackensen's force back and saved the retreat of the Serbian army is in danger of being forgotten amid the confusion of political propaganda, it was very pleasant to all who admire that gallant little country to see that, at any rate, the British Army did not forget to acknowledge their brave little Ally, and hung from the windows of the War Office the national flag of Montenegro.—I am, etc.,

ALEX. DEVINE.

NEAR EAST BOOKSHELF.

FATE OR FREE WILL.*

Miss Jane Stephen has set herself a very difficult task in attempting to follow the trend of Indian thought with the avowed aim of discovering its judgments of "the world, of men, and of that Power of which the world and men are the outcome." Her main authority is the Vedas, or Vedic, hymns—earliest literature of that marvellous race which invaded India in successive swarms between 1500 and 1000 B.C. These are commentaries, with supplementary chapters termed Brahmanas, which give minute directions for conducting sacrifice. The Hindu ideal of a well-spent life embraces three stages—namely, Youth devoted to education, Manhood to rearing a family and performing the duties of citizenship, and Old Age to preparation for death in the depths of a forest (*aranya* in Sanskrit). So the later Vedas are termed Aranyakas, and they conclude with the Upanishads, so styled because their doctrines were learnt by students seated (Sansk. *upa-ni-sad*, "to sit") round their teacher. They are treatises of philosophy, the writer's aim being to extract the grain of truth from the husk of superstition and ritual. Internal evidence inclines Miss Stephen to place the Upanishads between the completion of the Vedas and the Reformation preached by Buddha in the seventh century B.C.

Absorptive power is the basic feature of Hinduism. Every religion current in the West occupies a watertight compartment from which the dogma of its rivals is rigorously excluded. They are fiercely intolerant. "Orthodoxy," said the sardonic Bishop Warburton, "is my doxy, and heterodoxy is other peoples' doxy." On the other hand, a pious Hindu may hold two sets of conflicting ideas. His remote ancestors believed that the dead depend for support in a future life on the efforts of surviving relatives. According to a later development the soul released from its earthly tabernacle passes into another body, whose rank in the cosmogony is proportionate to the merit acquired during previous existences. Although the two theories are mutually destructive, a Hindu spends his life in attempting to deserve a higher stage on transmigration, and performs sacrifices calculated to ensure the well-being of at least three generations of ancestors. Every organised religion may be compared to a complex geological formation, for it exhibits strata of belief in chronological order. This characteristic is very marked in Hinduism. The student detects traces in its structure of the animism and magic practised by the aboriginal tribes with which the Aryan conquerors came into conflict. He can follow the ascent of the human intellect from the thrall of primitive supersition to nature-worship, anthropomorphic conceptions, polytheism, monotheism, and philosophic doubt.

But the ultimate efflorescence of Indian thought is found in the "Bhagavadgita," a poem which gathers into a mighty river the streams of speculation flowing in the Vedas and Upanishads. Miss Stephen assigns the fourth century B.C. to this "product of one of the finest and most powerful imaginations that the world has ever seen." It is an attempt to reconcile philosophic thought with the phenomena of actual existence by announcing a revelation made by a specified person at a specified time and place. In the Gitá God assumes human form as Krishna, who came into the world in order to destroy wickedness, promote virtue, and establish the reign of divine law. It thus possesses remarkable affinity with the Christian Gospels. Miss Stephen, however, disputes the theory once current that one of these revelations is a plagiarism of the other. Inasmuch as the two are teaching the same doctrine, it is natural that there should be likenesses of thought and even of expression. Each claims to be founded on an historical event, and each declares that the divine has manifested itself in human form on earth. Our belief in the doctrine is dependent on our belief in the historical event. We cannot press this point too strongly; it is essential in both cases.

Whatever view may be taken by militant theologians, it is impossible to overlook the vast influence on civilisation exercised by the system of philosophy built up by fifty generations of Hindu thinkers. It has percolated into the framework of the organised religions which took shape in Judea, Persia, Hellas, and Arabia; and it brings the age-long controversy, "Fate or Free-will," to an issue which grows clearer as we dwell upon it.

Western thought has accepted Hebrew guidance, and has put it into practice for 3,000 years; it acts on the assumption of free-will, and has announced its belief on God as a person. This belief it holds occasionally and inconsistently, confusing it with savage superstitions, forgetting and misrepresenting it. Succeeding generations have revolted against the intellectual idols bequeathed to them and set up others of their own; yet all have this common feature, that each man has attributed to God what was at the moment his own highest idea of goodness. To such conceptions India has opposed a continual challenge. It declares that the ultimate is incomprehensible, and that all experience is illusion.

Yet a peroration worthy of a book which is packed with profound speculation is the reverse of pessimistic. Miss Stephen writes:—

It seems that our choice lies between believing that personal character is nothing or is all. In early Indian thought we have the boldest and the most consistent effort the human mind has ever made to show that it is nothing, and the effort has failed. Thought may yet learn a lesson from life that shall end not in failure but in hope.

"A New Constitution for India": The Problem of the Electorates. (Calcutta: W. Newman and Co.)

We have received a memorandum on the Indian Reform scheme from Mufti Muhammad Sadiq, political delegate of the Ahmadia community, one of those interesting developments of Islam of which more is certain to be heard in the near future. As represented in this memorandum, the community take a middle position on the question of political reform; they scout the idea of immediate Home Rule, accord their support to the official scheme of Dyarchy, with certain modifications tending to the Right rather than the Left, and naturally argue strongly in favour of communal electorates. The views expressed are typical of sentiments widely held in India, and we are glad that they are being placed before the joint committee.

In response to the representatives of the Imperial Merchant Service Guild, the India Office has approved the issue of a war gratuity to officers (both Regular and Temporary) of the Royal Indian Marine under the same conditions as apply to officers of the Royal Navy or of the Royal Naval Reserve or Royal Naval Volunteer Reserve.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. August	1919. August		1337. Julkada.	5679. Ab.
15	2	Friday	18	19
16	3	Saturday.....	19	20
17	4	Sunday	20	21
18	5	Monday	21	22
19	6	Tuesday	22	23
20	7	Wednesday	23	24
21	8	Thursday	24	25

It is stated that the Shah of Persia is about to visit Europe.

General Sir W. N. Congreve, V.C., is shortly to leave England to take up an important military command in Palestine.

Brigadier-General Ronald Storrs, Governor of Jerusalem, had the honour of being received by the King on August 9.

The Governor of Madras unveiled a statue of His Majesty the King opposite Pachaiappa's College, Madras, on July 19.

Dr. F. G. Clemow, who has been in Constantinople in connection with the work of the Serbian Relief Fund, is proceeding home on leave.

Lieut.-Colonel J. P. Moir, D.S.O., Director of Posts and Telegraphs Department, has left the Sudan for leave to the United Kingdom.

M. Michael B. Boeresco, the Roumanian *Chargé d'Affaires*, visited the Foreign Office on August 8 and had an interview with Sir Ronald Graham.

The marriage was celebrated on July 3, at Sanderstead, Surrey, between Charles Francis Fitch, C.I.E., and Mrs. Emily Beatrice Gertrude Johnson.

The marriage took place on August 1, at Dharmsala, between Charles Campbell Canney, of the Punjab Irrigation, and Mai Burn, of Conseytrowe, Taunton, Somerset.

Dr. Smodlaka, the head delegate of the Yugoslav Peace Delegation, has arrived in London from Paris for the purpose of studying the economic conditions in this country.

His Excellency El Lewa H. W. Jackson Pasha, C.B., Governor of the Dongola Province and Acting Governor-General of the Sudan, left on July 22 for a visit to El Obeid.

M.E. Sowerby Bey, D.S.O., Sudan Government, has been struck off the strength of the Egyptian Army, and has been transferred to the Ministry of Communications, Egypt.

The marriage took place on August 1, at Rawal Pindi, India, between Captain Donald Gillies Reyburn, 93rd Burmah Infantry, son of Mr. and Mrs. Reyburn, Craigrannock, Ballachulish, and Meryll Vernon Nuttall.

Miss Frances E. Newton has been made a Lady of Grace of the Order of St. John in recognition of work done in connection with sending out the British Relief Unit to Syria and with the Syria and Palestine Relief Fund.

Our Malta Correspondent writes (August 2):—
Lieutenant-Colonel Bamford, O.B.E., M.C., of the South African Infantry, the newly-appointed Commissioner of the Malta Police, has just arrived on the Island.

The marriage was celebrated on July 31 at Nicosia, Cyprus, between Major Wilfrid Nash Bolton, O.B.E., late Wiltshire Regt., and Gertrude Nellie, daughter of Mr. and Mrs. Parkhurst, of Fairmount, Rochester.

The marriage arranged between Captain Hugh Trotter, I.A.R.O., attached 2nd Gurkha Rifles, and Miss Kathleen Norah Muller will take place at All Souls Church, Langham Place, W., on August 27, at 2 p.m.

The Sufi Khankah, established some years ago by Inayat Khan, at 86, Ladbroke Road, is now located at 29, Golden Square, where it will continue its activities. Inayat Khan is taking a short rest and change, and the Khankah will reopen for its new season next October.

Our Cyprus Correspondent writes:—Mr. C. S. Cade, Commissioner of Nicosia, has been granted three months' leave, and will not return to Cyprus. Mr. J. R. Holmes, Acting Puisne Judge, who was to retire in October, will, at the request of the Government, probably remain in the island until June, 1920.

His Honour Sir Harcourt Butler will proceed on tour towards the end of this month, and intends visiting Lucknow, Benares, Allahabad, Cawnpore, Agra, Firozabad, and Khurja before returning to Naini Tal.

Mr. H. M. R. Hopkins, a member of the United Provinces Board of Revenue, has been granted six months' leave dating from this month. Mr. Percy Harrison, Settlement Commissioner, is acting for him.

The engagement is announced of Captain V. C. Cassidy, Indian Army, son of the late Surgeon Capt. C. C. Cassidy, I.M.S., and Mrs. Cassidy, to Lola, younger daughter of Mr. David Wilkins, of Palace Mansions, Kensington, London, W.

The engagement is announced of Henry Plumer Keary, Indian Army, elder son of the late Mr. and Mrs. Henry Mee Keary, and Barbara Mary, youngest daughter of Mr. and Mrs. S. A. Bennett, of Moat Lodge, Beckenham, formerly of Alderley Edge.

Captain E. H. Mann, M.C., Royal Field Artillery; Captain J. H. Pelly, Worcestershire Regiment; and Captain W. C. Ratcliffe, Northamptonshire Regiment, have been taken on the strength of the Egyptian Army and posted to the Sudan Government.

The engagement is announced between Clifford James Price, younger son of Mr. and Mrs. Price, of Newent, Gloucestershire, and Muriel, youngest daughter of the late W. A. Nedham, Commissioner C.P. India, and of Mrs. Nedham, of Netherbury, Dorset.

A marriage has been arranged between Captain (T/Major) Philip Wheeler Bliss, Royal Engineers, youngest son of Sir Henry Bliss, K.C.I.E., of The Abbey, Abingdon, and Monica, youngest daughter of Mr. Frederick W. Hunt, of 20, King Street, Portman Square.

The Sir George Birdwood Memorial Fund, to which £662 12s. 7d. have been promised, will be closed on August 31. The money will be devoted to the endowment of an annual "George Birdwood Lecture" in connection with the Indian Section of the Royal Society of Arts.

The engagement is announced of Mr. Bernard de Hailes Pickard (late Indian Cavalry), youngest son of Mr. James Eastwood Pickard and Mrs. Pickard, of Ashfield, Leicester, with Brenda Gladys, second daughter of Sir Samuel and Lady Faire of Glenfield Frith, Leicester.

The marriage was celebrated on August 7, at the Church of St. John the Baptist, Kensington, by the Rev. Gilbert Weigall, M.A., between Captain Harold W. Goldfrap, M.C., Indian Army, and Edith Isobel, second daughter of Major C. R. B. Thorne, Beggearnhuish Manor, Somerset.

Dr. Honoria S. Keer has received unrestricted permission to wear the Insignia of the Fourth Class of the Order of St. Sava, conferred upon her by the King of the Serbs, Croats and Slovenes, in recognition of her services while employed with the Scottish Women's Hospitals in Serbia.

A marriage has been arranged, and will shortly take place, between Mr. Eric Evan Broadway, K.O.S.B.'s, only surviving son of Mr. A. Broadway, of Jhang, Punjab, India, and Gwendolen Mostyn, only child of the late Major C. M. F. Watkins, R.E., and Mrs. Watkins, of Heath End House, Farnham, Surrey.

A marriage has been arranged, and will shortly take place, between Major James Gourlie, D.S.O., King George's Own Central India Horse, son of William Gourlie and Mrs. Gourlie, late of Birdston, Helensburgh, Dumbartonshire, and Constance Winifred, daughter of the late William McKerrow, London and Singapore, and niece of Robert Craig-McKerrow.

The marriage was celebrated on August 5, at Brompton Parish Church, by the Rev. G. E. Rees, assisted by the Rev. Prebendary A. W. Gough, between Owen Meredith Rees, Indian Civil Service, son of the Rev. George Edward Rees and Mrs. Rees, of Harwood Vicarage, Bolton, and Laura Fernanda Morison, daughter of the late Alexander Joseph Morison, of Havana, and of Mrs. Morison, of 67, Queen's Gate, London, S.W.

A marriage is arranged, and will shortly take place, between Geoffrey Nelthorpe Simeon, Imperial Forest Service, Lieutenant, Indian Army Reserve of Officers, son of the late Rev. Geoffrey Barrington Simeon, M.A., Oxon, and of Mrs. Simeon, Fairlawn, Ryde, Isle of Wight, and Henrietta Mary Collingwood Carter, elder daughter of Rev. W. Collingwood Carter, M.A., Oxon, of Wychwood House, Ryde, formerly Vicar of Shipton-under-Wychwood, Oxon, and Rural Dean.

Our Jerusalem Correspondent writes:—
Major-General H. D. Watson, late Officer Commanding the Forces in Egypt, has come to take over the duties and functions of Major-General Sir Arthur W. Money, K.C.B., C.S.I., as Chief Administrator of O.E.T.A. (S) Palestine, who is relinquishing that post. General Money, by his patient and sympathetic handling of the many delicate questions that have come up for his decision, has gained the respect and love of the whole population of Palestine.

The marriage was celebrated on July 31, at St. Clement's Church, Jersey, by the Rev. Paget, between Captain Ronald A. P. Grant, M.C., Indian Army, and Janet Katharine Hay, only daughter of Colonel McCrae Bruce, C.B., and Mrs. Bruce, La Fontaine, Pontac, Jersey.

The *Sudan Times* states that a special committee will be elected by the Egyptian War Office for the object of considering the salaries and ranks of Egyptian officers, and that H.E. El Lewa el Sayid Ali Pasha, Assistant Adjutant-General, will probably be the President of the Committee.

The marriage was celebrated on August 6, at Wilton Square, London, by the Rev. W. E. Davies, of Ilford, between Captain W. J. Pugh, O.B.E., Royal Welsh Fusiliers, son of Mr. and Mrs. John Pugh, of Westbury, Shrewsbury, and Manon, second daughter of Mr. and Mrs. J. Davies Bryan, of Alexandria, Egypt.

The engagement is announced between Captain George Arrow Lambert, eldest son of Mr. G. B. Lambert, retired Indian Public Works Department, and Mrs. Lambert, of Brooklands, Enys Road, Eastbourne, and Hilda Mary, only daughter of the late Mr. J. A. Bishop, and Mrs. Bishop, of Holmwood, Alma Road, Southampton.

A marriage has been arranged, and will shortly take place, between Captain F. L. R. Munn, M.C., 46th Punjabis, son of the late Major F. H. Munn, D.S.O., Royal Irish Fusiliers, and Mrs. Munn, of Creggan, Athlone, Ireland, and Catherine Mary Aline, second daughter of Bernard Coventry, C.I.E. (late Agricultural Adviser to the Government of India), Indore, Central India.

The marriage arranged between Duncan George Mackenzie, I.C.S., Political Department, Government of India, second surviving son of T. D. Mackenzie, I.C.S. (retired), of Kincraig, Exmouth, South Devon, and Kathleen Millicent Chandos-Pole, only daughter of the late S. Chandos-Pole and Mrs. Bankhead-Browne, Hut 153B, Gulmarg, will take place on September 17 at St. Mary's Church, Gulmarg, Kashmir.

The marriage was celebrated on July 3, at Murree Hills, India, between Captain Harry Ridlington, 35th Sikhs, Indian Army, only son of Mr. and Mrs. Ridlington, Burton House, Kington, and Marjorie, daughter of the late Major Fox-Strangways and Mrs. Fox-Strangways (of Kashmir), Guides Cavalry, and Deputy-Commissioner of Jhelum and Ludihanna, and granddaughter of the late General Bagley, Indian Army.

The marriage was celebrated on August 6, at the Church of the Holy Ghost, Nightingale Square, S.W., by Rev. Leo O'Hea, assisted by Revs. Jerome and Ignatius O'Hea, brothers of the bride, between Captain Pierre Clifford Campbell-Martin, M.C., Croix de Guerre, Sherwood Foresters, R.A.F., son of Mrs. A. E. Campbell-Martin, of Calcutta, India, and Monica, daughter of Mr. and Mrs. John O'Hea, of 11, Endlesham Road, S.W.

APPOINTMENTS, PROMOTIONS, &c.

Colonel B. S. Romilly, D.S.O., Scots Guards, has been appointed Military Governor of the Province of Tiberias.

M. Grenard, formerly French Consul-General in Moscow, has been appointed Minister at Belgrade in succession to M. de Fontenay.

OBITUARY.

The Raja of Sailana (Central India) died at Sailana on July 13.

The death occurred on August 7, in London, of Major Geoffrey Leigh Blair (late 36th Sikhs).

The death is announced of Mr. T. A. Gibson, Sanitary Inspector, Red Sea Province. He was born in 1886, and had been since 1911 at Port Sudan, where he died.

The death occurred on July 30, at Srinagar, Kashmir, of Lieut.-Colonel Richard Randel Vaughan, Indian Army, elder son of the late Major Richard Vaughan, Bengal Artillery, of Bath, aged fifty-three.

Our Malta Correspondent writes:—

The name of Gollcher is a bye-word in shipping circles, not only in Malta, but in the more important ports further East. The Gollcher family has sustained a great loss in the passing away of Mrs. Vincenza, widow of Chev. O. F. Gollcher. The funeral was attended by representatives of practically all the merchants and shipping agencies of the Island.

The Island has been shocked on hearing the news of the death of General Sir Henry Fane Grant, who was accidentally killed whilst rabbit shooting. Tht deceased General was Governor of Malta from 1907 to 1909, and during his tenure in the position he was decidedly popular.

Sir Richard Frederick Crawford, K.C.M.G., K.B.E., who since 1911 had been Adviser to the Turkish Minister of Finance, has died at Bournemouth. He was fifty-six years of age.

The death occurred on August 2, at Franklin, Natal, South Africa, of pneumonia, of Meredith Exham Eugène Swyny, elder son of the late Exham Swyny, of Ceylon, and of Mrs. Swyny, at 33, Queen's Gate Terrace, S.W.

M. Lambros, the Greek ex-Premier, died on August 5 at the age of sixty-seven. He had been Professor of History at Athens University for over thirty years, before he was made, in 1906, Prime Minister by King Constantine.

The death is announced, at the age of seventy-five, in Poona, India, of Robert Batson Joyner, C.I.E., M. Inst.C.E., after fifty-two years' engineering work in the Bombay Presidency, thirty of which were spent in the service of the Government. Mr. Joyner will be remembered chiefly for his great services in designing and constructing the Tata Hydro Electric Works, Bombay.

NEWS IN BRIEF.

Turkish prisoners in Egypt are to be liberated and repatriated as soon as possible.

Spain has formally recognised the Kingdom of the Serbs, Croats, and Slovenes.

The Lieutenant-Governor of the Punjab has reduced to terms varying from six years to three months the sentences on twenty persons for their share in the recent riots in the Punjab. All sentences of rigorous imprisonment and forfeiture of property have also been remitted.

The 2nd Batt. of the East Yorkshire Regiment left Plymouth on August 8 for India, under the command of Lieutenant-Colonel D. Mathers, in the steamer City of York, which is proceeding to Bombay. The East Yorks will relieve a Territorial battalion which has been in India since the early days of the war.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant.
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

ROUMANIA AND THE MAGYARS.

The Paris Conference, which has consistently contrived to create its own difficulties, is now embroiled with the Roumanians over the Magyars. What threatens to be interminable delay in the settlement of Europe has been caused by the failure to recognise that the excellent idealism to which Great Britain, France, and the United States readily subscribe has no place as yet in the everyday existence of the East. If this fact had been grasped, the Inner or Supreme Council in Paris would not have encouraged the armies of South-Eastern Europe to act on its behalf after the Armistice. It is of little practical use to enunciate the most lofty principles and then to leave them to be carried out by people who have never practised them and do not believe in them. The Allies nail the doctrine of self-determination to their standard, but they authorise Serbian troops to over-run Montenegro, and allow Italians and Yugoslavs to "jump" one another's claims; they aim at a speedy settlement of the Near Eastern question, but they leave the matter entirely in the hands of those who have battened for one or more generations on the hatred of their neighbours. In the case of Hungary, the Paris Conference neglected to take the necessary measures to enforce its own decisions. It imposed its terms for an armistice upon the Magyars, but allowed them to be flouted. When Bela Kun, emboldened by his success, proceeded to attack the Roumanians, the Supreme Council had no effective support to offer to the latter, and was obliged to let the campaign take its own course. Fortunately for the Allies, the Roumanians were able to recover their lost ground, the Magyar Red Army was decisively defeated, and Budapest was occupied. The immediate result of this turn of the tide was the downfall of Bolshevism in Hungary, which, under Bela Kun, had defied the Paris Conference for several months. No doubt in an ideal world the supreme command of the Roumanian Army would have placed itself in telegraphic communication with Paris and waited for instructions before each fresh move. That way, as a rule, military success does not lie. The Paris Conference had concluded an Armistice with Hungary in November, 1918, but it had remained a dead letter. The Roumanians determined to leave no loopholes this time; they drafted an armistice somewhat reminiscent of their own experiences under the German Treaty of Bucharest, and set about what in common parlance would be styled "getting their own back." It was a wrong course to adopt, and one that the Allies could not tolerate, but before condemnation is passed on the Roumanians it is well to recall the provocation under which they acted, and the widespread feeling of disgust engendered in the Near East by the Conference's handling of the Hungarian problem.

When all excuses have been made for the Roumanians, it remains a matter for regret that they should have done anything that savoured of defiance of the Allied Conference, or was calculated to lower their prestige in South-Eastern Europe. The protest of the Supreme Council to the Roumanian Government affords unpleasant reading. It states, *inter alia*, that the Peace Conference learns "that the Roumanian generals are permitting their soldiers to pilfer private property, and are requisitioning and sending into Roumania livestock and rolling-stock, and that they are submitting Budapest to an unnecessary blockade, thereby starving the city, and destroying the railway lines, in particular that from Budapest to Vienna; and, in brief, are committing a series of actions in violation of the decisions of the Conference and the rights of the Allied and Associated Powers and of elementary humanity." Until the Roumanian reply to this strongly worded protest is received, we are in the dark as to the chain of circumstances which led up to the precise form that Roumanian action took in Hungary. It is known that the present Government has been on the verge of being superseded for some months. M. Bratiano handed in his resignation in June, and, although it was credibly reported that King Ferdinand had made up his mind to accept the resignation, no new Government has yet been formed. An ultra-Chauvinistic policy, it may have been argued, was likely to restore the Cabinet in popular esteem, if it succeeded; on the other hand, if it failed, the Government, already doomed, could be repudiated with the minimum inconvenience to the country. Another explanation may be forthcoming which will inculpate the generals in command of the Roumanian Army and exonerate the Government. The refusal of the former to comply with the instructions of the Allied generals, and to allow the publication of a telegram addressed by the President of the Allied Conference to the Magyar Government, resembles more the hot-headed action of a military commander carried away by the success of a campaign than the considered policy of a Cabinet. But wherever the responsibility for Roumania's action rests, it may be expected that the Allied protest will lead to a satisfactory solution of the difficulty.

In the meantime the Magyars are making great efforts to set their constitutional house in order. The situation cannot yet be regarded as stable, although all parties unite in welcoming the downfall of Bela Kun. Hungary, or what is left of it to the Magyars, quickly tired of a Bolshevist régime, and when the Peidl proved unable to free itself from Bolshevist influences, it was quickly superseded. The appeal to the Archduke Joseph has not unnaturally been regarded outside Hungary as a more or less avowed return to monarchical institutions. Whether it prove to be or not, the Magyars cannot be denied the rights of self-determination. Elections for a National Assembly are announced for an early date, and to that body will be entrusted the decision as to the future character of the Magyar State. It is possible to understand, without sharing, the anxiety regarding a monarchical Hungary. The tyranny of the Dual Monarchy has burnt too deeply into the souls of those who suffered under it to allow the dread of its return to be eradicated from the present generation. On the other hand, Austria-Hungary's capacity for evil lay in the strength of its fighting arm, and in the subservience of its policy to German ambitions. The future Hungary, whether monarchical or republican, will be a State of some ten million inhabitants, and, if the League of Nations becomes a vital factor in the world, for the most part unarmed. It may still march with Austria, but it will have round it Czecho Slovaks, Poles, Roumanians, and Yugoslavs, all ready and able to challenge the first attempt at imperialistic aims. The Allies can hardly overlook the fact that any republican leanings so far displayed in Hungary led straight to Bolshevism, and their experience of Bela Kun will not encourage them to insist upon the retention of a republican form of government. It may be that the Magyars have too much of the East in them to be fit subjects for republican doctrines. The Western Powers are far more concerned to see the country at peace and prosperous than conforming to certain methods of government which may be wholly unsuited to the mentality of the Magyars. We need not, therefore, be perturbed by insinuations regarding the plotting of this or that Great Power for a Restoration in Hungary. The one thing needed is to insist upon the Magyars carrying out the terms of the Armistice and of Peace, and for the rest to leave them to decide upon their own form of government, provided that it conforms to the orders of the Allies.

THE MIDDLE DANUBE.

(CONTRIBUTED.)

No doubt it is very inconsiderate of the Magyars to place before the Supreme Council such an awkward situation as that caused by their latest political move. It called for immediate decision, so the usual panacea, an Inter-Allied Commission of Generals, was applied. This Commission, probably to its great surprise, found itself obliged to delegate the control of the remains of the Kingdom of Hungary to a Hapsburg. Exit Bela Kun, enter Archduke Joseph. At first sight this seems an astounding *volte face* on the part of the Magyars, considering their doings of the last four months; but on reflection the change is not so very surprising. Let us cast a glance over the history of the last five years, and so we may find a sequence of events to help us in arriving at some clearer notion of Magyar affairs.

The war against Serbia was doubtless popular amongst the Magyars, but between them and the Serbs there was not that bitter enmity that characterised the relations between Serbs and German-Austrians. Nevertheless, Magyar and Serb, both being keen fighting men, were quite willing to fight each other at any time and on any pretext. But the Magyar is also a keen politician and an opportunist too, owing, it may be, to the position that he had to maintain in a minority among the divers races gathered together under the Crown of St. Stephen. This position, as the war progressed, became increasingly difficult. The Croats and Serbs in Syrmia and the Banat from the beginning of the war gave evidence of their faith in the ultimate victory of the Entente Powers and their Allies. They bought up property of Magyars and Austrians who thought fit to withdraw further away from the theatre of war; they assisted the Serbian troops in many ways, and eventually their secret societies declared openly for "Yugoslavia." Magyar power was waning, and force no longer availed to re-establish it; but the Magyar, still unwilling to accept the new position, was already casting round for some means of re-establishing the authority that he considered his birthright as son of Arpad the Conqueror. This was the situation under the Republic of which Michael Karolyi was President. The Dual Monarchy was no longer; Kaiser Karl had surrendered his authority to anyone who would take it; the Yugoslav State arose and took definite shape as the kingdom of the Serbs, Croats, and Slovenes; the Republic of the Czecho-Slovaks had become recognised as an independent State, and several small, ephemeral republics tinged with communism had started their precarious existence. The position of the Magyars, accustomed to domination, was peculiarly unpleasant to them, and many refused to accept it. Deprived of the provinces Banat, Badchka, and Baranya, where they drew much of their provisions, the Magyars nevertheless in the earlier days of March failed to readjust their sight to the new perspective; they continued to squabble with the Roumanians, and having made preparations for a general election to take place in April, intended to prove to the Western Powers that at least some of the territory claimed by the Roumanians was inhabited by people who insistently wished to remain Magyar. Then came the decision of the Supreme Council readjusting the line of demarcation between Magyars and Roumanians. This readjustment created a neutral zone between the two armies; it was to be occupied by small detachments of the French "Armée d'Orient," and was intended to prevent the constant bickering between the troops of the two nations immediately concerned. Incidentally the decision in question gave temporarily to the Roumanians a tract of country from which the Magyars expected results favourable to themselves in the proposed general election.

The Conference and Hungary.

The decision of the Supreme Council was handed to President Karolyi on the morning of March 20 in the presence of the War Minister and the President of the Council, by the chief of the Inter-Allied Military Mission in Budapest, who was accompanied by an officer of each of the other Allied armies. The events that followed this move, in view of the rate affairs have moved since, are almost a matter of ancient history. It was characteristic of the Magyar that the Hungarian Minister of War asked the Chief of the Inter-Allied Mission whether the small detachment of the French Orient Army would oppose any advance of the Hungarian Army against the Roumanians, should the Government of the Hungarian Republic consider such a step expedient. Count Karolyi's proceedings were also characteristic of Hungarian political methods, he delegated all power to the Magyar proletariat, thus hoping to induce the Supreme Council to reconsider its decision under the threat of Bolshevism. The history of subsequent events in Hungary is too well known to require recapitulation. The disorders that were bound to break out in Budapest and several other centres in Hungary had very much the aspect of Bolshevism, and the simultaneous agrarian movement among the peasants who longed for the old days of the *Husz Ar* (the 20 acres), was very intelligible. But it would seem that Chauvinism played as strong a part as Bolshevism in Magyar politics, and the pseudo-idealist Bela Kun, obliged to reckon with this movement, undertook warlike operations against Czecho-Slovaks and Roumanians, hoping by these means to gain touch with Lenin's forces and so to strengthen his own position. The initial successes of those operations have been discounted by the reverses inflicted on a discontented army by an enemy

whom the Magyar never considered an equal as a fighting-man, and so it seems that the Magyars, opportunists all, have been reconsidering their position. Bela Kun has fled, and Archduke Joseph succeeds him.

It is said that the Archduke has gained his present advantage (if it be one) thanks to the plotting of a small band of reactionaries, but it seems likely that that band would have been considerably reinforced by the suggestion of handing the Crown of St. Stephen to the King of the Roumanians. And again, where two or three Magyars are gathered together there is sure to be some conspiracy on hand. At any rate, the Archduke has come in with a rush, and under the auspices of an Inter-Allied Commission. The next thing is to let the Magyars decide whether they really want him or not, and in what capacity. Voices in Paris declare that the choice of a Hapsburg means such a reaction as to intensify Bolshevism. But why should it, and what has become of the doctrine of self-determination? Surely, Hungary now presents a fine opportunity for putting the theory of self-determination to the test. There are only small powers surrounding Hungary, so the Supreme Council need not be deflected from its purpose, or sacrifice its principles, by the fear of offending an old and valued Ally. But has the Supreme Council any definite purpose? In its dealings with Bela Kun there was little evidence of any, and as yet the new condition of affairs in Hungary has not led to anything more than the inevitable Commission and a remonstrance to the Roumanians who, by the way, seem inclined to treat remonstrances much as Bela Kun treated ultimata. Are we to assume that the Supreme Council has lost its power of action? It looks as if this were the case, despite the fact that the United States are threatening to withhold food supplies from both Roumania and Hungary. This threat was used on Bela Kun without any notable success.

But something has to be done. Let us take a glance at the physical map of Central Europe to see whether that inspires us with a suggestion. It should do so. The first feature that strikes us is the vast plain of Hungary enclosed by mountain ranges; the second obvious feature a mighty river which flows east and southward towards the Black Sea. There are minor features: rivers tributary to the Danube. There are minor features: rivers tributary to the Danube. gaps in the mountain ranges, all leading out of the

Digitized by Google

countries that surround the Danubian plain. Nature evidently intended these countries, influenced by the Danube and its tributaries, to co-operate. They have done so since time immemorial, with occasional interruptions caused by wars and débâcles, such as the conquest of Hungary by the Ottoman and the recent disruption of the Dual Monarchy through its own decadence. Why should old economic relations not be resumed along the great Danube waterway? This suggestion will probably raise an outcry from one or other quarter. What! a Danubian Confederation? Have we not poured out blood and treasure to break up the last Danube Confederation, the Dual Monarchy? Quite so; but the political aspect has changed, while the physical aspect of the map remains. Instead of the clumsy structure of the Hapsburg dominions we have several States that have gone through fire to freedom, and have found themselves. In the north the Czecho-Slovak Republic, touching the Danube along the stretch between Pressburg and Waitzen, is eager to use that great highway in exchanging its manufactured goods for the food and raw material of the Danube plains. In the east there are the territories inhabited by Roumanians, now to be joined to Roumania, but physically separated from that country by the Carpathian Mountains. Again, in the south a strong and enterprising people, the Yugoslavs, are joining together into a State which shows promise of a great future. Between these new States lie the remnants of the Austro-Hungarian Empire, German-speaking Upper and Lower Austria, then Styria and Carinthia stretching towards the Julian Alps as if holding out hands for help from Italy, their old enemy and one-time ally, and right in the midst the wreckage of Hungary.

The Connecting Link.

The first requisite is to keep open the Danube to enable those that live on its banks to resume normal conditions. Taking the reach of the river between Vienna and Orsova as our immediate concern, we find the chaotic remains of Lower Austria with Imperial Vienna, the "Kaiser Stadt" fallen from its high estate, starving, helpless. Just below Vienna, the Czecho-Slovak republic goes down to the river, a State self-contained and self-reliant, with a keen eye to business and thoroughly qualified to assist its former Imperial mistress. It must be remembered that Lower Austria, especially Vienna, has long been in economic dependence on Bohemia. The river from Pressburg to Waitzen is in the able hands of the Czecho-Slovaks, who have, however, been prevented from freely using this waterway by the disorders in Hungary. Bela Kun and his obstructionists have fallen, the attempt to insert a Roumanian wedge (possibly intended to extend westward through broken Magyars and Austro-Germans towards the new frontier of Italy, thus forming a Latin fence from the Adriatic to the Black Sea) has been foiled by the fact that what power is left to the remnant of Hungary has been delegated to a native prince. Below Baia the Danube enters the kingdom of S. H. S.,* and it is from this new State that help should come to Hungary. Economically the new Yugoslav State is drawn yet closer to Hungary through the fact that it now includes some of the richest districts of that country—Syrmia, Badchka, Croatia, etc. Economically these Danube countries are drawn together; the present separation of interests is due to the war, and in a measure to memories of the political injustice which characterised Magyar dealings with Serbs and Croats in the former kingdom of Hungary. But these memories are fading away under the necessity of re-establishing normal relations; the Serbs of Syrmia and the Baranya have many grievances against the rule of their former Magyar masters, the Croats still tell of the hideous injustice and cruelty under which they suffered in the days of the Dual Monarchy; but both are very ready to do business with their neighbours and to supply their new-born State with the means to fulfil its destiny. Between the Magyars and the Serbians there has never been the deadly hatred that inspires the latter towards the Bulgarians, for instance. True, they fought against each other as hard as good fighting men can; the Serbians won, not only victory in the field but also the respect of the Magyars. It is interesting to recall the fact that when, on March 22, the Magyar Soviet Government informed the Inter-Allied Mission at Budapest that it had declared war on the Entente Powers and all their Allies and Associates within reach, the Serbians were left out of the general condemnation. When this omission was pointed out to the Soviet emissaries answer came that there existed among the people no particular desire to fight the Serbians. Moreover, numerous Magyar soldiers have been known to state their readiness to fight for Yugoslavia against at least one of the Great Powers should occasion arise.

The Danube is the connecting link which will draw together in economic relations the new States and the ruins of the Dual Monarchy, and thus make for a return to order and normal conditions. There need be no fear of a recurrence of the dangers latent in an artificial State like that of the former Austro-Hungarian complex, with its seething mass of oppressed and discontented nationalities. Any future federation would be composed of homogeneous States —Czecho-Slovakia, Yugoslavia, and possibly a Magyar State, independent in themselves, linked together by the economic conditions common to all in consequence of their geographical position. The immediate aim of these States would be reconstruction and consolidation; their chief political preoccupation, at least in case of the Slavs, possibly also the Magyars, to defend themselves against the Teuton. It is in those matters that the new States still require assistance, and it is the duty of the older Powers to help. Here again the principle of self-determination should be brought into practice. The new States realise that they lack experience in many ways, and are anxiously turning to the Entente Powers for guidance; but they also have their preferences and should, therefore, be allowed to choose their friends. The Olympians of the Supreme Council that set out to settle the affairs of nations would do well to descend from out the clouds and take note of this. There is, for instance, a strong inclination amongst the Yugoslavs towards the British people. There is a constant demand for British goods; there is a strong desire for a closer spiritual and intellectual intercourse between the two races. This is not based merely on considerations of self-interest; it is a genuine desire to establish firm friendship. The Serbian and the British soldier hold each other in mutual respect as first-class fighting-men; Yugoslav youths have taken kindly to our games; there have been quite a number of football matches between British soldiers and sailors and Yugoslav teams. The latter proved themselves thorough sportsmen, modest winners, and good losers. The Teuton has overthrown his own "Kultur idol" to which Slav intelligence was forced to bow; the free people of the Entente are urged to replace "Kultur" by a more liberal creed, to open up the wealth of their gathered experience and learning to their humbler friends and Allies. The business men of the new State, with all its possibilities, are demanding their right to trade with us. But the Olympians seem deaf to all appeals.

Britain's Task.

It is, therefore, up to us as Britons to take the matter in hand. Business men, sportsmen, and students, we all have our duties to the nations that are struggling towards conditions which we for many generations have come to look upon as our birthright. We should insist on appropriate action by our Government—the Government elected to further our interests and satisfy our just demands.

It is in our interest to see order re-established in Central Europe, and the only way this can be achieved is by the assisting those friends and Allies of ours who are on the spot, and understand the conditions. The Austrians may well be left to the Czecho-Slovaks; the Yugoslavs know the Magyars well, and are quite capable of restoring normal relations in their section of the Danube lands. A strong, purposeful people will make its influence felt, and will be a guarantee for peaceful development. But the Yugoslavs in particular still require support, though not of the kind hitherto accorded to them. They require no more foodstuffs doled out to them by Inter-Allied Commissions, nor any kind of interference on the part of other peripatetic Missions that are enjoying trips abroad after the horrors of war on the Home Front. They want expert advice on many matters, they would like to choose their advisers, and, according to the doctrine of self-determination, they are entitled to do so.

We should, therefore, depart from ancient procedure, find out what exactly is wanted, or whose services the Yugoslavs require to help them in their work of reconstruction, and then carry out their wishes as best we can. We have a certain number of suitable men, men who are known to and liked by the Yugoslavs; it should be the business of the Government department concerned to find out these men and see how they can best be fitted into a scheme of helping the kingdom of S.H.S., and at the same time serving the interests of our country. It might even be advisable to consider geographical rather than political boundaries, and give the expert advisers, or whatever designation they may serve under, a mandate to extend their activities to include the Magyar country. This could be done from Belgrade, and would be a well-deserved compliment to the Yugoslavs.

However, before entering into details, let us establish principles:—

(1) That the peoples of the Middle Danube should form an economic combine.

(2) That these peoples should be assisted to the fullest possible extent by the Great Powers of the Entente.

(3) That these peoples should be allowed a voice in the matter of choosing the friends that are to help them.

* S.H.S., *i.e.*, Serbia, Hrvatska (Croatia), and Slavonia.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Recent telegrams make it plain that Egypt is suffering from the prevailing epidemic of labour unrest in the form of a strike movement. Particulars are not available as to the causes and aims of the movement, but I have no doubt that they are at least as futile as has been the case in other countries. The fact that a number of the public services are threatened is very significant, pointing as it does to the fact that the lesson of events elsewhere has not been lost upon those at the head of the strikes, and also very forcibly suggesting that the source of the trouble may be external.

***

In the light of our Cairo correspondent's remark last week, that the labour movement was increasing in strength all over the country, and that "before another six months Egypt will probably not need to envy Paris in any respect so far as Syndicalism goes," it must be admitted that the outlook is somewhat disquieting. Settled conditions are essential if the country is to make a rapid recovery from the effects of the recent disturbances, but it would seem almost too much to hope for anything of the kind in the near future. Still labour troubles have a habit of rapidly dying down, and let us hope it will be so in this case.

***

The very general desire in the Balkans for close economic relations with Great Britain is aptly illustrated by a very significant article which appeared recently in the *Jugoslavenski Lloyd*, of Prague. The article dealt with the scope for the development of Yugoslavia, and the necessity for foreign capital, in which connection it is pointed out that assistance from the former Central Powers must naturally be eschewed, and that Yugoslavia must depend on her Allies. The possibilities of the Allies are then discussed, and the writer, criticising French capitalism, says that "merciless capitalistic exploiting on the part of France" must be resisted vigorously, but of British commerce he says that it has, "true to its commercial fairness, employed investments as a means of production, and as an associate of labour, but not as a means of only exploiting other nations," and his conclusion is that "it is evident that we must open wide the door to English enterprise, commercial spirit, and sound business."

***

The increase in the price of India Council drafts from 1s. 8d. to 1s. 10d. for immediate telegraphic transfers, and from 1s. 7 15-16d. to 1s. 9 15-16d. for deferred telegraphic transfers and bills, is not surprising, in view of the continued rise in the price of silver, which, at its present rate, is equivalent to the rupee at about 1s. 9½d. It is very doubtful whether the present step will long suffice to meet the needs of the position, for there seems little prospect that the advance in silver will be arrested at present, and the rupee may well be at 2s. before very long. While the exchange rate remains in its present uncertain position, it need scarcely be said that there can be no real stability of trade.

***

Obviously, a stimulus to exports to India will be given by the raising of the value of the rupee, while the cost of imports from India will be increased. As regards Manchester, to give one particularly important instance, the position is not unsatisfactory, for the purchasing power of the Indian is increased by the advance in the rupee, and his purchases are likely to be correspondingly larger. On the other hand, rubber and tea companies in India and Ceylon will be very unfavourably affected, since they dispose of their produce in sterling, and will have to remit money for expenses at the higher rate of exchange. As rubber companies outside India and Ceylon will not be affected, rubber cultivation there may suffer to some extent, but as against this there is the prospect of a rubber shortage in the course of the next few years, so that this possibility is counterbalanced.

***

Reports from Roumania continue to be most favourable as regards the prospects for British trade enterprise in that country, and it is very satisfactory to be able to record that there is every reason for thinking that British firms will avail themselves of their unique opportunity in this direction. Representatives of many important British firms are now in Roumania, studying the ground and investigating the most likely openings, and, as the result of their activities, a variety of goods have been despatched to meet the more pressing needs. There is no lack of competition from other countries in Roumania, but, as in the case of Serbia, the desire is for economic relations with this country, and, provided British merchants and manufacturers cater for the market's requirements with the thoroughness they are capable of in other countries, I do not think this competition need be regarded very seriously.

***

During the past year ended March 31 the gross receipts of the Egyptian Delta Light Railways, Limited, amounted to £366,043, as against £292,520 for the previous twelve months. The gross receipts from passenger traffic increased by £44,064 to £223,739, and there was an increase of £28,923 in the gross receipts from goods traffic, the figures being £134,135. Working expenses increased from £171,331 to £195,194, but the ratio of expenses to earnings fell from 58.57 per cent. to 53,33 per cent. The net profits amounted to £170,850, and adding interest and dividends and the balance of £85,353 brought forward, the total is £266,750. After provision for debenture interest, the general reserve fund, and for the proportion of the profits due to the Egyptian Government, there remains £146,370, and out of this it is proposed to pay a dividend of 5½ per cent. on the preference shares and to carry forward the balance of £89,127. The working of the lines during the period in question was only affected by the disturbances during the last few days of the financial year, and it is only in the next year's report that the full effect will be seen. It may be noted that the company's lines were completely closed for fifty days from March 17, and were only partially working for a further period of thirty days, and that the material damage is estimated at £47,179.

***

A satisfactory report is forthcoming from the Bengal Iron and Steel Company, the net balance of profit available, including £35,208 brought forward and after providing a reserve of £167,000 for income-tax and excess profits duty, is £182,630, and after various allocations the amount available is £123,010. A dividend of 6 per cent. was paid on the preference shares on March 31, and it is now proposed to bring the dividend on the ordinary shares for the year up to 32 per cent. by the payment of dividends of 8 per cent. on September 30 and December 16, and to carry forward £30,058.

***

While the prospects of some of the cereal crops in Turkey are apparently not unfavourable despite adverse climatic and other conditions, so much cannot be said for Turkish fruit crops, in regard to which the latest report by Messrs. Giraud, which will be found on page 185, gives a most disappointing picture. The unfortunate developments which followed on the Greek occupation of Smyrna and the surrounding district are reported to have seriously affected the most important agricultural regions in the neighbourhood, with the result that it is stated that the prospects for all the crops of the Aidin vilayet are jeopardised. It is to be hoped that later information will be more reassuring.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

Branch: 11, CALEA VICTORIEI, BUCAREST.

SERVICE

is of primary importance in connection with the Transmission on any power-propelled vehicle (particularly so in countries where facilities for repairs and replacements are somewhat limited). With "THE COVENTRY" Chains fitted to your Cycle, Motor-Cycle, Road Tractor, or Agricultural Machine, you are insured against all Transmission breakdowns, while the whole of the Power is being delivered to the right place, viz., the driving wheels, without any loss en route through friction and and its attendant evils.

"THE COVENTRY" Service extends right back to the home of the Chain, the resources of our Technical Staff bei g at your service upon any problem of Transmission, without obligation.

"THE COVENTRY" CHAIN CO., LTD., COVENTRY, ENGLAND.

CABLES: CHAINS, COVENTRY.
Codes: A.B.C. 4th and 5th Editions, WESTERN UNION and MARCONI.

The Mineral Resources of the Near East.

A Detailed Survey.

By JOHN KIRSOPP, M.I.M.E., F.G.S.

Now that Peace has been signed, and prospecting and developments may be expected to spring up in various directions, a brief outline of the known resources of the Near East and India may be of interest. The following list, which of necessity covers a rather wider area than is included in this region, enumerates the minerals, known as existing in the respective countries, italics indicating that the minerals exist, and Roman type that they are being worked. The total value of the exports given in the text are for the year 1912.

Anthracite: *Roumania*, Russia.
Coal: Serbia, Bulgaria, Russia, Turkey, *Persia*, *Afghanistan*, India.
Lignite: *Egypt*, Serbia, Roumania, Bulgaria, Greece, Russia, Turkey, Abyssinia.
Peat: Russia.
Naphtha (or Petroleum: Algeria, Egypt, Roumania, Russia, Turkey, Mesopotamia, Persia, *Afghanistan*, India.
Asphalt: Russia, Turkey.
Alabaster: —
Alum: Turkey, *Persia*, India.
Amber: India.
Antimony: *Morocco*, Algeria, Serbia, Turkey, *Persia*, *Afghanistan*.
Arsenic (Orpiment): Turkey, *Persia*.
Asbestos: Russia, *Chinese Turkestan*.
Barytes: Greece.
Bauxite: India.
Bismuth: Serbia.
Boracite: Turkey.
Borax: *Persia*.
Cadmium: Greece.
Cobalt: *Roumania*, Russia. *Persia*.
Chrome Ore: *Egypt*, Greece, Russia, Turkey.
Copper: *Morocco*, Algeria, *Egypt*, Serbia, *Roumania*, *Bulgaria*, Russia, Turkey, Chinese Turkestan, *Persia*, *Arabia*, India.
Corundum: India.
Emery: Greece, Turkey.
Fireclay: Tunis, Egypt, Russia.
Flags: *Tunis*.
Fuller's Earth: Morocco, Turkey, India.
Gypsum: Egypt, India.
Gold: *Morocco*, Egypt, Serbia, *Roumania*, Bulgaria, Russia, Turkey, Chinese Turkestan, *Persia*, *Afghanistan*, *Arabia*, *Abyssinia*, India.
Granites and Porphyries: Egypt, Roumania, India.
Iron: *Morocco*, Algeria, Tunis, *Egypt*, Montenegro, Serbia, *Roumania*, *Bulgaria*, Greece, Russia, *Turkey*, Chinese Turkestan, *Persia*, *Afghanistan*, *Arabia*, Abyssinia, India.
Lava: —
Lead: *Morocco*, Algeria, Tunis, Serbia, *Roumania*, *Bulgaria*, Greece, Persia, *Afghanistan*, *Arabia*, India.
Limestones: Tunis, Egypt, Bulgaria, India.
Manganese: *Roumania*, *Bulgaria*, Greece, Russia, Turkey, *Persia*, India.
Magnesites: *Serbia*, Greece, India.
Marbles: Algeria, Roumania, Bulgaria, Greece, India.
Meerschaum: Turkey.
Mercury (or Quicksilver): Algeria, *Roumania*, *Russia*.
Mica: India.
Millstones, Serbia, Greece, *Chinese*, *Turkestan*, *Persia*.
Monazite: India.
Nickel: *Egypt*, *Persia*.
Nitre: *Chinese Turkestan*.
Ochre: India.
Phosphate of Lime: Algeria, Tunis, Egypt.
Phosphorite: *Russia*.
Plaster and Cement: Tunis, Egypt, Serbia.
Platinum: Russia, India.
Plumbago: India.
Potters' Clay: Tunis.
Precious Stones—
Diamonds: India.
Turquoise: Egypt, Persia.
Garnets: India.
Nephrite (Jade): *Chinese Turkestan*. India.
Amethyst: *Morocco*.
Emerald (beryl): *Egypt*, *Arabia*.
Rubies: India.
Carnelian: *Arabia*.
Crystals of Peridot: Egypt.
Realgar: *Afghanistan*.
Sal Ammoniac: *Chinese Turkestan*.
Salt: Morocco, Algeria, Tunis, Egypt, Roumania, Greece, Russia, Turkey, *Persia*, Abyssinia, India.
Saltpetre: *Persia*, India.
Sand, Gravel, and Flint: Tunis.
Samarstrite: India.
Silver: *Morocco*, *Serbia*, *Roumania*, Greece, *Russia*, Turkey, *Persia*, *Afghanistan*, India.
Slate: India.
Stone: —
Sandstone: Egypt. India.
Paving: Tunis, Roumania, *Afghanistan*.
Building: Algeria, Egypt.
Sculptural: Algeria, Egypt.
Steatite: India.
Sulphur: *Egypt*, Greece, Chinese Turkestan, *Persia*, *Afghanistan*.
Trap Rock: India.
Tin: *Persia*, India.
Wolframite and Tungsten: India.
Zinc (Salamine and Blend): Algeria, Tunis, Greece, Russia, Turkey.

Morocco.

Iron was worked by the Carthaginians at Djebel Hadid, 14 miles north-east of Mogador, magnetic iron occurs in the mountain range of Ul Nixan and Monte Milon, and obligiste and haematite at Tres Forcas. Copper ore deposits exist near Taradant, which were still being worked in the early sixties, and is also found in the Tangier region, and in the rocky heights of Mohader. Silver and gold occur in the province of Sas, veins of quartz with sulphuret of lead in the mountains of Afra, rock salt in the Atlas mountains, and sea water is evaporated by the heat of the sun at Rabat and elsewhere. Fuller's Earth in small quantities is exported from Tangier and Larache. Amethysts of great size and beauty have also been found in the mountains.

Algeria.

Phosphate of lime is extensively quarried in the vicinity of Tébessa, and at Tocqueville and Bordj R'Dir, in the province of Constantine. Rich lodes of silver lead ore are worked at the Ain-Smara mines, 11 miles from Constantine, and also in the provinces of Algiers and Oran. Petroleum wells were bored at Aia-Zeft, and a refinery was laid down at St. Aimé some decade and a half ago. Iron ore (magnetite and manganiferous hematite) is extensively worked near Bona and Tlemsen. Antimony ore (stibnite) exists in the department of Contantine. Zinc ores (salamine and blend) are extensively worked in the Souk-Ahrar and Tébessa districts in the department of Constantine. Salt is also produced from lakes in Contantine and Oran. Marbles are extensively quarried, there being the famous onyx marble at Sidi-Hamza and statuary and many coloured varieties at Filfila, near Phillippeville, at Ouled-Rahmoun in the Bona district, and at Tekbalet and Oued Chouly in the department of Oran. The total value of minerals produced in 1912 was £1,662,389, iron and zinc ores ranking highest.

Tunis.

Phosphate of lime is the most important mineral produced, the product value in 1912 amounting to £2,788,272. This mineral is found in the Lower Eocene rocks to the north and south of the mountain chain running from Wady Gtah, near Gafsa, to Tamerza, where the bed may be followed for a distance of 40 miles. The crude rock contains from 58, to 62 per cent. of phosphoric acid. A good deal of prospecting activity took place before the war, lead, zinc, copper, manganese, etc., being obtained. Important iron mines are worked in the north-west of Tunis. Salt is obtained from salt marshes and lakes. Value of minerals produced in 1912 amounted to £3,817,652.

Tripoli.

There seem to be few products other than agriculture.

Egypt.

In 1912 the following minerals, metals, and precious stones were being exploited or developed in a commercial scale:—Building stones, clay, gypsum, gold, lead, and zinc ores, manganese and manganiferous iron ores, natron, nitrate of soda, petroleum, phosphate of lime, peridots, salt and turquoise. Considerable petroleum developments are taking place in several localities, the oilfield region embracing a broad expanse of desert plain and low-hill ridges lying between the high ridges of the Red Sea hills, the Sinai mountains and the Gulf of Suez, and also extending down the western shoreline of the Red Sea, and includes a small portion of South-east Sinai. The dolomitic limestone and the Nubrian sandstone have up to the present yielded the most notable petroleum supplies. The Egyptian oilfield area presents a region of considerable geological complexity, and consequently of special difficulty as regards development. 27,522 tons was produced from the wells at Jemsa in 1912. The Sinai Mining Co. were constructing a railway and loading installation at Abu Zenima for exploitation of manganiferous iron ore deposits on a large scale. Manganese deposits occur in the carboniferous limestone formation in Western Sinai, where development work on a large scale is being carried on, the thickness of the ore varying up to a maximum of 6 metres. Lead and zinc deposits underlying the gypsum are being exploited at Jebel Rossas. Gypsum deposits are worked near Cairo, Heiwan, and Ismailia. The phosphate beds cover an enormous area in the aggregate, the present producing mines being situated on the Red Sea littoral and in the valley of the Nile respectively. Nitrate of Soda occurs in the Esna shales, which are strongly developed in the South of Qena, these shales appearing to carry about one per cent. of sodium nitrate together with considerable quantities of common salt. The gold deposits known to have been worked by the ancients are small and patchy and considerable prospecting and development work is still being carried on at

Digitized by Google

some of these ancient mining centres, and producing mines are also working at the present time in the south-eastern desert of Egypt. Turquoise mines at Wady Maghara, in the peninsula of Sinai, are worked by the local Arabs. The only known source of large crystals of peridots of really fine quantity is from a mine working on the Island of St. John's in the Red Sea, although smaller and poorer crystals are obtained from other localities. Several large salt pans are in operation near Port Said for the purpose of making salt from sea water, and salt is also obtained from the natural evaporation of the water of Lake Mareotis, and also at Wady Natron where there are natural alkali deposits, a considerable amount of caustic soda being there made and utilised at the Egyptian Salt and Soda Company's cotton seed crushing and soda and oil factory at Kafr Zayat on the Nile. Clay is worked for cement manufacture at Massara, fireclay and granite at Aswan, basalt at Abu Zabel, near Cairo, and sandstone and limestone are extensively quarried. During the last few years of the war important oilfield developments have taken place.

Montenegro.

Rich deposits of iron occur in this rocky little country, but no returns are available.

Serbia.

Most of the coal region, of Liassic age, lies near the Danube, the coal being shipped to districts requiring fuel, and to the Black Sea. True coal reputed nearly equal to English coal occurs and is worked in the Timok Valley near Vrska Tschuka, and a large area also occurs in the Boljevac district. Considerable beds of Tertiary brown coal also exist at Senje, Sisevac, Resava, Jelasnica, Kraljavatz, and in many other parts of the country. The State operates a mine at Serje, 60 per cent. of the output being delivered to the Serbian State railways. In 1912 a total of 303,000 tons of coal was produced from the various fields. Copper and iron ores are being worked in the vicinity of Bor and Lipnik, and at Maidanpek, where it is found in several quartz veins in a mass of andesite. Lead ore is being mined at Cerveni Breg and Kosmaj in Belgrade, and also in the departments of Podrinje and Rudnik. Gold was worked by the Romans and many centuries later by the Austrians, but Turkish invasions put a stop to mining, it being found in alluvial gravel and in quartz veins, especially in the district west of the River Timok, which forms the frontier of Bulgaria, many veins of gold bearing pyrites existing near Glogovitza. Dredging for gold takes place on the River Pek and the River Morava. Antimony ore is principally worked at Krupanj and Zajaca, in the department of Podrinje. The value of the total mineral production for 1912 was £763,327.

Bulgaria.

Fairly rich deposits of coal and lignite exist. The State works lignite mines at Pernik and Bobovdol, the output of the former place in 1911 being 245,314 metric tons, valued at £112,000. The latter colliery, situated about 10½ miles from the town of Doupnitzia, far from any railway, and so worked to supply local wants only, has an output of about 6,000 metric tons. The Trévena coalfield, 38 miles from Tirnovo, owing to the lack of railway facilities is also only worked on a very limited scale.

A copper mine of some importance is worked at Pakalnitza, about 7 miles from from Elisena in the department of Vratza, producing an annual output of about 15,000 tons, the value of the copper matter exported from the mine in 1911 being £32,000. A ropeway is established between the mine and the railway, and smelting works are close to the railway station. Gold is obtained in many places, from the beds of rivers. Limestone and marble are quarried on a small scale. Other minerals are known to exist but await enterprise and development, and the opening of the country with transport facilities.

Greece.

This country possesses great mineral wealth, easily worked and exported owing to the irregular formation of its coast. Lignite exists in certain districts, and has been worked on the Island of Euboea and in Cropo, but is now suspended owing to foreign competition. The chief product is iron ore, which occurs in several parts of Eastern Greece, the total production of ore in 1912 being valued at £152,574. Hæmatite containing 51 per cent. of iron is extensively worked at Seriphos, where the output amounts to over 200,000 metric tons per year. It also exists, and is worked, in the Laurium district, and in Grammanikon (where it is nearly exhausted), Siphnos and Thermia. Important deposits of chromiferous iron ore exists at Locrida near Lake Copais in the Atalanti district. Manganese occurs most with iron ores, and is worked at Plaka in the Laurium district and in Milos. Rich lodes of magnesite exist in Eubrosea, and it also occurs in the Hermione Chalcis, Simni, Mandondi, and Thebes districts. Several marble quarries are being worked by English companies, mostly in the districts of Dionysos, Larissa, Panosmos, Paros, Skyros, and Styra. The salt industry is a Government monopoly. The salt is obtained from sea water at Anavyssos near Laurium, in the island of Leucada, at Messolonghi, and other places. Zinc ores (calamine and blend) associated with lead ore occur in the Laurium district, and at Antiparos. Sulphur is found in Milos and in some of the volcanic islands. The total value of minerals sold in 1912 amounted to £962,786, of which lead (argentiferous pig lead) comprised one third, and iron ore and salt from sea water another one fourth of this total.

Roumania.

In 1912 petroleum formed the chief mineral product, 1,835,940 metric tons being produced, and 242,025 tons of coal. Petroleum is, and probably always will be, the mainstay of the mineral industry of this country. The mineral is obtained partly from shallow hand-dug wells, and partly from boreholes, in the region of the Carpathians, the principal centres being Prahova, Bacau, Buzeu, and Dambovitza, 90 per cent. of the production in 1912 being produced from the Prahova district. The average boreholes are less than 550 metres deep, whilst the wells are only from 20 to 100 metres deep. The bulk of the petroleum is refined, and the residue is employed in Roumania for heating purposes, for which there is an increasing demand. The capital invested in the Roumanian oil industry in 1909 was nearly 15 millions sterling.

Beds of anthracite and bituminous coal (lignite) outcrop in various parts of the country. Anthracite is worked at Schela in the province of Gorj. Lignite is found in very many parts, the seams sometimes reaching a thickness of 20 feet. It is mined in the following provinces: Mehedintzi, Muscel, Dambovitza, Prahova, and Bacau. An excellent fuel is produced by the utilisation of lignite into briquettes with petroleum residues, the fuel so produced being of excellent quality, and cheaper than Welsh coal. The mines at Marzineanca in the Province of Dambovitza are worked in concession by the State. Rich deposits of salt exist, extending for a distance of about 100 miles along the Carpathians. One bed of pure rock salt is from 300 to 1,000 feet thick. The industry is a Government monopoly, and much of the work in the rock salt mines has been carried on by convict labour. A large amount of rock salt is annually exported both to Turkey and Russia. A large number of stone quarries are being operated for building material, many by the Government. There are important granite quarries in the Dobruja, and marble quarries in Dobruja, Argesh, Gorj, and Mehedinjzi.

Copper ores are reported to exist in Dobrudja in the district of Tulcea, in the centres of Altim-Tepe, Amzatar, and Islam-Gifesca, and iron ores in the Dorna locality in the province of Suceava. The gold resources are as yet unknown, although for centuries the alluvia of some of the rivers, and especially the river Olt have been known to carry gold, and small quantities have been obtained by washing the sands by the peasantry. Gold is also reported to exist in the Gemenea locality in the province of Dambovitza.

(To be concluded.)

The traffic receipts of the Smyrna-Aidin Railway for the week ended July 25 amounted to £6,851.

NEAR EAST TRADE.

The Importance of Getting In.

(From a Correspondent.)

Never before has such an opportunity offered itself to British merchants to capture the trade of the Near East as the present moment. But to do so we must adopt new methods. Our banks must not only be prepared to finance shipments, but if needs be to take a share in the risks, credit for a considerable period must be given, although not to the exaggerated extent given by German traders.

The exchange difficulty is one that requires consideration, but it can be grappled with, and should not be used as an excuse for refusing to enter the market. High freights may be another excuse, but notwithstanding this, the Americans are getting their goods in and even at some sacrifice of profit we must do so also. Everything depends in getting in now. If we are to reap a harvest of trade in the Near East in the future we must do our sowing now by sending out agents wherever possible armed with samples and illustrated catalogues in French. Where it is not possible for firms to send out agents the banks represented in Turkey and the Near East will do everything to assist merchants to obtain suitable and reliable parties to act on their behalf.

It is difficult to forecast the future of Turkey. With time, however, and the assistance of the Great Allied Powers she has undoubtedly a period of prosperity before her. From a commercial point of view her huge undeveloped resources in Asia Minor are decidedly an asset of great importance, and the British merchant should lose no time in obtaining a footing in what will undoubtedly prove in the future to be a valuable field of enterprise.

£106,000 is reported to have been paid for the steamer War Malayan, bought by Greeks and renamed "Michael L. Embiricos." The vessel is only nine months old, and has made one voyage.

Speaking in the Spanish Chamber on August 11, Senor Lerroux, the Radical leader, declared that, in view of the new commercial currents now being manifested, Spain should freely pursue her activities in the occupied region of Morocco, and should furnish her troops with all necessary equipment.

Something *Quite* Different

from All other Paints—

"Riversea" Paint

Is Elastic, Waterproof, and is Impervious to Heat, Cold, and Atmospheric Conditions.

Is a Perfect Preservative for Iron, Wood, Stone, etc. Salt Water has no effect, and the Paint is a positive cure for damp, and resists the action of strong Acids. Can be submerged under water.

Is supplied in any Ordinary Colour.

Engineering Notes.

Roumanian Waterways.

Before the war there was much discussion in Roumania as to the question of diverting some of the railway traffic, already overloaded, to the waterways. In this connection the possibility of making the rivers Sereth and Alt navigable for a certain distance was being canvassed, and the construction of a canal connecting the capital with the Danube was also under consideration. As to the river Pruth, the improvement of the navigation was at the time considered by a commission of delegates from Austria-Hungary, Roumania and Russia. The advisability of deepening the bed of the river was brought forward, but the idea was abandoned on account of strong objections on the part of the Russian delegate. It was decided that the question could be well met by the construction and use of specially built light draught tugs, and the increase of the fleet of shallow draught lighters already plying there, and which even now grapple with a large part of the grain transport of Moldavia and Bessarabia. As regards the two rivers first mentioned, the question was carefully studied, and the only objection was the heavy cost of the work. This is the case also with regard to the Bucharest-Danube canal, the country to be cut through being extremely flat. It is said that the Government intends now to take the two questions into serious consideration, and probably a commission will be appointed and a decision taken in the very near future.

Engineering Openings in Bulgaria.

The particular attention which enterprising American contractors, engineers, and others have recently been paying to Bulgaria, may well be taken as a proof that the country will soon offer special opportunities for engineering and other enterprises. In recent notes we referred to a new railway, the construction of which, according to reports, an American syndicate proposed to undertake. Further particulars on this subject are not available; but, it is stated, that apart from that proposal, there is a scheme of reconstruction which includes rolling-stock and railway material of every kind, harbour works, electric lighting and tramways. Among the more important of these may be mentioned bridges, road-rollers, dredges, telegraph wires, motor boats for the Danube, barges and lighters, etc. The articles which will be required from time to time for minor contracts, during reconstruction, will include electrical appliances, drugs, surgical requisites, military boots, cement, office stoves, iron windows, hospital beds, paper, zinc, iron bars and tubes, bolts, nuts and screws, saws, lead bars, crude and cast iron, etc. Local agents are necessary in tendering for Government and municipal contracts, but in the case of large contracts it is much preferable that any firm wishing to tender should send out their own representative, as is often done by foreign firms. British firms wishing to do business with Bulgaria should be prepared to act accordingly.

Agriculture in Turkey.

One of the results of the Peace negotiations, a leading technical contemporary points out, is the singular activity of the Turkish Government in preparing for the development of the agricultural industry in that part of Asia Minor still under its control. While it may be possible that the Turks are showing this hitherto unsuspected energy as a means of impressing upon the Allies their desire to advance the general welfare of the population, it is certain that they are sufficiently alive to the economical situation to facilitate as much as possible the production of cereals, which are the main source of the country's wealth. The Germans are reported to have been sending considerable quantities of agricultural implements into Asiatic Turkey, but it is stated in a French report that they are not suited to local requirements. It is difficult to accept this statement in view of the fact that German manufactures were very largely employed in Turkey before the war. Huge quantities of these implements were consigned to all the markets in Eastern Europe and in Asia Minor, but this was due solely to the organisation and to the terms of credit offered, and there is no reason why British firms, by offering better implements, should not secure a large share of the business. In the French report referred to it is said that there is a big demand in the vilayets of Aidin and Adana for ploughs and motor ploughs, harrows, reapers, threshing machines and the like. There is also an active inquiry for flour milling plant. Those firms who get into the market now with suitable implements will have a great advantage in securing future business.

MARKET FOR AGRICULTURAL MACHINERY IN EGYPT.

The American Vice-consul at Alexandria in a recent report on the market for agricultural machinery in Egypt states that the following are the principal kinds of agricultural machinery seen in the country districts: Grain or threshing machines used on many larger estates; steam tractors used on some larger estates in Upper Egypt; portable engines, including steam locomobiles of 8, 10, and 12 horsepower, and refined-kerosene engines; and farm tractors. Before the war an American and a German firm had each sent one farm tractor to Egypt. They did not, however, prove satisfactory, as they were too heavy for the country roads. No other farm tractors have as yet been introduced into Egypt.

The sizes of agricultural machinery which will be most adaptable to Egypt are the following: Grain or threshing machines capable of doing 10 bushels per hour, for landowners whose estates average 400 to 600 acres; and machines capable of doing 25 bushels per hour, for landowners of 1,000 acres or more, and for contractors of threshing. Steam tractors are in disfavour in Egypt and cannot be recommended. Farm tractors, two sizes: A tractor capable of ploughing five acres a day effectively, and one capable of ploughing 15 acres a day. Both sizes must be light, not weighing more than 1,200 lb. for the smaller size and 2,000 lb. for the larger, as the soil in Egypt is light and the land is generally bisected by canals and drains (especially in perennial irrigation regions), and the tractors have to cross canals and drains on light bridges without breaking the banks. Farm tractors using kerosene are most advisable, as kerosene can be found anywhere in the country. Benzine, however, can only be secured in the large centres. The number of agricultural machines introduced into Egypt include 85 sets of steam tractors, all from Great Britain and most of them of the Fowler type; threshing machines, approximately 350, all from Great Britain; farm tractors, only two, as stated above.

Before the war a credit of six to nine months was allowed to jobbers in agricultural machinery, calculated on the basis of three months' time in which to sell the machines after their receipt plus three to six months' credit which the jobber himself had to extend to his customers. The time of credit allowed by the jobber to his customer was based on the time of the sale of the cotton crop, as all payments and settlements in Egypt are effected at this time (October-November). The jobber could have a guarantee of payment in making a contract of sale to the customer, but with the consideration that the machine was on hire only until the date of settlement. In this way he could get back his machine in case his customer happened to fail. From the beginning of the war to its close cash was universally demanded; credit terms, however, are now being granted again.

All the richness of the country lies in its agriculture, which is the main source of its revenues. Old conditions have entirely changed. The number of head of cattle has diminished by 25 per cent. since the beginning of the war. Labour is scarce and has trebled in price. The larger landowners would be willing to use almost any kind of agricultural machinery which would cut down the price of ploughing, harvesting, and sowing and enable them to finish each operation in time. Agricultural machinery, however, must be adapted to the needs of the country.

Ploughing is done in Egypt entirely with bullocks. No horses or mules are used. It costs about £1 15s. to plough an average acre of land six to seven inches deep, and it requires two pairs of bullocks in one day to do it. An average farm of 100 acres requires to keep standing all the year round nine head of bullocks to complete all the usual farm work. A good working bull costs £36 to £40. Therefore a type of tractor adapted to the country and one that would cost less than £1 15s. to plough one acre of land seven inches deep, whose cost price would be inferior to that of nine head of bullocks, should find a market.

ADEN-RED SEA SKIN MARKET.

Supplies and Prices.

The good demand in America and the resumption of direct shipping services has brought much prosperity and profit to the Aden-Red Sea goat and sheep skin market, says an American consular report of June 16. Shipping rates are now but little more than a quarter of what they were at the beginning of this calendar year, and the rupee has advanced in exchange value to a fraction more than 40 cents (normal value, 0.3244 dol.), and to 1s. 10d. (normal value, 1s. 4d.) in American and English currency, respectively; but notwithstanding these facts the prices asked and paid for goat and sheep skins in Aden continue at a fancy figure. Skins move rapidly, and it is estimated that on this date there are probably not over 1,000 bales of goat and sheep skins (a bale is from 300 to 400 skins) in Aden; half in the hands of exporters and half in the hands of the native brokers for sale to exporters. Considering the enhanced value of the rupee, which is the usual medium of exchange in buying and selling skins in this market, the prices now ruling are practically double those of normal times.

Supplies.

As usual, the Harrar goat skins from Abyssinia lead the market at prices varying from 40 to 48 rupees per score. Supplies of these skins are coming in good quantities, although the quality is at present light, as is always the case in the dry period preceding the heavy rains in Abyssinia. A strike on the Franco-Ethiopian Railway, over which a large part of the Harrar skins reach the market, has also temporarily reduced supplies, but the strike is now ended. Ramazan will also be over in another fortnight, and there may be expected increased supplies of Harrars, and of better quality owing to the beginning of the rains.

Blackhead sheep skins are next in value to the Harrar goat skins. There have recently been some substantial arrivals of these skins from Italian Somaliland, although the bulk of the blackheads in the Aden market are usually from British Somaliland. All supplies arriving have found a ready demand at from 32 to 37 rupees per score. Rains in the back Somaliland country have already occurred, and that means that skins of heavier and better quality will soon be coming again.

Of the Arabian goatskins there are good arrivals of Ghizans and Gatoways, the former selling readily in Aden at 30 and 32 rupees per score and the latter at 20 to 22 rupees per score. Whitehead and redhead Arabian sheepskins are in demand at 20 and 12 rupees, respectively, per score. Arrivals both by land and by sea are good, although the present monsoon season may lessen shipments from Red Sea ports to Aden. All the prices above quoted are for skins without selection.

Increased American Demand.

A distinctly large share of the skins passing through the Aden market since the beginning of the year has gone to the United States. In this period invoices have been certified at this consulate covering 2,703,749 goatskins and 799,412 sheepskins. These figures are nearly double those covering the entire year of 1918, during which year, however, exports of Red Sea goat and sheep skins to America were smaller than for any one of many preceding years.

The present prosperity of the Aden market for goat and sheep skins from various parts of the Red Sea commercial district is due largely to the American demand, and if that demand continues this year promises to be an unprecedented one in the number of skins which will be exported. Some of the Aden goat and sheep skin dealers buy and ship to America for their own accounts, others buy as the direct representatives of American importers, and still others buy on commission for American clients. When the buyer on commission enters the market the Arab brokers know that he probably has instructions to buy a specified number of skins within a specified time limit, and they naturally run the price up three or four rupees per score. The buyer on his own account, or the direct representative of the American importer, usually gets his skins that much cheaper, as he buys when the price is right, according to his idea, and can step out and wait when the commission buyer comes in and usually bulls the market.

Owing to war conditions, which have prevented the native tribes from getting their usual supplies of dates and rice and other grains from outside sources, they have undoubtedly had to depend more upon their flocks and herds for food. This being true, there will have been some depletion of the normal numbers of goats, sheep, and cattle, which will probably result in smaller supplies of skins and hides from this market during the next two or three years.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated August 6:—

Good rain throughout, except in Assam, where fall has been local, and more required.

Bombay cotton market continues irregular. Fully good Broach August quoted 2594 Rs Piece goods steady. Calcutta jute market fairly steady. Hessians and sackings considerably quieter.

Reconnaissance survey Jessore District (Bengal) railway to Salkopa sanctioned.

The India Office has received the following cable summarising the season till July 31:—

Monsoon was late in reaching parts of Madras, Bombay Deccan, United Provinces, Rajputana, and South and West Punjab, but it has recently been abundant, and is now generally satisfactory throughout India.

Despite some delay in agricultural operations in above areas, sowing of autumn crops is proceeding well. Young crops are flourishing and agricultural outlook good.

Prices are abnormally high everywhere, and are still rising in Madras and Bengal, but are showing tendency to fall in Bombay, Central Provinces, and Bihar. Demand for Burma rice and Australian wheat is slackening. Economic situation poor in Madras and Bengal, but, generally speaking, whole country has shown remarkable staying power, in spite of extraordinary high level of food prices. High wages, control of food grains supply and provision of standard cloth have helped to mitigate hardships due to high prices and failure of last year's monsoon.

TRADE ENQUIRIES.

ROUMANIA.—S. N. Iancovici, Bucharest, Str. Academici 6, desires to obtain English agencies. English correspondence. First-class references.

NEAR EAST. — Gentleman having important trade relations with Roumania and Balkan States, shortly proceeding to the Near East, invites correspondence with Manufacturers and Merchants for the developmetn of business. Principals only. No cash required.—Box 1,005, Leathwait and Simmons, 5, Birchin Lane, E.C.3.

EGYPT.—ALBERT J. HALFON.—P.O. Box No. 1182.—ALEXANDRIA, British Agent, in touch for twenty years with the best clients of Egypt. Complete and unique organisation (also for visiting the provinces). Highe t references. Would like to secure serious REPRESENTATIONS. Correspondence invited.

NEW COMPANIES.

Anglo-Balkan Commercial.

The Anglo-Balkan Commercial Co., Ltd., was registered as a private company on August 5 with a capital of £100,000 in 98,750 Ordinary shares of £1 each and 25,000 Deferred shares of 1s. each. Objects: Merchants, financiers, concessionnaires, bankers, general merchants, contractors for public and other works, ship owners and builders, shipbuilders' engineers, machinists, steel and iron merchants, etc. Subscribers: J. Morgan, 172, Kingston Road, Ilford, solicitor's clerk; H. N. Lewis, Rutland, Telford Road, Farnham, Surrey, cashier.

Roumanian Drilling and Trading.

The Roumanian Drilling and Trading Co., Limited, was registered on August 6 with a capital of £10,005 in 10,000 shares of £1 each and 100 Founders' shares of 1s. each, to carry on the business of contractors for drilling and prospecting for oil wells and deposits, etc. The subscribers are: G. P. Evans, J.P., Toursgrove, Aberystwyth, 1 Founders' share; Capt. T. S. Masterson, 6, Waterloo Place, W., one Founders' share; A A. Harden, Hillside, 36, Miller's Road, Brighton, cashier, one Pref. share. The first directors are: G. P. Evans, J.P., and Capt. T. S. Masterson (both permanent). Registered office: 45, Russell Square, W.C.1.

Anglo-Baltic and Mediterranean Bank.

The Anglo-Baltic and Mediterranean Bank, Ltd., was registered on August 5, with a capital of £1,002,500 in 200,000 Ordinary shares of £5 each and 2,500 Founders' shares of £1 each. Objects:—To carry on in England or elsewhere the business of banking in all its branches, and the business of bankers' agents, financiers, concessionnaires, insurance brokers, company promoters, merchants, etc. In any year when the net profits amount to 5 per cent. on the amount paid or credited as paid up on the issued Ordinary shares there shall be distributed among the holders of the Founders' shares a sum equal to 5 per cent. of the said net profits, free of income-tax. Subject as aforesaid, the profits which the directors decide to distribute shall be distributed among the holders of the shares other than Founders shares. In a winding up the holders of the Founders' shares shall, after repayment of the entire paid up share capital of the company, be entitled to 5 per cent .of the surplus assets. The balance of the surplus assets is to belong to the holders of the other shares. The seven subscribers to the memorandum of association (each subscribing for one Ordinary share) are all clerks.. The minimum cash subscription upon which the directors may proceed to allotment is seven shares. The articles of association provide that the first directors are to be appointed by the subscribers to the memorandum of association, but Percy Vere Sherwin, banker, of 8, Princes Street, E.C.2, is appointed as the first managing director. The qualification of a director is 250 Ordinary shares. Remuneration of each director £500 per annum and the amount of the income-tax thereon, with an extra £500 and amount of tax thereon for the chairman. The registered office is at 8, Princes Street, E.C.

Near East Markets.

Turkish Fruit Crop.

Messrs. C. J. Giraud and Co., Smyrna, report as follows under date July 10:—

Sultanas.

Since our report of June 1 business has continued its activity. Prices have advanced week by week, arrivals from the interior have unfortunately diminished, and stocks on the market are very reduced, consisting mainly of low grades and poorly-conditioned fruit of the 1917 crop. Stocks up-country are estimated at about 2-2500 tons, including existencies of 1917 crop.

Since the resumption of trade relations with the United Kingdom, shipments to British ports have been as follows:—246,576 boxes and 135,530 bags of sultanas, and 15,977 boxes, 12,163 bags, and 264 cases of figs. The s.s. Bellarossia is expected within a few days to load for London, and will take about 200 tons sultanas. No other sailings are in view for the United Kingdom until early August, very little cargo offering for shipment.

Figs.

Market practically bare of supplies and arrivals from the Interior have ceased.

Crop Prospects.

A marked change has recently come over the whole situation. The advance of the Greek forces into the interior of the country is meeting with considerable resistance on the part of the natives. Regrettable incidents have taken place, resulting in damage to some towns and villages, considerable loss of life, and a general exodus of the population. The bulk of the fruit crops are grown in the valleys of the Hermus and the Meander. In the former district, the centre of the vine growing, farmers are abandoning their vineyards, and as the gathering and drying of the grapes should begin next month, a continuance of the present disordered state will have serious consequences, and will certainly result in the loss of a good deal of the production. As regards the Meander Valley, where figs are exclusively grown, the conditions are far more serious. The damage to the town of Aidin, the capital of the district, to several smaller towns and villages, and the withdrawal of the population, are factors calculated to react very disastrously on the eventual gathering of the crop. To assure the fertilising of the fig and its reaching maturing, it is necessary to hang on the trees a string of male figs, and the failure of this operation, which had only been started and has not been completed, would in itself jeopardise the crop. But, coupled with the destruction that has since resulted, the gravest apprehensions are now entertained that the export trade in the coming season of this valuable product may be seriously compromised. The whole outlook at the present moment is serious, and on the developments of the next few weeks hangs the fate, not only of the fruit crops, but of all the products of this rich province. Meanwhile communications with the interior districts are difficult and arrivals of produce are virtually suspended.

In forwarding the above report, Messrs. Giraud write as follows:—As you will notice, the conditions generally governing current business and the prospects for the coming season have for the time being assumed a rather critical aspect. Communications with the interior of the country are for the moment suspended, arrivals of all produce have ceased, and the prospects, not only for the fruit crops but for all agricultural products of the country, are for the present seriously jeopardised We trust, however, that with a restoration of order before the new season is at hand, the situation may assume a more normal aspect. In any case, we are making every preparation to cope with a large volume of business during the autumn. We have recently received from Sweden a supply of 200,000 boxes for the packing of sultanas, and also a large supply of bags required for the packing of natural figs. We have also an adequate stock in hand of skeleton cases in excellent condition, and have made arrangements for any increased requirements that may be necessary. In spite of the difficulties that have prevailed, since the signature of the Armistice last November we have been able to handle up to this date a quantity of over 2,500 tons of sultanas and figs, and we can state with confidence that we are now in a position to cope in the coming season with any extent of business that may reach us. As soon as new sultanas are on the market in the course of next month we shall fix our standard grades Nos. 11 to 17, the same will be mailed to our customers as soon as possible. In view, however, of the delays, both postal and telegraphic, and other difficulties connected with transport, labour, and shipping, it will be clearly understood that unless an improvement comes about in these conditions, our offers will be subject to reply within the dates we shall specify in our cables, and subject also to war and strike clauses. We can also undertake orders in cleaned fruit at an extra charge of 3s. per cwt. over our quotations for uncleaned sultanas.

London Produce Report.

Currants.

There is no change to record in the market position. Prices continue to show an upward tendency. There is no news regarding shipments, but it is hoped that further supplies will soon be available, for while the stock in the country is considerable, the demand is very great and is likely to increase in the immediate future rather than the opposite.

Sultanas.

Available stocks are small. A further supply of Smyrna sultanas has arrived, but as will be seen from Messrs. Giraud's fruit report the outlook for supplies is not very encouraging at the moment. The position in the Smyrna region, and the demand from other countries besides the United Kingdom make it very probable that this market will be short for a considerable period.

Coffee.

Prices remain very firm, and the futures market is steady. Stocks of Brazilian are 117,098 bags, as against 247,719 bags a year ago. Stocks of other kinds total 303,970 packages, as against 184,089 at the same date. The futures market in Brazilian has been active at 5s. under spot prices. At auction, 9,541 bags have been offered. The offerings included 2,095 bags of Costa Rica which realised 151s. to 158s. for good to fine bold, and 146s. to 154s. 6d. for medium, and 835 bags of East Indian which brought 140s. to 156s. for good to fine extra bold, and 136s. to 151s. 6d. for medium.

Sugar.

The home demand for manufacturing purposes has somewhat decreased, but there has been no diminution in the demand for export. The return of the area under cane sugar in the United States as 510,000 acres, as against 540,000 has caused disappointment. Reports from Cuba indicate a record crop, and transactions are reported in it at an increase of about 6s. per cwt. on last year's prices. The market for refined has been steady.

Seeds.

Since the end of July the market for oilseeds has been quieter, but the advanced prices have been well maintained. Linseed has touched 58s. per cwt, and sales for September delivery have been transacted at 55s. There has been little activity in cotton seed. Egyptian has been done at 32s. 6d. per cwt. and for November at 29s. Prices for rape seed are about the same. Gujerat is 51s. at the quay.

Oil Cakes, etc.

High prices continue to rule in the market. Linseed oil has been rather quieter at £120 per ton, fine edible cotton-seed oil has been done at £135 per ton, and soya-bean oil has been steady at £90. Castor-bean oil is dearer owing to the absence of supplies. Shipments of India, Ceylon and Japanese coconut-oil not yet arrived are quoted respectively at 105s., 102s. 6d., and 100s. per cwt.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The quieter feeling in the market has continued, and, if anything, there has been a further falling off in the turnover. The pause in operations is partly due to the expectation in some quarters of lower prices, and partly the result of trade being disorganised by the holiday season of the year. On the whole advices relating to the Egyptian cotton crop continue more favourable, but the plants are still late. Futures in Alexandria and Liverpool have fluctuated rather widely. There has not been very much buying by spinners. Egyptian yarns seem to be stronger than ever. Some producers have refused to sell on any terms. Demand in certain counts and qualities has definitely overtaken supply, and producers have experienced much difficulty in getting what they want. Prices have again hardened. In cloth for Egypt there has not been quite so much activity as recently, but shippers have been prepared to pay very high figures for early delivery. A fair amount of business continues to be done for the Levant. Healthy reports are being received with regard to clearances in Cairo. Trade in piece goods for India has been slow. Demand for China continues on smaller dimensions. Very little has been done for South America. Printing cloths have been in steady request for certain outside markets and the home trade. An unimportant business has been done in American yarns for home consumption. Quotations have shown rather more irregularity, and spinners seem to be losing a little ground. In export numbers a feature of interest has been the active demand in extra hard descriptions for the Levant, and some substantial contracts have been arranged. An increased inquiry has been met with for Germany.

ECONOMIC CONDITIONS IN TURKEY.

Crop Prospects.

The following are extracts from recent reports received by the Imperial Ottoman Bank:—

Biledjik, May 31.

The cereal harvests which were forecasted during the months of December and January last as better than those of last year seem to have suffered by reason of the torrential rains, which fell incessantly during the months of April and May. The spring sowings could not take place, the ground being affected by the rains. Owing to the continued cold and rain during the last two months the opium crop in the valleys and plains has suffered to some extent.

The first arrivals of opium, which in normal times appear on the market about the beginning of June, are not expected before the end of June.

Kutahia, June.

The fine weather which followed the severe rains of May has improved the agricultural position of our region, which is satisfactory. The opium harvest will be rather good.

In spite of the rise in freight, the export of cereals to Constantinople continued during the month under review. The market in mohair has been rather active this month, and prices have risen from Prs. 55 to Prs. 70. Holders of this commodity commenced to unload their stocks on the markets. No important transactions have been effected in wool or opium.

The importation of manufactured articles into this region during the month of June amounted in value to about £T12,000. Colonial produce imported amounted to about £T5,000. The carpet industry is more active owing to the receipt of orders from Smyrna. The manufacture of the native "aladja" tissues seems to show a little activity.

Rodosto, June 1.

The month of May has been principally marked by the return of a certain number of deportees, some of whom have been completely ruined during their exile, but a few others have, on the other hand, improved their financial position. This return has been followed by greater activity in our market, and we are beginning to witness a certain movement which gives grounds for viewing the future with a certain amount of hope. Unfortunately the continual unsteadiness of the general political situation and the possibility of a change in the governing administration of Thrace causes the local trade to remain undecided.

Eski-Shehir, June 20.

During the long war period large amounts of labour having been taken from the fields by the general mobilisation agriculture in default of means in part, at any rate, of replacing the shortage of man power by agricultural machinery has been endangered, despite the co-operation of the village women. Compulsory cultivation imposed by the Government, which ought in part to have filled the gap, did not have the expected results. In practice the system only proved a new means for escaping military service for a number of individuals, who, instead of sowing new lands, only farmed the lands already cultivated before the passing of the law. The following reasons may be given for the decline of agriculture during the war.

(1) Lack of labour and of agricultural machinery. (2) The arbitrary measures which the Government used to obtain the crops from the tillers at prices which not only did not leave profits, but, on the contrary, caused them such losses that it was to their interest to produce the lowest possible amount. (3) The deportations and interference which the Christian population in general, and especially the Armenians, had to suffer. This hatred of the Christian which had such deplorable results only impoverished the country, which thus saw itself deprived of the only class capable of directing commerce.

For these reasons the war has had a disastrous after effect on the general situation of the country.

COMPANY NOTES & REPORTS

Egyptian Delta Light Railways.

The report of the Egyptian Delta Light Railways for the year ended March 31 last states that in consequence of the recent disturbances all lines were completely closed to traffic for a period of 50 days—namely, from March 17 to May 5, 1919 (15 days of which fell within the company's financial year)—and were only partially working for a further period of 30 days. The material damage done to the permanent way, rolling stock and buildings is estimated at £47,179 and the loss of revenue up to March 31 at £14,153, total £61,332. A claim for compensation has been made to the Egyptian Government. Gross receipts amounted to £366,043, against £292,520. The number of passengers carried was 6,189,221, as compared with 7,081,061. Gross receipts under this head were £223,739, an increase of £44.064, the average per mile per week being £7 13s. 8d., compared with £6 3s. 5d. The gross receipts from goods traffic were £134,135, an increase of £28.923, the tonnage lifted being 631,425 tons, a decrease of 48,170 tons. Working expenses amounted to £195,194, as compared with £171.331. The ratio of actual expenses to gross earnings was 53.33 per cent., as compared with 58.57 per cent. The balance carried to net revenue account is £170.850, which, with interest and dividends earned, amounting to £10,547, and with the balance brought forward of £85,353, gives a total of £266,750. After providing for interest on debentures and for all fixed charges, placing £35,140 to general reserve and making provision for the proportion of profits due to the Egyptian Government under the terms of the concession, amounting to £23,503, there remains £146.370. The Board recommend a dividend of 5½ per cent. on the preference shares for the year, which will absorb £57,243, leaving £89.127 to be carried forward. Meeting, Winchester House, E.C., August 21, noon.

Bengal Iron and Steel.

The report of the Bengal Iron and Steel Company for the year ended September 30, states that the net balance of profit available, including £35,208 brought forward, after providing a reserve of £167,000 for income-tax and excess profits duty for the year, is £182,630. Deduct portion of Manharpur prospecting and development expenses written off £712, transfer to general reserve fund in order to bring that fund up to the amount necessary to provide for the bonus on the conversion of the Founders' shares £7,350, transfer to the credit of depreciation, colliery sinking funds and ferro-manganese special furnace repairs account £41,558, and debenture stock interest £10,000, there is left £123,010. The directors propose to deal with this as follows:—Dividend of 6 per cent. for the year ended September 30, 1918, on the preference shares (paid March 31, 1919), £9,000; dividend of 32 per cent. for the year ended September 30, 1918, on the 262,350 ordinary shares (which include all the shares issued in exchange for the Founders' shares on conversion) as follows:—8 per cent. paid March 31, 1919, 8 per cent. paid June 30, 8 per cent. payable on September 30, and 8 per cent. payable on December 16 next, £83.952, leaving a balance of £30.058 to be carried forward. The scheme of arrangement for increasing the ordinary share capital of the company to £262,350 and extinguishing the Founders' shares by the issue to holders thereof of the 37,500 new ordinary shares, which was approved on August 29 and September 18 last, was sanctioned by an order of the Court, dated January 17 last. The general reserve has been increased to £37,350 by the transfer of £7,350 from profit and loss, and this sum has been applied to payment for the additional ordinary shares issued by way of bonus to the holders of the Founders' shares. The shares comprising the new issue rank pari passu with the old ordinary shares and are entitled to participate in all dividends declared or to be declared subsequent to that for the company's financial year ended September 30, 1917. Meeting, Cannon Street Hotel, E.C., September 5, noon.

Hyderabad (Deccan).

The report of the Hyderabad (Deccan) Company for the year ended December 31 last states that the output of coal shows a decrease of 4 per cent. as compared with the previous year. The amount available for sale, owing to colliery consumption, was 6.6 per cent. less, while the cost of winning the coal was 10 per cent. more. The new pit near the western boundary of the coalfield has reached the coal, which is reported to be of quality equal to Oosman Pit coal. The famine in India has been the cause of some considerable anxiety, but the manager, Mr. Trotman, made provision by purchasing sufficient supplies of rice, and thus kept the labour on the field by securing for them ample food at a reasonable price. This, however, has for the time being locked up a large amount of the cash resources of the company. Owing to the high cost of plant and machinery, the cash required for capital expenditure at Singareni Collieries during the next few years will be considerable. Boring on the Paloncha coalfield, which lies some twenty miles to the east of the Singareni coalfield, has proved a seam of coal over a large area, equal to Ram-paid coal. Further boring to prove deeper seams is being carried out with all possible speed. As an increased demand for coal is expected owing to the development of industries in India, it is desirable that the opening out of this field should be pushed on with as little delay as possible. Further developments at Singareni will also have to be carried out. The value of securities represented by £51,833 in the balance-sheet was £44.883 at the market prices current on December 31, 1918. The directors have set aside £22,000 for depreciation. After allowing for this and £2,000 for the reserve, the accounts show a profit of £31,573, which with the amount brought forward of £20,782 gives a credit balance of £52.354 and a dividend reserve account of £5,600. An interim dividend of 1s. per share, amounting to £11.200, has been paid on account of the year, and the board now recommend a final dividend of 1s. per share, less income-tax, making 2s. per share for the year. Although in normal times a dividend of 3s. per share could have been paid, with only a partial encroachment on the dividend reserve, this is not in present circumstances considered advisable, and it is therefore proposed to employ the dividend reserve in part payment of the dividend and carry forward £35,554. Owing to the famine and a great increase in the working costs since the beginning of the year, due to circumstances connected with the war, the prospects for the current year are not so favourable. The most serious rise in cost is due to the unprecedented appreciation of the Halli Sicca rupee, in which currency payments for the labour on the colliery and local purchases are made. The ultimate prospects of the company are, however, in no way impaired, but rather warrant an early and energetic development of the properties.

Southern India Tea.

The report of the Southern India Tea Estates for the year ended February 28 states that, after adding the balance brought forward, providing for general expenses, London office expenses, and writing off £1,000 for depreciation of machinery, the net amount at credit of profit and loss is £12,392. It is proposed to pay a dividend of 10 per cent., free of income tax, on the ordinary shares, dividend of 6 per cent. on preference shares, place to reserve £1,000, and to carry forward £6,684. The ordinary dividend, free of tax, is equivalent to 14 1-5 per cent. gross, with income tax at 5s. 11d. in the £.

Mahawale.

The report of the Mahawale Rubber and Tea Company for 1918, states that profit and loss, including the balance brought forward after making the appropriations and adjustments applicable to 1917, shows a credit balance of £12,616. The directors propose to pay a final dividend of 15 per cent., less income-tax (making 20 per cent. for the year), to write off £500 for depreciation, to place £250 to reserve for doubtful coast advances and £1,500 to taxation reserve, and to carry forward £2,366. During the year excess profits duty for 1917 amounting to £6,697 was paid.

Southern Shan States.

The report of the Southern Shan States Syndicate (1909) for 1918 states that the item of sundry creditors and reserves stands in the balance-sheet at £1,369, as against £2,210. The debtors have also been reduced during the year from £1,499 to £1,144. Cash in hand at the end of 1918 was £7,363, as against £6,480. The holding in Mawchi Mines remains unaltered. With regard to the other investments, the market price of the shares in the General Petroleum Corporation has considerably improved. The shares are, however, shown in the balance-sheet at cost price. The liquidation of the Burma Trust has been completed, and the final winding-up meeting was held on April 28 last. A final dividend of 8.625d. per share was declared and paid. This dividend on the syndicate's holding represents £719, which will be dealt with in the current year's accounts. As this liquidation has now been completed, in the accounts for the year ending December 31 next the items of £3,500 on the liability side of the balance-sheet and £1,000 on the assets side will disappear, and the return on the investment, amounting to £3,219, in addition to the £1,000 paid on the shares, will be dealt with in those accounts. The gross profit is £7,043, and after paying debenture interest and allowing for income-tax deducted from dividends received the net profit is £4,801. After providing for the amount required for debenture holders (about £1,030), the directors recommend that the balance be applied towards writing down the debit balance of profit and loss, which will then be reduced to approximately £18,341. The result of the company's operations for 1919 will largely depend upon the results obtained from its holding in Mawchi Mines. The directors who are all members of the Mawchi Board, are fully satisfied with the progress of that company.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanjue, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Wednesday.

The market in Egyptian securities has been somewhat idle this week, there being very few changes in prices to record and these are generally in a downward direction.

Among Government stocks, Egyptian 4 per cent Unified have declined half a point to 83½.

In Bank shares National Banks have fallen ⅛ to 21⅛, but all others are unchanged.

Amongst Land shares Aboukirs have been fairly extensively dealt in, but without changing the price. Egyptian Consolidated Lands are a trifle easier at 2s. 6d., and New Egyptians, after the exchange of a few hundred shares are quoted about 1s. lower at 23s. 6d. Sudan Plantations have fluctuated between 7⅞ and 8¼, and close to-night at 8, a decline of 3-16; while Union Foncieres also are a trifle easier at 73s.

Among Miscellaneous descriptions, Salts and Sodas are a shade harder at 3 1-16.

In the Oil division Anglo-Egyptians "B" are 3-32 easier at 5 15-32, and Roumanian Consolidated are 1-6 lower at 20s. 9d.

Amongst Greek securities the 1881 and 1884 loans are half a point down at 73. The others are unchanged.

ROUMANIAN DOCK DUES.

The Board of Trade have received through the Foreign Office a copy of a dispatch, dated July 17, from His Majesty's Consul-General at Bucharest stating that by a decree dated June 27, 1919, new pilotage dues have been fixed for vessels entering and leaving the docks at Galatz and Braila. The dues are to be paid to the harbour masters at those ports and are calculated on every ten tons of a ship's net registered tonnage as shown by the ship's papers, and are applicable alike to sailing vessels and steamships. The dues are paid in full by each ship on her first entry into the docks, while on subsequent entries of the same ship in the course of a year a reduction of 10 per cent. is allowed. In case a ship employs the services of a tug the dues for the tug are payable by the ship employing it. The following is a table of the new dues:—Ships up to 200 tons, 30 bani per 10 tons; ships of 201 to 400 tons, 40 bani per 10 tons; ships of 401 to 600 tons, 50 bani per 10 tons; ships of 601 to 800 tons, 60 bani per 10 tons; ships of 801 to 1,000 tons, 70 bani per 10 tons; ships of over 1,000 tons, 80 bani per 10 tons.

The directors of the Assam Frontier Tea Company announce a dividend of 20 per cent. (40s. per share), free of tax, on ordinary shares for the year, and 7 per cent. (14s. per share), less income-tax, on preferred shares for half-year, making 10 per cent. for year, both paid on July 21; £20,000 to reserve, £583 to provident fund, £30,474 forward, subject to excess profits duty.

NOTES OF THE WEEK.

An Anglo-Persian agreement was signed on August 9, and, being made public in London a few days ago, has naturally revived the strong interest in Persia and Persian affairs which has so long existed in this country. The terms of the Agreement and its significance are dealt with in our leading article, and here we need only emphasise the hope that Persia has now entered upon a period of greater prosperity and truer freedom than she has enjoyed for many years past. We would also express the sincere good feeling with which Englishmen are looking forward to the visit of H.I.M. the Shah. Other Shahs who have visited this country have always been received as welcome guests, and the present youthful ruler is assured of a hearty welcome. The British public never fails to respond to the appeal made by the sight of youth called on to assume the responsibilities of sovereignty; and attempts which have been made to misrepresent the reasons for Shah Sultan Ahmed's journey and for his visit to our shores will only increase the good will of our people for himself and his subjects.

The Roumanian reply to the protest of the Supreme Council in Paris was very moderate in tone, and he would be a captious critic indeed who would find fault with it on this ground. It appears to have been satisfactory upon the whole even to the august body to which it was addressed, and as a result the tension that was perceptible a week ago is now relaxed. The Roumanian Government declared that "Roumania has not changed her territorial claims according to the success of her army, but she does consider that the new military efforts that she has been constrained to make . . . and the services which she has rendered to civilisation by her sacrifices, give her a new title to claim her rights." Again: "The Roumanian Government could not foresee that the Peace Conference would consider the Armistice of November, 1918, as still existent after having received from it the invitation to co-operate in a military action against the Hungarian Army. Still less could it foresee this attitude after having been the object of a general offensive on the part of this army." To the ordinary man these things look clear enough, but it may be difficult to see them clearly from Mount Olympus. The Council, to judge by its reply, was largely concerned about "the fact that no final recovery of war, railway, or agricultural material or of cattle, etc., can take place at present." The Olympians, it would seem, have a sufficiently keen eye for the main chance.

The Supreme Council, beginning to realise, perhaps, that its handling of this Roumanian-Hungarian-Bolshevist entanglement has not been entirely felicitous, and that the world was getting heartily sick of the inexplicable delay which was finally ended by Roumanian action, has modified its previous *hauteur;* and Roumania has lately had less cause to feel that her services to the Allies must have been forgotten. The Inter-Allied Generals have refrained from any appearance of wishing to issue instructions to the Roumanian troops, and have been conferring with the Roumanian Commander as to future action. The net result, at the time of writing, is that Budapest is to be provided with a force of 6,000 Hungarian police, and that a few Roumanian troops will be left in the neighbourhood of the city.

As we anticipated, Kurdistan declines to settle down and adjust itself to the new order of things. South Kurdistan is semi-officially described as "still disturbed," and since a fresh attack on a British detachment in this district is reported, the description cannot be regarded as unduly pessimistic. In Central Kurdistan it has been necessary to dispatch a punitive expedition to Amadia in order to arrest some of the inhabitants who had murdered British officers and men. This town lies north-east of Mosul, from which it is distant about fifty miles, and is in the Hakkiari country, which has never enjoyed a reputation for law abiding. Sir Mark Sykes described the town thus in "Dar-ul-Islam": "As a position for observation and defence I should deem it almost perfect even now; for the heights behind, which command it, are inaccessible. . . The track which leads up to the town is steep and almost dangerous." The successful surprise of such a place is a feat on which the punitive expedition may justly congratulate itself; and will doubtless afford the Kurds another telling object-lesson.

The formation of a new Yugoslav Ministry was not an altogether easy matter, but it has now been accomplished by M. Davidovitch, leader of the Democratic party, who, finding it impossible to get together a Coalition Cabinet, has formed one from the Democrats and the Socialists, with the addition of a non-party Minister for War. Whether the combination will be able to hold its own against all possible combinations of other parties is rather uncertain, but

Digitized by Google

it is much to be hoped that Yugoslavia may not suffer from a succession of ministerial crises at a time when it requires all its energy to cope with the very serious problems, internal and external, by which it is confronted. The new Prime Minister, who was formerly Minister for Education, enjoys a high reputation, while the party he leads is the strongest unit in the Serbian Parliament; and in all probability in any real emergency he may count upon the support of the best men of all parties, whose first thought will very rightly be not for their party, but for their country. They realise that if Yugoslavia is to live and prosper it must present a united front to the world, especially in these days when it is still possible to readjust frontiers without too seriously incommoding the official map-makers. Thus, while it may perhaps be necessary, for party reasons, to let off a few fireworks upon occasion, we may surely expect the display to be kept within reason.

Three important Turkish prisoners have succeeded in making their escape—General Halil Pasha, who was in command against us at Kut-el-Amara; Kuchuk Talaat Bey, an active member of the C.U.P.; and Nuri Pasha, younger brother of Enver Pasha. The escape of Halil Pasha, who was confined at the Ministry of War in Constantinople, is particularly vexatious; for he was rather more than suspected of responsibility for certain crimes for which reparation must sooner or later be made. Nûri was in the custody of the British military authorities at Batoum, and his disappearance is surrounded by mystery. He was awaiting trial on a charge of being concerned in massacres; and his escape is the more regrettable because it will almost inevitably enhance the prestige of the C.U.P. and its agents in Transcaucasia.

The escape of these prisoners was at first reported to be responsible for the resignation of Nizam Pasha, the Turkish Minister for War; but later reports ascribe his act to a difference of opinion with his colleagues regarding the subject of the elections. The Constantinople correspondent of *The Times* anticipates that some C.U.P. candidates are likely to be returned, and that the non-Moslem elements will take no part in the elections, "which," he adds, "is probably wise in the circumstances." What Nizam Pasha's views on these subjects may have been he himself alone knows. His resignation may have embarrassed the Cabinet slightly, but he has already been replaced by Shefik Pasha, who has lost no time in justifying the saying regarding new brooms sweeping clean. Among high officials who have been dismissed by him is the Military Governor of Constantinople.

The Constantinople correspondent of the *Daily Express* reports that "a Smyrna court-martial has condemned tho Greek Colonel Skina to penal servitude for life in connection with the conduct of Greek troops after the landing last May." The infliction of this sentence will doubtless help to appease the very strong feeling of indignation that was aroused in many circles other than Turkish by the acts referred to, and the Greeks are to be congratulated upon having shown real courage in grappling with at least one of the many awkward problems which confront them at Smyrna. If they persevere in the same spirit they may yet "make good," and falsify those rather numerous prophets who foretell disaster for them and for Smyrna alike if their occupation of the town be prolonged.

In the House of Commons on Monday Mr. Cecil Harmsworth announced that it is hoped that the Commission for Egypt over which Lord Milner will preside will leave this country early in October. He added that with one exception all the gentlemen invited to form part of the Mission had accepted, but he would not give the names before the completion of the list. No better head than Lord Milner could have been found for the Commission. He has first-hand knowledge of the country and its financial requirements and potentialities, combined with cool judgment, resolution, and the capacity to take a long view. If his colleagues are as well chosen, and if the Commission is backed by the Home Government, it should inspire in Egypt that confidence which is requisite in order to secure the maximum benefit from its labours.

Members of the Zaghlulite deputation to Paris are now drifting back to Egypt, somewhat depressed, it may be supposed, if not chastened. The "party" has gained no credit at all by the Paris excursion, and though some of its members have contrived to have what they would probably regard as a good time in the French capital, their supporters will extract no particular satisfaction from that fact. Whether the one-time Minister for Education and his followers will now accept the situation as they find it, and endeavour to fit themselves into the existing scheme of things, rather than to remodel it, time alone can show. Zaghlul Pasha might now serve his country well by bringing his influence to bear in favour of law and order; and it is certain not only that it would be easier for him to work with the English than against them, but also that by so doing he would be far better placed to help Egypt along the path of progress.

Egypt's present plague is of an economic rather than a political character, and Cairo and some of the larger towns are suffering from an outbreak of strikes. As is shown by the letter of our Cairo Correspondent, which will be found on another page, some of these strikes are not without their humorous aspect, but they are to be deplored because they serve to prolong the restlessness from which the country has been suffering for quite a long time. Moreover, there are signs that they are taking on a new character: that foreign influence has been brought to bear to make them more annoying thorns in the side of the British administration, and that foreign gold is being freely spent to achieve that purpose. One of the recently returned Zaghlulites, for instance, has been bragging of his recent meetings with Bolshevists; and claims that English Bolshevists in Paris and London have assured him that the independence of Egypt will ere long be proclaimed by "the London Soviet." Curiously enough the English (?) Bolshevists omitted to inform the credulous gentleman of the exact date on which this interesting event will actually take place.

The withdrawal of British troops from Armenia has actually begun, but it is to be conducted very slowly, extending over two months, and the official view is that it is unlikely to be attended by a massacre of Armenians, as has been feared in some quarters. In point of fact, it is announced, there are very few British troops in Armenia, the bulk of our force in that part of the world being in Georgia, and the few outposts in Armenia being engaged only in guarding property and lines of communication. At the same time, it is officially recognised, the presence of even these small bodies has actually served as a check on the display of the secular hatred that still flourishes in the region in spite of—or, more probably, because of—the blood that has been shed there in the past; and their withdrawal will mean a relaxation of this restraint. Efforts are, therefore, being made "to secure the effective policing of the country by arrangement among the Allied Powers." Whether the dispatch of General Harbord and other generals of the United States Army to investigate conditions in Armenia from the military point of view had any connection with these efforts is uncertain. But in view of the fact that the investigations are to provide information regarding the questions that would be involved in taking over and administering the country, they can hardly be completed in time for America to undertake the policing duties now being abandoned by us; and previous attempts to induce other Powers to accept the responsibility do not encourage hopes of success in the present case.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 4.

A Waiters' Strike.

Cairo has been at first amused and later on somewhat perturbed at the great strike at its favourite tea-shop and *patisserie*. The peaceful strike of the waiters was complicated by the somewhat over-prompt action of a "blackleg," who, when his comrades began to reproach and insult him, drew a pistol and, shooting "into the brown," wounded three of the assailants somewhat severely. The strike has now ended by the owner allowing a salary of from £12 to £15 a month, but on condition that there is to be no more tipping. This clause, however, may almost be looked upon as nugatory, as it is impossible in the present stage of the world's manners and customs to prevent a customer from tipping a waiter. Consequently the staff of this establishment will probably benefit enormously by the strike. This is excellent business for them, but it has put up a detestable precedent from the point of view of all other restaurant and *café* proprietors. As for the public, it cannot temporarily be appreciably affected by the issue.

On the whole the sympathies of the consumers and customers are, probably, rather against the employers of labour, even if they do not approve altogether the demands or methods of the employed. Egypt has enjoyed an exceptional cheapness of living compared with the cost in most other countries, and if she has done so it has been in a great measure due to the fact that the price of labour has increased but little. It has certainly not been through any self-sacrifice on the part of traders in commodities of life.

The Profiteer Again.

Take, for instance, a bottle of whisky, which is bought for, say, thirty-five piastres. The bar-keeper divides it into twenty glasses, which he sells for five piastres each, and makes sixty-five piastres clear profit, or about 200 per cent. A native paper, the *Ahaly*, states that the average profit on beer is 300 per cent., and on mastic, vermouth, and other short drinks 400 per cent. It has been whispered by a waiter in one of the big *cafés* that its owner makes nearly £2 a day on his backgammon board, which itself is only worth ten shillings! A kilo of cheese is sold at 100 per cent. profit, and a kilo of olives, which costs six piastres, is sold for sixteen. Sardines, which the grocer buys at four piastres wholesale, are retailed at forty the oke. And so the profiteers have consistently lined their own nests and fleeced the public without raising the wages of the employees who help them to get rich quickly. It cannot, therefore, be greatly wondered at if at length and at last the working classes in Egypt are beginning to follow the examples set them in Europe. Their demands are often extravagant, and the labour movement is still in its infancy, but still the embryo is here. There are no trades unions yet to look after the strikers and their families, but it is a mere question of time for the various guilds and working classes to organise on the usual lines.

More Labour Manifestations.

As a specimen of the quaint procedure that is adopted, the case of the tramway employees may be quoted. They formed a syndicate and placed themselves "under the patronage" of Prince Ismail Daoud. This prince once volunteered to join the British Army, and is the son of ex-Prince Mohammed Daoud, who has just been expunged from the list of relatives of the Sultanian family entitled to enjoy the rank of prince. Whether this degradation applies also to the sons of Mohammed Daoud is not apparent, but presumably if the father is no prince, much less is the son.

One of the latest manifestations of labour has been the strike for an increase of wages by 10 per cent. of the employees of the Delta Light Railways. Amongst Government employees the *Moawins* of the province of Gharbieh are demanding increase of pay and various other administrative privileges and reforms, and similarly the employees of the Wakfs and Sheikhs of Harahs have put in for various favours. The native lawyers' clerks of Beni-Suef are also said to be combining "to defend their interests," and are beginning by a request for an increase of 50 per cent. in salary.

Yet another step towards improvement in the conditions of labour has been the adoption by all the principal shops in Cairo of what is known as "the English week" of forty-eight hours' work and Saturday afternoon and Sunday "off."

Lastly, it is rumoured that medical men are talking of raising their fees all round, in view of the increased cost of living. These are all signs of the times, which Egypt could not hope to escape from.

Bolshevism or the Koran.

Bolshevism has not openly appeared under its name yet, but the Nationalists are beginning to talk of its exploits and its tenets with some approval and satisfaction rather than otherwise. On the whole, however, there does not seem to be the same danger of Moslems being infected with this ultra-Socialistic theory as there is in Christian countries, where religion is a thing apart from politics and government. The Koran is at once a creed and a code to govern the life of individuals and of nations, and it is diametrically opposed to the creed of the Bolshevists.

A Moving Ceremony.

The anniversary of the opening of the Great War—August 4—was marked in Alexandria by a moving ceremony at the British Military Cemetery at Hadra. The French residents having asked permission to pay a tribute to the immortal dead who had died for the peace of the world, a Delegation, consisting of the Acting French Consul and many French officers and deputies of the nation, met the G.O.C., Alexandria, at the cemetery.

A magnificent wreath was then laid on a chosen spot, and most cordial speeches were made by the Consul and by General Price, followed by an oration delivered in honour of the heroic sons of England and France by M. Barbaza, whose own son has been numbered amongst the victims of the Armageddon.

To-morrow another melancholy ceremony will take place in Cairo, when the remains of Pope Bey and of the British officers and other ranks who were murdered in the train outrage at Deirut will be brought to Cairo, and be given a solemn military funeral here, at which representatives of all the corps and units of the garrison will be represented.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

BELGRADE LETTER.

POLITICS IN SERBIA.

(From Our Own Correspondent.)

Belgrade, August 5.

The Ministerial Crisis.

The Ministerial crisis, which was foreshadowed in last week's letter, has broken out. The resignation of Dr. Koroshets and Dr. Gostinchar, which was withdrawn, was attributed partly to personal differences with the President of Council, M. Stoyan Protitch, but by many to a disinclination to be a party to a Peace Treaty which assigns two hundred thousand Slovenes to a foreign Power. At the time of that crisis it was reported in Radical circles that the President of Council intended to resign, which would involve the whole Cabinet. On July 21 a special session was held to sign a number of decrees, at which there appears to have been a more than animated discussion, in which several of the Ministers declined to serve any more under M. Protitch, and challenged him to report the resignation of the Cabinet to the Prince Regent, who was at the time away from Belgrade. On August 2 M. Protitch tendered the resignation of the Cabinet to the Prince Regent, basing his action upon the impossibility of working in unison with the Minister of the Interior, M. Pribichevitch, on the failure of the communications of Serbia and on differences on the question of agrarian reform. There was another incident, which certainly had considerable weight. In the Radical organ, *Demokratsia*, there appeared in the news column a wire from Zagreb announcing that the Pope had confirmed Bishop Akshamovitch to the see of Diakovo, rendered immortal by Bishop Strossmayer, the protagonist of the Yugoslav movement. The President of the Council, M. Protitch, who is also leader of the Radicals, denied official knowledge of this, although Dr. Bauer, Archbishop of Zagreb, had known of it a month previously. The latter published a statement to the effect that Akshamovitch had been nominated by the Croatian National Council, which nomination had been signed by Dr. Koroshets and M. Pavelitch, and that he had not considered that it was his duty to inform the Government, but that of the Papal Nunciature in Vienna. M. Protitch complained that this nomination was known in Zagreb before it was announced in Belgrade, and that he had not been officially informed; and the Radical organ, *Tribuna*, declared that the Government should decline to recognise the nomination, and thus bring on a conflict with the Holy See.

M. Protitch's resignation was accepted by the Prince Regent, whereupon the President of the Council paid a hurried visit to Zagreb, intending, according to his opponents, to make an alliance with the *Narodni Klub*, which represents the Starchevists, or Nationalists of Croatia, who number thirteen members in the Skupshtina. As this party, weak as it is, is avowedly separatist, M. Protitch's opponents accuse him of flirting with the partisans of disunion. Meanwhile, the Democrats, lead by Dr. Davidovitch, Minister of Education, and M. Marinkovitch, Minister of Mines and Forests, two of Serbia's best politicians, and M. Pribichevitch, the well-known Croat patriot, had been holding conferences and meetings, and replied in the Press to M. Protitch's statements in his letter of resignation. They state that his differences with the latter-named Minister are purely personal; that his complaints on the question of communications are unfounded, since all that he asked for has been achieved, and that as far as concerns the question of agrarian reform, perhaps the only controversial question before the Government, M. Protitch himself had recently signed a number of decrees, which were signed by all his colleagues, after preparation by the Minister of that Department, Dr. Poljak. Finally, they roundly accuse him of idiosyncrasies so marked that with the best intentions in the world it had become impossible to collaborate further with him.

The Political Parties.

One thing is certain, and that is that the Radical Party, which has been all-powerful for so many years in Serbia, has made many enemies, who accuse M. Protitch of having learnt during the bitter years of war and exile methods of absolutism which might then have been justified by circumstances, but which are intolerable nowadays, especially when his Cabinet includes prominent men from all parts of Yugoslavia. It certainly appears that in Serbian politics the personal equation plays a greater part than it does in the West. It was common conversation in Salonika before the liberation that if the Radicals went to the polls on their return to their country they would go out of power, and to-day, when their policy, directed by the Grand Old Man of Serbia, M. Pashitch, has achieved their dream of union and final dispersal of their secular enemies, the Turks on the one side and the Austro-Hungarians on the other, the Radicals do not command a majority in the Skupshtina.

The strongest party is the Democrats, with a hundred and twenty members, led by Liub. Davidovitch, Minister of Education, Marinkovitch, Minister of Mines and Forests, both Serbs, and Svetozar Pribichevitch, the Croat; but even they are rather heterogeneous, with a strong Left, including a few Bosnian and Croatian extremists and a few Independents; their Right wing includes the remains of the Forward Party, some Nationalists, and a few Independents. The Radicals have a strength of only seventy-two members, but are a powerful and organised group. Their policy is asserted by many to be Tory rather than Radical, for they are opposed to the most modern reforms, object to Proportional Representation, and favour a rather conservative policy on the agrarian question, which is the only really vital question in contemporary Serbian politics upon which opinions are seriously divided. The ideal of the Radicals is a *Velika Srbija*, in which all provincial differences shall be sunk and the country eventually unified into an entirely single state upon the model of the old Serbian organisation. At the same time, the Democrats are stated to be advocates of a rapid and complete fusion of all the provinces into a single form, while the Radicals are in favour of a slower process, all of which is extremely confusing for the foreigner to follow.

A third political group in the Skupshtina is formed by a series of dissidents and relicts of former parties now almost extinct; there are the Clericals, a new feature in Serbian politics, who are a patriotic party numbering nineteen members in the House, led by Dr. Koroshets; these are mostly Croats and Slovenes, as there are practically no Roman Catholics in Serbia proper. At the moment, this party is holding somewhat aloof, waiting to give its support to a strong, patriotic coalition government; then there are the Starchevists, or Croatian Nationalists, represented by the *Narodni Klub* of Zagreb, with thirteen members. The old Liberals, the Whigs of Serbia, who were founded by Jovan Ristitch in 1860, have outlived their usefulness; they number but six members to-day, led by Ribaratz. Then there are thirteen Socialists, led by Kristan, half-a-dozen Dissident Radicals led by Trifkovitch, Minister of Justice; and seven Dissident Democrats led by Dr. Bogdan Medakovitch. If this third group holds together, it will determine the balance of power between the Democrats and the Radicals, even if the latter succeed in combining with one of the minor parties. To the onlooker, it would certainly seem an unnatural alliance between the Radicals and the *Narodni Klub*.

National Feeling.

The crisis has already lasted a full week; the old Ministers are carrying on, while there are goings and comings, and much talking and many conferences, and the expenditure of much ink, of which there threatens to be a shortage, while everyone is wondering what the new Government will be. For while all hope for a strong Coalition Cabinet to steer the country through these critical days, it does not appear likely that there can be one if the majority of the Ministers refuse to sit in the same Cabinet with M. Protitch. Without him in the Cabinet the Radicals will be in opposition; if he joins, the Democrats will stand out.

The declaration of the Democrats referred to above is signed by the three acknowledged leaders of the party, whose names have been already quoted, and also by Dr. Veljkovitch, Minister of Commerce; Dr. E. Lukinitch, Minister of Posts and Telegraphs, who is regarded as one of the soundest men in the late Cabinet; Dr. Alaupovitch, Minister of Religions; Dr. Albert Kramer, Minister for the Constituent Assembly; Dr. Urosh Krulj, Minister of Health; Dr. Franjo Poljak, Minister of Agrarian Reform; and Shefkia Gluhitch, Minister of Agriculture. If this strong group succeeds in forming a Government it will certainly have the support of Dr. Koroshets and his Clericals, and probably of the better elements in the smaller nondescript groups.

Independent opinion in Belgrade believes that the real cause of the crisis is not so much hostility towards M. Protitch, though that may well be a contributory cause, but the dislike of every member to associate his name to a treaty that is profoundly unpopular throughout Serbia, as there is no question that the country strongly feels that it has not had fair treatment in Paris. Each fears that when he appears again before his constituents they will turn away from the man who gave his signature to a treaty that gave Temesvar to the Roumanians, and two hundred thousand Slovenes, with the port of Fiume and a piece of Dalmatia to the Italians. Rightly or wrongly, they feel that the Fiume question will not be solved in their favour, and that after all their sufferings they will remain an inland State, in spite of the size of the country and their

Digitized by Google

twelve or thirteen millions, and that for access to the sea they will be dependent upon the goodwill of Greece at Salonika—which they dread, remembering 1915, and knowing that M. Venizelos cannot live for ever—and of Italy or some international authority at Fiume, which is galling to so high-spirited a people. And that any part of Dalmatia should be amputated they resent very strongly, as the Dalmatians are strongly patriotic and national, and the Italian element, even at Zadar, is an intrusive one. Moreover, it has been categorically stated that Serbia is to receive neither damages nor indemnity, and even when facts show this to be utterly wrong, the feeling of irritation once aroused, is not likely to be easily soothed.

Meanwhile, all saner elements in the country, and all well-wishers of Yugoslavia, are heartily praying for a rapid solution of the crisis, and a final one, so that the young United Kingdom may gain confidence and respect abroad, and proceed with the development of its own career on broad lines according to the national genius.

BULGARIAN NOTES.

(From Our Own Correspondent.)

Sofia, July 26.

Internal Affairs.

Up to the present order has been maintained in the country. In connection, however, with the campaign for the Parliamentary elections, which are fixed for August 17 of this year, the extreme elements, although an insignificant minority, have turned to their great advantage the present precarious international situation. Supplied with plenty of money by the Russian Bolshevists, and by the Socialists and Bolshevists of Athens and Belgrade, they manifest extraordinary activity, and are spending money right and left in their endeavours to gain the votes of the people. Their propaganda is especially successful among the dismissed officers of the Army, who were given up on the demand of the Commander-in-Chief of the Allied Armies in Bulgaria. The National Army has been reduced to 40,000 rifles. About 750 officers have been dismissed, and since their pension is, owing to the extreme cost of living, quite inadequate to provide for the subsistence of their families, the Communists make their way with success among them, giving them 30 francs a day, and promising them several times this amount if they help them to proclaim a Soviet Republic. The Government, though working under most unfavourable conditions, is taking heroic measures to smash the Bolshevist movement, and we may hope that with the sincere co-operation of the Allied Armies full success will crown their efforts.

The Bulgarian Peace Delegation.

On leaving Bulgaria, the Delegation despatched from Rustchuk, through M. Madjaroff, the Minister for War and President of the Cabinet Council, the following appeal to the nation:—

"On starting for Paris, where is to be decided the fate of our nation, the Delegation addresses a sincere appeal to Bulgarian citizens to preserve as hitherto calmness and order, counting wholly on the just decision of the Great Powers, whom History has called to create, upon the principles of Liberty, Right, and Equity, lasting conditions for the peaceful development of all nations in the Balkan Peninsula. The wise and worthy behaviour of all in these fateful circumstances has greatly helped the fulfilment of our heavy duties." For all the delegates, signed, T. Theodoroff, Prime Minister.

Besides the five plenipotentiaries whose names I have given in previous letters, the Delegation consists of the following persons:—

Advisers: — MM. Iv. Enst. Gueshoff (former Prime Minister and Leader of the National Conservative Party), Prof. Stephen Panaretoff (Bulgarian Minister Plenipotentiary at Washington), General Loukoff, D. Tzokoff (former Minister Plenipotentiary at London), Tng. B. Morfoff (Director of the Bulgarian State Railways), and Dr. N. Sakaroff (a lawyer and financial expert).

Secretaries:—MM. Dr. D. Stancioff (Bulgarian Minister at Paris, and former Foreign Minister), Stephan Balamezoff (Chief of the political department at the Foreign Ministry), C. Minkoff (former secretary at the Bulgarian Legation in London), N. Antonoff (Director of the Bulgarian Telegraph Agency), Lieut.-Colonel C. Nikoloff, Captain Petroff Tchoniakoff, N. Stoïloff (secretary at the Foreign Ministry), Captain V. Tzenoff, and M. L. Tcholakoff.

Private Secretaries to the Plenipotentiary Delegates:—MM. K. V. Mouraveïff, to the Agrarian Leader Alexander Stambolisky; Sakyzoff, to the Moderate Socialists' Leader, Minister Yanko Sakizoff Ghenoff, to the Radical Minister, Venelin Ganeff; and Pomakoff to the Tzankovists' representative, Michaïl C. Saravoff, former Finance and Diplomatic Minister at Vienna and Constantinople.

Experts: — MM. M. N. Stoïanoff, Director of Public Debt; the Professors D. Michaltcheff, I. Ivanoff, and D. Michaïkoff, Colonel Noïkoff, I. Molloff, S. Touleff, Shefket Beyoff (a physician), I. Kaleff (Vice-President of Bulgarian Zionists), Pastor D. N. Fournadjieff (representative of the Bulgarian Evangelists), and his wife, Mrs. Z. D. Fournadjieff. Including copyists and other minor officials, the delegation numbers forty-six persons.

Macedonia.

A fortnight ago Mr. Ivan Karendfalott, Attorney-General at the High Court of Cassation, native of Bitolia, Macedonia, and President of the Executive Committee of the Macedonian Benevolent Brotherhoods, convoked a congress at Sofit, whither were sent delegates of eighty Brotherhoods representing all the towns with their surrounding villages of the whole of Macedonia. They discussed the present sad condition of their native land, and after prolonged and exhaustive debates passed an unanimous resolution to send an appeal to the Paris Peace Conference, pleading the sacred cause of their unlucky country, and imploring a just settlement by which Macedonia should be made an independent district, with an autonomous rule, under British or American protection. This unanimous will of the representatives of the whole of Macedonia with the appeal was presented to His Excellency Brigadier-General W. Baird Gordon, His Britannic Majesty's Military Representative at Sofia, and to His Excellency Mr. Wilson, the American *Chargé-d'affaires* here, with a request to transmit it to their respective Governments.

NEW YUGOSLAV CABINET.

Reuter's Belgrade correspondent writes August 16:—The Prince Regent has signed the decree appointing the new Ministry The Cabinet which has been formed by the Social-Democratic party is composed as follows:—

M. Liouba Davidovitch	Prime Minister
M. Pavle Marinkovitch.....	Public Instruction
M. Voislav Veltkovitch	Finance
Dr. Ante Trumbitch	Foreign Affairs
M. Milorad Drachlovitch	Communications
M. Mosta Hymotyevitch	Justice
M. Velislav Voulovitch	Public Works
M. Svetozar Pribichevitch	Interior
M. Edo. Lukinitch.....	Posts and Telegraphs
M. Tougoman Elabupuvitch ...	Public Worship
M. Albert Kramer	Commerce and Industry
M. Franco Poljak	Agricultural and Agrarian Reform
General Stevan Hadjitch	War
M Vitomer Oratch	Social Policy & *ad interim* Public Health
M. Vilin Rouckscheg	Food
M. Anton Kristan	Mines and Forests

The three last named are Socialists. The Ministers took the oath at 6 o'clock this evening at the Palace.

The Greek Government has decided to postpone for another four months the enforcement of the stipulations of the Treaty of Athens, signed in 1913, according to which all Moslems who have decided to adhere to Turkish nationality are under obligation to quit Greek territory.

At a meeting of the Lord Mayor's Armenian Relief Committee in the House of Commons on August 14, Mr. W. G. Smith, Commissioner of the American Society, appealed for delay in the withdrawal of British troops from the Caucasus. There were fears, he said, of the peril of famine and also of attack on the Armenians by Tartars (under Young Turk leadership), Kurds, and possibly Georgians.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, August 10.

There is still a good deal of talk of a new Constitution; and while there is much that is decidedly unreasonable, the clearer thinkers of the island are asking for nothing that is out of the way or chimerical. Summarised, their demands amount to:—A House of Assembly, with a Speaker; an Official House, to be called the Legislative Council, which would be composed of the official members and others to be nominated by the Governor from the electors. Financial matters—the real crux—would fall into the province of the House of Assembly exclusively, whilst other matters would pass into law when approved by both Houses. Such a Constitution would bring Malta into line with other self-governing colonies.

Trade Developments.

The island has long been notorious for its lack of local industries, and, as was pointed out in these notes of but a short time ago, the presence of the Army and Navy has not been altogether a blessing to the community; whilst the capitalists of the island have shown an astounding chariness in investing capital for the benefit of all concerned. But, happily, matters seem on the way to improve, for from statistics before me I learn that the import trade has increased considerably during recent years. Under the auspices of the Horticultural Society a start is to be made in the manufacture of perfumes, and an expert from Grasse has been appointed to teach the people the methods which are in vogue in the south of France. Through the assistance of a lady of title, artificial flower-making is also to be begun. The lace industry, the products of which are known the world over, has received a great impetus during the war, this being largely due to the island being used as a sick base to the extent that it has. Malta imports annually from the United Kingdom goods valued at £1,200,000, and in return it is hoped that the Mother Country will take in exchange local fruit, chiefly oranges, figs, and grapes. In this connection it ought to be also mentioned that Mr. Giovanni Borg, Superintendent of Public Gardens and Plantations, has been entrusted by the Government to draw up a scheme to organise the agriculture of the island. Similar attention is to be devoted to the fisheries. In General Plumer, the new Governor, we have the right man in the right place, and it is characteristic of him that one of his first suggested reforms is the better housing of the poor.

Russian Refugees.

The Russian refugees are still with us, and are likely to remain here for some time to come. By one section of the public—the ill-informed—their presence has not been looked on altogether favourably. In the opinion of the people referred to, these refugees ought to be fighting against Bolshevism, but it is known as a fact that the military refugees have protested against this enforced inaction, and have done all that is possible to get away to do something. It is a pleasing fact to note that letters often appear in the local Press from the refugees, thanking all and sundry for the kindness shown towards them. The last letter on this matter was signed by no less than three princes and a count and countess. This tells the type of refugee.

News Items.

At a special sitting of the Council of Government, the Lieutenant-Governor read a minute from His Excellency the Governor regarding the appointment of a Board of Inquiry in connection with the recent riots. As regards the financial situation a considerable deficit is anticipated.

It comes as good news to all that the Postal Censorship has ceased from to-day, the 10th.

The Government is prepared to allow the exportation to the United Kingdom of 90,000 lbs. of raw cotton.

The local millers have secured two cargoes of Australian wheat. This will lighten the tension at present existing.

THE CARAVANSERAI.

The report that the jewels of the ex-Mpret of Albania have been dropped from an aeroplane in the South of Sweden sets one thinking what the wandering and scarcely winning Wilhelm of Wied is doing now. It will be remembered that when he took on the job of Mpret he uttered many windy words about what he was going to do, but, lacking the courage necessary to translate word into deed, he deemed it best to stay all the time in his palace at Valona. Finally the place became too hot for him, and he fled in imperial haste. From the most recent news it would appear that even Germany cannot hold this monkey-ish monarch, and that he has started, like James II., "on his travels again." By now he should be quite skilled in the moving business! That he will even go back to Albania is a possibility; but one cannot imagine that any respectable Albanian would touch him again with a shepherd's crook.

***

In connection with the possibility expressed recently in The Near East of ex-King Constantine's returning to Greece, I am reminded of the miraculous cure which that monarch enjoyed. He was declared by a body of German doctors to be suffering from a pericardial abscess, and his condition really was neither pleasant nor hopeful. With the insight in which olden times were saturated and at which modern times scoff, some priests proposed that the King should have recourse to a Greek icon—the very famous Virgin of the Peloponnesus. With doubting wisdom the King assented to the proposal, and the miraculous object was brought to Athens. He, stooping low to kiss it, felt in a flood of emotion as though his heart would break, and on inquiring into the causes of his feeling found that his abscess had actually broken!

***

I have been asked by a correspondent for the well-known "hymn" story of Earl Kitchener. I am surprised to find that such a famous story is not more widely known. However, as far as I can remember, the facts are these: Towards the end of the war of South Africa, when we could see the edge of the wood but were not quite out of it, a friend of Earl Kitchener sent, in anticipation of the public expression of joy, a private telegram, which read: "Can we sing next Sunday at church parade Hymn No. —— ('Peace, Perfect Peace')?" With characteristic promptness the reply came: "No; sing Hymn No. —— ('Christian! Seek not yet repose')."

***

I have just received from a correspondent some fresh facts to prove how the Turkish females are still travelling along the road that leads West. He tells me that the *yashmak* is now almost as extinct as the Dodo in Constantinople, that the dresses there are new and smart; that high-heeled shoes are worn, and the eager "flappers," more saucily to attract, are carrying swagger canes in imitation of the British Tommy. Some of these things—the high-heeled shoes, for instance—have been on the way, so to say, for some time, and I read of them unmoved. But others—the flappers—mark an epoch; and one wonders where, if they can be done even in Turkey, such things will end. In the harems of Tarsus, I have read, are to be found tawdry types of European ornaments, and by such means these unhappy females appear generally to make the brightest of a dull job. The old Orientalism is being undermined, and it must give place to a new. If they have orchestras in the restaurants of Constantinople, why should they not have baths in the houses of Konia? And if the Turkish beauties have already renounced polygamy, why should they not take unto them the unnatural virtue of cleanliness?

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

"THE MIDDLE DANUBE."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I fully agree with the principles established by your contributor in his article "The Middle Danube":—

(1) That the peoples of the Middle Danube should form an economic combine;

(2) That these peoples should be assisted to the fullest possible extent by the Great Powers of the Entente;

(3) That these peoples should be allowed a voice in the matter of choosing the friends that are to help them.

Some time ago I stated in a letter to your journal that a close economic co-operation among the nations of the Middle Danube was desirable, and I expressed the conviction that such a co-operation among the Czechoslovaks, Yugoslavs, and Roumanians was almost certain to come into being. Of course, it goes without saying that anything resembling former Austria-Hungary is out of the question. Only a genuine and free economic combination based on equal terms has a chance to be realised, and its immediate aim, as your contributor suggests, should be reconstruction and consolidation. The Czechoslovaks are ready to take part in such an economic combination, and I think they may constitute the rallying point in the Central European *bloc* as one of the most advanced nations.

The difficulties, however, will be with the Magyars and Austrians. The restoration of the Habsburgs in Hungary would certainly be a great handicap, as the Czechoslovaks can have no confidence in a State at the head of which is a Habsburg.—I am, etc.,

ALEXANDER BROZ.

ST. GEORGE PATRON SAINT OF THE COPTS?

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have read the extract from Dr. Butler's article, "The Fortunes of Egypt," published in your issue of yesterday, and I cannot agree with him when he says that St. George of Merry England is also the Patron Saint of the Egyptian Christians.

Without wishing to contradict this hypothesis, pointed out by such a high authority in Egyptian history as Dr. Butler, I should like to remind him that the only national and beloved Patron Saint recognised as the Apostle of the Egyptians is evidently the Evangelist John Mark, of Cyrene, Barnabas' kinsman. It is true that St. George was, and is still, venerated throughout all the land of Egypt, and before the Arabian cataclysm the churches dedicated to his shrine were numerous. I cannot contest either that George is a preferred namesake for Greeks, Copts, and Syrians, and that the only Greek monastery of St. George, Old Cairo, is honoured especially by Coptic pilgrims, on St. George's "Pardon." St. George's Day is celebrated two days before the anniversary of St. Mark's martyrdom. On that day the Orthodox Greeks in Alexandria return the complimentary visit of the Copts on St. George's Feast, and devoutly attend St. Mark's Church, where their Coptic brethren gladly welcome them. I have always considered the anniversary days of St. George and St. Mark as "red-letter" days for Copts and Greeks, fraternising after so many centuries of misunderstanding. In those days Dioscoros, Proterios, Achiros, Apollinarios, and the Coptic schism are not considered.

Now, I have never heard that St. George was the Patron Saint of the Copts, though I myself am proud of being born in the Land of Light. I know, of course, that the Copts claim to be the descendants of the Ancient Egyptians, and that they style themselves as "Massiheen Mourgousieen" (Christians of Mark). For them Mark is a magical name. The two cathedrals in Cairo and in Alexandria, and most of the Coptic churches, are dedicated to St. Mark. The Coptic colleges are always known as "St. Mark's Orthodox," and the Coptic Patriarch, besides attributing to himself the title of "Pope of Alexandria, the Western Pentapolis, Nubia, etc.," is also called "The Vicar of Mark's Apostolate."

I could write more on another subject—that of the tradition of St. George "The Tropaioforos," Patron Saint of the Byzantines and of the Greek Klephtes during the War of Independence. Unto this day the Greek infantry regiments proudly hoist, not the Greek mercantile flag, to which we are used in this country, but the Greek White Cross, upon blue ground, and St. George defeating the Dragon within the crest of the Cross.

Apropos of St. George, I read some time ago in the *Egyptian Gazette* a leading article, in which an erroneous statement was published concerning the Patron Saint of England. The writer pretended that St. George "with the Dragon" is no other than George of Cappadocia, one of the two Arian Georges who occupied the See of Alexandria during the exile of St. Athanasius (middle of the fourth century). I have always believed that the "genuine" St. George was the son of a Cappadocian father and a Palestinian mother. He was a Tribune of a Roman Legion somewhere in the East, and suffered martyrdom during the reign of Diocletian (A.D. 296). The pious traditions of the Greek, Latin, and Coptic Churches state that the martyr's slave brought his master's body to Lydda (Lud), in Palestine, that town being, probably, St. George's mother's birthplace.

It was then an extraordinary coincidence, gladly hailed by the inhabitants of Lud when the British entered their town on November 3/16, 1917, the anniversary date of the translation of St. George's body in the Siamonymans Church, built upon the Martyr's tomb at Lud.—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester, August 16, 1919.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I examined very carefully the letter of the "Cyprus Deputation," published by you on July 11, and though I failed to find in it anything logical justifying their demands, here I shall write some of the facts revealed me lately by my investigations.

Homer, in the second book of the Iliad (Globe ed., p. 36-44), describes the number, ships, and the country of Greeks who went to destroy the old city of Priam. He cites just 1,162 ships sent from twenty-nine different parts of Greece, including three trim ships led by Nireous from Syme, and nine from Rhodes, led by Tlepolemos. Here Homer mentions almost every country and every island inhabited by Greeks, but he says nothing about Cyprus, because Cyprus was not Hellenic. The breastplate, mentioned in the Book xi., p. 202, given to Agamemnon as a guest-gift, and not as a war-gift, is proof enough that if some help had gone from Cyprus he would not pass silently over it.

After the war of Troy, the description by Telemachus of his experiences in Cyprus is an ever-living and unanswerable argument that Cyprus was not Hellenic at all, and leaves one in doubt whether any Greek was living there. Again, his narrative shows that Cyprus was populous, prosperous, and civilised—though not in moral and spiritual qualities. I believe—and there is no reason to contradict me—that the ancestors of the people to-day living on Cyprus, and assuming to be of Greek descent, are those of whom the son of Odysseus complains so bitterly.

I have many proofs that the mythology of Aphrodite—Kypris, the coward goddess (p. 92)—is not Greek by origin. Then, as a correspondent of THE NEAR EAST once wrote, in 480 B.C. Cyprus sent 150 ships to join the fleet of Xerxes against Greece.—I am, etc.,

M. NEJMI BODAMIABISADE.

Paphos, Cyprus, August 5, 1919.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Letters often appear in your paper over the signature of Mr. N. K. Lanitis, and others, which state that it is the wish and will of the *whole* Orthodox population that Cyprus be united to Greece. If such is the case, can Mr. Lanitis, or anyone else, explain, first, why so many *Orthodox* Cypriots are anxiously *hurrying* to take out certificates of *British* nationality, especially since the "Delegation" left England? Secondly, why, when asked whether they really want union with Greece, most of Mr. Lanitis' Orthodox compatriots deny it, generally adding, "It is only a few fanatics and agitators who want this union"?

I have lived twenty years in Cyprus, and know, for a fact, that most Orthodox Cypriots would be perfectly satisfied to remain under British protection, notwithstanding anything the "Delegation" may say on the contrary.—I am, etc.,

Cyprus, July 30, 1919. M. B. E.

WHERE IS CYPRUS?

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The remarks of "Corsair" on the general ignorance in respect of Cyprus are very well founded.

We know from Mrs. Botherby (through Thomas Ingoldsby, Esquire) that the world, according to the best geographers, is divided into Europe, Asia, Africa, and Romney Marsh: the said Marsh being a spot where, in favourable weather, a witch may be occasionally discovered braving the waves in an egg-shell, or careering through the air on a broomstick. I have often been tempted to think that Cyprus has a good claim to the fifth place. If not the abode of a witch, it is the home of the most bewitching of the goddesses, and it is said that the form of Aphrodite may even now be sometimes seen, on a moonlit night, to rise from the foam at some favoured spot along the Paphian coast.

It was hardly surprising that at the time of the British occupation in 1878 many schoolgirls, and even boys, should have guessed that Cyprus was somewhere in the West Indies. Even now many persons, possibly a few M.P.s, have but a vague notion where it lies. This is very natural, seeing that Sir Charles Bruce, in an interesting paper on "Colonies and Places," located it in Europe, thereby raising the British population in the Mediterranean by more than double; seeing, also, that the Colonial Office, in the annual List, assigns it to Europe. The present Colonial Minister lately confessed that he knew "very little about Cyprus."

A friend of mine, an officer in a detachment quartered in Cyprus, took an excellent island pony to India, and there entered him for a race open to Asiatic ponies only. The Race Committee had no idea whether Cyprus was in Asia or Europe, and much time was spent before the question could be settled.—I am, etc.,

PRESS ON THE NEAR EAST.

Britain, France, and Syria.

The *New Statesman* of August 10 examines the causes of French suspicion of British policy in Syria. The following is its version of the French case :—

The two main complaints centre in our support of the Emir Feisul and in an alleged campaign of misrepresentation of the French to the Moslem world. Feisul, with his army of Hedjaz Arabs, rendered valuable service against the Turks, and is entitled to his price. But what is that price? His ambitions have grown, and his claims have grown. He is to have Damascus. But by what right is he to extend his pretensions to Aleppo, to Alexandretta? What is the meaning of his emissaries and his propaganda right across Syria? What is this talk of an undivided, independent Arab kingdom? Where does he get the long purse that is so necessary for his activities? There can only be one answer to all these questions, say the French. Feisul is the creation of Britain. He is supported by British gold and by British diplomacy. Those Frenchmen who are friendly to us—and there are many—warn us that we are playing a dangerous game. The Arab will not lick the hand of his benefactor for ever, and a policy which aggrandises the power of the Hedjaz may result presently in the overwhelming not only of French influence in Syria, but of our own also throughout the Middle East. Palestine is not a country inhabited entirely by Anglophil Zionists. Mesopotamia has yet to be proved. Egypt has just given us an ugly lesson. Islam is a force to be reckoned with very seriously by Europeans in the East.

The article concludes :—

What is the answer to all these allegations? Which, if any, contain truth? We do not know. We may believe that they are capable of refutation. But we have not the means of refuting them. We are aware (and the French are aware also) that many Englishmen hold that France is not good at colonial administration, that Syrian opinion is not really favourable to the French. But this, even if it were true, would not help much, for we definitely repudiate any claims to Syria, and it will hardly be alleged that the Syrians love the Hedjaz Arabs! Nor do we think that anything is gained by pretending that our only business is to see to the integrity of Palestine, and that the rival claims in the north can be fought out independently between France and the Emir Feisul. The whole onus of the French charge is that nothing which Feisul does is independent, since we are behind him all the time. And, in any case, it is folly to imagine that this country is not vitally interested in the settlement of Syria. Let it be clear that we hold no brief for France. We make no imputations against the Emir Feisul, or against anyone else. We are interested in the welfare of the peoples of Syria, of Palestine, and of the rest of the Middle East. We are interested in the maintenance of good relations with our Allies. And we are interested in the honour of Britain, which is seriously impugned. For those reasons we demand that the country should be enlightened on our policy in Western Asia.

Persia.

The *Manchester Guardian* of August 16, in discussing the terms of the Anglo-Persian agreement, says :—

To begin with, we pledge ourselves in the strongest terms "to respect absolutely the independence and integrity of Persia," but as we have done the same thing several times before, with the final result of the 1907 Agreement, this by itself will hardly give great comfort to the Persian Government. Still, there can be no doubt that this does really represent alike the policy and the interest of this country, and therefore, in the absence of any strong temptation to the contrary, we shall certainly respect our undertaking.

Its conclusion is :—

Everything depends on the spirit in which such an agreement is worked. Honestly and honourably worked, with some approach to a disinterested regard for Persian interests and the growth of the spirit of independence in Persia, it may prove the beginning of a new and better era for a once great people. It will be for public men and for the people at large here to see that this is done. But it will need all our vigilance and all our goodwill.

The *Morning Post* of August 19 thus views the position :—

One has only to look at a map of the Middle East to see the vital importance of Persia to the British Empire. A weak Persia, a prey to internal anarchy and defenceless against machinations from without, is a standing danger to the security of India. The part which was allotted to Persia in Turco-German designs is well known, and although these ambitious schemes have now been frustrated, there remains the Bolshevist danger. It would have been sheer madness on the part of Great Britain had she failed to respond to the overtures from Teheran. She is, further, the only Allied Power which marches with Persia, and—were her policy not dictated to her by urgent strategic necessity—she is manifestly the Power whose mission it must be to extend a helping hand to Persia and assist her to the prosperity which her natural resources entitle her.

In commenting on the same subject, *The Times* of August 16 says that England seeks neither territory nor exclusive influence in the lands of the Shah.

In that disinterested spirit, the present agreement has been framed. When the Shah and his Ministers saw that the ultimate victory of the Allies was assured, they recalled memories of the past close friendship of their country with Great Britain, and made overtures, to which there was a ready response. Sir Percy Cox, who possesses a long and intimate acquaintance with Persian questions, was sent to Teheran, and under his discreet guidance the new Agreement was framed.

The broad attitude of England towards Persia is thus summarised :—

The wish of the British Government is that Persia shall stand on her own feet, and with the aid now given to her she should be able to reorganise her Administration. The revived friendship between the two countries will be exemplified by the visit which the young Shah is about to pay to these islands. The Agreement has the full support of the Persian Government, and without the cordial aid of leading Ministers at Teheran it could never have been concluded. The regeneration of Persia really rests, in the last resort, with the Persians themselves. They have now a renewed opportunity to show their capacity for enlightened government. If they cease from internal strife and purge their Departments of corruption, the Agreement should help to produce a definite stabilisation of the Middle East, of which the Kingdom of Persia is the core. The only part of the Agreement which we regard with misgiving is the reference to railway construction. Persia's first need is roads, not railways. Her population is too scanty and her resources too few to permit large railway schemes. On the other hand, there never was a country more admirably suited for a widespread system of motor transport, and we trust roads and motor vehicles will be given the foremost place in any programme of internal developmet t.

NEAR EAST BOOKSHELF.

DISEASE IN PALESTINE.*

Whatever merits may be claimed for Palestine as a potential El Dorado, a tourist's paradise, or even an ideal strategic base, we doubt whether anyone will ever have the hardihood to advertise it as a health resort now that its sanitary secrets have been revealed to the world by Dr. Masterman. It was Mr. Rudyard Kipling, we believe, who, after reading "The Cruise of the Cachelot," wrote to Mr. Bullen praising his book highly, but at the same time chiding him for shocking extravagance in his use of material—for the making of one book he used enough matter to make half-a-dozen. We are inclined to think that this criticism applies to some extent to Dr. Masterman's effort, for here we have skilfully compressed into a small pamphlet published by the Palestine Exploration Fund not only a comprehensive sanitary survey of modern Palestine, but also a weighty contribution to Biblical criticism. Practical sanitarians may be tempted to read Part I., giving a miss to Part II. Historical students may be tempted to reverse the process. We strongly advise readers of the former class to persist to the end, and of the latter to begin at page 1. For there is not a superfluous line in this book, and although the author has divided it into sections, the historical chapters will be found to have an important bearing on the sanitary questions discussed in the first part of the work. It is conceivable that in a Zionist Palestine the Levitical law might become the law of the land for the great majority of the population; hence it is desirable that we should be in a position to examine that law critically and dispassionately before we can claim to express an opinion as to its suitability for governing the life of a civilised community in the twentieth century.

The picture presented to us by the author of the sanitary conditions prevalent in Palestine to-day is not in the least highly coloured. He is sparing in his comments, contenting himself with the recital of facts, mostly unpleasant, which, set down in cold print, seem to us to constitute one of the most damning indictments of Turkish rule ever brought to the notice of an exasperated world, sick of the Turk and all his works. One fancies that Dr. Masterman's revelations will not be altogether welcome to some people interested in the future of Palestine. Zionism is fashionable for the moment, and Zionist schemes of settlement are beginning to take definite shape, but one doubts whether the enthusiasts responsible for them really want to know that the Promised Land is to-day a hotbed of disease, into which it would be almost criminal to introduce a large number of civilised colonists until it had been subjected to a thorough cleansing from end to end, its filthy towns and villages opened out and rebuilt, a proper system of drainage and water supply provided for them, and their malaria-infected inhabitants removed to areas where their capacity for breeding and spreading disease might at least be limited. All these things can be done; the transformation of the Panama Canal zone from a forcing ground of disease into a tropical health resort leaves us in no doubt on that point; but it will cost a great deal of money, and where it is to come from is a problem which might well engage the attention of the League of Nations and the Zionist Committee, let alone our own overburdened Government. In connection with the future administration of Palestine, we seem to have heard murmurs of the blessed word "autonomy," and enthusiasts for self-determination are disposed to leave the people of Palestine to work out their own salvation, which in their case really means to stagnate in filth until some salutary epidemic sweeps them off the face of the earth. This might, at least in theory, be justified if we were dealing with an ordinary Turkish province released from the Sultan's paternal rule; but this most emphatically does not apply to Palestine, which, apart from its historical attraction for the great international Jewish community, is for millions of Christians the Holy Land. A heavy responsibility rests with the Power armed with the mandate of the League of Nations to administer it, and if the lot falls to us it behoves our Government to see that a free hand is given to their officials to cleanse it thoroughly, without making the slightest concession to the ignorance and prejudice of its present inhabitants. It will be the duty of the mandatory Power to make Palestine a model State. In their efforts to wrest the Holy Land from the Saracens, our forefathers not only sacrificed their lives in thousands, but poured out their treasure freely in days when Western Europe was sparsely populated and very poor, and if there is any reality in our Christianity to-day we should be prepared to find all and more than the money needed for the restoration of Palestine to a proper condition of health and prosperity by our voluntary subscriptions. It would be a disgrace to Christendom if the tax collector was allowed to have any hand in the business.

The chapters in which Dr. Masterman deals with the health of the people of Palestine in Biblical times take us on to some very debatable ground, difficult to explore in these days when the Bible, never more freely discussed, to say nothing of being drawn on heavily by journalists and politicians in search of catchwords calculated to attract the multitude, is actually read and studied by the comparatively few. One doubts indeed whether many of the present-day clergy could pass a satisfactory examination in the Levitical law as set forth in the priestly books of the Old Testament. But Dr. Masterman is nothing if not practical, and bringing the trained observation of the physician to bear on the sanitary element in the Jewish law, he demolishes with ease many popular beliefs on the subject which have been allowed to take root merely because nobody has hitherto taken the trouble to expose the fallacies underlying them. It is interesting to note that, in his opinion, the Jewish division of the animal kingdom into beasts clean and unclean rests on no sanitary basis, as is popularly supposed, but is rather to be traced to a survival of Totemism into the historical period. He suggests that the taboo on certain beasts classed as unclean really owed its origin to an attempt to preserve their pristine sanctity in the eyes of man. His attitude towards those who by seeking to establish rational explanations for the miracles recorded in the New Testament eliminate the supernatural from our religion is frankly discouraging, and his severely logical handling of some of the popular theories on the subject is calculated to rejoice the heart of the orthodox, even if it leaves the modernist unconvinced.

The prejudice against the missionary dies hard, and even now there is a marked tendency among the educated classes to belittle the achievements of the devoted men who under many sectarian flags have laboured unceasingly in many lands to bring about the practical realisation of the Christian dream of a kingdom of God upon earth. But even those who are little inclined to value the spiritual element in their work cannot deny that in the practical business of spreading civilisation among the backward races of Asia and Africa great things have been achieved by our missionaries. Nowhere is this more evident than in Palestine, where the work of the British medical missions has done so much for the sanitary education of the people. It is on the pioneer work of men like Dr. Masterman that, one trusts, will eventually be raised the structure of the model State we all hope to see established in Palestine now that Armageddon has been fought and won.

E. H. B.

* "Hygiene and Disease in Palestine in Modern and in Biblical Times." By E. W. G. Masterman, M.D., F.R.C.S., D.P.H. (Palestine Exploration Fund, Manchester Square. 2s. 9d. post free.)

AN INDIAN PORTRAIT GALLERY.*

Mr. Bannerjea offers us a series, or rather the first part of a series, of sketches of Indian public men, from Ram Mohan Roy to B. G. Tilak, his object being not so much "to chronicle incidents as to strive to reveal the personality" of the men whom he describes. It is an ambitious undertaking, and we must say frankly that Mr. Bannerjea's effort stops some way short of success; his sketches are in some cases interesting exteriors, but he scarcely ever gives us a glimpse of the inside, and a reader without other sources of information would derive from this book impressions so inadequate as to be altogether misleading. The sketches show little sign of the historical spirit, and the writer is so delightfully confident of the truth of his own somewhat conventional prepossessions that he is apt to judge the merits of his predecessors by the conformity of their opinions with his own. We cannot recommend the book to serious students of Indian thought, but it is readable enough, and we have not noticed actual mistakes in matters of fact, though there is some loose writing, as in the sentence on p. 115 which suggests that the British were in India when the Parsees came. We hope that in the further volume which is promised we shall find rather deeper study of the subjects and a little less of Mr. Bannerjea's own views.

* "Indias' Nation Builders." By D. N. Bannerjea. (London: Headley Bros. 7s. 6d.).

BOOK NOTES.

Messrs. Hutchinson will shortly issue "The Madman," a work of Kahlil Gibran, the poet-painter of Arabia.

A report of the public meeting to express sympathy with the Armenian cause, held at the Central Hall, Westminster, on June 19, 1919, which included speeches by the Rt. Hon. Viscount Gladstone, the Rt. Hon. Viscount Bryce, General Andranik, and many others, is now published in pamphlet form, and is obtainable from the Armenian Bureau, 153, Regent Street, London, W.1.

BOOK RECEIVED.

"A Colloquial Sinhalese Reader," by H. S. Perera and Daniel Jones. (Manchester University Press: 4s. 6d. net.)

We understand that Mr. W. G. Middleton Edwards has left London for Constantinople.

Colonel R. Rossetti, the newly-appointed Military Attaché to the Roumanian Legation, has arrived in London.

Sir Malcolm McIlwraith has returned to London from the Mission in Belgium and Northern France to search for missing British soldiers.

The marriage arranged between Mr. E. B. Robinson, Alma, Maturata, Ceylon, and Miss I. Margaret Horn, will take place at Epping Parish Church on Tuesday, September 9.

The marriage arranged between Major A. C. H. Trevor, 24th Punjabis, and Miss Dorothy Noel Woodhouse, will take place on Thursday, August 28, at Holy Trinity, Wandsworth.

The Rev. Montford, Milford, Derby, would be pleased to hear from anyone who was at Nablus Hospital, Palestine, in April, 1918. He is anxious for news of his son, who has been reported missing.

The Church Missionary Society has selected Bishop Azariah, of Dornakal, South India, to preach the sermon at St. Bride's Church next May, when the annual meetings are held. He is the first Indian to be raised to the Episcopate.

The marriage of Mr. A. H. Clarke, Calcutta and Dublin, to Miss E. Dorothy Walls, second daughter of the late Rev. R. A. Walls and Mrs. Walls, Boothby Hall, Burgh-le-Marsh, Lincs., is arranged to take place in Bombay in October.

Major-General Sir Arthur Money had the honour of being received by the King on August 18, when His Majesty invested him with the Insignia of a Knight Commander of the Most Excellent Order of the British Empire, Military Division.

An engagement is announced between Captain William Robert Kempson, R.F.A. (T.), late R.A.F., of Thorpe, Norwich, and Miss Enid Margaret Fearnside, daughter of Colonel C. F. Fearnside, I.M.S., and Mrs. Fearnside, of Haven House, Conway.

The engagement is announced of Captain W. S. Smith, 2/19th Punjabis, youngest son of Captain C. J. Smith, late Royal Berks Regiment, and Mrs. Smith, the Old Rectory, Enfield, to Mary, only daughter of Mr. and Mrs. J. H. Clements, Rosslyn Road, Watford.

The Rev. Dr. W. A. Wigram, of St. Albans, Head of the Assyrian Mission, has returned to England after being a voluntary hostage to the Turks (taking the place of a married man) whilst officiating as chaplain of the English Church at Constantinople.

A marriage has been arranged, and will shortly take place, between A. A. Dunbar Brander, O.B.E., Imperial Forest Service, India, youngest son of the late Captain Dunbar Brander, of Pitgaveny, Elgin, N.B., and Frances Emily, widow of George Rowell, F.R.C.S.

Lieutenant-Colonel Herbert Bryan, Colonial Secretary of Jamaica, having served in France, Macedonia, Salonika, and Constantinople, has returned to the island after an absence of five years, and has assumed the Governorship until Sir Leslie Probyn returns.

A marriage has been arranged, and will shortly take place, between Captain Harold H. M. Spink, I.A.R.O., attached 1st King George's Own Sappers and Miners, and P.W.D., India, eldest son of Mr. S. M. Spink, of Furze Hill Lodge, Redhill, and Silvia Mary, only daughter of the late Mr. Edward Cleaver Newbery and Mr. Newbery, of Rathcool, Eastbourne.

The marriage was celebrated on August 16, at Park Chapel, Crouch End, N., by the Rev. J. T. Maxwell, between Arnold James Jack, Captain, Indian Army, and Constance Mary, elder daughter of Charles Biggs, Esq., of 32, Tivoli Road, Crouch End.

Major-General Vere Fane had the honour, on August 16, of being received by His Majesty, when the King conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Commander of the Most Eminent Order of the Indian Empire.

The Committee of Management of the Hospital for Sick Children, Great Ormond Street, London, have had an engraved brass plate fixed to the wall in the front hall of the hospital, as a permanent record of the generosity of the officers and men of the 15th Indian Division.

Vice-Admiral Sir John de Robeck, upon his appointment as Commander-in-Chief, Mediterranean, and High Commissioner, Constantinople, and Brigadier-General Sir Gilbert Clayton, Egyptian Expeditionary Force, had the honour of being received by His Majesty on August 15.

A marriage has been arranged between Captain Brian Gerald Keene, 92nd Punjabis, son of the late Charles James Keene, C.I.E., and Mrs. Keene, Bedford, and Dorothy Elizabeth Atkinson, only daughter of James Atkinson, of Great Bentley, Essex, and the late Mrs. Atkinson.

The marriage arranged between Arthur Beatson Reid, Indian Civil Service, son of the late John Maitland Reid and Mrs. Reid, of Charmouth, and Norah, daughter of the late F. Stonehewer Bird and Mrs. F. Stonehewer Bird, 40, Roland Gardens, S.W., will take place early in September, at Charmouth.

A marriage has been arranged between Captain R. W. Mollison, R.F.A., son of Mr. James Mollison, C.S.I., Inspector-General of Agriculture in India (retired), of Ascotts, East Grinstead, and Veronica, younger daughter of Mr. Arthur J. Walker and Mrs. Walker, of Dean Lodge, Felixstowe.

The engagement is announced of Lionel S. Hargreaves, Public Custodian of Enemy Property in Egypt, Egyptian Civil Service, son of the late Mr. Charles Hargreaves and Mrs. Hargreaves, The Hill, Laverstock, Salisbury, and Kathleen Comyns Eames, eldest daughter of Dr. and Mrs. Eames, Shanakiel, Heanor, Derbyshire.

Lieut.-Commander H. C. Luke, R.N.V.R., the author of "The Fringe of the East," "The City of Dancing Dervishes," and other works on the Near East, has been seconded from his post as Commissioner of Famagusta, Cyprus, in order to join the staff of Admiral Sir John de Robeck, who is proceeding to Constantinople as High Commissioner.

The engagement is announced between R. N. Dymoke Broad, captain, 5th Gurkha Rifles, Frontier Force, son of Rev. J. A. and Mrs. Broad, of Cheddington Rectory, Tring, and Elsie Marie Sturridge, L.D.S.R.C.S., daughter of Ernest Sturridge, L.D.S.D.D.S., 29A, Wimpole Street, W., and Mrs. Sturridge, 127, Dartmouth Road, Brondesbury.

The marriage was celebrated on August 16, at St. Mary's, Bryanston Square, by the Rev. J. N. Newland-Smith, of St. Mark's, Marylebone Road, between Major Philip Wheeler Bliss, Royal Engineers, youngest son of Sir Henry W. Bliss, K.C.I.E., of The Abbey, Abingdon, and Monica, youngest daughter of Frederick W. Hunt, F.R.I.B.A., of 20, King Street, Portman Square.

A marriage has been arranged, and will take place early in October, between Captain George Tresilian Pender, M.C., Indian Army, Reserve of Officers, attached 1/33rd Punjabis, third son of Mr. and Mrs. Herman Usticke Pender, of Tresilian, Falmouth, and Budock Vean, Cornwall, and Marjorie Vernon, fourth daughter of the Rev. and Mrs. C. V. P. Keene, of Crosswood House, East Molesey, Surrey.

The marriage arranged between Captain P. H. Champion, West Kent Yeomanry (attached 24th Battalion the Rifle Brigade), Personal Assistant to the Honourable the Chief Commissioner Central Provinces, eldest son of Mr. and Mrs. Philip Champion, Nevill Lodge, West Malling, Kent, and Beatrice Katharine, only daughter of Sir Benjamin Robertson, K.C.S.I., K.C.M.G., C.I.E., and Lady Robertson, will take place at Nagpur on Tuesday, September 9.

The marriage was celebrated on August 11, at St. Michael and All Angels', Swanmore, Ryde, by the Rev. W. F. Hanbury, M.A., Vicar, between Lieut. Geoffrey Nethorpe Simeon, I.A.R.O., Imperial Forest Service, son of the late Rev. Geoffrey Barrington Simeon, M.A., Oxon, and Mrs. Simeon, Fairlawn, Ryde, and Henrietta Mary Collingwood, elder daughter of the Rev. W. Collingwood Carter, M.A., formerly Vicar of Shipton-under-Wychwood, and Rural Dean.

Digitized by Google

The marriage wes celebrated on August 14, at St. Peter's Church, Bedford, by the Rev. H. F. Prideaux Davson, brother of the bridegroom, assisted by the Rector, the Rev. J. E. Gilbert, between Major (acting Lt.-Col.) Harold John Hunter Davson, D.S.O., 82nd Punjabis, youngest son of the late Dr. Davson, of Dartmouth, and Mrs. Davson, of Torquay, and Marjorie, only daughter of Major Garraway (late Royal Irish Regiment), and Mrs. Garraway, of Bedford.

The Shah of Persia arrived on board a British warship at Constantinople on August 19. The Shah's suite during his visit to Europe is as follows:—Prince Firuz Mirza, Nusrat-ed-Dowleh, Minister for Foreign Affairs; Prince Hussein Kuli Mirza, Nusrat-es-Sultaneh, the Shah's uncle; Prince Shahab-ed-Dowleh, Master of the Ceremonies; Prince Mohammed Hussein Mirza, A.D.C.; Muin-ul-Mulk, Secretary; Lokman-ed-Dowleh and Hakim-ed-Dowleh, doctors; and five personal attendants to His Majesty.

An engagement is announced between Lieut. Victor Léon Henri Chatenay, Croix de Guerre, of Doué la Fontaine, Maine et Loire, France, late Commandant of the S.S.Y.3 (Hackett-Lowther) unit of the French Army, and Miss Barbara Edith Stirling, Croix de Guerre, Serbian Medal for Valour, and Cross of the Serbian Order of the Good Samaritan, only daughter of Mr. and Mrs. A. W. Stirling, of Goring-on-Thames. Miss Stirling served as a member of the unit during the war. The wedding will take place early in October.

Reuter's Paris correspondent writes:—General Harbord, of the United States Army, is leaving Paris shortly at the head of a mission to visit Armenia and Trans-Caucasia, under instructions from President Wilson, to investigate the conditions there from the military point of view. His mission is distinct and apart from any other now in those countries. He will inquire especially into conditions in the new Armenian Republic, and by personal investigation obtain complete information, indicating what questions would be involved in taking over and administering the country. General McCoy and General Moseley are also members of the mission

APPOINTMENTS, PROMOTIONS, &c.

Fatollah Khan Monazam-es-Saltaneh has been promoted Second Secretary to the Persian Legation in London.

The Lord Chancellor has appointed the Rev. W. S. Langston Day, late Chaplain at Moda, Constantinople, to the rectory of Thoresway-with-Croxby, Lincoln.

The Secretary of State for India has appointed Major Malik Sir Umar Hayat Khan Tiwana of Kalra, K.C.I.E., M.V.O., to join the Committee on the Army in India as a member on its arrival in India in the autumn.

OBITUARY.

The death has occurred of Lieutenant-General William Dunlop Morton, Indian Army, retired. He spent thirty-five years in India.

Colonel Frederick Thomas Humfrey, late of the Indian Army, has died at Bournemouth, at the age of eighty-three. During his service he took part in the Hazara Campaign of 1863-4, and in the Afghan War of 1878-80.

Our Malta Correspondent writes (August 10): Great regret has been expressed over the death of Salvatore Carnana Dingli, LL.D., the *doyen* of the legal profession. He graduated in 1862, and for many years was connected with the firm of Banker G. Tagliaferro and Sons.

Lieutenant-Colonel E. Quin, late of the Indian Staff Corps, who has died at Llandrindod Wells, served in the Abyssinian Campaign of 1867-8, when he took part in the siege and capture of Magdala. He also took part in the Afghan War in 1880 and in the Burmese Expedition of 1885-7.

The death is announced of M Isvolsky, who, as Russian Minister for Foreign Affairs, was responsible for the conclusion of the Anglo-Russian Agreement. He had much diplomatic service, his posts including Rome, Philippopolis, Bucharest, and Belgrade. He was largely responsible in promoting a community of views between England, France, and Russia.

Mr. Edmund Penny, C.I.E., late of the Indian Civil Service, who has died at Bournemouth, was born in 1852, and was appointed to the Indian Public Works Department in 1874. In 1890 he planned and carried out the scheme for the Nagpur Waterworks. In 1891 he acted as Assistant Secretary to the Chief Commissioner; in 1899 was appointed superintending engineer and Secretary to the Chief Commissioner; and in 1900 was nominated a C.I.E.

The death occurred on August 14 of Major the Hon. Rupert Leigh, at Stoneleigh Abbey, the residence of his brother, Lord Leigh. He was third son of the late Lord Leigh, and heir-presumptive of the present Baron. Major Rupert Leigh had seen much active service, having taken part in the Afghan War, 1878-9, and in that in Egypt in 1882, and in Bechuanaland, 1884-5. He was also in the North-Western Frontier Expedition in 1897. He was Military Secretary to Lord Northcote during his Governorship of Bombay.

NEWS IN BRIEF.

A message from Bucharest states that the Roumanian Mission under General Zadik has arrived in Lemberg.

A Japanese military mission has arrived at Belgrade to examine the principal Serbian battlefields of the great war.

The ex-Mpret of Albania's jewels, dropped from an aeroplane in the south of Sweden, are valued at nearly £380,000.

A memorandum has been presented to the Peace Conference by the Committee for the defence of Jews in Roumania.

Two French airmen who arrived at Salonika on August 14, from Paris, have safely completed their flight to Cairo via Constantinople.

Over a thousand troops from India, chiefly territorials, who have been serving abroad since 1914, arrived at Plymouth on August 16, from Bombay, on the P. and O. liner Malwa.

A fire, arising from an act of carelessness, has destroyed a hundred houses in the suburb of Beshik Tash, Constantinople. The flames were overcome with the assistance of Allied troops.

General Halil Pasha has escaped from imprisonment in the Ministry of War at Constantinople, and crossed to Asia Minor with another propagandist leader of the Committee of Union and Progress.

Commenting on the reduction of sentences on the ringleaders in the Punjab disturbances, the *Englishman* says that Sir Edward Maclagan, the Lieutenant-Governor, has taken a very grave responsibility in the matter.

The Orient Express service, which was held up on August 18, is now definitely cancelled, owing to the refusal of the Austrian Government to provide a locomotive for the train across their territory, the lack of coal being alleged as a reason for this decision. The Ministry of Railways of Czecho-Slovakia points out that the Allies delivered to Austria 86 per cent. of the promised coal, while only 67 per cent. has been delivered to Czecho-Slovakia. The suspension of the service completely cuts off Czecho-Slovakia from France.

The survivors of the ship Tara, about sixty in number, visited Saighton Grange, Chester, on August 16, to make a presentation to the Duke of Westminster as a mark of gratitude for their rescue by him from the Senussi Arabs, by his armoured car dash across the desert in 1916, after their ship had been torpedoed in the Gulf of Sollum. The gift, which was jointly presented by the survivors of the Tara and several from the Moorina, consisted of a silver casket surmounted by a miniature armoured car, and bearing an inscription.

FRIDAY, AUGUST 22, 1919.

GREAT BRITAIN AND PERSIA.

Both Great Britain and Persia are to be congratulated upon the new agreement made between the two Governments on August 9. This document, it is to be hoped, marks the definite end of the weak policy that Great Britain has pursued towards Persia for the last dozen years—weak, not in the sense that any high-handed treatment of Persia was called for, but because of hesitation to give effect to the line of action that our friendship for the country as well as British and Persian interests required. There is no need now to cry over spilt milk. The British Government's policy towards Persia has been in theory always the same; but the necessity of remaining on good terms with Russia was held to be an overriding consideration, and in the hands of advocates of peace-at-any-price it was inevitable that the less important interests should go to the wall. Thus, it came about that, in spite of a genuine desire to do the right thing by Persia, to safeguard her independence and to set her upon her feet again, Great Britain became closely associated with Russia's deliberate aim at destroying Persian independence and reducing the country to a condition that made annexation under one form or another the only possible outcome. The British Government has done well, therefore, to lose no time in giving its real policy towards Persia a fair start while Russia is out of action. We owe it to ourselves, to the Persians and to the world at large; for no views in regard to Persia's capacity to work out her own salvation without reference to any Great Power could carry conviction under the conditions prevailing before the outbreak of the Great War. It was open to those Persians who had an interest in retarding the development of their country to urge that Persia could quite well manage her own affairs if she were freed from interference by Russia or Great Britain; and conceivably the League of Nations, anxious to impress the smaller States with its disinterestedness, might have felt obliged to support the contention. The present arrangement between Great Britain and Persia is the only honest method of meeting the needs of the position, and from the fact that immediately after the signing of the agreement the Shah has left Teheran on a visit to England we may infer that the Persian Government is anxious to let it be known that it has been acting as a free agent, and has been in no way dragooned into acquiescence. The point is an important one, for Persia cannot be rehabilitated in her own despite, and unless she is prepared to co-operate willingly and wholeheartedly, Great Britain's efforts to help her must fall short of complete success.

The agreement places once more on record the fact that it is in the essential and mutual interest of both countries that the ties of friendship which have existed in the past between the two Governments should be cemented, and the British Government reiterates the undertakings repeatedly given in the past, but so frequently stultified in the eyes of the Persians, "to respect absolutely the independence and integrity of Persia." As the basis of the new order Great Britain supplies, at the cost of the Persian Government, the services of whatever expert advisers may, after consultation between the two Governments, be considered necessary for the several departments of the Persian Administration, as well as such officers and such munitions and equipment of modern type as may be adjudged necessary by a joint commission of British and Persian military experts, for the purpose of a uniform force, which the Persian Government proposes to create for the establishment and preservation of order in the country and on its frontiers. A further clause in the agreement arranges for "a substantial loan" for the purpose of financing the reforms indicated and provides that, pending the completion of negotiations for such a loan, the British Government will supply on account of it such funds as may be necessary for initiating the said reforms. When, therefore, on the same day a contract was entered into between the two Governments for a loan to Persia of £2,000,000 to be paid to the Persian Government after the British Financial Adviser shall have taken up the duties of his office at Teheran, we must conclude that this sum represents a preliminary advance on account of the "substantial loan" to be negotiated at a later date. It cannot be contended that Persia, with an empty exchequer and, probably, heavy calls for arrears, which will have to be met at once, can be set on her feet by a loan of only two millions sterling. Financial assistance to be effective must be on a scale to enable the country to be put upon a paying basis within the shortest possible time. One of the first needs will be the adequate payment of Government officials to relieve them of the necessity of living by corruption and oppression. In this matter only the most uncompromising candour will bring relief to the country. If circumstances compel the retention of the existing civil service, it should be stipulated that the time-honoured practices which have undermined all efficient administration in Persia must be at once discontinued. To pretend that the departments of the Persian Administration need only expert advice will expose the service to the continuation of the old abuses, by allowing the new recruits to suppose that efficiency is possible side by side with corruption. Nor shall we do well to encourage the belief that Russia has hitherto been the sole obstacle to Persian reform. Russian aggression was helped considerably by Persian incompetence, and only adequate recognition of their shortcomings in regard to self-government will enable the Persians to benefit to the full by the new opportunities now offered them. If Sir Percy Cox, who has brought the negotiations of the last nine months to a successful issue, has been able to convince the Persian Government that Great Britain has no designs on Persian territory, and is actuated solely by the desire to see the country administered by Persians on sound progressive lines, it should be possible to insist upon a thorough purging of the existing Administration.

There would be nothing surprising in an outcry in Germany against Great Britain's "land-hunger" and an attempt to represent the agreement with Persia as marking the final act in the elimination of that country from the family of independent States. But it is unfortunate that the French Press should play Germany's game to the extent of taking exception to the Anglo-Persian Agreement, and trying to make of it a special *coup* for Great Britain, to be grudged by France or to be weighed against some failure on the part of France to attain all her aspirations in another direction. By no stretch of the imagination can the relations between France and Syria be compared with those existing between Great Britain and Persia. The war, it is true, was carried into Persian territory, but Persia did not become in any sense of the term a belligerent. To what extent the deputation that went to France to urge the claims of the Persians to territory in the Caucasus represented the considered judgment of the Teheran Government we have no means of knowing, but it could not hope for success, and if the Government had had anything to do with its despatch it was well advised to lay no further stress upon an imaginary Persian irredentism in Russia and to proceed with the negotiations with Great Britain. In view of the recent developments in Afghanistan and the part played by Persia as a more or less privileged corridor through which German and Bolshevist agents were free to pass for their sinister purposes, the British Government could not allow the anomalous position in Persia to continue indefinitely. During the war the nucleus of a new gendarmerie had been created in the South Persian Rifles, for whom Great Britain was en-

Digitized by Google

tirely responsible. This force, apart from the British troops which had been drafted to Persia and the Caspian Sea represented the only protection available for Persia against lawlessness and unrest. But its position was not regulated, and in any case it could not singlehanded have effected the rehabilitation of Persia. The malady from which the country was suffering was too deep-seated. The whole system of Government needs to be radically overhauled, and it is to be hoped that the new agreement will be the prelude to this act. Great Britain has an easy conscience in regard to the matter, and can afford to ignore insinuations from outside. It will be time enough to challenge her action when she has restored prosperity to Persia and raised the standard of administration to a point at which there is some likelihood of the Persians being able, when left to themselves, to carry on without a lapse into old methods and abuses. In the meantime, the Anglo-Persian Agreement is but one item in the complicated settlement of the Near and Middle East, and if strained relations between the various Powers concerned are to be avoided no time should be lost in bringing the work of the Paris Conference to an end.

ALAM KHAN.

A TIWANA IN CAPTIVITY.

"Salam' alaikum!" was my greeting to the wounded Indian soldier, as I approached him, seated on his bed, at the end of No. C.2. Ward in the King George Hospital, Waterloo. "Walaikum salam!" ("To you also be peace") was the response he made, smiling to hear the familiar tones of his vernacular. "Ya Rab! is bandeh ko salamat rakhe" ("Keep this, Thy servant, safe, O Lord"), and, thereupon, we were good friends. He invited me to sit down on a chair by his bed. He was dressed in the usual blue hospital costume, with a brown turban, with a flowing end. Alam Khan did not know a word of English, but that did not impede our conversation, as I had lived in his country for more than thirty years. "How have you come here?" I said; and he proceeded to tell the story. Alam Khan is a Tiwana, a Mohammedan tribe of high degree, of whom a considerable number have their ancestral lands in the district of Shahpur, Punjab. The Tiwanas have the instincts of ancestral nobility, and may be said to be a military caste. Alam Khan has three brothers, officers in the 31st. Bengal Cavalry (Jacob's Horse), and he himself is a Daffahdar. His home is the well-known township of Mittha Tiwana, which supplies a good many officers, and some thirty or forty troopers to Jacob's Horse. This born fighter is a fine young man with aquiline features; and he wears his hair somewhat long, as is the custom of his race. His demeanour is gentle and courteous. The Tiwanas claim to be Rajputs, and the conversion of their tribe to Islam is lost in the mists of early history. They resisted the advancing forces of the Sikhs, long after the rest of the district had fallen before them.

Alam Khan's story was that he was with his regiment in France, when one night he was sent out with three other men on a scouting expedition. Proceeding through the darkness they suddenly encountered a party of the enemy, and a machine-gun opened upon them. They were all knocked over. One was killed and three were made prisoners, including Alam Khan, who was carried off the field and taken to a German hospital in the town of Douay. Of his two fellow troopers, he believed one had died, and one he had lost sight of in Germany. After a time he was taken to a prison camp in Munster, and subsequently to Berlin, where he remained five months. Then he was sent with a batch of English prisoners, too badly hurt to fight again, to Switzerland, and after three months there, he was sent to London, preparatory to his being sent back to India. With the exception of a "Padre Sahib" (no doubt a German missionary who had served in India), and a Miss Sahib, who was kind to him in Switzerland and gave him a Bible, he has not spoken his own language to anyone for about a year. All this time he had never heard from his home, although he had repeatedly sent letters. He dictated one to me there and then, so that his three little boys would at last hear of their father's whereabouts.

Very soon after his arrival in the hospital here he was visited by a Colonel of the Military Staff of the India Office, who telegraphed his arrival here to his people in India. He had been wounded in the hip and in the ankle, but could move about pretty easily, and even take short walks in the street.

As regards his treatment as a prisoner in the hands of the Germans, he does not appear to have been subjected to anything like cruel treatment, though he had to subsist largely on black bread and fish. At the German prison camps in Berlin, however, there seems to have been some store of supplies provided for British and Indian prisoners, and the parcels of food which he received from home were a great boon. Being a Mohammedan he could not partake of pig's flesh, nor, indeed, of the flesh of other animals, because they had not been slaughtered in accordance with the strict Mohammedan ritual. He said his wounds were dressed about once in ten days. When I asked him what had been the principal hardship in his lot in Germany he said that he felt his *isolation*, arising from ignorance of German or other common language, as one of his principal trials.

On the occasion of my second visit to him I found him deep in a game of draughts, which he was playing with an English Tommy. I stood at a distance, and did not disturb the game, which shortly ended in a victory for Alam Khan. On this occasion I had to cut short my visit. I told him I must leave, as I was going to church. "Remember me in your prayers," he said, quite simply. It is good to think that, having done his bit, and sustained an injury which will hamper him for life, this faithful soldier had the prospect of a speedy return to his ancestral home in the Central Punjab, under the Salt Range, where he would have an interesting story to tell.

W. COLDSTREAM.

EARLY BRITISH RELATIONS WITH TURKEY.

(FROM A CORRESPONDENT.)

In his account of the "principal voyages and traffiques of the English nation" R. Hakluyt relates how voyages to Candia and Chios were made by English ships in 1534 and 1535, and mentions one William Eyms as factor to Sir W. Bower, Alderman of London, and to the Duke of Norfolk, both of whom had commercial relations with the island of Chios up to 1532.

These have always been mentioned as the earliest known instances of our countrymen trading in Turkey, but the Venetian records have many instances of British activities at a much earlier period. In 1469 there is a decree of the Senate concerning one William Cowper, who shipped a quantity of goods from Constantinople on the Andrea de Napoli, which was captured off Scio by Sir Nicolo de Conne, the Venetian Captain-General. Cowper's complaint to our Government appears to have been taken up in a very energetic manner, for they protested, and supported his claim at Venice. A decision of the Council of Ten finally awarded him £1,500.

In 1490 there is another instance before the Doge and Senate, and a "decree of the Criminal Court of Forty concerning an English merchant, one Richard Pencher, who had shipped a certain quantity of wax, hides, etc., from Constantinople." The goods were captured by the Venetian Admiral, but compensation was eventually made. The records seem to indicate that the Venetian merchants did not favour our activities in those parts, and by pin-pricks hoped to drive us out. The Doge and Senate, however, had greater interests in England, and to secure support here were not disposed to follow the lead given by their countrymen in the East.

Some idea of the trade is provided by entries in the Venetian records. In 1510 an English barque was wrecked off Irica (?), "having a cargo of 7,000 pieces of coloured kerseys" for Chios. Another mention is made in 1510 of a barque from Hampton bound for Scio with kersey and cloth.

From the facts here related it is evident that Hakluyt, Epstein, and others are wrong in attributing the entry of

English traders into Turkey to Anthony Jenkinson in 1553, or to Queen Elizabeth in 1580.

Jenkinson was the first to obtain privileges—he obtained what we might to-day call a concession. It was a purely private privilege granted by the Sultan Suleiman at Aleppo. In 1575 Hakluyt asserts in a document which is at the Record Office that after 1550 the Levant trade declined, "was in manner quite forgotten," until Sir Edward Osborne and Richard Stafer made an effort to revive it. To these two London merchants, particularly Richard Stafer, is due the success of the enterprise. Their agent, William Harborne, obtained the first privileges, notwithstanding the opposition of the French Ambassador and the Venetian Bailo. Harborne was a skilful and diplomatic agent, and managed to obtain a letter from the Sultan to Queen Elizabeth couched in flattering terms. This letter offered to open Turkish ports to the English traders who had sent Harborne, and asked that a similar liberty might be granted to the Turkish traders. Elizabeth's reply suggests that the privilege be extended to all English traders. Seven months later, in June, 1580, Murad II. issued a charter of privilege to English traders. This was opposed, however, by the French Ambassador and the Bailo, and was not ratified until 1583. It is evident from the correspondence that Harborne's mission was originally purely commercial. The opposition he met threw him, so to speak, into the political ring; and to obtain what he wanted he made his mission a political one. Elizabeth and her Ministers supported him; and the formation of the Levant Company with the charter was the natural consequence.

Harborne again went to Turkey—this time as Ambassador. His commission gave him authority to appoint Consuls and Vice-Consuls within a month of his arrival. Richard Foster was appointed "Consul to the English nation in the ports of Aleppo, Damascus, Jerusalem, etc." That Englishmen were trading in those parts is obvious from the wording of the Commission. It empowered him "to execute the office of Consul over all our nation," and gave him extraordinary powers "to imprison and expel and command all Her Majesty's subjects to honour his authority."

A further proof that there were Englishmen trading at Aleppo is to be found in the voyage of John Eldrid in 1583, who mentions his "caravan arriving at Aleppo, where he was met by Mr. W. Barrett, our Consul, who fell sick and died in eight days."

In 1581 and in 1582 John and Ralph Fitch, London merchants, started from Aleppo for Baghdad.

These notes are sufficient to show that our commercial relations with Turkey date from a much earlier period than the Levant Company.

CHESS.

The culminating point of interest in the Hastings Tournament was reached on August 20, when Senor Capablanca and M. Kostitch, the Serbian master, met in what was thought before the tournament began would be the deciding game. While the two masters had up to that point dominated the tournament, Capablanca had unquestionably played the better chess. He narrowly escaped a draw with Sir G. A. Thomas, it is true, but only because he missed the right continuation—the sacrifice of his queen—at his last move, and apart from that oversight his superiority has been very marked throughout. On the other hand, there has not been the same suggestion of ease about the Serbian's successes, and his draw with Mr. Wahltuch, of Manchester, came, in the circumstances, as no surprise. In a subsequent game against M. Marchand he was more than a little fortunate to win when a pawn down, and in view of his somewhat uncertain form little doubt was felt that Capablanca, with black, would at least obtain the draw, which is presumably all he requires for victory. And that is precisely what happened. The leading scores up to the end of the ninth round are: Capablanca 8½, Kostitch 8, Sir G. A. Thomas 5½ (1 unfinished), Wahltuch 5½.

This is the game between Mr. Wahltuch and M. Kostitch:—Queen's Pawn opening. 1, P—Q4, Kt—KB3; 2, Kt—KB3, P—K3; 3, P—QB4, P—Q4; 4, Kt—B3, QKt—Q2; 5, B—Kt5, B—Kt5; 6, P—QR3, B x Kt ch; 7, P x B, P—B4; 8, BP x P, KP x P; 9, Q—R4, Castles; 10, P—K3, P—B5; 11, Kt—Q2, P—QR3; 12, B—K2, R—K1; 13, Castles, P—Kt4; 14, Q—B2 (*a*), P—R3; 15, B—R4, Kt—B1; 16, B—B3, B—Kt2; 17, B x Kt, Q x B; 18, P—QR4 (*b*), Kt—K3; 19, KR—Kt1, B—B3; 20, P x P, P x P; 21, Q—Kt2, Q—Kt3; 22, R x R, R x R; 23, B—Q1, Kt—Kt4; 24, B—B2, Q—Q3; 25, R—R1, Q—Kt1; 26, P—B3, P—Kt3; 27, P—B4, Kt—K5; 28, R x R, Q x R; 29, Kt x Kt (*c*), P x Kt; 30, P—R3, Q—R4; 31, K—B2, P—B4; 32, K—K2, K—B2; 33, K—Q2, K—K3; 34, Q—Kt4, Q x Q; 35, P x Q. Drawn.

(*a*) Q—Kt4 would have been better.
(*b*) P—K4 would be answered by Q—Kt3.
(*c*) With B x Kt White would have had a chance of a successful ending.

In the distribution of the French Navy, a Danube and Black Sea flotillas are provided, and a Rear-Admiral will command the Syrian squadron, which will consist of nine big ships, with gunboats and mine-sweepers.

NEAR EAST IN PARLIAMENT

HOUSE OF COMMONS.

Transcaucasia. August 14.

In reply to Mr. A. Williams, who asked the Secretary of State for Foreign Affairs whether the British forces in Transcaucasia, or part of them, were to be withdrawn, Mr. HARMSWORTH said: The British forces are being entirely evacuated from Transcaucasia immediately. At the same time a political mission, under the charge of a gentleman specially qualified for the post, is on its way to Transcaucasia, and will, it is hoped, be in a position to exercise a restraining influence on the local Governments of the various Republics, both as regards their relations with each other and with the Russian Volunteer Army to the north. His Majesty's Government regard the position of the Armenians in the Caucasus as extremely unsatisfactory, and they earnestly trust that it may be possible to appoint a mandatory Power in the near future. In the meantime, the Peace Conference in Paris have appointed an Allied High Commissioner for Armenia.

Armenia.

In reply to Mr. A. Williams, who asked what steps had been taken to bridge the interval between the withdrawal of our troops from Armenia and the establishment of some other settled government in the country, Mr. HARMSWORTH said: The Italian Government at one time contemplated sending troops to the Caucasus, not specifically to prevent an Armenian massacre after the withdrawal of the British troops, but to assume military charge of the areas between the Black and Caspian Seas. They have since desisted from that intention. The American Government have not accepted a mandate for Armenia, nor can they do so without the consent of Congress, which has not as yet been given. The British occupation of the Caucasus, undertaken for the purpose of expelling the enemy, has indirectly had a great effect in tranquillising the country. But if it were to be continued until settled government has been established in those regions, it would be impossible to place a limit to its duration. His Majesty's Government are taking every available step to prevent the revival of racial conflict and to secure a stable order upon the departure of the British forces.

Jewish Soldiers in Palestine. Aug. 19.

Mr. Forster, asked by Captain Ormsby-Gore whether the status of the Jewish battalions of the Royal Fusiliers now in Palestine had yet been decided; whether they were for general service or only for service in Palestine; whether 400 Jewish soldiers enlisted in the United States of America for those battalions would be allowed local demobilisation, as they requested, instead of repatriation to America; and what were the rules regarding the local demobilisation of Jewish soldiers now in Palestine, said:—The whole matter is under consideration, and it is hoped to arrive at a decision very shortly.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The new agreement concluded between the British and Persian Governments should prove an event of far-reaching importance in the history of Persia. The country possesses great natural resources, as yet practically entirely undeveloped, and if the conditions which obtained before the war had continued it is obvious that they never would have been developed, except in circumstances unfavourable to Persia. The war has brought about a state of things in which settled conditions are no longer an impossibility for Persia, and it is in order to ensure this happy issue that the new agreement has been made. Great Britain has no ulterior motives in regard to Persia, unlike Russia and Germany, whose ill-concealed desire to obtain possession of the mineral resources of the country found vent in several remarkably candid statements, and the agreement, made solely in the interests of Persia, will, it is hoped, enable that country to give her entire attention to the question of the development of her resources free from all preoccupations in regard to external affairs.

***

It will be noted that the agreement provides for a loan of £2,000,000 to the Persian Government at an interest of 7 per cent. and repayable in 20 years. The existing 5 per cent. loan of £1,250,000, of which the outstanding amount is £1,237,200, was issued at 96½, and the higher rate of interest of the new loan emphasises the change that has taken place in financial conditions in the intervening years. The services of the 1911 loan is secured on the net Customs dues of the ports in the Persian Gulf, and these dues will also be the guarantee for the service of the new loan. On a pre-war basis, these dues will not suffice to pay the interest on both loans, and the deficiency will have to be met in other ways by the Persian Government, for which contingency due provision is made, but it is very probable indeed that if Persia's commerce develops as expected, the dues will soon prove far more than sufficient to meet these charges.

***

This brings me to the question of the country's development. Obviously, for the growth of commerce, adequate communications are absolutely indispensable, and Persia's transport system is very poor. A good system of railway and road communications, with adequate services of motor transport, is essential for the opening up of the country, and to secure this should clearly be the first care of the Persian authorities. When this has been done the country will be on the high road to progress, and the proper development of her undoubted resources. It need scarcely be said that the present loan will not suffice for any extensive schemes, but I imagine that it is to be regarded merely as a first instalment, and that if Persia proves her eagerness to further her economic progress by utilising that sum to the best advantage, she will not find any difficulty in obtaining the further amount that may be necessary.

***

The Government's scheme for encouraging the resumption of British trade with some of the devastated areas of Europe was referred to by the Prime Minister in his speech on August 18. He pointed out that special steps are necessary for the resumption of trade relations with Roumania, Serbia, and other countries similarly situated, because, while there are very extensive demands from these countries there are no credits established. To meet the situation the Government have adopted a scheme for furnishing credits to the extent of £26,000,000 as a guarantee against risks or absolute loss. British traders have been waiting for action on these lines, and this step will undoubtedly give a great impetus to the revival of trade between this country and the Near East.

***

A correspondent draws my attention to increasing postal delays between this country and Roumania. It appears that while some weeks ago letters only took a week to reach Roumania, at the time my correspondent wrote the time had increased to fifteen days. Unfortunately I have only too good reason to know that the position with regard to Roumania is more or less typical of communications with that part of the Near East at the present time. Mails are intermittent, and the possibility of regular weekly communications seems as yet out of the question. It is a most unsatisfactory state of things, and is bound to have almost as adverse an effect on business as the uncertainties of the cable service. The matter is one which ought to receive the attention of the authorities, for it calls for official representations in the quarter responsible for these delays.

***

While on this subject I may point out that complaints are still being made with regard to the cable service between this country and certain parts of the Near East, notably Constantinople, and there is no doubt at all that the continuance of these delays will very seriously affect British trade enterprise in these regions, for our business rivals are not handicapped in this way. French and Italians can send what are known as "urgent" telegrams by payment of a treble fee, and these messages are subject to no delay, with the result that these countries are at a considerable advantage in business transactions which require an immediate decision. If it is impossible to remedy the delays in respect of British messages immediately the system of "urgent" messages might well be introduced here as a temporary expedient. But it should not be impossible if, as is stated, the chief cause of delay is the length of official messages.

I learn that in general outside the Smyrna district Turkish crops are very promising. Our Constantinople Correspondent, who refers to the good reports which are being received, draws attention to the opening in the country for the sale of agricultural machinery, provided local requirements are studied. It may be pointed out that in many localities, at any rate, Turkish agriculturists had an exceedingly prosperous time during the last two years of the war, and with a good harvest this year they will be well able to make extensive purchases of machinery and implements. Undoubtedly there is an excellent opening in this direction for our manufacturers, and it rests with them to take due advantage of it.

***

A further report from Messrs. Giraud on the fruit crop position in the Smyrna district is given elsewhere in this issue, from which it will be seen that the situation has rather tended to grow worse than to improve. Turkish proprietors have abandoned their holdings and have withdrawn into the interior, so that the gathering of the crops must be inevitably delayed, while in many localities the complete loss of the fruit is feared. The estimate of the yield of sultanas varies from 23,000 to 25,000 tons, but the most optimistic opinion is that the actual yield will not be over 18,000 to 20,000 tons, and that of this quantity not more than half will reach the market within the next five months. As regards figs, the outlook is just as unsatisfactory, and the prospects as regards the yield of the finer qualities, which are grown in the Meander Valley, are specially unfavourable. Obviously it should be the first duty of the Greek authorities to induce the Turkish inhabitants to return to their holdings.

***

A satisfactory report is forthcoming from the Champdany Jute Company for the year ended March 31. The sales amounted to £1,316,800, as against £924,100, which, after the deduction of working expenses and costs and £350,200 as against £194,500 for excess profits duty, leaves a net profit on working of £221,000, an increase of £86,000 on the figures for the previous year. Including interest received and the amount brought forward the available balance is £286,600, which is utilised to pay a dividend of 70 per cent., as against 45 per cent., while £22,400, as against £30,000, is written off block account for depreciation and £126,300 is carried forward, as against £50,100. The prospects for the current year are stated to be favourable, but it is pointed out that the cost of raw jute is likely to increase.

CONSTANTINOPLE BUSINESS LETTER.

Opening for Agricultural Machinery.

(From Our Own Correspondent.)

Constantinople, July 30.

Contrary to what might be expected from the disturbed state of the country, the agricultural reports, except in the Smyrna district, are surprisingly good under the circumstances. But such is the scarcity of labour that as much as £T.1 per day is being paid to harvesters. The whole of the harvesting is done with sickles and scythes. As in the province of Castamouni alone there are no less than 560,000 acres under cultivation, there ought to be a splendid opening here for agricultural machinery, provided the peculiar requirements of the country are studied.

Before the war, scythes, sickles, and ploughs were supplied mostly by Germany. At one time, under the auspices of the Ministry of Agriculture, certain experiments were made with a German plough of special design. The following results were noted:—

Native ploughs used, 1 sown, 3 reaped.
Native ploughs, with chemical manures, 1 sown, 5 reaped.
German ploughs, 1 own, 10 reaped.
German ploughs, with chemical manure, 1 sown, 20 reaped.

In the year 1918 there were 2,051,714 donoums under cultivation. This year there are 2,273,347 donoums under cultivation, an increase equal to more han 55,000 acres. Once the country is settled there is not the slightest doubt that there will be a great demand for the right kind of machinery. But it must be remembered that machinery suitable for England or the colonies is not necessarily the sort of thing that will do for Anatolia. In this respect, as with other branches of business in this country, there must be a special study of conditions and requirements. The mentality of the Anatolian cultivator must also be taken into consideration. It would be best to have a man on the spot who knows the country and the people, and to follow his advice. Every kind of agricultural machine is urgently needed, but it is essential to have a man on the spot, and to make arrangements, if possible, for demonstrations. The initial outlay would soon be recovered with interest. But the thing will have to be done at once, because I happen to know that the Americans are already on the same game, and they are our most dangerous competitors in this particular line.

Rebuilding Constantinople.

As I pointed out in a former article, huge areas of the city have been wiped out by fire during the last ten years. One fire went from the Marmora Sea to the Golden Horn. One or two companies have already been formed, and have approached the Government in the matter, but there is so much to do that only a very big syndicate could possibly deal with the task on an adequate scale. Something like 50,000 houses might be built within the next ten years, and then there would be none too much room for the population. Wherever one goes, whether in the city itself or to the suburbs on the Bosphorus, one finds ruins everywhere of houses burnt down and never rebuilt for want of capital, enterprise, material, and labour. The best thing would be for a syndicate to arrange for plant to manufacture its own bricks, etc., in the country, and to obtain a concession to exploit one of the forests for the wood required.

Trade.

There is nothing startling to record with regard to business in general. The restlessness of labour has been faintly reflected here, but although there have been threats of strikes among various sections of the manual workers, nothing has come of them. But the situation is like the situation everywhere—bad. Labour is scarce and dear. There seems to be little prospect of a fall in prices, and the outlook is far from encouraging from the point of view of the small employer.

ANGLO-PERSIAN AGREEMENT.

The £2,000,000 Loan.

A White Paper (Cmd. 300) has been issued giving the text of the agreement between Great Britain and Persia. We reproduce below the clauses relating to the financial arrangement and also Article 5 of the contract relating to the Persian Five per Cent. Loan of 1911, which is included for reference:—

Agreement relating to loan of £2,000,000, at 7 per cent., redeemable in twenty years.—Preamble: Contract between the British Government and the Persian Government with reference to an agreement concluded this day between the said Governments. It is agreed as follows:—Art. 1. The British Government grant a loan of £2,000,000 sterling to the Persian Government, to be paid to the Persian Government as required in such instalments and at such dates as may be indicated by the Persian Government after the British Financial Adviser shall have taken up the duties of his office at Teheran, as provided for in the aforesaid agreement. Art. 2. The Persian Government undertakes to pay interest monthly at the rate of 7 per cent. per annum upon sums advanced in accordance with Article 1 up to March 20, 1921, and thereafter to pay monthly such amount as will suffice to liquidate the principal sum and interest thereon at 7 per cent. per annum in twenty years. Art. 3. All the revenues and Customs receipts assigned in virtue of the contract of May 8, 1911,* for the repayment of the loan of £1,250,000 are assigned for the repayment of the present loan with continuity of all conditions stipulated in the said contract, and with priority over all debts other that the 1911 loan and subsequent advances made by the British Government. In case of insufficiency of the receipts indicated above the Persian Government undertakes to make good the necessary sums from other resources, and for this purpose the Persian Government hereby assigns to the service of the present loan, and of the other advances above mentioned, in priority and with continuity of conditions stipulated in the aforesaid contract, the Customs receipts of all other regions, in so far as these receipts are or shall be at its disposal. Art. 4. The Persian Government will have the right of repayment of the present loan at any date out of the proceeds of any British loan which it may contract for.

Signed at Teheran, August 9, 1919.

* See below.

Article 5 of Contract between the Persian Government and the Imperial Bank of Persia relating to the Persian Government Five per Cent. Loan of £1,250,000 of May 8, 1911. (Included for reference.):—5. The Imperial Government of Persia specially assigns to the service of the loan, and as a first charge thereon, subject only to prior charges amounting to £15,714 1s. 10d. per annum for three years, and £30,278 12s. 7d. per annum from the year 1913 to the year 1928. The full net Customs receipts of every description which the Government now is, or at any time hereafter may be, entitled to collect and receive at all ports or places in the Persian Gulf, including Bushire, Bunder Abbas, Lingah, Mohammerah, and Ahwaz, which receipts are hereby made payable to the Bank, and the Imperial Government of Persia hereby engages forthwith after receipt thereof to pay to the Bank all such Customs receipts as aforesaid without deduction other than for actual expenses of administration of the Customs of the said ports disbursed prior to the date of such payment. (*a*) The Imperial Government of Persia undertakes that throughout the continuance of the loan all sums collected by the Customs Administration shall be paid to the Bank at the ports of collection, or at its nearest branch, week by week, for meeting the prior charges referred to above, and for the service of the loan, and an account of such receipts shall be submitted to the Persian Government by the Bank at the end of each month. (*b*) The Bank shall, out of the moneys so collected, pay the prior charges above-mentioned, and the interest and sinking fund of the loan, and shall hold the surplus at the disposal of the Imperial Government of Persia. (*c*) The Bank undertakes, out of the moneys so received, to pay on behalf of the Imperial Government of Persia the half-yearly coupon in London, and supervise the working of the sinking fund and service of the loan free of charges connected with the same. (*d*) In the event of the Customs receipts of the above-mentioned ports for any three months falling short of the amount required for the prior charges and the service of the loan, either for interest or amortisation, the Imperial Government of Persia binds itself to make good such deficiency from other sources of Government revenue, and further, should receipts from these sources fall below the amount required as above, the Persian Government hereby assigns for this purpose the revenue derived from the receipts of the telegraphs—this assignment to constitute the second charge on the said telegraph receipts up to the year 1928, after which the telegraph receipts will be free.

EGYPTIAN MARKETS.

The weekly returns of the Egyptian Markets, Ltd., for the week ended August 7, were:—Cattle markets, £343; general markets, £509; total, £852; total for year, £35,778. The figures for the corresponding week of 1918, ended August 8, were:—Cattle markets, £342; general markets, £455; total, £797; total for year, £31,602.

THE HELLENIC COMPANY OF MARITIME ENTERPRISES

(PALIOS LINE).

Head Office - PIRÆUS.

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.

26 PASSENGER and CARGO STEAMERS.

285 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Coaling Yards and Repair Shops.

GENERAL AGENTS for the High Commission of Sea Transports; for all Passenger Steamers requisitioned by the Greek Government.

The Mineral Resources of the Near East—II.

Position in Turkey.

By JOHN KIRSOPP, M.I.M.E., F.G.S.

Turkey.

No geological survey of the Ottoman Empire has ever been made, but its mineral resources are reported to be great. Owing to deficient transportation facilities, however, they are almost entirely undeveloped. Coal is known to exist in nearly all the provinces of the Empire, but the only mines deserving mention at the present time are those at Erekli, which in 1912 produced 513,899 statute tons of coal. Other small mines are operated in the Heraclea coalfield, which produced an additional 220,000 statute tons. Other known coal deposits exist at Amasserah on the Black Sea, Rodosto on the Sea of Marmora, and in the neighbourhood of Adrianople, and the opposite side of the Sea of Marmora, as well as on the Island. Coal is also found at Bolon, Castamoni (Black Sea), and at Viranshes (Asia Minor), and also further inland at Mount Lebanon, and near Lampsacus on the east side of the Dardanelles. The Rodosto mines worked a seam 5 feet in thickness, but containing a band of 18 inches, but seems to have been abandoned owing to the district being heavily watered, and to only very primitive pumping contrivances being in operation. Deposits of antimony ore occur in the neighbourhood of Alexandretta, at Allkhar, near Rozdan, and near Aidin. Orpiment occurs with the antimony ore deposits at Allkhar, and there are also some important mines near Yenikeni. The Dead Sea is reported to contain large quantities of asphalt. Borate of calcium (boracite) is worked near the port of Panderma in Asia Minor, and it is also found in the province of Aleppo. Chromite (chrome ore) is found in many parts of Turkey, occuring in regular bunches of serpentine. Copper ores are worked in various places. The Arghana Maden is the richest copper mine in the country, the average ore containing about 30 per cent. of copper. Other mines are at work in the Trebizond Vilayet, and in the Erzeroum district. Deposits of argentiferous galena (silver lead) exist in the province of Aleppo and in the district of Konia, and mines are also worked at Balia, in the province of Karassi, at Avnie, in the Caza of Adramit, and at Karalar in the province of Adana, and the Government are working silver mines at Bulghar Maden, near Konia. The Kodja Gumush mine at Balia produces a good proportion of the country's annual output, working ore yielding 82 per cent. of lead, and from 1¼ to 4 per cent. of silver. A mine at Iotape or Eidah in the province of Adana is worked for silver-lead and zinc. Zinc also occurs at Anamur. Ancient workings for mercury exist in several places near Konia. There are oilwells at Myriofito and Hora on the north coast of the Sea of Marmora. The country round Kerkuk in the Vilayet of Mosul, and also that near the Red Sea is said to be very rich in mineral oil. Petroleum also occurs in Farsan Islands in the Red Sea, and also in the province of Erzeroum. No particulars of output are available. Asphalt is worked in small quantities in the vicinity of Hesbeya, and the Dead Sea is reported to contain large quantities of it.

Salt is a Government monopoly, and is obtained from sea water, brine lakes or springs, and rock salt mines. Extensive beds of salt are located in the region of the Dead Sea in Palestine. Rock salt mines are worked near Van in Armenia, and near Neveshehr in the Konia district. Rock salt is also widely distributed over many parts of Tehama, and there are also extensive salt mines in the Yemen. In 1908-9 the value of the salt sold was £1,229,000 on 335,923 metric tons, of which about one-third was exported. In the Turkish vilayet of Benghazy, on the Mediterranean, the sea overflows the waste salt tracts of land, leaving salt deposits which are extracted during the summer. Deposits of iron ore exist at Beirut-Dagh in the province of Aleppo. Shipments of iron pyrites are exported from Stratoni. Magnesite is worked at Yerakino. Manganese mines are in operation in Asia Minor. Fuller's earth is quarried on a large scale, the deposits extending over 60 miles and being of varying breadth. The greater part of their area is comprised in the Sandjak of Kutatnia, and principally in the Caza of Eskichehir between the two banks of the Poursaktchai and the left bank of the river Sakaria. Emery exists in Asia Minor, and a large quantity is annually exported from Smyrna. Mining meerschaum is an industry of some importance at Sari-sou, Sépétdji, Gherkli, and Menton, and several thousand persons are engaged in digging the stone, and preparing it for market.

Mesopotamia.

This country is rich in petroliferous territories, which are situated near the Baghdad railway, and on the borders of Persia. The region is mostly a great plain.

Chinese Turkestan.

Mineral wealth of considerable importance exists in the districts of Bagdo-Gia, and around Turfan. Nephrite (or true jade) is found in some of the mountain gorges traversed by the upper waters of the Yarkand and Khotan, and by the Karakash, a tributary of the Kholan.

Russia.

This country is enormously rich in all kinds of mineral wealth, very largely undeveloped. Coal (anthracite, coal and lignite) mines are in operation in the districts of Donetz, Poland, Moscow, Urals, Kieff, Turkestan, Tomsk, Caucasus, Saghalien, and Eastern Siberia, the aggregate production in 1910 reaching 25,433,567 metric tons. The most productive coal region is the Donetz Basin, in the province of Ekaterinoslav; next in importance comes Poland, mining true coal and brown coal, the Dombrowna Basin in Poland being a continuation of the great Silesian Coal Basin. Other important coal regions are the Urals, the Eskibastus district south of Omsk, the Kusnelski Basin in the Government of Tomsk, and the Tkvibulski district in the Caucasus. A large proportion of the product of the Donetz Basin is converted into coke. Coal is also abundant in Siberia, but it is chiefly brown coal and the quality is poor. It is also worked in the island of Saghalien, by convicts, for bunkering purposes.

Petroleum ranks as the second largest production, 9,317,700 metric tons being produced in 1912 from the Caucasus, Transcaspian, and Turkestan. The Baku region comprises five separate fields—viz., Sabounchi, the most productive, the average depth of the producing wells being 994 feet, Balakhany 693 feet, Romany 1,456 feet, Bibi-Eibat 1,589 feet, and Binagadi 490 feet. Ninety per cent. of the oil derived from wells in these fields is required to be drawn up mechanically. Eighty-four per cent. of Russia's total production is obtained from the Baku district. Other producing territories are Grozni, producing 11½ per cent., Maikop, 1.5 per cent., and the island of Tcheleken, situated in the Caspian Sea, at the entrance to the Bay of Krasnovodsk, 2.1 per cent. A new field was discovered in 1909 near the river Elchta on the boundary of the provinces of Archangel and Wologda, reputed to be a richer field than that of the Caucasus, but the region is difficult of access.

Oil is also reported to exist at Gulkhan, in the Kokand district, and there are large oil wells at Urdkin, Chaivo, and also near Nabil Bay, on the north-east coast of Sakhalin.

Peat is also an abundant and important fuel, deserving special attention as being so easily and economically obtained in certain localities far removed from railways. Many of the turbaries have been carefully tested by borings, and large areas of peat bogs have been proved, several ranging from 19 to 38 square miles (5,000 to 10,000 hectares) in area and over, and in the aggregate (as proved) occupying an area of at least 398 square miles. Large peat works exist in the neighbourhood of Petrograd, and the Rojsjo Peat Works are manufacturing compressed peat in Finland.

In manganese ore Russia has a greater wealth than any other country in the world. There are two great manganese districts, one in the province of Kutair and county of Sharapan, and which extends over the whole central part of the basin of the river Kvisila, and in which the richest mines are situated, the other being in the province of Ekaterinoslav. The richest deposits cover an area of more than 50 square miles, the beds of manganese ore being interstratified with sand and clay of Eocene age, the ore as exported containing about 50 per cent. of metallic manganese, 6 to 9 per cent. of silica, and 0.12 to 0.17 per cent. of phosphorus. The quantity exported from Batoum and Peti in 1912 was 926,330 metric tons.

Important copper mines exist at Pitkäranta, on the north-east coast of Finland, and also in Siberia, 54 per cent., however, being produced from the Urals, and 28 per cent. from the Caucasus. Platinum is being derived from alluvial deposits mainly in the Perm and South Verkhotursk districts in the Urals, where many dredges are at work. The bulk of the world's supply of platinum is produced by Russia. The iron ore deposits in various parts of the Empire are also enormous, the total quantities raised in 1912 being 7,993,500 metric tons, of which over two thirds were obtained from the rich deposits in the Krivoy Rog district in the South of Russia. Deposits of high-grade magnetic iron ore exist in the neighbourhood of Olga Bay (Vladivostok).

Important deposits of asbestos exist in Finland, but the Ural region is the chief source of supply. Gold is derived mainly from alluvial deposits in the Urals, and in Eastern and Western Siberia. Gold dredging is carried on in the Urals and in Lapland, chiefly in the river Ivalo. The output of fine gold in 1912 was 1,395,882 oz. Silver deposits exist in the Urals, Altai, Nerchinsk, and Karkalinsk districts, and are also worked at Tomsk, Transbaikal, Kirghiz Steppe, Caucasus and in Finland. Quicksilver is obtained in the district of Ekaterinoslav in South Russia, the deposits being first worked in 1885.

Sulphate of sodium is largely obtained from the Transbaikal district, and the Government of Tomsk. The great Marmischanski Lake is estimated to contain more than a million tons of sulphate of sodium, and a large quantity is obtained from it annually and some of it is used for making soda. Native sulphur occurs in various parts of the Empire. It is worked in Daghestan and at Czarkowsky in the Government of Kielce, near the Austrian frontier. Zinc ore is at present mainly obtained from the deposits of calamine in Poland. In 1910 about 51 per cent. of the salt produced in Russia was from lakes, 23 per cent. was obtained by evaporating brine pumped up from the boreholes, and 26 per cent. by mining beds of rock salt. The lake production is derived mainly from the Crimea, and the adjacent provinces, and in Astrakhan and Taurida. Most of the rock salt is mined in the districts of Ekaterinoslav, Orenburg and Erenvan. The boiled salt is principally produced in the Perm district. In Western Siberia salt is obtained from a number of lakes which partially dry up in summer, and in hot years deposit crusts of salt from two to four inches thick. The great Burlinsk Lake yields 20,000 tons yearly in this fashion. In Eastern Siberia the salt is obtained from springs, and from deposits of rock salt. The value of the total minerals produced in 1910 amounted to £50,678,102. This is the year for the last available return.

Engineering Notes.

Spraying Machines.

In spite of the extensive use in the Levant of sulphate of copper, lime, and other substances in liquid form, for spraying vineyards, orchards, etc., as a prophylactic against phyloxera, peronosporos, and other diseases, a subsequent, though sporadic, appearance of these diseases is not unusual. And as this occurs even in vineyards or gardens where economy in spraying is not considered, and only the best quality of liquid is used, it may safely be taken as an indication of faulty or imperfect spraying. With a deficient spraying machine or apparatus, the liquid cannot be properly sprayed; vital parts of the plants or trees may thus be left "untreated," and, naturally, such parts, as well as any others which the spraying has not reached, will sooner or later be attacked by the disease, and there the germs will breed, and the spreading of the disease will follow.

Machines Hitherto Used.

Various spraying machines and devices have hitherto been used in the Levant, but, as a rule, the cheap German and Austrian mechanisms were mostly in evidence. Cheapness was not so much a temptation as the way in which the manufacturers "pushed" their wares before the buyers' notice. These were bought because buyers knew where and how to find them, although their efficiency might be doubtful. In view of the present opportunity for introducing British-made sprayers in the Near East, makers should take the necessary steps in that direction *now*, for now is the time that landowners and farmers begin to realise their products and decide as to what machinery and implements they must purchase for the approaching season; and sprayers are of the utmost importance to almost every peasant in the Near East, for few do not possess a vineyard, an orchard, or a garden. It must also be borne in mind that Continental, American, and Canadian competitors are aware of the bulk of business that can be done in this simple, but very important, agricultural implement, and will not lose time in availing themselves of the present opportunity. Some new designs of spraying machines of British construction may be found very suitable for the East, for they are fitted with very powerful pumps, enabling the liquid, applied as a spray, to reach the corners, cracks, and crevices of the plant, where, generally, disease and germs breed. This cannot be done with ordinary mechanical spraying devices such as hitherto have been used in the Levant vine and fruit-growing districts. Makers of the above-mentioned British sprayers, of all sizes, should not lose time in bringing their productions before the notice of Oriental and other agriculturists. There will be no demand for prompt delivery, for such sprayers are generally needed about January or February, but orders are booked from now.

Potato Diggers.

There was a time when potatoes for consumption in the Near East were supplied by Italy and Austria, but now the cultivation of the tuber is almost general in all districts. It is not well known, however, to growers that there are machines or implements for the raising of the crop, and others cannot believe that such work can be done by a machine without damaging the tubers. But now that manual labour is very scarce, potato farmers will be obliged to have mechanical diggers, or raisers, and some of the new patterns used in England and Ireland will be found very suitable. They dig clean, and owing to the slow motion the potatoes are not bruised or damaged in the slightest degree, and are left in a narrow row. The shares are of hardened steel, and can be adjusted to the correct working depth by a lever at the side of the driver; their draught is sufficiently easy to enable them to be worked by two horses.

Manure Distributors.

The use of artificial manure is increasing every year in the East, and apart from considerable quantities that are imported, there are large factories in the Near East that produce some excellent qualities for local use and the supply of the neighbouring countries and South Russia. Most of the distributors used were of Hungarian origin, but those who use machines of British construction have found the latter far superior, stronger, simpler, and easier to manage than the Hungarian, although their price used to be slightly higher. A machine for the Near Eastern countries must be made to suit the requirements of a fruit farm owner as well as a root grower; that is to say, to be of general use on an estate. It must be fitted with a metal hopper by preference, as wooden hoppers do not last long in hot climates. Some time ago an English pattern was introduced in a Thessalian district which has, apparently, given satisfaction since other districts have adopted it. This distributor was built upon the disc delivery principle, and the rate of distribution can be altered without changing any cog wheels. It was simple in construction, and perfectly easy to operate. Manufacturers of such and other types of distributors may find a good market in the Near East and especially in the Levant mainland and the large Aegean islands, where in recent years there has been a distinct advance in the employment of modern machinery for agricultural purposes.

Small Agricultural Tractor.

The reason for recommending and importing American agricultural tractors was stated by an engineer and machinery importer in the Near East, to be because the smallest British made agricultural tractor was too large for the Oriental agriculturist and required two or three men to attend to it, while the American machine was small, light, and compact, and required only one man to operate it. Of course, this is not the case and if buyers had only been aware in the past of the qualities of British machines they would have insisted on having them. As a guidance to buyers in the Near East, mention may be made of the wonderful work of a small British made agricultural tractor, which was witnessed the other day by a party of foreign landowners at an English farm. At the time this little tractor was driving some barn machinery, and was prepared to start soon after on field work. This machine allows a two-furrow plough, a cultivator or other implement to be hinged behind in such a manner that it can be operated and lifted by the driver. Work with this tractor, therefore, becomes a one man proposition, and its suitability for employment on small farms cannot be gainsaid. Owing to its light weight it can be used for seeding or harrowing, and its power is fully equal to the rapid harvesting of grain with a six-foot binder. Its width is 4 ft., three speeds of 2, 3, and 5 miles per hour, and a reverse are provided; force pump lubrication with an indicator on the front dashboard is supplied, and a well made magneto ensures regular ignition of the fuel. Cooling of the engine cylinder is effected by a thermo-syphon and tank with very large water pipes arranged on a new principle giving, it is claimed, unusual efficiency and ample facility for cleaning. The engine starts on petrol, but works on paraffin, one minute's run on the spirit being sufficient to obtain the heat necessary for vaporising the more ordinary fuel. It is mounted on steel travelling wheels, and is fitted with a belt pulley and friction clutch from which barn machinery requiring up to 10 h.p. can be driven. For transporting farm produce, it is said, this tractor will do the work of, at least, four horses, hauling three tons at five miles per hour on roads with reasonable gradients. It is to be regretted that such modern machines have not been brought to the notice of buyers in the Near East.

At the present time, when the acute dearth of dwellings for the people has brought all matters relating to building very prominently before the notice of the public, the forthcoming issue of *Specification*, of which Mr. Frederick Chatterton, F.R.I.B.A., is the newly-appointed editor, will be looked for with more than usual interest. It will contain, together with much technical matter of direct value to architects, surveyors and municipal engineers, specially contributed articles on a variety of subjects. Mr. Chatterton will be remembered as having practiced as an architect in South Africa some thirteen or fourteen years ago, during which period he designed St. Patrick's Church, Pietermaritzburg, and carried out a variety of work in Pretoria. He has for the last seven years been in the service of the Egyptian Government as a member of the architectural staff of the Public Works Ministry, Cairo, which appointment he resigned in order to take up his editorial duties in London.

COMPANY NOTES & REPORTS

Champdany Jute.

The report of the Champdany Jute Company for the year ended March 31 last states that inclusive of £50,086 brought forward the balance at credit of profit and loss is £224,781. An interim dividend of 20 per cent. was paid on October 22 last, and £22,391 has been written off the block account for depreciation. The directors now propose to pay on August 27 a final dividend of 50 per cent., which will leave a balance of £126,281 to be carried forward. The stock of jute has as usual been taken at cost price, and the cloth and bags have been entered at contract rates. The mills have run smoothly throughout the year. Full time working was in force up till November, when the Armistice caused a suspension of the demand for manufactured goods, and an agreement was signed by all the Calcutta mills to restrict working to five days per week. This was subsequently curtailed further to four days per week, and advice has recently been received that the latter arrangement is to have effect up to December 31 next. Thereafter it is proposed to work five days per week during January, February, and March. The prospects for the current year are favourable, but prices for the new season's jute crop have opened on a very high basis, and the cost of raw jute is likely to show a material enhancement on that recently current. Meeting, Glasgow, August 26, 2 p.m.

Near East Markets.

Unfavourable Outlook for Turkish Fruits.

Messrs. C. J. Giraud and Co., Smyrna, report as follows under date August 1:—

We regret to report that there is no improvement in the outlook. Being on the eve of the new season, we consider it advisable to enter fully into the present conditions and future prospects of the fruit crops.

Sultanas.

The estimate of the yield stands presently at about 23,000 to 25,000 tons. The gathering and drying of the grapes in the lower districts should commence during the next fortnight. Under normal conditions, arrivals of new fruit would begin middle of August and regular supplies would reach market throughout September and October, at least 15,000 tons becoming available for shipment during this period. The situation to-day does not in any way warrant this forecast. In many districts, the farmers have abandoned their vineyards and have withdrawn into the towns. Security does not exist. The gathering in many localities will necessarily be delayed and may consequently involve the complete loss of the fruit. Transport has diminished considerably, and where the fruit is gathered, it will require time to convey same to the railway stations for transport to the Smyrna market. The view now generally taken is that arrivals of new fruit in any quantity will be much later than usual, that supplies will come forward with much irregularity and delay and that a considerable portion of the yield will be lost owing to the impossibility of gathering the grapes on maturity. The most sanguine opinion does not incline to estimate the eventual result of the yield at over 18,000 to 20,000 tons and it is not expected that more than half this quantity will reach market over the next four or five months.

Figs.

The outlook for this article is decidedly more unfavourable. The estimate of the yield stands at present at about 60,000 to 65,000 loads. Of this total, about 15,000 loads would be raised in the districts of Thyra, Odemish, and Ephesus, the remainder coming forward from the Meander Valley, say in the district between Azizieh and Nazli, the town of Aidin lying about half-way. This district produces the fine qualities required for layer packing. The Meander Valley, however, has for some time been a battle field. The town of Aidin, numerous villages, farms, etc., have been burnt. The population has scattered. The country between Azizieh and Aidin is in possession of the Greek forces, but as practically 90 per cent of the fig orchards in all the Meander Valley are owned by Turks, it is needless to say that the population has entirely withdrawn.

The authorities are considering a scheme under which the fig orchards in this district will be allotted to the Christian refugees who have lost house and home, at the rate of sixty trees per head, the produce being equally shared between the gatherer of the fruit and the Government. This scheme in practice is not likely to work out satisfactorily. If any portion of the fruit is eventually gathered under these conditions, the quality, condition and grading will certainly not be up to the mark, the fear being that the fruit will be taken up in immature condition. The country beyond Aidin is held by the Turks and all railway communications are impossible. Further hostilities being imminent, the native population is slowly withdrawing. Meanwhile, the collecting of the figs should commence in about a fortnight and supplies would, under other conditions, have come forward by the third week in August. Normally, given a yield of about 80,000 loads, say some 18,000 tons, daily arrivals by railway to the Smyrna market would average about 300 to 400 tons and between the end of August and the first week in October some 15,000 tons would have reached Smyrna, been packed and shipped off. At present, it is the conviction of the majority of dealers that not more than 25,000 to 30,000 loads can be collected and transported to Smyrna in the period September-December. Arrivals will be on a small scale and intermittent. The fine qualities grown in the Meander Valley and on the hill slopes bordering same will not be forthcoming.

Market Prospects.

Meanwhile, against this unfavourable outlook, shippers are receiving inquiries from all foreign markets, and there are strong indications of a very active demand for both sultanas and figs, especially from Northern Europe. If a Government control on prices is established in the United Kingdom, it is inevitable that the bulk of the sultanas and figs in the coming season will find an outlet on other markets. Holland so far has been paying better prices for sultanas, and the American market and the Continent will certainly absorb the bulk of the fig crop.

The railways serving Smyrna are very badly off in rolling stock, locomotives, etc. It will be very difficult for them to cope with anything but moderate traffic for some time to come. Timber is scarce and the supplies of cases, boxes, etc., in shippers' hands are totally inadequate even for the reduced crops in prospect. Labour is scarce and dear, port shipping facilities are very limited, the currency question is still far from a settlement, and exchanges are continually fluctuating, rates in a few days showing variations of as much as 10 per cent. It is needless for us to make any reference to the delays in cable and postal communications. These are unfortunately too obvious and are not limited to our parts only. The season is likely to prove a very difficult one for shippers, and importers abroad will be well advised to take full count of the situation, which we have in no way exaggerated.

Promising Bulgarian Harvest.

(From Our Own Correspondent.)

Sofia, July 26.

After the cessation of the prolonged rains of May and June and the weather became warmer the grain crops underwent a marked improvement, and the peasants are now reaping abundant crops of the very best quality. Unfortunately, the lack of labour owing to the fact that a great number of war prisoners are not yet released is being sorely felt, and this factor and the insufficiency of means of transport due to present conditions will result, it is feared, in much of the harvest being left in the fields to spoil. But it is certain that sufficient will be harvested to provide amply for the needs of the country.

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in June:—

Cotton.

The weather has continued adverse, with high cold winds and cold nights. Temperatures were persistently below the average throughout the month, except at the end of the first week of June. The mean for the month was abnormally low. The mean temperature at Giza was 23°5 or 2°0 below the normal; this is the lowest temperature recorded for the period on record since observations started at that station in 1902. The lowest temperature recorded at Giza during the period May 26-June 2 was 10°: and the absolute maximum was 42°. Water supply has been generally sufficient. The crop is still at least 20 days later than usual and in many districts the plants are stunted. Speaking generally, the prospects are unsatisfactory, especially in Lower Egypt. In Upper and Middle Egypt conditions are slightly better and bolls are forming. The cotton worm (Prodenia) attack has fortunately been slight, and is being easily controlled. It is practically confined to Lower Egypt and Giza, the only attack elsewhere being a small one in Fashn Markaz (Minya). Aphis is prevalent in practically all provinces of Lower and Middle Egypt and is reported to have caused some damage in places, especially in Minufiya. Thrips is also reported from Daqahliya and Minufiya. Attacks of "wilt" are becoming more serious in Beheira, Gharbiya, and Daqahliya, and are reported to attack Sakellarides while leaving other varieties in neighbouring fields unaffected.

Wheat.

The final reports confirm last month's forecast: the result of the Hindi variety in Lower Egypt has been even worse than was expected last month, owing chiefly to the heavy attack of rust. Apart from the poor yield, the grain is stunted and gives a very low out-turn of flour. The attack has not been quite as bad in the Baladi variety. In Middle and Upper Egypt the crop has been almost an average one.

Barley.

The final estimation of the yield is somewhat lower than that made last month.

Millet (Sefi).

Weather not favourable; water supply sufficient everywhere, including the new canals of Assiout basins. The stalk borer is fairly prevalent but has hitherto caused little damage. In Girga, Assiout, and Minya the early-sown fields are in flower, and the crop generally is in a fairly good condition.

ECONOMIC CONDITIONS IN TURKEY.

The following are extracts from recent reports received by the Imperial Ottoman Bank :—

Panderma, July 10.

It is impossible as yet to estimate the final yield of the approaching harvest, but, without being charged with pessimism, one can foresee a decrease of 50 per cent. at least compared with what the production should be. It is our opinion that the country will find it necessary to import certain quantities of cereals to supply its needs.

The despatch of catalogues of agricultural machinery is very desirable, for the farmer needs to renew his material, and he will desire to purchase the latest and most satisfactory agricultural machinery.

The past month has not been marked by any important transactions. Commerce is for the most part inactive, merchants hesitating to conclude business, owing to lack of confidence due to previous disappointments.

Aidin, May 17.

Our cultivators and merchants have for the most part realised large profits during the last two years of the war, owing to the high prices of all products. There are few people who have not profited sufficiently by the low level of paper money to settle their pre-war debts. Fortunes which were before reckoned in hundreds of pounds are to-day for a great number estimated in thousands. Even taking into account the difference between gold and paper money, the wealth and credit in general of various merchants and agriculturists are very greatly improved. Commercial tranactions in the future cannot be otherwise than favourably affected by the new position of our merchants and producers.

Broussa, July 24.

The people deported during the war have not yet all returned to their homes. A large number of the repatriated folk who had money before the war find themselves in a position of serious difficulty. Apparently this situation will last until a decision is made in regard to their demands for restoration of their goods.

There are a certain number of business men who, through the unforeseen circumstances of the war, have grown rich.

Among those exports which we think will probably interest you the silk of our district occupies the first place. Unfortunately, sericulture has declined greatly in importance in the lest few years, due chiefly to the withdrawal of the active part of the population. Secondary causes of this decline in importance include the removal of mulberry trees on a vast scale, their use as firewood, and their replacement by the cultivation of cereals. Without doubt, the silk production could be improved by the re-establishment of security in this district.

The agricultural situation could be much improved by the introduction into the country of ploughing machines.

As to products of import in general, the proximity of Constantinople to Broussa make it imperative for this town at the moment to provide for itself almost entirely from the neighbouring market.

LONDON PRODUCE REPORT.

Currants.

The demand continues, and prices still show a hardening tendency. There is still nothing to report regarding the prospects of further supplies. When details of the proposed scheme of control are available the outlook will be clearer.

Sultanas.

This commodity remains in great demand, and the available stocks are being rapidly absorbed, so that if further shipments do not come to hand shortly the market will be bare of supplies. The prospect for further shipments at the moment is not encouraging, the latest report of Messrs. Giraud on Turkish crops being of a most discouraging nature.

Coffee.

The feature of the market has been the strong demand for export, and as prices for export business are better than for home trade merchants have been giving the former the preference. Indian and Brazilian have been in special demand, while Costa Rica has been in steady request. At auction this week 8,486 bags were offered. The offerings included 1,997 bags of Costa Rica, which realised 152s. to 157s. for good to fine bold, and 152s. to 154s. 6d. for medium. The stock of Brazilian is 116,609 bags as against 255,594 a year ago; while the figures for Central American are 200,868 packages as against 132,469 for the previous period. The future market has been quiet.

Sugar.

There is a marked demand, both for home consumption and for export, and a feature has been the inquiry from the Continent. The outlook for beet crops on the Continent appears to be very unfavourable, with the result that cane sugar is likely to increase in price. A tendency in that direction has already been noticeable, Java sugar being dearer. In the circumstances the excellent reports of cane crops are, to say the least of it, eminently satisfactory.

Seeds.

The market has been rather easier, and prices for some varieties have been a shade lower. Linseed has been done at 52s. per cwt. (Calcutta), and at 55s. per cwt. (Bombay). Prices of rapeseed have been maintained, the quotations for August-September being for bold Ferozepore 48s., for Toria 49s., and for brown Cawnpore 45s. There has not been much business, as buyers have been holding aloof. Cottonseed has been quiet. Egyptian September-October is quoted at 29s.

Oil Cakes, etc.

There has been a decided reaction in the prices of oils. Linseed oil has been done as low as £112, the quotation for September-October being the same. Crude cotton-seed oil is £110, while refined cotton-seed oil is £120. The Government's price for linseed cake is 500s., and for cotton-seed cake 400s. The official price of decorticated ground-nut cake is 400s., and of undecortricated ground-nut cake 420s. There is a good demand for coconut cake at 440s., and for sesame cake, which is exceedingly scarce.

The Japanese have opened business houses in British Cochin, and it is reported that the Japan Cotton Trading Company intend to take over spinning mills in Travancore.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

Trading in the market during the past week has been on a comparatively small scale, and the tone in all quarters remains very quiet. The confidence of buyers in current prices has been very severely shaken by the recent easier tendency in American cotton rates. It is quite likely, however, that a reaction in values would soon result in increased activity, and perhaps that point is not very far off. Advices relating to the Egyptian cotton crop continue favourable. Some damage to the plants is mentioned from pests, but the weather conditions are satisfactory. Prices in Liverpool and Alexandria have favoured buyers. Demand in Egyptian yarns has been on a small scale, but producers are in a strong position as a result of extensive engagements, and full prices have had to be paid for anything wanted. In piece goods for Egypt demand has been more subdued than for some time back. Some shippers have been prepared to purchase for long delivery, but many makers do not care to commit themselves to contracts beyond next March. Fair offers have been mentioned for several outlets of the Levant. A little more inquiry has been reported for India, and it remains to be seen whether business will mature. Only odd lots have been sold for China. Grey shirtings have again been purchased for Singapore. Stock lots, especially in printing cloths, have been wanted for South America. Manufacturers have been slow to grant concessions in price. A rather dragging state of affairs has existed in home American yarns, and rates have favoured buyers. There are signs of supplies becoming rather more plentiful. A pause has come round in operations in shipping yarns.

Cotton Mill Deals.

The outstanding feature in Lancashire cotton trade circles this week has been the deals in mills. It is understood that three or four financial syndicates are determined to secure control of a large number of spinning companies, and very tempting offers are being made to directors to dispose of their concerns. As an indication of what is going on, it may be said that the Wye Mill at Shaw, which contains about 67,000 ring spindles, has just been sold, £16 per share being given by the buyers. The shares are of the value of £5, but only 10s. has been paid up, and of this amount 5s. has come out of past profits in the way of a bonus can. Recent dividends have been at the rate of 200 per cent. per annum. It is of interest to point out that a buyer of 100 shares in this concern at the floating of the company, which would cost £25, will receive for his holding £1,600. Another interesting case is that of the Pearl Mill, Oldham. A financial syndicate has offered £29 for the £10 shares, of which £6 is paid up, £1 10s. of which has been added as a result of the capitalisation of reserve funds. The mill contains nearly 120,000 mule spindles and over 14,000 ring spindles. Other deals have also taken place, and very big figures have been paid This development in the Lancashire industry is viewed with some apprehension in certain quarters. Profitable trade is expected for several years, but depression is bound to be experienced sooner or later, and when that time comes the high capital value of the mills which are now being purchased will hit the owners very severely. There are numerous companies in Lancashire which stand in the books as a result of depreciation at 10s. a spindle, whilst these new concerns are being floated at anything from £2 10s. to £3 per spindle.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director General of Commercial Intelligence, Calcutta, dated Calcutta, August 13:—

General rain throughout, except in North West Frontier and Assam where fall was local. More badly wanted in Assam.

Bombay Cotton Market dull. Fully Good Broach August quoted Rs. 526. Piece goods Market steady. Calcutta Jute Market dull. Hessians dull, nothing doing. Sackings very quiet.

INDIAN FAMINE FIGURES.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agricultural Department, dated August 15:—

Our telegram dated August 8. Famine has been declared in Palur, Biridi, Humma and Ronabha estates, and in Chatrapur subdivision of Ganjam district, Madras Presidency. Relief works in Gungarpur Native states of Rajputana, and test works in Merwara have been closed and cheap grain shop relief in Akola district of Central Provinces stopped. Distress in the United Provinces is greatly diminished and decreasing in Bengal. Condition of cattle in Bombay has much improved. Numbers relieved:—Bengal: relief works, 4,001; test works, 83; gratuitous relief, 19,505. Bihar and Orissa: relief works, 1,193; test works, 3,660; gratuitous relief, 44,305. Feudatory States of Orissa: test works, 7,300; gratuitous relief, 23,359. United Provinces: test works, 675; gratuitous relief, 13,012. Rajputana: test works, 362; gratuitous relief, 75. Ajmer-Merwara: gratuitous relief, 425. Central India: relief works, 4,000; gratuitous relief, 10,078. Central Provinces: relief works, 15,248; test works, 8,500; gratuitous relief, 47,897. Bombay: relief works, 1,936; dependants, 12,243; village works, 1,985; test works, 438; gratuitous relief, 68,755. Hyderabad: relief works, 24,000; gratuitous relief, 25,000. Madras: relief works, 34,360; test works (incomplete figures), 445; gratuitous relief (incomplete figures), 65,298.

COMPANY RESULTS, Etc.

The directors of the Egyptian Delta Light Railways announce that the dividend on the cumulative preference shares for the year ended March 31 last will be 5½ per cent.

The directors of the Southern Punjab Railway have declared an interim dividend on the Ordinary stock in respect of the year ending September 30 next of £5 per cent., together with a bonus of £1 per cent., payable on September 10.

The directors of the Standard Tea Company of Ceylon announce an interim dividend of 5 per cent. (at rate of 10 per cent. per annum) for the six months ended June 30 last.

The dividend on the Egyptian Guaranteed Three per Cent. Loan, due on September 1, will be paid by Messrs. N. M. Rothschild and Sons on that date.

BRITISH TRADE CORPORATION.

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Wednesday.

Business has continued dull, and this has had the effect of making some Government stocks and several land shares somewhat easier in price. Bank shares, however, with one exception, have remained firm.

Among Government stocks Egyptian Unified have dropped half a point to 83, while the 3½ per cent. Pref. have suffered a much more considerable decline to 70¼.

In the Bank division some business has been done in Nationals and Agriculturals, but without change of price in either case; while a fair-sized deal was effected in the Agricultural Pref. at 7⅜—a decline of ⅛. Bank of Abyssinia shares are also in demand at about 32s., but there are none on offer.

Among Land shares the easing of prices has been fairly general. Behéras have dropped half a point to 14, Egyptian Delta Lands have lost 6d., and are now quoted at 14s. 6d., while a more considerable decline has brought Egyptian and Foreign Trusts to 14s. 6d. also. New Egyptians have lost 1s., and are now 22s. 6d.; but, exceptionally, Egyptian Consolidated Lands are firmer, and are quoted at 2s. 9d.

In the Miscellaneous group Salts and Sodas have changed hands in fair numbers, and some business has been done in Alexandria Water, but without change of price in either stock.

INDIAN EXPORT TRADE AND CURRENCY RESTRICTIONS.

The East India Section of the London Chamber of Commerce have received a telegram from the Bengal Chamber of Commerce drawing attention to a statement in the House of Commons by the Secretary of State for India to the effect that exporters of produce from India were not being seriously inconvenienced by currency restrictions. The Bengal Chamber consider the statement open to question, and affirm that the export trade is undoubtedly seriously hampered by the inability of exchange banks to purchase forward bills without cover, owing to the inadequate supply of Council bills for foreign trade requirements and the restrictions on the import of gold and silver. The Bengal Chamber do not suggest any alteration in present restrictions until the report of the Currency Committee has been published, but wish to correct the impression conveyed by the Secretary of State that the export business is not restricted.

The traffic return of the Egyptian Delta Light Railways for the ten days ended July 20 amounted to £E8,773, making the total for the year £E56,624. The corresponding totals for the previous year were £E7,862 and £E80,801.

NOTES OF THE WEEK.

If the Paris Conference had displayed a greater understanding of the Near Eastern question or had been more successful in its handling of it during the last nine months, most people would have been inclined to be less critical of its second excursion into the realm of definite action. A few weeks ago it administered in a most inconsiderate manner a public rebuke to Roumania for carrying to their logical conclusion the military measures which led to the downfall of Bela Kun and freed Hungary from the red terror of Bolshevism. It has now announced that it cannot recognise the Archduke Joseph as the head of the Hungarian Government for the purpose of either concluding peace or of holding the elections which are to decide the future constitution of Hungary. The reasons given for this embargo are that the Archduke is a member of the Hapsburg family, which, through its policy and its ambitions, is in great measure responsible for the calamities from which the world is suffering and will still suffer for a long time, and, further, that elections held by a Government of which he is the head would either not represent the Magyar people or, if it should express the wishes of the country, "nobody would admit it."

There is much to be said for the contention about the holding of elections, especially in view of the manner in which elections are "made" in South-Eastern Europe. At the same time, the Archduke Joseph has been ill-advised in retaining or in using for official purposes his Imperial title. On the other hand, the wisdom of shutting the door to a member of the Hapsburg family as potential head of the future Magyar State may well be open to question. A Hohenzollern could be ruled out of order in Germany, because Germany remains in extent very much what she was before the war. The Austria-Hungary of pre-war days has completely disappeared, and to pretend that the future Magyar State of nine million people, whether under a Hapsburg or not, is going to be the danger-spot in Europe that the Dual Monarchy was is foolishness. The Paris Conference can hardly wish to claim a reversion for the rulership of the Magyars for Bela Kun and his heirs; and if the country is unable to produce a strong man outside the Hapsburg family, it would seem the negation of sound statesmanship to forbid his election. The Conference's communication to the Inter-Allied Mission in Budapest does not specifically state that it will not recognise the Archduke Joseph if he should be placed at the head of the nation by popular vote, but there can be little doubt that such a verdict would be a rebuff, in view of the way in which the message is worded.

No one in Great Britain is likely to hold a brief for the Archduke Joseph, but the dispassionate onlooker will be tempted to believe that in the present welter in Europe any man of action, not of Bolshevist leanings, is preferable to the studied flabbiness which is in danger of doing duty for statesmanship these days. Moreover, it is not complimentary to the Allies' Peace Settlement to pretend that a single individual at the head of a small State is going to be able to set the nations again at one another's throats. There is, in our opinion, far more to be feared from one act of injustice in connection with the Peace Terms than from the power of any man, whether constitutionally acquired or not, provided that the Allies remain true to themselves. It would certainly be a mistake to apply the doctrine now enunciated by the Conference in regard to the Hapsburg family to the Bulgarian Royal House. Neither in character nor in manner does King Boris resemble ex-King Ferdinand; nor has he had at any time the least sympathy for his father's policy or methods of government. To demand his removal from the throne on the strength of his relationship to the former King of Bulgaria would be an injustice to a capable ruler of marked promise and a disservice to the Near East and to the Allies. The peoples of South-Eastern Europe are not yet ripe for the republican form of government; they take their politics more seriously, perhaps, than Westerners, and with the nation divided into so many bitterly hostile camps they appreciate having someone on the spot who is above politics but can yet be appealed to on political and other subjects.

The news that Prince Carol has definitely renounced his claim to the throne will surprise no one who has been in close touch with Roumanian affairs. His morganatic marriage gravely compromised his position as Heir-Apparent; but it was hoped that the separation or divorce would be accepted by both parties and would save the necessity for interfering with the succession to the Crown. Prince Carol, however, has been cast in a different mould. He refused to give up seeing his wife, and it was generally recognised that he could not long fill the position of Crown Prince. An announcement to the effect that he contemplated a long tour abroad prepared people for the formal renunciation, which is the wisest course to adopt in all the circumstances. The whole incident has given rise in some Roumanian circles

Digitized by Google

to the hope that it will have the effect of steadying the morals of a small section of the population, which had succeeded in gaining too much notoriety for itself.

At long last there is some prospect of the Fiume question being solved. At all events, a memorandum giving details of a possible solution has been submitted to President Wilson, and it is understood that if it meets with American approval, Italy will accept the arrangement proposed. According to this scheme, "the so-called free port and the port of Barossa, with its wood deposits, would be ceded by Italy to the League of Nations for ninety-nine years"; the "accompanying port and railway facilities necessary to the service of the hinterland" would also be administered by the League; while Italy would retain "the remaining small portion of the port . . . as a national Italian port," and the greater part of the city and territory of Fiume. The plan has obvious defects, but if Italy and Yugoslavia are content to accept it, it would be better by far than any entirely one-sided settlement, which could not fail to leave behind a feeling of rankling injustice. How soon the League of Nations will be in a condition to take over such a responsibility as that proposed for it by this project remains to be seen.

French comment upon the situation in Syria, and the future of that country, continues to be marked by a certain nervousness and occasional irritation, but upon the whole the disposition to hold Great Britain responsible for whatever is amiss is happily less in evidence. On the other hand, the fear expressed in these columns a fortnight ago appears to be in a fair way to be justified, for the French Press shows symptoms of uneasiness regarding France's interests and rights in the Near East. In view of conditions brought about by the war, this may be perfectly natural, but it is none the less regrettable, and unless Paris and London give the matter prompt attention it may do real harm. As far as Syria is concerned, the most obvious course to follow would be to let the country decide its own fate, either accepting the report of the American Commission or else taking a plebiscite under Anglo-French auspices—or Franco-American auspices, if that be preferred by France. If this were suggested officially, France would surely not insist upon the letter of the Anglo-French Treaty of 1916.

One thing is certain: Great Britain has no desire to accept responsibility for Syria, and she does very strongly desire to do nothing that can wound French susceptibilities. At the same time she cannot ignore the Emir Faisal, King Hussein of the Hejaz, and the Arabs. She must, indeed, now more than ever pay careful heed to Arabia and its complicated and very fickle politics. The recent severe fighting between Ibn Saud and King Hussein's forces serves to remind us that surprises may still be looked for from the Arabian desert; and though we may truthfully say that Emir Faisal owes us a great deal more than we owe him, we cannot forget that he also has fought side by side with us, and, as an Ally, may naturally look to us for help in the heavy work that lies before him.

The strong element of uncertainty to which reference is made above lends Arabia and Arabian politics a fascination that is lacking in most countries and policies—though these are often uncertain enough also—nearer home. Thus Ibn Saud's sudden move against King Hussein is interesting not because it was unforeseen—for plenty of observers did, in fact, foresee that it was likely to come, if once the Nejd leader found himself strong enough to make it—but because it shows that now, as ever, the personal factor is of enormous value in Arabian politics, and that the Ishmaelitic tradition is by no means yet dead. It is interesting also as showing how the old puritanical spirit that inspired the Wahibis has survived in the Nejd; and as indicating that while King Hussein's qualifications appeal undoubtedly to the Hejaz, it would be a great mistake to imagine that his prestige—to say nothing of his authority—holds good throughout Arabia. It would be too much to hope that tribal feuds and sheikhly jealousies should be laid aside at once at the wish of European statesmen; but it would be foolish to accept the theory that the Arabs never will be able to unite until it has been tested under modern conditions. Meantime it is to our interest to limit the rivalries of the more important chiefs and leaders as far as possible, and to work steadily for an Arabia united in spirit if not in form.

An Inter-Allied Commission, consisting of three generals—British, French, and Italian—and an admiral—American—has begun an investigation of the situation arising from the Greek occupation of the Smyrna district. Unless we are mistaken, it has never been announced who asked for the appointment of this Commission; but there can be no doubt that, if it conducts its investigations in a thorough way, it should serve a more useful purpose than many other commissions which have been called into being by the war and the peace. It is to be hoped, however, that the inquiry will not be long-drawn-out. The present state of affairs in regard to Smyrna and its district is about as unsatisfactory as it can be, and if it has to continue until the Commission has concluded its labours and presented its report, we shall all hope that that body will be as expeditious as possible over its work.

A book, entitled "Germany and Armenia: 1914-1918," which has just been published in Berlin, throws a lurid light upon the internal policy pursued by the Young Turks and approved by their German friends during the war. The book is edited by Dr. Lepsius, president of the German Armenian Society, and, being based upon official reports and published with the authority of the Wilhelmstrasse, its authenticity can hardly be questioned. The main lines of the story it tells are already only too well known, as far at least as concerns the massacres of the Armenians; but the particulars it gives of the relations between the Germans and the Turks of the Committee ring are extremely valuable. A few highly-placed servants of the Kaiser had the courage to protest against the unspeakable horrors which were perpetrated by Enver, Talaat, and their fellow-criminals; others seem to have made half-hearted appeals for a cessation of the worst atrocities. But it is as clear as day that official Germany must be held guilty at least of allowing the massacres, if not of actually encouraging them. As Baron Kress von Kressenstein, German High Commissioner in the Caucasus, wrote in a dispatch to the German Foreign Office: "History will not, and cannot, admit that the two great Christian Empires of Central Europe were not in a position to impose their will upon their Asiatic ally."

At the moment the future of Armenia does not look sufficiently cheerful to tempt us to forget the gloomy facts just referred to. It is recognised on all sides that the new Armenia must have a protector, and a powerful one, if it is to weather the fresh storms that it is bound to encounter, but competition for the post on the part of the Great Powers is distinctly not keen. Indeed, unless America makes up her mind to step into the breach, the outlook for Armenia will be a very poor one. And, according to recent reports, it would seem to be very problematical whether America will, after all, accept the responsibility. The Washington correspondent of *The Times* wrote recently: "If anything in the extremely muddled and inchoate situation can be certain, it is the prospect that the Senate will refuse to allow the President to undertake responsibilities in Armenia, Constantinople, or elsewhere." Perhaps, however, a change of view may be brought about by the report of the American Commission which has been conducting investigations in Turkey.

If America has really made up her mind not to accept any foreign responsibilities at all it will prove a bitter disappointment to those Egyptian "Nation-

Digitized by Google

alists "—and others—who have been hoping that the great Western Republic would lend a ready ear to their arguments—and turn a deaf one to the other side. It may be argued, of course, that the refusal to accept a mandate for any part of the Old World would not necessarily imply a lack of interest in European or Asiatic problems. But it is safe to say that a merely theoretical interest in their concerns would fail to satisfy the self-appointed representatives of the "oppressed" nationalities who desire to present their "cases" to the American Senate. These gentry will have noted with satisfaction that some hard things have been said in the Senate regarding the Anglo-Persian Agreement. Fortunately, American opinion as a whole is less likely now than formerly to be led away by the desire to "twist the lion's tail."

M. Davidovitch, the new Prime Minister of Yugoslavia, has submitted his programme to the Skupshtina, by whom it has been accorded a favourable reception. One of the most pressing problems confronting the new Cabinet, as M. Davidovitch reminded his audience, is that of "stemming the continually incoming flood" of Austrian paper currency and of ridding the country of the "stupendous quantities" that have already found their way into it. In order to cope with this difficulty, the National Bank is to be reorganised and the scope of its operations is to be extended. Two other topics touched on by M. Davidovitch were the expropriation of large land-owners, which is to be proceeded with more rapidly, and an extension of the suffrage. A reference to "such of our brethren as are not yet united to us and are persecuted for their love of us" will probably arouse misgivings iu the minds of those who remember how, in the past, such expressions, used by Balkan statesmen, were apt to give rise to trouble, or at least to fan the fires of trouble.

Most people will agree that the members of the Joint Committee on Indian Reforms have acted wisely in deciding to take a month's holiday and meet again at the beginning of October. The evidence has covered a very wide field, and while it is true that most of the witnesses, or, rather, advocates, have adhered closely to their briefs, and said nothing that could not have been foreseen, we must remember that it is nearly all new to the majority of the members, and that some time may fairly be given for its assimilation. The official forecast is to the effect that the first week of October will suffice to bring the evidence to a conclusion, and that "several further weeks" will then be devoted to the consideration and amendment of the Bill; that brings us well into November, and, of course, no forecast can yet be made of the reception which the amended Bill will be accorded by Parliament.

The public in this country have been allowed to know very little about the proceedings in the Joint Committee. We have no doubt that in this matter the Press has correctly appreciated the taste of a community intent on making the best of its long-deferred holiday, but it is well to make plain that the Committee have had the benefit of singularly little current criticism, and their responsibility to England and to India is consequently all the greater. The results of their labours will have to be judged by critics who have not watched their proceedings from day to day, and there is a possibility that the verdict may come as an unpleasant surprise to the men who have done the work. More probably the public will acquiesce, for, as we have said before, they have hitherto declined to take an interest in the details of the new constitution; they have said that something must be done, and are likely to accept the decision of the Committee as to the lines on which action shall be taken.

Outside the Press we hear a certain amount of criticism regarding the selection of witnesses. Apparently the Committee have found it desirable to relax the restriction originally announced granting a hearing only to representatives of organised interests, and we notice the names of some witnesses who appear to speak only for themselves; Lord Carmichael, for instance, did not apparently claim to represent anyone, and his particular views are certainly not those of men who have been recently Heads of Provinces in India. It is in regard to this class of witness that criticisms are heard; suggestions are made that in order to be called a man must be either a delegate or a dyarchist, and while they may be due merely to pique, their currency is all the same unfortunate. We confess we should feel increased confidence in the Committee, if we heard of the appearance before it of some of Mr. Montagu's out-and-out opponents, apart from those who speak for the Indo-British Association.

At the same time it is right to recognise that the Committee have cast their net fairly widely; the divergent views of Liberals, Congressmen, and Home Rulers, of Brahmins and non-Brahmins, of Moslems of various types, of officials, lawyers, and journalists, and all the rest make fine confused feeding, and even then there remains the question of Burma to complicate a business which is very far from simple. The information which reaches this country regarding the position of Burma leaves this question obscure. On the one hand we have the Administration declaring for ultimate separation, and warning the people against the allurements of a "mess of Indian pottage"; on the other we have heated assurances that this Indian pottage is precisely what Burma yearns for, and we are probably justified in concluding that the country has not yet made up its collective mind.

Speaking for ourselves, we regard this question of Burma as a great though not immediate danger. Indian politicians, "thinking big," and hypnotised by existing administrative arrangements, regard Burma merely as an Indian province, and treat the idea of separation as a new threat of "partition." Burma undoubtedly feels the pull of the great peninsula on the west, but at the same time possesses all the elements of distinctive nationality, though they have not yet been fully realised by the national consciousness. To yoke Burma to a self-governing India may well result in the development of another of those subject-nationalities which are almost the greatest plagues of the modern world, and there is much to be said for an immediate separation, which should leave the smaller country free to develop on her own lines. The practical and sentimental obstacles to this course are, however, serious, and we question whether our present statesmen are inclined to face them.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 10.

An Educational Experiment.

An interesting experiment is being tried in the direction of educating officers and men in a regular college course. A similar course was started about a year or more ago in France, and the Zeitoun Education School opened under Major Pollard six months ago. The success that has attended the school has been surprising, both in the number of pupils and in the rapidity of their progress.

At the end of last month a party of Corps Commanders were invited to inspect the school and attend a conference to be held immediately after the visit was over. The school occupies a series of temporary buildings. The party first listened to a short address by Major Pollard on the objects and methods of the teaching. They were then taken round in turn to hear and watch lectures and the practical demonstrations accompanying them. The first hut was occupied by agricultural students, who were learning the mysteries of germination; principally with the practical aim of distinguishing good seed from bad. The men each had drawings made by themselves, and apparently most of them had seedlings also of their own sowing. The next lecture room was devoted to engineering, and here a demonstration of the working of various types of turbines was in progress, with determination of horse-power, etc. In the next lecture room the instructor was giving a simple explanation of various political factors, such as franchise, tracing its growth from the death of feudalism up to the inclusion of women.

This was followed by a visit to the chemical laboratory, where certain elemental facts were being illustrated. In the English course the instructor was Sergeant Roberts, who traced the origin and growth of the English language from its source, coupled with a sketch of the Aryan family of tongues. Business Methods were being explained in the next room, especially with regard to checking stocks and sales; and in the following shed another sergeant-instructor was expatiating on various forms of S, St, and Str in shorthand. The inspection terminated at ten o'clock with the Art School, having occupied about two hours, with one hour between for breakfast.

The conference was taken up with discussion of any points that suggested themselves, and some useful results were arrived at. Perhaps the least satisfactory feature of the situation was the extreme difficulty of obtaining and retaining capable instructors from amongst the N.C.O.'s. Of ten or twelve who had gone home lately on leave with the express understanding that they were to return on expiration, only two had come back.

The object of the course, which in order to pass in all subjects should take about six months, is the obtaining of a certificate which dispenses with matriculation at London University, and is accepted by many public institutions (such as the Institute of Chartered Accountants) as an ordinary pass degree. It is hoped that later on, when enough instructors can be procured, fifty or sixty pupils may every six months obtain the "Special Army Education Certificate," to the effect that they have passed an examination "in the advanced standard" in English, arithmetic, or elementary mathematics, and history or geography, and in optional subjects selected from those above mentioned. This certificate is signed by the respective instructors under whom the pupil has worked, and countersigned by the Principal Education Officer. Major Pollard, who is at present occupying this position, is about to visit the parent establishments in France in September, and on his return the Zeitoun School may be expected to crystallise into the permanent establishment it aims at becoming—in effect a University.

More Strikes.

After a period of very enjoyable freedom from labour and political demonstrations and manifestations, Cairo was disagreeably surprised to wake up on the morning of Sunday the 10th and find that all the tramway services were suspended. The good people of Zeitoun, Heliopolis, and Abbassia were obliged to spend their day in their own gardens, unless they cared to pay four or five shillings for a cab each way to town and back. Similarly, Cairenes could not travel out to their pet Sabbath promenade in the Zoo, or out to the Pyramids, and had to content themselves with such amusements as those afforded by the cafés and tea gardens. But even these were destined to fail them, as at four o'clock, with Napoleonic decision and promptitude, the waiting staff of twenty-four of the big café restaurants and bars also went on strike. Their object was comparatively a modest one, as they only asked for £6 a month instead of £4; but their strike seems to have come as a total surprise to their employers. The proprietor of one of the biggest cafés, the "Parisiana," considered discretion was the better part of valour, and gave in at once, with the result that his was the only one of the "struck" establishments that remained open during the "apéritif" hour so beloved of all Orientals. Upon what principle the strikers decided, however, puzzled the public considerably, for they found a place like the "Phœnix Bar" doing a roaring trade, whilst the "Obelisk" Restaurant, almost next door, had all its iron shutters down. About 6 o'clock the twenty-three café owners went round to their fellow owners to beg them also to shut down as they themselves had been compelled to do, but this request did not appeal to the business instincts of those who were still untouched, and they were either "out" or not to be found when the unhappy twenty-three asked to see them. Their turn, however, probably will come in its own good time, for now that the Egyptian employee has tasted the sweets of rebellion against his "natural foe" and "tyrant," in the person of the "bloated profiteer" who pays him, he is not likely to stop until he is shown that the limit has been reached. So far there is a great deal of minor inconvenience to the public at large, but very little ill-feeling against the strikers, who are only playing their own game as best they can. The same public has been so mercilessly fleeced by all the purveyors to their needs and pleasures since the war began that it has very small sympathy now for the shrieks and growls of the fat and prosperous employers of labour who are now being tackled and made to stand and deliver some of their too arbitrarily earned fortunes.

And More to Follow?

The Nationalists seem to be trying to claim that the repeated strikes are a sign of discontent against the British Protectorate, but this is somewhat ridiculous, as the British authorities, and particularly the Military, are the last to suffer in any way from the strikes, which are directed almost exclusively, so far, against foreign companies and foreign employers of labour. The happy result (for the waiters) of the Groppi strike naturally leads to numberless imitators, and it is only surprising that when the Groppi strikers obtained £15 a month the much harder-worked staffs of other, less opulent, establishments content themselves with anything less.

To all appearances the tram and café waiters' strikes of to-day are only the precursors of a good many more struggles of the newly formed syndicates to redress their wrongs or obtain their rights, which we may expect in the immediate future.

BELGRADE LETTER.

(From Our Own Correspondent.)

Belgrade, August 11.

The Ministerial Crisis.

The Ministerial crisis is dragging out slowly, this being the eighteenth day it has lasted, and it is by no means certain that it may not last many more yet. This is very unfortunate, for it means that all important business is shelved; the ex-Ministers, who are carrying on the routine work, decline to accept any responsibility, and leave everything over for the new Cabinet, which will find a nice little accumulation of arrears upon assuming office. It is also extremely unfortunate that there should be every appearance of disunion at home, when it is so necessary to present to the world a united front while the destinies of the young nation are being settled in Paris. All parties unite in deprecating this confusion, and insisting upon the necessity of a strong united line of policy abroad.

But it is a mistake to take these crises too seriously; the personal equation plays a dominating part in Serbian politics, and parties are held together more by personal likes, or rather dislikes, than by differences of principle. As a matter of fact, it is very difficult to define the difference between the bitterly hostile Radicals and Democrats, for they both seem to have the same programme, and each party accuses the other of stealing its thunder. The chief disrupting element appears to be the attitude of the individual to the ex-Prime Minister, M. Stoyan Protitch, who is certainly a strong man. The first rumours of the impending crisis began with whispers that M. Pribichevitch, Minister of the Interior, was going to resign. To the relief of the public this did not take place, but, as we reported two weeks ago, Dr. Koroshets and Dr. Gostinchar resigned on the grounds of incompatibility of temper, which made co-operation with the Prime Minister impossible. No sooner was that crisis averted than the Prime Minister himself brought about the present state of affairs, justifying his action on the grounds that he could no longer work with the Minister of the Interior, and implying the same against the Minister of Communications. Since then the party and the independent Press have been making all manner of attacks upon different Ministers; but there appears to be a prevailing impression that M. Protitch has made a mistake. It may be that he was beginning to find his position untenable, and that he provoked the crisis as a tactical move; but as his party is not the strongest in the Skupshtina, it seems very likely that he will lose his position, which is, perhaps, his real motive.

Present Position of Parties.

According to the very latest information the distribution of seats in the Skupshtina is as follows:—Democrats, 113; Radicals, 69; Narodni Klub (Croat Nationalists), 29; Dr. Koroshet's group of Christian Socialists (Slovenes), 20; Socialists, 13; Montenegrins, 10; Independent Radicals, 6; Liberals, 9; Bunjevaks and Slovaks, 9; nondescript, 18; and "Wild Man," 1. This curious list is culled from the independent *Pravda*, and leaves one wondering what is a Bunjevak, and, above all, what is the programme of the Wild Man. But it seems pretty clear that it is the attitude of the miscellaneous assortment which will hold the balance of power and play in Belgrade the rôle that used to be played by the Irish Party at Westminster; though it is but a question of time for them to become absorbed in the larger and more formed parties, when Serbian politics pass out of the present incoherent stage and crystallise out.

The suggested solutions are that either the Democrats should form a *bloc* supported by the oddments, including Dr. Koroshets, and leave the Radicals in opposition, or that a Coalition Government should be re-formed. The Radical *Tribuna* came out the other evening with the following prognosis, that the Government be again entrusted to the Radicals; which means that M. Protitch should again be President of the Council, and that portfolios should be distributed four to the Radicals, four to the Democrats, and two to the Starchevists of Croat Nationalists, the Independents (a dying party, a legacy from the smaller politics of the old kingdom), and to Dr. Koroshets' group respectively; and one each to the Socialists, Independent Democrats, Radicals, Dissidents, Liberals, and Veljkovitch's group. This suggestion is rejected by the Democrats, who maintain that as incompatibility of temper prevented them from working with M. Protitch in the past, such a solution could at the best be temporary; it would be, in fact, simply asking for trouble. They desire a final settlement, so that the important and vital work of consolidation can proceed unhampered by party factions.

On Thursday the President of the Chamber, who has the reputation of being an independent-minded Radical, after canvassing the leaders of the different groups, was received by the Prince Regent, to whom he recommended that the task of forming a Government be entrusted to Dr. Davidovitch, former Minister of Education, a Serb with a high reputation, as leader of the Democrats—the strongest party. The Prince accordingly sent for Dr. Davidovitch and entrusted him with this task, requesting him to spare no effort to produce a firm and stable Government capable of dealing with the manifold and difficult problems which lie before the young State. Since then Dr. Davidovitch has been kept busy, but it looks as though some days must lapse yet before he can announce success. He has interviewed the leaders of the other groups. Dr. Koroshets will support any party that makes for solid work in the general public interest; but the Narodni Klub will not sell its support cheap, and will probably made demands that cannot be granted. The latest news is that the Radicals have agreed to join the coalition provided that the former Minister of Religions (Dr. Alaupovitch) and Minister of Communications (M. Vulovitch) are not in the Cabinet, and that M. Pribichevitch has some other portfolio than the Interior. It is hardly likely that the Democrats will accept such an ultimatum, which they designate as impossible.

Party Aims.

The chief lesson for the outsider is to learn to see these crises in true proportion. The main groups—that is to say, the Democrats, Radicals, and Dr. Koroshets' party—are all united in wishing to see a strong united Yugoslavia under the sceptre of the Karageorgevitch dynasty; the Socialists themselves hardly seem to want more than the solution of the agrarian question at the expense of the large landowners, without compensation—that is to say, a policy of frank confiscation; while the other parties are agreed upon the necessity of dividing up the large estates among the peasants, but always subject to compensation to the former owner by a sinking fund. The policy of the ten Montenegrins is not generally known, but it is probably parochial without being anti-patriotic; for the anti-Serb Montenegrins are now mostly in Italy and Switzerland. They are conducting a fairly vigorous Press campaign from Geneva, whence their paper, *La Libre Serbie*, in Serb, is full of violent and savage attacks upon the Serbian Government in general, and upon the Radical party in particular. This paper was banned in Macedonia, but a few copies found their way into Salonika, all the same.

NEWS IN BRIEF.

The French Mission to Syria has arrived at Marseilles from Beyrout.

An offer of seven lakhs of rupees has been refused for a big ruby found at Mogok (Burma).

Of 400 Serbian doctors who were practising before the war there now remain less than a hundred.

The kingdom of Serbs, Croats, and Slovenes proposes to withdraw from circulation all Austrian crowns.

M. Albert Eid's collection of Egyptian postage stamps has been purchased for £4,000 by the Sultan of Egypt.

Telegraphic, telephonic, and railway communications will shortly be restored between Yugoslavia and Hungary.

General Liman von Sanders, after his release from internment in Malta, has left on board the British yacht Ivy for Venice.

The installation on the *gadi* of the new Bhavnagar ruler, His Highness Maharaja Shri Krishnakumarsinhji, took place on August 1.

In Eastern Macedonia the 1919 and 1920 classes of conscripts, hitherto under deferred classification, are being called up on September 14.

When Field-Marshal Sir H. C. O. Plumer paid his first visit to Gozo (sister island to Malta) on August 19, the whole population turned out to greet the new Governor.

A strong protest against the cession to Greece of the island of Cyprus has been forwarded to the Colonial Office by the Executive of the British-Israel World Federation.

The Sultan's representative in the Spanish zone in Morocco has published a Royal Proclamation declaring Raisuli a rebel, and ordering confiscation of his goods and chattels.

A correspondent in Switzerland writes:—The death is announced in Constantinople of General Shakir Pasha, ex-Minister of War, and son-in-law of General Avni Pasha.

Parties of Moroccan insurgents, having cut the telegraph wires, attacked the French blockhouse at Zolzit, south of Taza, but were driven off. Seven of the garrison were killed.

Special food trains have been organised by the Roumanian Command, and freedom of navigation on the Danube has been given to all ships that assist in revictualling Budapest.

M. Lutaud, a former Governor of Algeria, and two other persons fell during an ascent near Bonneville, Haute Savoie, on August 21, owing to the breaking of a rope. They were seriously injured.

At the final meeting of the Ladies' Emergency Committee of the Navy League recently held at 13, Victoria Street, the grants made included £500 each to the Sailors' Home and Recreation Hut at Malta, and a similar institution at Alexandria.

The Athens correspondent of *The Times* states that the censorship on postal and telegraphic correspondence with Great Britain has been abolished, except on letters addressed to Egypt and other places where military operations are being carried on.

In India the condition and prospects of standing crops are generally satisfactory. Distress is disappearing in the United Provinces, and the test works in Shahpura State, Rajputana, have been closed. Distress is still severe in Hyderabad, where the rain is insufficient.

BUSREH LETTER.

(From an Occasional Correspondent.)

Busreh, July 11.

For the last month or two in Busreh there has not been a great deal of news to chronicle. Of course, the signing of the Peace terms at Versailles must, I suppose, be considered the most important event of the past month. The news came to the public at Busreh about 10 p.m. on the night of Saturday, June 28, but it created very little stir in the town. The Busreh Club, it is true, did not close its doors till a somewhat early hour next morning, and during Sunday all the vessels on the river were dressed in honour of the occasion, but otherwise everything went on as usual. Doubtless the official celebrations will be held later; in fact, in Baghdad the date has been fixed for July 19.

Three Fires.

Considerably greater excitement has been aroused by the outbreak of several large fires which have occurred of late. The first took place about 9 p.m. on May 29 in the neighbourhood of Ashar Barracks, and was not of great extent, though, amongst other damage, a quantity of date wood belonging to Messrs. Asfar and Co. was destroyed.

The second fire was a much more serious affair. This time the fire broke out about noon among the buildings situate between the Custom House and the Whitley Bridge, Ashar. Many of the buildings were of light construction, and proved most inflammable; and it was a matter of days before the fire was finally extinguished, though it was entirely under control before evening. While it lasted it presented a tremendous blaze, and at one time threatened to involve a considerably larger area, as a *mehala* anchored in Ashar Creek took fire, and also some light structures on the south side of the creek. Luckily these latter fires were quickly dealt with, and kept within a limited area.

Some heavy losses were sustained by some of the merchants, many of whom were not covered by insurance; but although one sympathises with them to a certain degree, one cannot help realising that the clearance effected by the fire in this locality is an excellent thing for the future good of the town.

A third fire, also of considerable extent, broke out about ten days ago at Maaghill, and involved the I.W.T. Stores, where large supplies of ships' stores were destroyed, and some slight damage done to one of the wharves.

Future of the Port.

Busreh is already beginning to think of the near future, when it is to be hoped the necessities of war will no longer be the one vital element in its existence; and, among other questions, that of the institution of a Port Trust has already come up for consideration.

Some authority of this nature is certainly wanted, and should prove extremely useful, but at present no details are available.

EGYPT AND THE SUDAN.

Th following have been selected for appointments in the Egyptian and Sudanese Civil Services:—

Egypt.

In the Ministry of Finance:—M. R. K. Burge, H. H. Gardiner, J. H. Hall, F. R. V. Jameson, A. J. King, C. C. C. Oulton.

In the Ministry of the Interior:—E. C. D. S. Carter, S. M. Campbell, W. J. Henn, A. R. I. Mellor, G. V. Pearse, J. C. Penney.

Sudan.

To proceed abroad immediately:—D. J. Bethell, E. S. Fiddes, P. Ingleson, D. H. Kitchin, M. W. Parr, J. Ryan.

To spend a probationary year at a University:—G. C. Allchin, I. M. Bruce-Gardyne, B. K. Cooke, G. B. Crole, D. Newbold, A. S. Redfern.

Egypt.

In the Survey Department, Ministry of Finance:—A. P. Mitchell, J. C. Gurney.

In the Customs Department, Ministry of Finance:—L. Henshall.

ZIONIST COLONISATION AND PALESTINIAN LANDOWNERS.

At meetings held last week at 77, Great Russell Street, Professor Alfred E. Zimmern and Dr. Chaim Weizmann (president of the English Zionist Federation) reported the results of their recent visits to Palestine.

In the course of his remarks, Dr. Weizmann said that he and his colleagues were convinced that the political and other conditions in Palestine would allow to grow up there within a measurable and definite period a Jewish population, speaking Hebrew, with Jewish institutions, industry and enterprise, which community would ultimately develop into a Jewish state. One condition of this development was that Palestine must not be politically merged with Egypt, Syria, Arabia, or any other country, but must stand as a definite territorial unit with such boundaries as would enclose all the natural resources that legitimately belonged to Palestine. Of these natural resources the chief was water. At present the power of the country to absorb a Jewish population was extremely small, nowhere near what was needed for the realisation of Zionist aims, but the power of absorption might be enormously increased. A first necessity was that Palestinian soil must be rendered accessible to Jewish colonisation. At present Palestine was in fact a nearly empty country; nevertheless, there was but little land there which had not an owner, and laws must be made which, while not dealing unjustly with present owners and occupiers, must make the uninhabited country available for cultivation and close Jewish settlement. There were some small tracts which had no owner, and these would probably be handed over to a Jewish Council that would be set up for the development of Palestine. Most likely they would not be handed over free, but would be charged with some part of the public debt. The land in question, although without an owner, was not always without tenants, and the rights of these tenants must be respected—if there were no other reason for not despoiling them there was the fact that the Jew wished to live on good terms with his neighbours. He did not wish to make an enemy of the whole Mohammedan world. A second category of land might be described as half-owned. For example, in the whole of the south of Palestine there were few villages, and, except Rephaim and Gaza, no towns. But during part of the year much of the land was used as grazing ground by tribes who had wandered over the country since the time of Abraham. This partial use of the land by these border tribes was incompatible with its close settlement and thorough cultivation, and they must be induced to remain beyond the Jordan—being compensated for the disturbance. A third category of land consisted of waste lands. Even dunes and marshes had their owners—especially was it the case that when a marsh was drained an owner turned up from somewhere. But the country would be surveyed, these titles regulated, and the land made accessible to improvement and cultivation. The most difficult category of land was the fourth, that belonging to the effendis. The effendis were rich and had no need to sell, but could hold their land while Jewish immigration increased its value. These gentlemen could only be tackled by legislation; but such legislation could be obtained, for the democratisation of the world that was going on produced but little sympathy for the great landowner, especially when he did not work his own land. The development of the country would benefit all its inhabitants, Arabs as well as Jews.

The Secretary of State for India announces that it has been decided to issue to officers of the Royal Indian Marine, both regular and temporary, a gratuity for war service on the same conditions generally as those announced by the Admiralty for officers of the Navy, regular and temporary. The gratuity is now payable in the case of officers still on the active list. It is not payable to any officer whose first commission is dated February 11, 1919, or any later date. In the case of regular officers the gratuity will be at the same rates as for officers of similar rank in the Navy, and for temporary officers it will be based on the pay of corresponding ranks in the R.N.R. and R.N.V.R., and not on the Indian pay of the appointment held. Officers who have retired, and the legal representatives of officers who have died or have been killed during the war, should apply for a form of claim to the Secretary, Military Department, India Office, London, S.W.1.

W. MORPHY & SON,

PRESS ON THE NEAR EAST.

Persia.

In view of the importance of the Anglo-Persian Agreement, and in accordance with our custom of giving the opinions of all sides, we print the following extracts from an article in the *Nation* of August 23:—

Two consequences follow from this over-smart performance. The French are exceedingly annoyed. They have never hitherto displayed much interest in Persia, though they may have felt flattered by the wish of the Persians (which we have vetoed) to engage French educational experts. It is hard to believe that "Pertinax" and the *Temps* are really distressed by this outrage on a little nationality—though to be sure we all have a surprising capacity of sympathy for the victims of our rivals. It may be, of course, that the French are somewhat perturbed by the possible consequences of so many wounds dealt to Moslem pride. They have taken Morocco and Tunis, and they want to take Syria. We have made the Sultan of Turkey our prisoner, and the King of the Hedjaz, the prospective Caliph, is our creature. And now as a climax we extinguish what was left of the independence of the last Mohammedan State. On the whole, however, we imagine that the French Press is retaliating against us for our supposed reluctance to carry out the Secret Treaty which makes over Syria to France. Our troops still hold it. We are supplying arms to the Arab Prince Feisul, backing his claims to Damascus, and also arguing for the maximum extension of the Jewish "national home" in Palestine. Our experts (while taking Mesopotamia and Egypt for ourselves) talk Arab nationalism when the French press their claims. They even hint broadly, and probably truly, that outside the Lebanon no one wants to see French rule in Syria. Inevitably comes the retort that the Persians no more desire our protection than the Syrians call for the French. This quarrel, we imagine, will be settled on the usual diplomatic principle that two wrongs make a right. It is known technically as the doctrine of compensations. The French will grow callous about Persia when we cease to deplore the hard fate of Syria.

The other consequence of this transaction will be more enduring. It has exposed the vanity of the hopes, or shall we say, of some of the hopes, that were reposed in the League of Nations. If we can, without consulting the rest of the civilised world, assign this great region, with its high though fatally impractical civilisation; if we can escape in Persia even the few limitations implied in a formal "Mandate"; if we can shut the door of the World's Court to any weak suitor whose case runs counter to our interests, we have succeeded in demonstrating that the League of Nations means nothing but the consecrated hegemony of three or four Great Powers. We, by self-interest, the Americans by weakness and incapacity, are destroying the ideal for which both profess to have fought. From crisis to crisis, always in Russia, largely in Hungary, and now in Persia, idealists repeat the warning yet hopeful phrase, "The League of Nations is passing through a test." It takes a series of tests to extinguish so great a hope.

Armenia, Turkey, and Germany.

The Times of August 27 printed some extracts from the book recently published in Berlin, "Germany and Armenia: 1914-1918," by Dr. I. Lepsius. The array of official documents adduced in this book "conclusively shows," says *The Times*, "that from the Imperial Chancellor in Berlin down to the lowest grade official in Anatolia, the whole of the German Foreign Service knew day by day what was happening in Armenia." And in a leading article it refers to the confessed knowledge of guilt:—

It is but just to say that some of the diplomatists and soldiers were disgusted by the senseless barbarity of their allies. The Ambassadors made academic protests. Enver, with true Turkish humour and a just appreciation of the position, begged them not to impede the "unification" of Turkey. Talaat met inconvenient expostulations by the reminder that Turkey had abolished the Capitulations with Germany's consent, and that foreign interference in her internal affairs was most improper. He did not deny the massacres—over 20,000 women and children were slaughtered outside Erzerum in four days, and 55,000 corpses were buried at Meskene alone—but he pleaded "military necessity."

But German responsibility for the Armenian atrocities was far more complete than its concealment. For, says *The Times*:—

The truth was known in Berlin so far back as 1915. "The Committee," the German Ambassador wrote home in that year, "insists that the last remnants of the Armenians shall be devoured," and he explained that their policy of "Turkification" meant "to expel or to kill everything that is not Turkish," and to destroy or appropriate other people's property. "Herein," he adds, "for the moment, and in the childish repetition of French Liberal phrases, consists the vaunted new birth of Turkey." So "the many-headed hydra of the Committee, with its chauvinism and its fanaticism," was allowed to go its way unchecked. The Germans—who so often posed in the war as the champions of the altar and the throne—were under no misapprehension of the real purpose of their ally in what Dr. Lepsius describes as "perhaps the greatest persecution of Christians of all time." Forcible conversion to Islam was, as always, a feature in the Turkish attack upon the Armenians. The Germans acquisced, because "in the East creed and nationality are synonymous." They knew, too, that the Turks fully intended to destroy the existence of the Armenian nation, but that design could not greatly shock the heirs of the "Frederician tradition" as practised in Poland and Denmark. . . .

But far from dissociating themselves with such enormities, the Germans accepted the official Turkish version of the facts.

The *North German Gazette*, the semi-official organ of the German Government, published the Turkish official denials of the massacres which the German Ambassadors reported, and rebuked the Allied Press for its slanderous suggestion that the Government of Germany's ally could have had anything to do with whatever "excesses" might have been committed. . . . Ludendorff, indeed, did protest against the Turkish invasion of Armenia beyond the districts assigned to Turkey at Brest-Litovsk. His protest, however, was made exclusively upon military grounds. Hindenburg concurred, and "as a Christian" added a plea that the populations of the Caucasus might be spared. Enver treated the plea with contempt. His brother, Nuri Pasha, assured Baron von Kress, the German High Commissary at Tiflis, that "any little accidents" which might have occurred would be repaired. That is all that Germany, with full knowledge of the facts, and with power for a long period to give commands to Turkey, obtained for the nation who were being deliberately extirpated by the ally she directed, financed, armed, and led. Her own High Commissioner warned her of the judgment her conduct must bring upon her. He had the courage to tell his Government in a despatch that "the responsibility for the annihilation of this ancient Christian people would lie for ever upon Germany and Austria." "History," he went on, "will not, and cannot, admit that the two great Christian Empires of Central Europe were not in a position to impose their will upon their Asiatic ally, at least . . . where the life and death of a whole people are at stake." That is the judgment on the attitude of Germany and of her allies in Armenia from official German lips. We cannot imagine a condemnation more terrible or more just.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

It was with very real regret that I learned of the death of Dr. Leonard W. King. I could not claim the honour of his friendship, but I had met him a few times in connection with matters Assyriological, and I always found him particularly courteous and willing to help a duffer with unfailing patience. Moreover, he struck me as a man of much energy and singularly little affectation. Unlike many Assyriologists, he never seemed to wish to impress you with a sense of his own importance, his own great learning, his own wonderful theories. Perhaps this was because his position was assured; he was our greatest living Assyriologist, according to sound Continental opinion; his work is likely to endure; and he did "not advertise," because he did not need to do so. But he *did* work, and in pursuit of his work he was always ready to take risks if necessary. The copying of the Behistun inscription of Darius, for instance, was no light task, accomplished, as much of it was, while swinging dizzily over the cliff edge—and Dr. King was no featherweight to dangle in such giddy fashion. But he took the experience as part of the day's work. He was emphatically a *man*; and the world is the poorer for his loss.

***

A lady who had travelled in Mesopotamia told me, some time ago, of two ball games that she had seen the Arabs play. I never saw either of them myself, but I dare say some of our soldiers who have served in those parts may have done so; and it would be interesting to know whether the games are at all common. In the first game, two men threw the ball to and fro, just as English children do; but when one of the men dropped it he had to take on his shoulders a third Arab, who then had to do the catching. When number three dropped the ball he changed places with number one, and so on. In the second game, one man squatted low on the ground, leaving just room for a ball to pass between his feet, and two others then rolled a ball to and fro, making it pass between the squatting man's feet. The latter was not allowed to move, but when the ball touched him, he changed places with one of the throwers—or trundlers. Neither game strikes me as wildly exciting. But, then, the half-settled, *Ma'dan*, Arab is not a very brainy person, of course.

***

The appearance in last week's NEAR EAST of M. Mosconas' letter on the subject of St. George reminds me that Australia claims to possess the bones of the original and only genuine saint. The relics in question were discovered in the course of the War, at Ludd, lying, I think, under a mosaic pavement, and were exhumed and transported to the Antipodes by their discoverers. Just what the evidence in favour of their authenticity may be I cannot pretend to say, but there was lately some talk of their being sent to England and buried in Westminster Abbey. The Abbey authorities, however, set their faces against the proposal, and there the matter dropped. In my humble opinion it is just as well. To prove that the bones referred to were actually those of "St. George" would be an impossible task; though, no doubt, plenty of the 'ologists would undertake it, if thereby they could secure a little publicity for themselves. And anyway, who cares whether the bones are "genuine" or not? To me the memory of St. George is precious because, rightly or wrongly—very likely wrongly—it is associated with my country. It is the idea—and the ideal—that one cares for. As for the bones, it seems a pity that they were ever disturbed.

***

My attention has been called to a paragraph in the *Daily Express* upon the subject of goats' milk. The writer sings the praises of this drink with real enthusiasm, and wonders why its value "has not been recognised earlier in this country." I, too, like goats' milk, and have memories of drinking it with gusto in Arab tents, and, for that matter, in the saddle outside Arab tents, as one travelled on the fringe of the Syrian desert. Drunk thus, fresh from the goat, it is delicious, with a pleasing flavour and a creaminess that is never found in the milk you buy in England. But I am told that the old prejudice about "Malta fever" being produced by drinking goats' milk has got a firm hold in this country; and that, perhaps, accounts for so few people keeping goats, even in these days of outrageous prices for milk and cream. I do not know whether the "fever" theory has any backing in fact; but I do know that it is sometimes a terrible job to get enough milk from a goat to make it worth while to keep one. Of course, many goats yield richly, and their possessors are lucky; but I have known people keep three or four goats—in one case six—and still find it hard to get half a-pint a day!

***

The *Express* writer introduces into the middle of his little essay in praise of goats' milk a reference to "*yoghourt*" (more correctly, *yaghourt*). I wonder whether he is under the impression that this is soured goats' milk. In any case, it need not necessarily be goats' milk, but can be prepared from the milk of cows, buffaloes, or even—I believe—camels. It is a delicious and very healthy food. In Mesopotamia I took vast quantities of it, as did all my companions; and though some of them did not take to it at first, they all became firm supporters of the *yaghourt* habit in time. One man used to like it with date juice, eating it in the same way as one eats there the cream and date juice or grape juice. And those are dishes of which I still retain pleasant memories. As to *yaghourt*, it can be obtained over here still, although the *Express* writer seems not to be aware of the fact. If he will look through the pages of THE NEAR EAST he will find there an advertisement that will tell him where to go for the treat.

THE FUTURE OF SYRIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—What thoughtful and well-intentioned Syrians aim at is to form their own Government—neither Mohammedan nor Christian, but national.

They will need protection from surrounding subversive elements, but for the rest they hope to manage their own affairs to the entire satisfaction of their friends and benefactors, as well as of the League of Nations. This need to provide for future protection does not arise for the moment, as the British troops now in the country cannot be withdrawn until a stable government can assume the responsibility for peace and order.

Were the latest solution put forward by *Le Temps*, to withdraw the British troops from all Syria, and to allow the French to send troops to the Lebanon and the Syrian northern coast, adopted, the resulting failure would be put to British account, and added to Syria's already heavy misfortune!

No part of Syria is at the moment in need of special French protection, as Emir Faisal is anxious to prove how good a pupil of the best Arabian school he is in governing the country, with the help of *all* Syrians.

The only thing to be done now is to acknowledge this Prince as head of Syria's Government, and to let the country get to business. This stagnation and uncertainty are very bad for all concerned.—I am, etc.,

A. SEFI.

NEAR EAST BOOKSHELF.

AN EPIC OF THE MIDDLE EAST.*

Professor Seeley opined with perfect truth that we owe to ancient Hellas everything that sweetens and adorns our life—the blind forces of Nature alone excepted. His judgment coincides with that of Professor Gottheil, of Columbia University, who, in an introduction to Dr. Emil Kraeling's "Aram and Israel," affirms that "whatever we are and whatever we may possess comes to us from the eastern half of the Mediterranean Sea." The conquest of the Aramæan race included vast territories still known as Mesopotamia and Syria; the latter being a fertile and populous tract bounded eastwards by the inhospitable desert. Syria served as a bridge or corridor for caravans bringing the wealth of Asia to North-Western Africa and Europe.

Dr. Kraeling's narrative begins with the third millennium B.C., when the Assyrian or Aramaic hegemony dawned on Eastern Asia, and ends with its fall in 606 B.C. His materials are the cuneiform inscriptions unearthed from the ruins of countless palaces and temples. Modern research enables us to trace the migration of this conquering race; but in appraising their value we must make allowance for the tendency shown by official chroniclers to exaggerate a monarch's successes and preserve a judicious silence regarding his failures. The Old Testament is another mine of information. Its reference to the heathen tribes which fought with the Chosen People is trustworthy when the writer describes events within his own knowledge, and not so when he is dealing with tradition. He has no interest in exaggerating the exploits of Gentile Kings; but his judgment is often affected by religious bias, and he consistently ignores events which have no direct bearing on the fortunes of Israel. The Old Testament cannot be made the basis of a history; its record is important only in so far as it confirms the testimony of monuments.

Dr. Kraeling follows the progress of the Aramæan race from its cradle in the Arabian highlands. He describes its lusty prime, when the Assyrian Empire stretched from the Euphrates to the Mediterranean, and its final collapse at the commencement of the sixth century B.C. He lays stress on the fact—which is not, as he affirms, "without analogy," but rather a commonplace in history—that the conquered race should force its language on its conquerors.

Aramaic, he writes,

> became the necessary means of communication between the Iranian east and the Semitic west. It succeeded eventually in entirely displacing the Hebrew and Canaanitic. From the Persian Gulf to Cilicia, from Edessa to Petra and Syene on the Nile, the Aramaic became the language of the common people. And it mantained its supremacy even against the inroads of Hellenic civilisation, until, finally, the great quest of Islam brought its rule to a sudden end. But withal, its importance to the world was then consummated. It had been the language of Christ and His Apostles and of the early Christian Church. Without it the expansion of Christianity in the Orient would have been unthinkable, just as it would have been unthinkable in the Occident without the Greek. This then is the historical debt which the world owes to the Aramæans.

Genius, according to Lord Macaulay, is the "capacity for taking pains." If we accept this definition we may well credit Dr. Kraeling with a spark of the divine fire. His book is a monument of patient research, and exhibits all the virtues with most of the vices which characterise Teutonic scholarship. But history in its modern sense is much more than a catalogue of dynastic happenings, which fill the reader's soul with weariness and make him long for a touch of the constructive imagination which would clothe these dead bones with vigorous life.

F. H. S.

THE CROWN OF ADVENTURE.†

It is not given to all those who partook and suffered in the war to have their memories perpetuated in words, but it may be said that the spirit which formed and was developed by the experiences described in this book is typical of the British Army. Others may not have had the same fortunes, may not, indeed, have the skill to relate such things as are here given, but the attitude towards the great adventure which all undertook was universally the same. Those particular eight officers who escaped from Yozgad, in Asia Minor, to Cyprus, are extremely fortunate in having their story told by two such skilful authors as Capts. Johnston and Yearsley, but it is not the art of narrative which makes this epic tale the best war-story yet published in English: it is rather the fact that it is supremely British in its matter and writing, which makes the book ring as true as gold. Sufferings and kindnesses are merely hinted at, and it is more from the lines which are unwritten that one knows what these men—heroes rather—endured. Incidents that gave rise to bright humour or dull despair (of which incidents the Turks supplied many) are told with a simplicity so artless as to move the heart. Naturally, the authors being what they are, the humorous incidents are more numerous than the other kind. Here, for instance, is a finished pleasantry:—

> "The gendarmes were, for the most part, remarkably well mounted, and in charge of them was a benevolent old gentleman of the rank of *bash-chaoush*, or sergeant-major, who was for ever holding forth upon his friendship towards the English, and his utter inability to understand why we were not fighting side by side in this war. The sergeant-major talked much to us, punctuating his remarks with 'Sánom' (My dear). He was jovial, he was pleasing to look at, he was interesting. He had been through several Turkish wars, and he discussed the Great War with more intelligence than many of the Turkish officers we had met. One day, as two of us were marching beside the horse he was riding, the dear old man pointed out a deep ravine some few hundred yards to our right. His face lighted up with pride of achievement and pleasant recollection. 'Do you see that ravine?' he said. 'Well, there I helped to massacre 500 Armenians. Allah be praised!'"

It is not really fair to give extracts from this volume, which consists rather of a prolonged adventure than of a series of adventures. It is impossible adequately to describe the book, and the reading of it alone will give a correct idea of its worth. That such an idea will be gained we do not doubt for a moment, for this story will be read as long as English temperament remains what it is.

WAR IN THREE CONTINENTS.*

Many survivors of the war have succumbed to the temptation of writing their experiences in it, particularly those who were called to service in many lands. But it is not a fact that wide experience can compensate for the lack of intense adventure, and of war-books we prefer that kind in which the writer concentrates upon and really discovers to us something of one particular front. In this book, however, we have the ordinary things written about Malta, the Suez Canal, Aden, Bombay, Bareilly, Cairo, El Arish, and the rest, and to make these things appear less dull than they really are, extraordinary charm of writing is necessary. New things can be said of places familiar during the war, but they are not to be found in this little book. We are aware that these reminiscences are unpretentious and claim only to represent facts as superficially seen; but a modest purpose does not always justify publication.

Prince Paul of Serbia has left London for Paris..

Mr. Herbert E. Clark and family have left Lausanne for Jerusalem.

We understand that Mr. Alfred Silley leaves England for Constantinople on September 2.

General Sir E. A. Altham, Quartermaster-General, is leaving India shortly on account of ill-health.

Colonel R. Rossetti, the newly-appointed Military Attaché to the Roumanian Legation, is taking up his duties this week.

Mme. Nikolas Pashitch, wife of M. Pashitch, chief of the Serbian Peace Delegation, left London on August 26 for Paris.

M. Venizelos, the Greek Prime Minister, will pay a fortnight's visit to London after the Treaty of Peace between the Allied Powers and Bulgaria has been signed.

A correspondent writes:—Mirza Hussain Khan (formerly Muin el Vizareh) arrived in London from Paris on August 19 on the dispersal of the Persian Peace Delegation.

Mushawr el Memalek, on instructions received from the Persian Cabinet at Teheran, has arrived in Constantinople from Paris to consult with H.I.M. the Shah.

The Shah's younger brother, the Valiahd, has arrived in Teheran from Tabriz (where he had been Governor of the Province of Azerbaijan) to assume the office of Regent during the absence of H.I. Majesty from Persia.

The marriage was celebrated on August 21 at St. Mark's Church, Surbiton, between Algernon Shairp, of Colombo, Ceylon, and Gertrude Ethel Brander, M.B.E., of Surbiton.

The Countess of Stradbroke has arrived at Henham Hall, Suffolk, from Egypt for six weeks, when she will return to Cairo to join Colonel the Earl of Stradbroke, who is in Egypt.

The engagement is announced between G. K. Thornhill, Ceylon Government Survey Department, and Marjorie Gladys, daughter of Mr. and Mrs. George Bolden, 18, York House, Kensington.

General Hoare Nairne, Military Attaché to the British Legation at Athens, has handed to General Paraskevopoulos, Commander-in-Chief of the Greek and Allied Forces in Macedonia, the insignia of the Order of the Bath.

A correspondent in Switzerland sends us the following news:—The residences of Prince Abdur Rahim, Princess Muniré, Princess Kadrié, and Princess Yussuf Izzedin of Turkey have been destroyed by fire in Constantinople.

Turkhan Pasha, President of the Provisional Government of Albania, having resigned the leadership of the Albanian Delegation at the Peace Conference, the new delegation is constituted as follows:—President, M. Bumci; delegates, M. Gurakugi, Dr. Fourboulis, Mehdi Bey Frasheri, and Mehmed Bey Konitza.

A garden party was given at Seraglio Point, Constantinople, on August 3 in aid of the Turkish refugees from Smyrna. The fête was arranged by Princess Chivekiar of Egypt, Mme. Chukri Pasha, Mme. Hamdy Bey, Mme. Ismail Jenani Bey, Mme. Edhem Bey, Reshid Pasha, ex-Minister for Foreign Affairs, and others.

The engagement is announced of Nicholas Robin Udal, Assistant Director of Education, Sudan Government, youngest son of J. S. Udal late Chief Justice of the Leeward Islands, to Margaret Ruth, younger daughter of Mr. and Mrs. Roderic Oliver, of Orlestone, Kent.

The marriage was celebrated on August 19, at the Parish Church, Oswestry, by the Rev. D. R. W. Marsland, Assistant Priest, between Selwyn Barrett Glascodine Simons, the South Wales Borderers (24th Regiment), son of the late Charles Edward Glascodine Simons, M.B.C.M. (Aberdeen), D.P.H., Edinburgh, The Hollies, Merthyr Tydfil, and Ruby Eileen Dowling, daughter of the late Robert Henry Dowling, India.

The marriage was celebrated on August 7, at Christ Church, Lancaster Gate, W., by the Rev. C. E. Woodruff, uncle of the bride, between Major Walter Kingsmill Cook, Indian Army, son of the late Surgeon Major-General Henry Cook, M.D., I.M.S., and Mrs. Alicia Anne Kingsmill Cook, of Grey Cliff, Bonchurch, I. of W., and Joan, daughter of the late Rev. A. W. W. and Mrs. Woodruff, of North Waltham Rectory, Hants.

The marriage took place on August 23 at the Parish Church, Chipping Barnet, between William James, eldest son of Lieut.-Colonel Tarleton, late 54th Regiment, and Vida Helene May, second daughter of Mr. F. W. K. Yeoman, late of the Indian Public Works Department.

A marriage has been arranged, and will take place in September, between Eric Oswald Anderson, C.B.E., of Rangoon, Burma, and Cecil Violet Mary, widow of Mr. Arthur D. Stafford, Royal Warwickshire Regiment, and elder daughter of Mrs. Lionel Bigge, Clevelands, Exmouth.

The engagement is announced between Captain Kenneth Darlaston Yearsley, R.E., youngest son of the late Rev. R. O. Yearsley, M.A., and Mrs. Yearsley, of Wolverton, Chatsworth Road, Brighton, and Norah Rose, elder daughter of Mr. and the late Mrs. Henderson Webb, of 78, Dyke Road, Brighton.

An engagement is announced, and the marriage will take place next month, between Percy C. P. Heath, eldest son of the late Lieut.-Col. Lewis Forbes Heath, I.S.C., and Mrs. Heath, Failand, Paignton, and Adria Frederica, younger daughter of the late Ross Porter and Mrs. Porter, Marchwood Park, Marchwood, Hants.

The King has given permission to Mrs. Ironside, widow of Mr. William Allan Ironside, Additional Member of the Indian Legislative Council, to enjoy the style, title, place, and precedence to which she would have been entitled if her husband had been a Knight Bachelor, which dignity would have been granted him had he survived.

The engagement is announced between Lieut.-Col. Hugh Drummond Pearson, R.E., D.S.O., attached Egyptian Army, second son of the late D. R. Pearson, M.D., and Mrs. Pearson, of Beckley, Sussex, and Blanche, youngest daughter of the late Lieut.-Col. E. E. Grigg, Commissioner of Kumaon, and the late Mrs. Grigg.

A marriage has been arranged, and will take place in India early in October, between Captain John H. Innes, M.C., 2/8th Gurkha Rifles, eldest son of Mr. and Mrs. A. C. S. Innes, Pollokshields, Glasgow, and Marion Alice, daughter of the late Mr. and Mrs. Daniel Murray, 1, Queensborough Gardens, Glasgow, W.

The marriage arranged between Geoffrey Swinford Laird-Clowes, Egyptian Civil Service, only son of the late Sir William Laird-Clowes and of Lady Laird-Clowes, and Dulcie Evelyn, eldest daughter of George Glass Hooper, of 23, Kensington Court, W.8, and Bude, Cornwall, will take place at Bude on Wednesday, September 3.

The engagement is announced of Capt. Clement Abraham, M.C., Indian Army, son of Mr. and Mrs. Frank Abraham, and nephew of Dr. Phineas Abraham, 66, Harley Street, London, to Miss Ivy Frances Salaman, younger daughter of Mr. Edmund V. Salaman and the late Mrs. Salaman, Egerton House, Egerton Park, Rock Ferry, Cheshire.

A marriage has been arranged between Mr. Eric Evan Broadway, K.O.S.B.'s, only surviving son of Mr. A. Broadway, of Jhang, Punjab, India, and Gwendolen Mostyn, only child of the late Major C. M. F. Watkins, R.E., and of Mrs. Watkins, Heath End House, near Farnham, Surrey, and will take place at Hale Parish Church on September 2.

Mrs. Walter Tibbits left London on August 23 for Cairo, where she will be joined later by Major Walter Tibbits, who was detained by the late war in Afghanistan. She is travelling to Egypt as the guest of the Government of Australia, by direction of Lieut.-Gen. Sir John Monash, Corps Commander, Australian Imperial Force, in recognition of services rendered to them.

Professor Patrick Geddes, an authority on civic and town planning, has been engaged by the International Zionist Commission for the planning of the new Jerusalem and its proposed University, in co-operation with Dr. Weizmann. He will leave at once for Palestine, and prepare a report on the Zionist colonies there. While in Palestine he will organise a department of sociology and civics for Bombay University.

The marriage was celebrated on August 20, at the Parish Church, Okehampton, Devon, by the Rev. H. Milner, Rector of Belstone, between Edmund Burd, Major, Indian Army, second son of E. P. Burd, and Esther Mary, eldest daughter of Dr. and Mrs. G. V. Burd, Okehampton.

Digitized by Google

The marriage was celebrated on August 21, at St. Barnabas Church, Pimlico Road, S.W., between Mr. L. K. M. Powell, 19th Bengal Lancers, son of the late Henry Watson Powell, of the Mercers' Company and Australia, and Beryl, only daughter of the late T. F. Ricketts, M.B., F.R.C.S., and Mrs. Ricketts.

An occasional correspondent writes from Evian-les-Bains:—

H.H. Prince Aga Khan is the guest of Aix-les-Bains. In an interesting foursome, played on Aix-les-Bains golf links, the Aga Khan and his partner, the world's champion, Mr. J. H. Taylor, were beaten by Capt. the Hon. E. Fitzgerald and Will Armour, the Aix Club professional. The conditions were handicap play, the Prince and Taylor giving a *bisque*.

H.H. Hon. Lieut.-Col. Singh Bahadur, Maharaja of Kapurthala, G.C.S.I., and the Princess of Kapurthala have arrived from Paris at Evian-les-Bains, and are with their suite at the Royal Hotel. The Maharaja, who used to play tennis at Evian-les-Bains before the war with the late Capt. Wilding, champion of the world, has accepted honorary membership of the Evian Tennis Club, and given one prize for gentlemen's singles and two prizes for handicap mixed.

On the occasion of the return of the 30th Infantry Regiment to Evian-les-Bains, its pre-war station, the Maharaja entertained, at the Casino Municipal, the colonel of the regiment and some departmental authorities.

Other Oriental guests at Evian-les-Bains are:—Prince and Princess Mirza Assad Khan, from Teheran; the Persian Minister Plenipotentiary at Stockholm; and Sabri Bey, from Cairo.

APPOINTMENTS, PROMOTIONS, &c.

General Nairne, Military Attaché to the British Legation at Athens, has informed M. Adossides, the Greek Governor-General, that the King has conferred upon him the Grand Cross of the Order of the British Empire in recognition of his services to the British troops in Macedonia.

The King has been pleased to give directions for the appointment of Michel' Angelo Refalo, Esq., LL.D., C.B.E. (Crown Advocate), to be the Chief Justice and President of his Majesty's Court of Appeal for the Island of Malta, and also to appoint him to be Vice-President of the Council of Government of that island.

At the request of the Hellenic Government, the Anglo-Hellenic Educational Foundation have selected candidates for posts as teachers of English in certain commercial schools in Greece, and have recommended the Hellenic Government, through the Greek Minister, to make the following appointments:—Athens, Capt. G. C. T. Giles, B.A., Camb.; Patras, F. S. Read, B.A., Lond.; Volo, A. A. Elder, M.A., Edin.; Pyrgos, F. W. Kuhlicke, B.A., Lond. The appointment of a teacher for Salonika has not yet been finally settled.

OBITUARY.

DR. LEONARD W. KING, LITT.D., M.A., ETC.

A correspondent writes:—The news of the death of Dr. Leonard William King, of the British Museum, at the early age of 49, comes as a shock to all who knew him, although he had been ill for some fifteen months. He was an outstanding figure in the little company of distinguished archæologists and scholars to whom the scientific world looks for leadership in these branches of learning. Dr. King's chief interest was in Assyrian and Babylonian archæology and history, and he threw the whole force of his mind into their minute and exhaustive study. His published books on "Babylonian Magic and Sorcery," and "The Letters of Hammurabi," will long be standard works of reference not only for their complete mastery of subject, but for their clear and vigorous literary style. The lectures on "Legends of Babylon and Egypt in Relation to Hebrew Tradition" (Schweich Lectures, 1918), lately published in book form, were equally comprehensive and vivid. He conducted the British Museum excavations at Nineveh for over a year, until sickness obliged him to return to England; and he also made a special journey into Persia and recopied the great inscription of Darius cut in the rock at Behistun—a notable achievement whose result was published afterwards by the British Museum. Dr. King succeeded the late Colonel Sir Charles Watson as chairman of the Executive Committee of the Palestine Exploration Fund, bringing to that society the whole-hearted service of his wide learning and experience; he was also an excellent man of business (by no means always an attribute of the scholar), and no one could more courteously, yet effectively, reclaim a discussion which had wandered from its original lines. He gave the impression always of being one who was completely master of himself and of everything he knew; he spared no effort of mind or body in the pursuit of knowledge; he was never satisfied until he had fully grasped a subject to its smallest detail; and to everything he took up he brought the full power and interest of an extraordinarily vigorous, alert, and reasoning intellect. His keen enjoyment of work, his vivid interest in whatever claimed his attention, his sense of justice and fair play, made him an inspiring head and a most helpful colleague; and though his extreme quickness in grasping a problem, however new, and his strength and capacity for work made him sometimes impatient of slower brains, the impatience was kept well under control, and he was extraordinarily kind and generous to his subordinates, and never too busy to give a helping hand. During the war Dr. King was engaged on confidential work for the Government, and early in 1918 he was asked to undertake some work abroad of a delicate and important nature. No one better fitted for such a task could have been chosen, but unfortunately, before he could start, he was taken ill, and was never again well enough to resume full work. His loss will be increasingly felt in the world of archæology.

The death occurred on August 20 in London of Thomas Henry Olney (of Ceylon), son of the late Herbert Olney, of New Zealand; and Mrs. Olney, of Wadhurst, Sussex, aged 27.

Colonel Elliot Alexander Money, C.B., late of the Indian Cavalry, died on August 20. Born in 1843, he entered the Army in 1860, commanded the 3rd Bengal Cavalry from 1891 to 1894, was D.A.G. in India from 1894 till 1897, and afterwards officiated for two years in command of the Allahabad, Assam, and Agra districts.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant, Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant, Bathing Cabins on the Beach. Billiards. Daily Concerts on the Verandah.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

FRIDAY, AUGUST 29, 1919.

NEW INDIA AND THE WORLD.

The discussions now proceeding on the reform of the Indian Constitution are being conducted almost entirely from the self-regarding standpoint. Here, at least, reformers of all schools find a spot of common ground; they think solely of India, and do not pause to consider the effects of their proposals on India's relations with the world at large. Their attitude is natural, and indeed inevitable in the circumstances, but India is not an isolated entity, and in many other countries—in Canada and Australia, in the United States and Japan, as well as throughout Eastern Europe and Western Asia—practical men are asking how they will stand under the new regime. They know the nature of the present administration, usually cumbrous and slow to move, often uninspired, but always honest and deserving of trust, and they desire to know whether they can count on a continuance of these conditions, or whether changes are to be expected which will necessitate a readjustment of their mental focus. What, they ask, will be the character of a definitely Indian administration in its dealings with men of other countries? Will it be efficient and vigorous? Will it be honest? Will it be fair? No final answers to such questions as these can be offered at the present stage, but the conditions by which the answers will be governed may be stated with some degree of confidence, for the spirit of an administration is an expression of the mental and moral outlook of the men by whom it is controlled, and its nature can be inferred from a study of appropriate data. We have accurate knowledge of the spirit of the purely Indian administrations of earlier times; we can estimate the effect of the influences which have been more recently at work, and we can watch their operation day by day in departments already controlled by Indians, and more clearly in several hundreds of Indian States in very different stages of development. Making use of these data, we can indicate the lines on which answers to the questions we have stated must be sought.

In the first place, it is practically certain that an Indian administration will be very highly centralised. It is true that advocates of devolution may be found among the ranks of politicians, but Indian politics are just now highly artificial, and when we turn from them to examine the institutions actually at work, we find everywhere the same conditions, reluctance of superiors to entrust wide powers, and reluctance of subordinates to exercise responsibility. There will be no lack of vigour, for administrative vigour is in the blood, but the driving-force will be at the centre, while the local agencies will be marked by a strict adherence to form and routine, and by a tendency to refer for orders all matters which are not clearly covered by existing regulations. There will, in fact, be an abundance of red-tape, probably more than now, and there will be strong inducements for foreigners to establish relations with the centres rather than the outposts of the administration; the outposts will elaborate and hesitate, but the centre will usually be prompt to act. So far we believe that there is little difference of opinion among those who have made a serious study of the problem. The second question, that of honesty, must be approached with somewhat greater hesitation, since there is no doubt that bribery was universal in India before the English period, and unfortunately it cannot yet be said to be extinct, though its scope has been very greatly curtailed. Some authorities hold that under an Indian administration the institution would quickly regain much of its old position, though its operation would be adapted to the times, and offerings of coined gold and silver would be replaced by the less crude, but not less injurious expedients rendered possible by the developments of modern commerce and finance. The danger must be admitted to exist, but, on the other hand, it is beyond question that English influences have in this matter produced a very remarkable effect. The best Indians of to-day hate the idea of bribery as strongly as the men of almost any other nation, and in quite recent years this new attitude has spread downwards through the ranks of the administration to such an extent that senior British officers look back with astonishment on the conditions which prevailed in the earlier years of their service. The change is, as we have said, by no means complete, but we believe that, so far as it has gone, it may be regarded as permanent, and that for the future India will comprise an element absolutely opposed to the whole tradition of corruption. If, therefore, the new constitution should bring this element to the top, and this event is by no means improbable, we might expect to find an Indian administration permeated at the centre by the spirit of honesty, though we could not count on a similar influence throughout the whole; there would be corruption, as there is now, but it would be actively discouraged, and it is quite possible that a strong Minister could take more drastic measures for its repression than are open to the existing bureaucratic Government. It is also possible that the working of the new constitution might result in the re-establishment of the old evil tradition. For ourselves, we think the former alternative is more probable, but the question cannot be answered with certainty until some experience has been gained of the operation of institutions of which the form has not yet been finally determined.

There remains the last of the questions we have asked, whether an Indian administration will be fair, and here we must regretfully admit that the world has recently been given grounds for a pessimistic conclusion. The tendency of certain Indian politicans to ignore facts and cling to preconceived ideas can, when translated into practice, lead only to unfairness, and this tendency has of late been very much in evidence. To take the most conspicuous instance, we have just been provided with the spectacle of an Indian gentleman, occupying a seat on the Viceroy's Executive Council, who views the past and present of India through such a dense medium of prejudice that fact becomes indistinguishable from fiction, and the very form of justice disappears; and we may say at once that if India is to be administered in this spirit, her case will be desperate indeed. Such evidence, however, is not conclusive, though we admit that it is disquieting. We must reckon with the possibility that some branches of an Indian administration may be inspired by prejudice rather than by justice, and also that such an attitude may command a measure of popular support, but we are equally bound to recognise the existence of very many Indians of position, to whom that attitude is as repugnant as it is to us. Should such men be called to power, the world might safely count on equitable treatment, and it would be premature to draw a pessimistic conclusion from symptoms which may be no more than the froth produced by a period of active fermentation. In regard then to fairness, as to honesty, the future depends on the practical working of the new institutions; if they bring to the top the best in character that India possesses, the prospect may be viewed with reasonable hope, but the possibilities of a different result cannot as yet be definitely ruled out. For the time being, the destinies of India will be in the hands of the leaders rather than the masses, and should the leaders fail to rise to their opportunity, a period of discredit among the nations must ensue. That they may prove equal to the occasion is the aspiration of all who have the good of India at heart.

THE FUTURE OF PALESTINE.

VOX POPULI.

There is little doubt in the minds of those who know Palestine well that the great desire of the people as a mass is for British rule. It has become a truism that Britain understands the East, and that the East trusts her as it trusts no other Western country. The elasticity of British rule, which confers self-government as soon as the people governed are able to bear the responsibility, appeals most strongly to the East, which, while easily moved on the surface, is at heart very slow to change. For years Palestine has longed for Britain to take her over, either by direct annexation (regardless of political obstacles) or else by joining her to Egypt. The people have had a long and varied experience of practically every European nation, but only one has become to them a test of probity and uprightness: "On the word of an Englishman it is true!" Every European coinage is current in Palestine, but only one never fluctuates in value—our own. Among European imports British coal and British steel—before the war, at least—still held the first place; though Jewish shops, by selling cheap inferior knives and scissors of wretched quality, called "English," but undoubtedly made in Germany, were doing much to shake the credit of Sheffield in the eyes of the natives. During the war the people preserved a wonderful belief in the power and the will of Britain to help them. They waited three years for deliverance, and when at last it came they rejoiced doubly that it was wrought by British arms. Many, indeed, had hidden their best clothes "for the day the English come."

These statements, of which I am very sure, are based on personal knowledge of Palestine before the war, extending over a period of many years up to July, 1914. It may be asked, "Have not the people changed in their views at all, especially as so many of the generation that looked to Britain for deliverance must, unhappily, have perished?" It will be best to let the people themselves answer this; and I will, therefore, quote literally from some of many letters written by Syrians in Palestine, whose spontaneous expression of gratitude for what Britain has done for them and their land needs no comment. All clues to the identity of the writers are, of course, suppressed, and I would also ask any who recognise their own words to forgive this use of them; but at a time when the fate of Palestine is being decided anything that shows the unmistakable feeling of its people on this vital matter is surely permissible. The creed of each writer is mentioned, as this is always a matter of moment in Palestinian problems and politics.

From a Moslem, in Switzerland, December 1917:—

"Many things happened during these two years. Many things have also changed. One thing did and will never change in me: my sympathy and feeling for the British nation and her Allies. In order to prove it to you, I must confess that at the news of the delivery of Jerusalem by the British troops I was so glad that I could not help myself from shedding tears. It is not necessary to tell you here (for you know and you are sure of it, because you lived amongst us) that most of the educated Arabs consider the British and the French nations as their best friends; on the contrary, the Germans and the Turks their greatest enemies. The British and the French nations are loved and honoured by the Arabs; the Turks and Germans are hated. The victories of the British troops in the East have naturally increased the feelings of the Arabs for the two noble and generous nations. The occupation by British troops of the two ancient towns, Baghdad (the city of the Khalifs) and the Holy City, far from afflicting us, rejoices us over all measures. The British troops who are fighting there against the Turks and Germans are fighting for us. They are therefore considered as our liberators and not our oppressors, the defenders of our liberty and our legal claims. We are sure that Great Britain will help us in every way to consolidate an Arab kingdom. She had already and is helping us in supporting the right claims of the King of the Hejaz, who on his part is helping the British troops in the East with all his might and all his resources. My best wishes and hopes are the victory of the Allies, who are fighting for Right, Justice, and Liberty."

From a Church of England Syrian girl, January, 1918:—

"I feel so glad and relieved now since the English troops have entered Jerusalem. I feel so glad to hear the troops speaking English, instead of hearing Turkish and German. I have been working in Turkish hospitals before the English captured Jerusalem, and I looked after many of the English prisoners that were wounded. We did all we could for them. As they could not eat the food that was given them, I used to feel awfully sorry for them, and did give them what little I had for my meal. As I think you would know, we have had it very hard, so that we could not do to them as we would like to have done; but what we did we had to do it all in secret."

From an Orthodox Church Syrian, January, 1918:—

"It does seem strange to be able to write English letters again freely. The last three years were simply terrible, and to think of what we had to go through is exactly like a nightmare. Now I do not feel obliged to have my windows closed with thick curtains to prevent those dreadful spies from peeping through into the room to see what one is doing, or with whom he is sitting. Everything has changed from oppression and persecution into liberty, and we now feel that we can breathe, so to speak, the air of freedom. We really do owe a great deal to those that have rescued us."

From a Moslem, in Europe, February, 1918:—

"I have read and heard in Egyptian, English, and French newspapers about the cruelties, the atrocities, done by the Turks in Syria and Palestine. They requisitioned all the people, rich and poor, possessions, sheep, horses, camels, up to the most necessary provisions, even beds and houses. Not contented with all these requisitions, the Turkish Government pretended that a party of young Arabs in connivance with the enemy was working against the Government and to throw off the detestable yoke of the Turk. Upon this pretence they executed more than 200 of the most educated and intelligent of the Arabs. Their families and many others have been exiled without pity, their properties sequestrated. All this roused in my heart pity for my countrymen, and increased my hate to the Turk. And as soon as Jerusalem was delivered an idea came to me. I thought if only I could relieve my countrypeople who suffered during the war, and especially under the hated Turks. Now, as our country is partly delivered by the British troops, the British nation will not leave these unfortunate people to die of hunger. Can I not appeal to it? But I am far from England. The only way is for me to write to the British Ambassador at—— and ask him if he will be good enough to help me in this work. For my idea was to create a Committee of Relief for the unfortunate of Palestine. To my great surprise, he answered me that such a committee is already working in England."

From an Armenian woman, March, 1918:—

"Oh, how sorry I was in the war. I pray every day to God to bring us the English. He brought us the English and defeated the Turkish flag. Now is everybody free. Free is a dear word. Never you can know how we have been troubled under the Turkish Government; he massacred many, many Armenians, but in Jerusalem was not so bad as in other places."

From an Orthodox Church Syrian, April, 1918:—

"I hope you will not think that over three and a-half years of imprisonment and tyranny and tribulation under the dirty Turks were likely to make us forget you all. How often during these three and a-half years I wished myself in Egypt, so that I could be in touch with my friends, and, better still, away from the savage Turk."

From a Church of England Syrian girl, April, 1918:

"We have had such bad times here. Everybody is so much relieved since the British took hold of the land. One feels to be in safe hands that are Christians not in name only, but in deed too. They are doing all their best to help the people. The Relief Fund is to be put in the hands of the Americans now. I have no favour for them whatever."

From a Church of England Syrian girl, April, 1918:

"It was simply grand to see the British take Jerusalem. The day they came in was a great festival to us all. It was so exciting to see them as they were coming in; the people clapped and shouted "Hurrah." They really saved our lives. We had so much to suffer in every way. We had hardly anything to eat. If you could see what a change the British made here; you can see now everybody happy, but before you could never see anyone smiling; there was such a sad look on everybody's face. So many people died in the country, as there was so much sickness, typhus, and cholera. Many people died of starvation, and some were killed by the Turks because they were of some importance, and were thought to be in favour of England or France. I can never forget the debate we had one evening (at school before the war), and how everybody wished the English to have rule over this country. I was in a Turkish hospital working, and I took care of the English prisoners of war. I did all my best to help them. I looked after sixteen of them. They were captured in a place before Hebron was taken, and they were only 99 against many more, and they fought very bravely."

From an Orthodox Church Syrian, June, 1918:—

"You cannot imagine the great ecstasy the people had when the English came into Jerusalem. They felt they were freed from the Turkish yoke. All the deserters that were in hiding came out, with their faces pale from being shut up, but rejoicing."

From a Church of England Syrian girl, May, 1918:

"Now I am very glad to say we have got rid of the Turks and of their rule; they have been very cruel to us. I wish

Digitized by Google

those big-headed Germans would move out of the Allies' way; things would be done much smoother without them. My brother is still at Constantinople working with the Turks. We are very anxious about him; you see, a Turkish soldier without money is worth nothing, and it means starvation, for they hardly give them any rations."

From a Church of England Syrian, June, 1918:—

"Thank God we are all well, though we passed through great distress during the Turkish rule. Now, you can imagine how glad we are in being under the rule of the British Government. The day we saw the British troops entering Jerusalem was surely a great day to us; faces were beaming with joy, and we were so happy that really I cannot describe it by writing. We are very thankful to the great British nation for the trouble they are taking in improving and ameliorating the situation of our city, for helping the needy and poor, and opening orphanages and schools, so as to make all happy and content. We surely appreciate the work they have done in this short time. We pray daily for their victory."

From an Orthodox Church Syrian, September, 1918:

"Everybody here (Jerusalem) seems to believe that our country has by a mysterious miracle escaped the *German culture*. Practically four years of slavery, despotism, fanaticism, terrorism, and no end of sins, all through German organs. . . . I only wish I could relate to you verbally stories of my four years of captivity. Oftentimes in my prison cell I sang St. George's old and favourite song:

Hard times, hard times,
Come again no more.

Thank God, we can now say no more hard times, but joy and prosperity awaiting us. . . . I for one will do everything in my power to help the British soldiers, who were our rescuers from the clutches of despotism and anarchism. Whatever little I do for them I find it insignificant compared to the gigantic and most dangerous work they have cheerfully achieved for our sakes, and, to tell you the truth, we do not deserve such a sacrifice."

From an Orthodox Church Syrian, in the Sudan, February, 1918:—

As you are no doubt aware, the way for return to Palestine was opened some two months ago. The news I received from home is extremely painful. All males from 16 to 50 years of age were compelled to join the Turkish colours. . . . The news that Palestine is to be given to the Jews fills the heart of every Syrian with fear. It is out of the frying-pan and into the fire. The few Turks who came to Syria could be easily competed with, but what with the Jews! It requires the whole universe, as one body, to compete with them. I hope that what has been heard about this is only a rumour. No one can tell what the Jews are except those that have seen them in Jerusalem. I don't think any Syrian would submit to being governed by the Jews, unless forced by the Great Powers to do so; and this I hear said by every Syrian about. They (I mean the Syrians) prefer to quit their country for good if the rumour proves to be true."

From a Church of England Syrian, December, 1918:—

"Everything is so changed since the English took our city; you cannot imagine the difference. They are helping us all they can. There is only one thing that troubles our minds, and that is what some people say, that the British are going to give over our country to the Zionists to have. Truly, I cannot believe this, for everyone knows what the Jews are with the Syrians, and that they will take everything from the poor Syrian peasants, and we shall have no place in this country. This makes us really very uneasy, and we can hardly believe that the British Government, who have done so much for us, will take our country and give it to the Jews."

From a Church of England Syrian, June, 1918:—

"The Special Commission delegated by the Conference to come to Palestine and Syria and examine the sentiments of the inhabitants as regards the future administration of the country have already arrived at Jaffa. . . . It is now understood by all people that the advice and assistance of a mandatory power is decided, and not as a great number of the self-conceited and narrow-minded Mohammedans thought at first, that they would be able to govern themselves without the assistance of any of the Great Powers. As regards the wishes of the people, they are divided as follows:—

"1. Some desire to have England as the Mandatory Power; and these are the Greek Orthodox, and, of course, all Protestants, and a portion of the Mohammedans.

"2. Others wish to have France as the Mandatory Power; and this party is chiefly composed of the Roman Catholics.

"3. Some Mohammedans now express a desire that Palestine should be united with Syria, and that the United States be the Mandatory Power."

These letters, from individuals of every class and creed in Palestine, explain the general feeling of the country more definitely than any foreigner could express it. They are voluntary declarations of trust and confidence in England, of desire to be ruled by her, and of genuine anxiety for the future of their country: as such, they merit our sympathetic and careful attention. If, through any international greed or jealousies, or through the complexities of high politics, Palestine is reft from the keeping of England, who, under God and at great cost and sacrifice, has been the liberator of the Holy Land, the whole vexed problem of Palestine will merely have been suppressed for a few years, not settled; and it will inevitably spring up again (and possibly very soon), to drench the East in misery and blood. There can be no lasting peace for the world until the question of Palestine is freely and truly and rightly settled. The people of Palestine know that England is willing and glad to help them through the years of anxiety and weakness and difficulty; the past eighteen months have shown them that English rule is even broader and more just and sympathetic than their brightest hopes had pictured it; and (for they are an acute and intelligent people) they know very well that they can never as a people attain their full stature and excellence save under England's fostering care.

ESTELLE BLYTH.

CHESS.

The final positions in the Hastings Tournament were quite in accordance with expectation. Senor Capablanca, with the fine score of 10½ out of 11, was first by the margin of a point above M. Kostitch, who failed to do more than draw with Sir G. A. Thomas in the penultimate round. The closing stages of the tournament were chiefly interesting for the struggle between Sir G. A. Thomas and Mr. F. D. Yates, holder of the English championship, for the third and fourth prizes, and with the former drawing his last two games, Mr. Yates, who started badly, was able to draw level with him at 7, as the result of winning in the last round.

It is too early yet to say with certainty what modifications will be introduced into English chess as the result of the tournament, but, judging by the play in the last few rounds of the contest, it seems probable that Capablanca's style is going to have a pronounced influence in the future. The Cuban, it may be pointed out, does not depend upon sudden and rapid attacks to attain victory; on the contrary, the secret of his success is to be found in the fact that his play is always correct. His aim is positional advantage, and it is characteristic of him to map out the definite course of action almost from the start.

As regards the openings used at Hastings, the various Queen's openings seemed to enjoy the greatest favour, no doubt because only by their use is it possible to avoid the numerous irregular replies by Black. The Caro-Kann defence was played without success on a number of occasions, and it may as a result decline in popularity, at any rate for a time.

The game between Senor Capablanca and Sir G. A. Thomas, which had a dramatic ending, was as follows, the former having first move:—1, P—K4, P—K4; 2, Kt—KB3, Kt—QB3; 3, Kt—B3, Kt—B3; 4, B—Kt5, P—Q3; 5, P—Q4, B—Q2; 6, Castles, B—K2; 7, R—K, P x P; 8, Kt x P, Kt x Kt; 9, Q x Kt, B x B; 10, Kt x B, P—QR3; 11, Kt—B3, Castles; 12, B—Kt5, Kt—Q2; 13, B x B, Q x B; 14, Kt—Q5, Q—Q; 15, R—K3, Kt—K4; 16, R—KKt3, P—KB3; 17, P—KB4, Kt—B3; 18, Q—B3, R—B2; 19, P—B5, Q—KB; 20, Q—Kt3, K—R; 21, Kt—B4, Kt—K4; 22, Q x P, R—Kt.; 23, Q x RP, R x P; 24, R—QKt3, R x BP; 25, QR—Kt, P—R3; 26, Kt—Kt6ch, Kt x Kt; 27, P x Kt, R—K2; 28, R—Kt8, Kt x Kt; 29, Q—R8 (*a*). Resigns (*b*).

(*a*) A mistake. R x R was the only move when the play would have continued. Q x R; 30, Q—R4! and Black is left without resource.

(*b*) R x RP would have drawn. If 30, Q x R, then R x R; if 30, R x R, then Q x R; if Q—Kt7, then R—R5, 31, Q x P, R x P, leaving Black a pawn ahead, though with nothing but the draw, in view of the position of his King.

The following is the game between Senor Capablanca and Mr. F. D. Yates, the former having the move:—1, P—K4, P—K4; 2, Kt—KB3, Kt—QB3; 3, B—Kt5, P—QR3; 4, B—R4, Kt—B3; 5, Castles, B—K2; 6, R—K, P—QKt4; 7, B—Kt3, P—Q3; 8, P—B3, Kt—QR4; 9, B—B2, P—B4; 10, P—Q4, Q—B2; 11, QKt—Q2, B—Kt5; 12, P—Q5 (*a*), P—Kt4; 13, Kt—B, P—R3; 14, Kt—Kt3, R—Q; 15, P—QR4, P—Kt5; 16, P x P, P x P; 17, B—Q3, B—QB; 18, B—K3, Kt—Kt5; 19, QR—B, Q—Kt; 20, B—Q2, Q—Kt 3; 21, Q—K2, Kt—Kt6; 22, R—B6, Q—R4; 23, B x RP, B—Q2; 24, B—Kt5, B x R; 25, B x Bch, K—B; 26, Q—B4, Kt x B; 27, Kt x Kt, Q—R2; 28, Q—K2, P—R4; 29, Kt—B5, B—B3; 30, Kt—B4 (*b*), Q—B4; 31, P—QKt3, Kt—R3; 32, Kt x Kt, R x Kt; 33, Q—K3, R—B; 34, R—QB, B—Q; 35, Q x Q, P x Q; 36, Kt x P, K—K2; 37, R x P, P—B4; 38, R—B4, B—R4; 39, B—Kt5, R x R; 40, Kt x R, B—B2; 41, P—K5, B—Kt; 42, Kt—K3, R—R2; 43, Kt x Pch, K—B2; 44, P—K6 ch, K—B3; 45, P—K7, R x P; 46, Kt x R, K x Kt; 47, P—Kt3, B—B2; 48, K—Kt2, K—Q3; 49, B—K8, P—R5; 50, B—B7, K—K4; 51, K—R3, B—Q; 52, K—Kt4, P x P; 53, BP x P, K—B3; 54, B—K6, K—Kt3; 55, P—Q6, K—B3; 56, B—B5, B—Kt3; 57, P—Q7, B—Q; 58, P—R4, P x P; 59, P x P, B—B2; 60, P—KR5, K—Kt2; 61, B—K4. Resigns.

(*a*) Shutting off the Queen's Knight.

(*b*) It will be noted how the attack concentrates on the weak pawn.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Sir William Garstin's description of the damage done to the Egyptian Delta Light Railways in the recent disturbances brings out very clearly the organised character of the attack on the lines. As Sir William says, the destruction of communications was evidently one of the chief aims of the rioters. Fortunately, they were foiled in their attacks on the main railway workshop at Mit Ghamr. Detailed figures of the losses incurred are not yet available, but the approximate estimates are £47,200 for damage to property, and £46,000 for loss of earnings since the commencement of the riots, a total of £93,200. As I pointed out recently, the past year's earnings were only affected by the outbreak to a comparatively slight extent, and the effect on the current year's working can scarcely be other than pronounced, seeing that it is not merely a case of direct consequences, for which compensation will no doubt be made in due course. To say nothing of the time it will take to carry out the construction work entailed, there is the dislocation of the country's trade and commerce to be taken into consideration.

***

On the subject of labour unrest in Egypt Sir William, whose speech was read in his absence by Mr. Montagu Sharpe, makes some remarks which are particularly apposite and interesting at the present juncture, when the country is threatened with a strike movement on an extended scale. He points out that the labourer in Egypt is aware that his fellow workers in other lands are clamouring for shorter hours and increased pay, and that prices of food and necessities have risen by over 100 per cent., and in his view these two causes are sufficient to account for the existing state of unrest, but he fears also that there is little doubt that Bolshevik propaganda has reached the East and has had some effect.

***

As regards the general outlook Sir William was far from optimistic, stating that the current year might possibly turn out to be one of the "lean" years. "I think it best," he said, "to point out to you plainly that we have anxious times before us in Egypt. In that country the future at present seems as uncertain as it does throughout the world. Nevertheless, I have always had the greatest confidence in the future of Egypt, and even in the darkest times I have never varied in this respect. The country has such recuperative powers and has so quickly recovered from bad times in the past that I feel certain it will quickly recover prosperity in the future—provided that any recurrence of the recent events is assured against, and that law and order are maintained."

***

The capture of Odessa and the retreat of the Bolsheviks to the interior opens up the prospect of the speedy resumption of trade with the whole of the vast markets of South Russia, if matters continue to go well, as there is every indication that they will. I need scarcely urge the importance of these markets for British manufacturers and exporters. Before the war British trade with that region was very considerable, particularly as regards agricultural machinery, and there is no question that in the future commercial opportunities there will be greatly increased. But if this country is to obtain its share of the trade, the market requires the most careful and immediate attention. In this connection I would call attention to what our Constantinople Correspondent says regarding the present requirements of these markets. Agricultural machinery he puts first among the openings, and other commodities required include all kinds of clothing and colonial produce.

***

An illustration of the absolute necessity of increased production is given by the same correspondent, who points out that there are many complaints at Constantinople of orders to British manufacturers being turned down with a statement of regret that the market cannot be considered for some time. It is too deplorable for words that manufacturers should be still adopting this attitude towards the Near East markets. The fact is, I fear, that many of them are content with the home market, which is equal to absorbing vast supplies, and are neglecting foreign markets. This is a most short-sighted policy, for the home market could be regained at any time, but the time to enter foreign markets is now or never, and I would impress upon manufacturers that this applies particularly to the Near East markets, where there is an urgent demand for goods of every kind, and where permanent trade will go to those who enter the market now.

***

According to the Indian mail papers just to hand an enormous deposit of coal has been found at Namtu, in the Southern Shan States, Burma, twenty-five miles from the Burma Railways line. No details are given as to the quality of the coal. Obviously this addition to India's extensive coal resources, if it proves as considerable as it is believed to be, should be of very great value in connection with industrial developments in Burma.

***

Silver continues its upward movement and the time cannot be far distant when there will be a further change in the sterling exchange value of the rupee from 1s. 10d. to 2s. The metal now stands at over 61d., and a comparatively small advance will now place it at the value at which rupees would be turned out at a loss.

***

His many friends will learn with deep regret of the death at Teheran last month of Mr. David Brown, deputy manager of the Imperial Bank of Persia in that country. Mr. Brown, who, I understand, was to have succeeded Mr. A. O. Wood, C.B.E., on the latter's retirement this autumn from the position of chief manager of the bank in Persia, had won for himself a great reputation by his knowledge of local finance, and his understanding of the workings of the mind of the Persian. His death is a great loss to British trade in Persia.

***

During what may be called the war period there is no question that the manufacturers and exporters of Japan have succeeded in gaining a remarkable hold on the Indian market. In 1916-17 Japanese exports to India were valued at Rs.13 1-3 crores, for 1917-18 at 18¼ crores, and for 1918-19 at no less than 33½ crores! In other words, in the last trade period there was an increase of roughly 150 per cent. on the figures of two years ago. At the same time the United Kingdom's exports to India were gradually decreasing, and from Rs.87¾ crores in 1916-17, fell to Rs.81¾ crores in 1917-18, and to only Rs.77 crores in 1918-19, or little more than double the figures for Japan. These changes, due wholly to war conditions, will doubtless only prove temporary if British manufacturers cater for the Indian market with characteristic thoroughness. But here, again, everything depends on the factor of production.

***

The openings for British trade in Roumania, where the inhabitants are so keenly desirous of developing trade relations with this country, have been the subject of constant reference in these columns. In a recent British Consular Report from Bucharest a list is given of some of the goods that are at present in greatest demand in the country. The list includes jute manufactures, agricultural machinery, industrial machinery, electrical lighting installations, ironmongery, drugs and chemicals, cotton piece goods, boots and shoes, coal and coke, paints and varnishes, wearing apparel of all kinds, waterproof coats, etc. Here alone would be a fairly comprehensive list of requirements, but the goods mentioned are merely illustrative of the market position, commodities of almost every kind being needed.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

THE EARL OF BESSBOROUGH, K.P., C.V.O., C.B.

Constantinople Business Letter

Trade in South Russia.

(From Our Own Correspondent.)

Constantinople, August 5.

The British Chamber of Commerce in Constantinople reports that the Russian sugar monopoly has been temporarily abolished and replaced by a duty of 300 roubles per pood on lump and 200 roubles per pood on sand sugar. Sugar is now free for import sales subject to duty, and sells at about 900 roubles per pood for the fine without duty. Lump is about 200 roubles the pood dearer. Customs duties have now been replaced by a general 10 per cent. *ad valorem* tax. Goods subject to duty do not pay this tax. Trade is declared free, and permits are only required for the export of foodstuffs, etc.

With the prospect of business opening up in Russia if all goes well with the volunteer armies in the near future, the following information as to requirements may be interesting:—First, agricultural machinery and gardening tools are required. Tractors from 15 h.p. to 60 h.p., and tractor ploughs to suit; reaping machines with binders; binder twine for American reaping machines; ploughs, single-furrow and double-furrow, of the Rudolph Sack type; scythes, saws, forks, spades, etc., are all in demand, and will sell readily if they are of the style of thing suited to the country. Clothing of all kinds is badly needed, especially strong boots and ready-made clothing for soldiers; but women's and children's clothing is also needed. Colonial produce: coffee and cocoa; matches; drugs and pharmaceutical preparations, such as aspirin, veronal, etc., are all in demand.

The Russian Commercial Attaché in this city announces that commerce with Novorossisk is absolutely free, and there are no fixed prices or any obligation to sell to the Government or any particular individual. Exporters should apply to the Comité Commercial, Rue du Quai, Maison de l'Ecole Réale, Novorossisk, for information and assistance with regard to the Customs formalities.

The Turkish Customs.

I announced in a previous letter that the Allies had not pressed their demand for the re-establishment of the pre-war system of *ad valorem* Customs duties instead of the present system, whereby goods pay duty according to their weight, which was established by the Germans. The Turks might have known that anything established by the Germans would not be likely to benefit anyone else but the Germans—except by accident. Yet they clung to the German system. A Turkish paper took up the matter, and demonstrated in a special article on the subject that the revenue was suffering heavily, and estimated the loss at no less than 97 per cent. of the sum that would be collected on an *ad valorem* basis. The Ministry of Finance became alarmed, and has set a Commission to work to investigate the matter. British business men whom I have questioned on the subject are quite satisfied with the present system. From their point of view it is a pity that the subject was ever raised.

A Chance for British Typewriters.

One of the greatest handicaps to office work at the present moment is the scarcity of typewriting machines and accessories. So far as I am aware, there were never any British machines on the market here before the war, and the Americans easily held the field. But at present there is plenty of room for a British machine to obtain a footing which would be permanent. I have seen an "Imperial" machine, which, with a French keyboard, would, I feel sure, find a ready sale. Ribbons, ink-pads, and all sorts of accessories are badly needed.

Wasted Opportunities.

It is unfortunate that there should be so many complaints of orders to British manufacturers being turned down. "We regret that we cannot consider your market for some time," is the sort of thing that is getting far too common. By the time those manufacturers decide to consider this market they will find that someone else has been more wide awake, and then their consideration will be useless. As long ago as January the Federation of British Industries advised its members to make every effort to establish and maintain the predominance of British trade in the Near East, even at the expense of the home trade. The F.B.I. pointed out that it would always be much easier to recapture the home market than to drive out a competitor from a foreign market. To dispose of our surplus production we must have foreign markets. At present it is true that there may be very little surplus production, but all the world knows that increased production is a matter of life or death for us, that being the only way to repair the frightful ravages of the war. What will be the use of increasing our production if we are going to neglect to secure the necessary outlet for it? The matter is worth more than a passing thought, and here in the Near East there is certainly a great opportunity for establishing a sure, steady, and profitable outlet for our surplus production, but we must get at it now, or we shall find ourselves forestalled in the bad old pre-war style.

JAPAN'S TRADE IN THE NEAR EAST.

By Victor L. Trumper.

The life-and-death struggle which Europe has been engaged in has given an opening for Japan to make a bid for markets which previously she would have had no chance of obtaining. Without in the least minimising the value of Japan's share in the war, the fact remains that the war has given her a place amongst the world's producers which nothing else could have done in a generation. While Europe has been manufacturing implements to carry on the war, Japan has been attempting to supply the Near and Far East with those goods which they would ordinarily get from Europe. Of course, there is one thing that Japan is, and probably always will be, pre-eminent in, and that is the numberless small articles which go under the comprehensive name of "curios." These, as every one knows, may consist of anything which quaint ingenuity may suggest, whether it be a doll or a door mat, a fan or flytrap. No European nation could possibly compete with them in this.

Previous to the war, Japan supplied matches to the Far East and also to India, but practically none were seen in Egypt. However, with the normal supplies from Sweden cut off, Egypt felt the match shortage, but was soon flooded with lucifers from Japan. Happily for Europe the matches were of exceptionally bad quality, and so everyone gave them up when others were obtainable; but had they been even fairly good no doubt Japan would have secured a good entry into the Near East match trade.

However, perhaps the most serious thing for the British manufacturer is the cotton piece-goods trade. For many years Japan has been making cotton cloth, of comparatively poor quality, it is true, but still just what the average native wanted. In India and the middle East, these competed with cheap German goods, but, of course, during the war this and all other competition, except local Indian manufactures, was eliminated, which gave Japan a tremendous pull over her erstwhile trade rivals. Another great factor was that Japan could import the raw cotton to feed her mills from China, free of war risk, in any sort of a vessel, large or small, while the rest of the world had to run the gauntlet of submarines. Is it any wonder that cotton piece-goods from Japan began to be seen in the Near East markets?

One often hears the sayings that the goods are cheap and nasty, and that nothing can touch the British manufacturer for quality, both of which may be quite true, but which do not touch the point at issue, namely that a vast proportion of buyers cannot afford anything except a low-priced article, and that the trader that supplies them with that gets the business.

For many years before the war, the State-aided ship-yards of Japan were building ships for their own lines, but the shortage in the world's tonnage owing to the submarine war induced them to start shipbuilding on a large scale. Many of the "standard ships" which we heard so much about were built in Japan. They were expensive; they will probably not have a long life, and in many ways were faulty; but the fact remains that they served their purpose in replacing the world's tonnage, and compare pretty well with other standard ships turned out under Government supervision. No doubt in the future, when shipbuilders will be asking for orders, instead of as now, shipping companies begging for ships, prices will come down, but by that time the Japanese will probably have acquired considerable experience; and perhaps British shipyards may have a four-hour day, so possibly Japan will have to be reckoned as a permanent competitor in two essentially British industries, namely, that of cotton manufacture and shipbuilding.

THE HELLENIC COMPANY OF MARITIME ENTERPRISES

PALIOS LINE).

Head Office - PIRÆUS.

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.

26 PASSENGER and CARGO STEAMERS.

285 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Coaling Yards and Repair Shops.

The Mineral Resources of the Near East—III.

Persia, Abyssinia, and India.

By John Kirsopp, M.I.M.E., F.G.S.

Persia.

The mineral wealth appears to be great, but mining, owing to the general absence of good roads, and the lack of enterprise, is but indifferently prosecuted. The minerals of the country belong to the Government, and are leased out to private persons. The Ministry of Mines has no account of production, etc. There are fine coal deposits near Kerman, and in the province of Khorasan, and much iron ore of good quality exists on the slopes of the Elburz range and elsewhere. A wide oil area exists in the lower valleys of the province of Kermanshah, near the Turkish frontier, extending south from Kerkuk in Turkey to Shuster in Persia, and even to the island of Ormuz. The principal oilfields are situated in the province of Kermanshah. Petroliferous fields have been exploited by the Anglo-Persian Oilfields Company. Rich deposits of copper ore are known, and there are mines to the south of Kerman, and also in the Turbat and Gabzawar districts in the province of Khorasan, but they all require better means of communication in order to develop them properly. Salt is obtained (by the process of evaporation in tanks) from the salt water which collects in the oil wells of the province of Kermanshah, and small quantities are exported from Bunder Abbas and from Lingah. The turquoise mines near Nishapur in Khorasan were a decade ago, and less, annually let for £4,800, the concession for which is sold annually by the Government, but the mines are not worked in a scientific way, and although the value of precious stones exported from Khorasan and Seistan was £2,752, in 1912-13 it was only £316.

Afghanistan.

Although this country is known to possess mineral wealth probably to some considerable degree, no mining or exploration work has taken place, as the country is very largely inaccessible by its great distance from the sea, its inhospitable sands, and the bold mountain fastnesses that interlock it. The transit trade is, however, considerable by camels and horses, between Kabul and Peshwar.

Arabia.

The Arab is not a miner by nature, and there is little or no working for minerals on the great Arabian peninsula, probably fully one half of the country still remaining unexplored. Iron, copper, and lead abound, and although little is known as to mineral resources, it is certain many forms of precious stones (emerald, carnelian, etc.) are found. In days gone by, according to Burton, gold mines were worked in the land of Midian, and an attempt at gold mining has, within the last couple of decades, been made in the Hadramait. In 1908-9, 909 metric tons of salt were exported mainly to Zanzibar and India from Muskat, and during 1909-10 875 metric tons. During each of these two years £33,976 value of pearls were also exported. Pearls valued at £1,227 were exported, chiefly to India, during the year 1912-13. The pearl banks along the Persian Gulf extend above 200 miles, give employment to many thousand men, and are reputed to yield an annual product valued at about £300,000.

Abyssinia.

Gold, iron, and lignite have been discovered, and there are various unworked concessions. Traces also of copper have been found in numerous places. Finds of coal have been reported, but these have turned out to be lignite or obsidian. Gold is obtained from the Wallega, Shankalla and Benischongul districts, and is also washed in the Baro River (which is navigable to Gambeila), and exported from Adis Abeba and Harrar. The amount of gold exported annually is valued approximately at £50,000. The gold is seldom exported in dust, but usually in small rings, and sometimes in small ingots. Up to the present no auriferous quartz has been found in sufficient paying quantities. Iron ore is worked in the districts of Entoto Hamasen, Damot, and Agomeder, which is smelted locally and manufactured into knives, swords, spears, agricultural implements, mule bits, cart axles, etc., for the local market. No steel is made. Lignite is found at Tégullet, Bulga, and Debra Libanos, and other places. The Tégullet outcrops were worked by the Government, in a small way, up to 1910, the amount of lignite transported to Adis Abeba for use with the Government traction engines being about 10 tons a month. These works are now, however, practically disused. Salt is found in various parts of the country in sufficient quantities to supply the needs of the native population. Rock salt is abundant in Arusiland. Salt is produced in large quantities from Lake Alel-bad (near the Eritrean frontier), Lake Assal (Danakil country), and the Arussi and Borana districts in the south. In the last named a lake and two wells produce in the one magnesium sulphate, and the other two edible salt.

India.

The total value of minerals produced throughout India in 1912 amounted to £9,264,274. This total may be compared with that for 1909, amounting to £8,243,814, the increase in value being due to a greater production chiefly in coal, clay, corundum, manganese ore, mica, stone (miscellaneous), tin, tin ore, and wolfram. Since the years mentioned, a great increase has taken place in the value of minerals produced.

The resources of India as a coal-producing country are immense, and very large areas rich in mineral fuel have not yet been touched. The total output in 1912 was 14,706,339 statute tons, an increase of nearly two million tons over that of the previous year, and by 1916 the output had risen to 17,254,339 tons. Bihar and Orissa are the great coal-producing area, while other regions are Bengal, the Central Provinces, Rajputana, Hyderabad State, the North-West Frontier, and Baluchistan. In 1912 97.23 per cent. of the coal raised was obtained from the Gondwana system, and 2.77 from beds of tertiary age. The coal raised in Rajputana is lignite or brown coal. Among the most important coalfields are Raniganj, Giridih, and Jharia, in Bihar and Orissa. Very little coal is used for household purposes, the bulk being consumed in railway locomotives, as bunker coal for the steamers, and in steam raising at the mills. The average output per person employed in 1912 was 111 tons.

Petroleum has been obtained from oilwells in Upper Burma for more than 2,000 years, the yield in this province during 1912 being 245,335,209 gals., out of a total production of 249,083,518 gals. for the whole country. The chief producing districts are the Yenangyaung fields in Upper Burma, where rich sands have been struck at greater depths. A greatly increasing supply is also being produced in the Minbu district (Assam), where nearly four million gals. were produced. Various ores of iron, viz., magnetite, hematite, limonite, and clay ironstone occur abundantly, and show a constantly increasing output, due to the operations of the Tata and the Bengal Iron and Steel Companies. The country ranks as one of the world's greatest producers of manganese, the chief deposits being in the Central Provinces and Madras. The ore is of high quality, yielding from 51 to 54 per cent. of metal, and occurs in enormous quantities, no mining being necessary at present, as there are plenty of exposed deposits, many of which are hillocks above the surface of the surrounding country. Most of the manganese raised in India is exported. Gold occurs and is worked in several provinces, viz., Mysore, the Nizam's Dominions, Burma, Punjab, Bombay (Dharwar), Madras, and the United Provinces, the greatest production, however, being obtained from the quartz veins of Koar, Mysore, and the Anantapur fields of Madras. Small quantities of gold are washed from river sands in very many parts of the country, and dredging is carried on at Myitkyina in Burma, where also a small quantity of platinum is obtained. Copper ore is known to exist in several provinces, and is being worked both in Singhbhum and Sikkim, but the industry is still in the prospecting stage. The ruby mines of Mogok, in Burma, yield the whole of the output of rubies, sapphires, and spinel in the country at the present time, which is a satisfactorily increasing one. The Myitkyina district, in Upper Burma, yields jade and a small amount of inferior amber. Garnets are mined in Rajputana. Mica is both quarried and mined to an increasing extent, principally in the provinces of Bihar and Orissa, and Madras, but a small quantity is obtained in Mysore and at Ajmere and Merwara, in Rajputana. A large quantity of the poorer grade mica is used locally for ornamental purposes. A small amount of samarskite was extracted from the mica mines at Nellore in 1912, with a view to its possible employment as a source of radium salts.

Tin ore exists in and is obtained by washing some of the gravels in Burma, and working for tin has now been taken up seriously in the Tavoy district of Burma. Magnesite occurs as veins in the altered olivine rocks in the Salem district of Madras, and near Seringala, in Coorg, Mysore State, but the industry is only a small one. Slate quarrying is carried on at Monghyr, Bengal, and also in the Kangra Valley, and at Rewari, Punjab, and a large quantity of slate of an inferior quality is also obtained in the United Provinces. Large quantities of granite and gneiss (for building and ornamental stone) are being worked in the Thatôn district (Burma). White marble is obtained from the Makrana quarries in Marwar (Jodhpur State), Rajputana.

The sources of the salt supply are (*a*) rock-salt mines and quarries of the Punjab, Kohat, and Mandi State, (*b*) lakes and wells of Rajputana, wells and springs of the Punjab and Upper Burma, (*c*) evaporation of sea water in Bombay, Sind, Madras, and Lower Burma. The production fluctuates with the seasons, the greater part of the production is made from sea water. Saltpetre, or the nitre of India, is obtained from a natural efflorescence from the soil, especially from the province of Bihar. The crude earth is purified by solution, filtration, evaporation, and crystallisation, the area over which saltpetre is manufactured being estimated a couple of decades ago at 232,314 square miles. There is a large export of refined saltpetre from Calcutta. Soda salts, or the carbonate and the sulphate of soda, are also manufactured in very many districts from the surface soil, or from saline efflorescences in like manner to saltpetre.

Engineering Notes.

Canada and the Near East.

Canadian agricultural engineers are preparing, according to recent reports, to act in co-operation with each other in order to secure European orders for farm implements and threshing machinery. The chief desire is the fixing of a price basis for the export trade; and it has been reported that representatives of the leading farm implement factories have conferred with the Canadian Trade Commission at Ottawa in order to arrange for the extension of export trade in farm machinery, and preliminary plans were proposed by which foreign business could be secured to better advantage by the Canadian industry. It has often been stated that competition for foreign trade has been very keen in the past, not only between Canada and the United States, but also between individual Canadian firms, and that this competition has been detrimental to the interests of Canadian producers. A proposal, therefore, has been made that the agricultural engineers should organise on much the same basis as the various other groups in Canadian industry for the securing of export orders. These are expected to be extensive from those European countries that were importers of Canadian implements and machinery before the war. In place of competition, it is suggested that the manufacturers should unite in maintaining a single selling agency, the expenses of which will be distributed *pro rata* among the various members of the group. The question of credits has also been dealt with by the combine, and among other things the Canadians hope to arrange a plan providing for a fair price being fixed which will make it impossible for the foreign buyers to undersell.

As is known, Canadian engineers, before the war, were doing considerable business in agricultural engines and machinery in Russia, particularly in Southern Russia and the Levant, although they were competing in those regions with the Americans more than with anybody else. The Greek engineering markets have always been of much interest to Canadians. Hence, apparently, their prompt decision to approach officially Greece as soon as the above arrangements between Canadian engineer manufacturers were settled. Thus, it appears, the Canadian Government, according to reports from Athens, approached the Greek Government and proposed to supply Greece with various kinds of agricultural and industrial machinery and implements on credits—such credit to represent a value up to 500 million francs. Moreover, the Canadian Government stated that the supply of such goods could be extended on credit also to private individuals, on condition that a federation of the Greek Banks should be formed and would give the necessary guarantee. These terms were, it is said, particularly acceptable, and the National Bank of Greece has undertaken to invite all the Chambers of Commerce to a meeting on the subject.

Study the Buyers' Needs.

An experience recorded in the West of Scotland Iron and Steel Institutes Journal gives an apt illustration of the value of adapting products to the needs of foreign customers.

In South Africa, the Kaffirs use an implement which is known as a Kaffir pick, which really is a flat spade in the shape of a heart. This is used as an axe, as a pick, and as a spade. A sample of it was brought home to this country, and reproduced here. The writer says that he would have defied any man to detect the difference between the two, but still the English article would not sell. At length, a representative was sent from home, and, going up-country, found that the Kaffir uses the pick for one purpose of which nothing was known. That is, he takes it out of its shaft and uses it as a cattle call, and the representative found his firm had not got the right note. The discovery put them on the right line, and with the reproduction of the correct note they have built up and retained an enormous trade.

Heat by Radiation.

With the present scarcity of fuel, and the not unjustified fears that conditions will be worse during the approaching winter, the question of fuel for heating and other domestic purposes is apparently occupying the attention of the public in many districts of the Near East. Charcoal and wood, the usual fuel for domestic purposes there, is already at a price unheard of before. In the meantime, the question apparently creates a certain amount of argument as to the best and most economic methods for heating houses during the winter. Evidently opinions differ considerably in some cases. Some modern engineers are in favour of the old methods, and are upholding the preference of the gas fires over the modern "European" systems. According to one of them, none of these systems of electric heaters, steam pipes, batteries, or gas fires is so pleasant as the old-fashioned open fire. This criticism is generally dismissed as displaying some ignorance of scientific principles, but it is really based on a sound foundation. Steam pipes and other heating fixtures warm a room by heating the air by conduction. For this purpose their temperature has to be raised to about 150 deg. Fahr., so that the air in their immediate vicinity is at that temperature, and falls to 55 to 60 deg. at the remoter parts. It is an established fact that a room is quite comfortable if kept at a uniform temperature of 55 deg. Fahr. A good fire will maintain the temperature, but, being so localised, it usually fails to warm all parts of a large room. A new system, however, may be of interest to many who prefer heating by radiating. It is a system of warming whereby the action of a fire is imitated.

THE NEW SYSTEM.—The principle is that if pipes carrying steam are embedded in plaster, which is a semi-conductor of heat, they transmit the high temperature heat at the small area of their own surface to the wide surface of the plaster, where it is radiated into surrounding space. Thus, a pipe at 150 deg. Fahr. is made to diffuse a gentle heat of about 55 deg. Fahr. This device may be made up in the form of tubes bent backwards and forwards, and supported on an iron frame embedded in panels, which may be placed at intervals in a room, or may be set back in recesses in the wall. This is called a "hot panel." Another form is the "hot border." In this arrangement, half-inch steel pipes are laid about one inch below the floor, running round close to the walls. Alternately, the pipes may be built into the cornice round the ceiling. The only danger with the latter device is that an unequal contraction of pipes and plaster may take place, causing cracks, but this can be avoided by selecting plaster of about the same coefficient of expansion as the metal.

INDIAN FAMINE FIGURES.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agricuultural Department, dated August 22:—

Our telegram dated August 15. Condition and prospects of standing crops generally satisfactory. Distress is disappearing in the United Provinces and test works in Shahpura State, Rajputana, have been closed. Distress still severe in Hyderabad, where rain insufficient. Diminution of rain necessary in Central Provinces and Central India. Numbers relieved:—Bengal: relief works, 3,830; test works, 302; gratuitous relief, 18,402. Bihar and Orissa: Relief works, 1,071; test works, 3,007; gratuitous relief, 46,982. Feudatory States of Orissa: Test works, 8,737; gratuitous relief, 30,199. United Provinces: Test works, 801; gratuitous relief, 12,980. Ajmer-Merwara: Gratuitous relief, 411. Central India: Relief works, 5,100; gratuitous relief, 7,700. Central Provinces: Relief works, 8,731; test works, 7,636; gratuitous relief, 41,383. Bombay: Relief works, 18,339; dependants, 9,406; village works, 1,621; test works, 429; gratuitous relief, 70,931. Hyderabad: Relief works, 28,000; gratuitous relief, 32,000. Madras: Relief works, 33,853; test works, 817; gratuitous relief (incomplete figures), 89,439.

YUGOSLAV FINANCES.

A Reuter message from Belgrade, dated August 19, states that in order to solve the financial problem a special inquiry will be undertaken and strict measures will be adopted to prevent the importation of Austrian crowns into the country. This measure is connected with the proposal to found a national issuing bank for the whole kingdom, which would have the task of withdrawing from circulation all Austrian crowns.

The traffic returns of the Egyptian Delta Light Railways for the eleven days ended July 31 amounted to £E10,336, making the total for the year £E66,960. The figures for the corresponding period of 1918 were £E9,683 and £E90,484.

PERSIA'S TRADE OUTLET.

Openings for British Enterprise.

We give below some interesting extracts from a despatch from the British Legation, Teheran, published in the *Board of Trade Journal* :—

In the earlier stages of the war Persia does not appear to have suffered any great loss. There was, naturally, some dislocation of trade, and the Turkish incursions to Tabriz and Kermanshah inflicted local damage. But the disturbance to trade which occurred was probably fully compensated by the eager demand abroad for opium and foodstuffs, and by the high prices paid for supplies and transport by the foreign forces operating in the country. On the other hand, since 1917 the country has suffered severely. The retiring Russian troops did great damage, and the later occupation of Azerbaijan and the rich plains of Urumia by the Turks caused these districts to be harried and depopulated. Much Russian paper-money, at present almost without value, was accepted in payment for supplies and is still in Persia. There is, however, a brighter side. Persia has not incurred any unusual military expenditure during the war, and has received very liberal assistance from Great Britain in meeting the loss of public revenue resulting from internal disorder, and has obtained very high prices for supplies, transport, and labour required by the British forces operating in the country. The greatest calamity to Persia was the drought and consequent famine throughout the country in the winter of 1917 and spring of 1918, followed by influenza in the autumn of 1918. The population was greatly reduced by hunger and disease, flocks and herds were much reduced in numbers, and from shortage of forage great numbers of beasts of burden were lost. The harvest of 1918 was excellent, and that of 1919 is most promising, and though prices of foodstuffs remain high employment is active, and there is no longer a real distress.

Country without Stocks.

Agriculture and a great number of trades have lost heavily from interruption of trade with Russia. Before the war imports from Russia amounted to krans 350,000,000 (£6,000,000), of which one-third was sugar; and nearly another third was cotton tissues; exports to Russia amounted to krans 300,000,000 (£5,000,000), raw cotton accounting for one-third and grain and dried fruits for another third. A great part of this trade is at present suspended. It will doubtless be resumed in course of time with Russia or with other countries, except perhaps exports of raw cotton, which derived advantage from fiscal arrangements in Russia which may not necessarily be continued in future. Khorassan and other parts of Northern and Central Persia have prospered on cotton grown for export to Russia—50 million lb. per annum—where it was admitted at a duty of 40 kopecks per lb., nearly 2½d. per lb. less than the duty paid on cotton imported to Russia from other countries. The present condition of Persian commerce is that the country is without stocks of foreign commodities necessary to it, or to which it will revert as soon as they are obtainable, and that despite losses from internal disorders and famine, it is quite able to pay for these imports. Moreover, the country has been traversed by foreign forces which have improved roads and shown to the people the advantages of mechanical appliances. There are indications that an increased demand will arise for tools, implements, machinery, and engineering works. Finally, Russia, the largest customer of Persia, is at present disorganised, and the former trade with that country is seeking new outlets. Home manufactures have been substituted to some extent for textile and other commodities which Persia has been accustomed to import, but has not since been able to obtain in sufficient quantities. Many commodities, such as sugar, tea, metals and their manufactures, drugs, mercery and ironmongery, Persia has not been able to produce, and must obtain from outside.

Communications.

Nearly the whole foreign trade of Persia at present passes through the Persian Gulf. It cannot, however, be expected that the whole of this trade will remain with the Gulf routes after other routes have reopened, for the northern provinces, which are now the most cultivated and populous regions of Persia, are more accessible by present methods of transport from the Black Sea than from the Persian Gulf. In 1913 the cost of transport from Mohammerah to Ispahan was about £22 per ton, and from Enzeli to Teheran about £20 per ton. The best access to these northern markets in normal times is from Batoum by rail to Tiflis and Tabriz, or by rail and steamer to Astara, Enzeli, and other Caspian ports. Foreign goods have not hitherto been allowed transit to Persia through Batoum, and if in the future reasonable terms of transit should be accorded it must be remembered that few Persian traders are at present acquainted with forwarding agents or transport charges on this route. Other European countries will be in as good a position as Great Britain for trading with Persia by the Black Sea route.

The South may be able to retain much of the trade which has been diverted to it, for we have improved our means of access to the commercial centres of Persia. Indian commerce now has railway facilities via Nushki right up to the Seistan border. The roads from Bandar Abbas to Kerman, and from Bushire to Shiraz, have been made practicable for wheeled traffic. The port of Busreh has been improved, and ample rail and river communications with Baghdad, and on to the Persian frontier, will be available. A metal road has been constructed from the frontier to Kermanshah.

The traffic on all routes from the Persian Gulf to the interior has been interrupted for longer or shorter periods, but the Mohammerah-Ahwaz-Ispahan route has suffered least from interruption. At the date of this report all these routes are open to traffic, but safety of merchandise on these southern routes is not well assured, especially in Ispahan and the Central Provinces, where open brigandage is still rife, and the Baghdad-Kermanshah route is much preferred, although transit charges in Mesopotamia are very high. The present charge of transport from Ahwaz to Ispahan is the equivalent of £145 per ton, and from Ispahan to Teheran £66 per ton. In 1913-14 the cost was £20 per ton from Ahwaz to Ispahan, and £13 per ton from Ispahan to Teheran.

Foreign Trade and the Exchange.

The latest statistics available on the trade of Persia are those of the Persian Customs Administration for the year ending March 20, 1918, which indicate a decrease in foreign trade compared with the previous year.

The following table shows the value in krans (and the equivalent in sterling at the ruling rate of exchange in each year), of the total imports and exports :—

Year ending March 20.	Krans.	Rate per £	£ Sterling.
1914	1,103,000,000	54	20,000,000
1915	895,000,000	54	16,000,000
1916	841,000,000	54	15,000,000
1917	928,000,000	40	23,000,000
1918	806,000,000	30	27,000,000

The increase in sterling equivalents is due to the great fall in the kran rate of exchange on London, resulting mainly from the great rise in the gold value of silver. During the year to March 20, 1919, the average rate of exchange was krans 27 per £ sterling, and since the beginning of the present financial year it has been krans 26 per £ (telegraphic transfers on London).

A great reduction in quantity of commodities imported is shown when one compares the figures for the years ending March, 1914, and March, 1918.

	1914. cwt.		1918. cwt.
Sugar	2,500,000	..	960,000
Cotton tissues	420,000	..	235,000
Woollen tissues	8,700	..	2,200
Tea	90,000	..	30,000

In 1918 the value in krans, at the port of entry, of sugar had increased by 100 per cent., cotton tissues by 10 per cent., and woollen tissues by 30 per cent. In 1914 340,000 tons of foreign goods were imported of a value of krans 630,000,000 (£11,700,000) and in the latter year only 250,000 tons valued at krans 470,000,000 (£14,500,000). The value in krans at port of entry of most imports has increased in spite of the favourable exchanges. The further great increase in inland charges has raised the actual price paid by the consumer to three or four times pre-war prices.

Similarly the quantity of commodities exported has greatly diminished during the last two years of the war. Exports of raw cotton, silk, wool, carpets, rice and other grain, dried fruits and nuts have been reduced to a third or fourth of former quantities. Exports of opium have been maintained, and exports of petroleum, a new industry not yet fully developed, have greatly increased during the last few years. The kran prices of most of these articles have fallen, with the exception of opium and foodstuffs, which have risen. The severe drought and famine in 1917 accounted for a decrease in exports of foodstuffs. A comparison of the exports, excluding petroleum, in the years ending March, 1914 and 1918, shows that in the former year 240,000 tons of Persian products exported were valued at krans 410,000,000 (£7,600,000) and in the latter year only 105,000 tons valued at krans 195,000,000 (£6,500,000). Evidently the increased war prices obtained abroad have counterbalanced the fall in exchange.

Princess Antoine Bibesco
(née Miss Elizabeth Asquith) writes:—"I think the 'De Reszke' Cigarettes quite excellent."

Captain Herbert Heyner writes:—"I find smoking in no way affects my voice, thanks to the 'smoothness' of your excellent 'De Reszke' Cigarettes."

Ernest Parke, Esq. writes:—"I have pleasure in expressing my high appreciation of the quality and blend of your 'De Reszke' Cigarettes."

Madame Albani writes:—"My friends speak highly of the excellent quality of your 'De Reszke' Cigarettes."

PEOPLE who know a good cigarette say the "De Reszke" is unusually good. Why not try a box?

Near East Markets.

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in July:—

Cotton.

The crop has improved since last month in Lower Egypt. In Middle and Upper Egypt it is almost normal. The weather improved during the second week of the month, when an appreciable rise of temperature took place. A general shortage of water, especially at the tails of canals, has been felt in a varying degree in practically all provinces during the period under review. There is a diminution in the attack of "wilt" and the damage done under this head is not appreciable. The cotton worm attack has increased in most parts of Lower Egypt but has done very slight damage with the exception of the province of Behera, where the number of attacked leaves per feddân towards the middle of the month was three times as large as that of last year, and damage has been done in isolated areas where fields have been neglected. The examination of green bolls shows a steady improvement in the pink boll worm attack, which is now less severe than during the corresponding period in any of the last three years.

Millet (Sefi).

The weather has been generally favourable, although the heat is reported to have caused some shrivelling of the leaves and damage to the plants in Minya. Water has been sufficient on the whole, although somewhat scarce at the tails of canals. Slight attacks of stalk borer are fairly common, but have caused no damage. The crop is doing well, and its prospects are generally satisfactory. Harvesting of the early sown fields will begin in the first week of August. The area under this crop in Asyût is considerably less than last year.

Sugar-Cane.

Weather favourable; water supply on the whole sufficient. The stalk borer attack is not serious. The plants are healthy and the crop is doing well.

Rice (Sefi).

The favourable weather prevailing has accelerated the growth of the plants. Water supply is reported to be sufficient in the rice zones of Behera and Sharqiya, barely sufficient in Gharbia, and short, though not to a serious extent in Daqâhlîya. No damage of importance has resulted from the rice worm attack and the crop is on the whole doing well at present. Preparations for the sowing of *Nili* rice on limited areas have commenced in Behera and Gharbia. In Fayoum the sowing of this crop has been proceeding since July 10.

Ground-Nuts.

Weather favourable; water supply sufficient. The flowering is general, and the crop is in good condition.

Maize.

A fairly large part of the land assigned for this crop was watered before the removal of the prohibition of *sharâqi* irrigation. Watering and ploughing of land for sowing are in active progress. But it is not expected that the crop on the whole will be an early one. One of the reasons was the reduced number of working cattle. The plants on the early sown fields are quite healthy. The system of cultivation on ridges appears to be gaining ground.

Buareh Notes.

(From an Occasional Correspondent.)

The date crop is coming on well and promises to be a fair average one this year, but with labour at its present price and freights as they are now it is hardly likely that the public will be able to purchase them very cheaply. However, provided the control restrictions are largely removed, there should be plenty available when this year's crop gets on the market.

London Produce Report.

Currants.

Except that the shortage of supplies is becoming more evident, there is no change to record in the position. Imports of currants during July amounted to 19,695 tons, making the total for the first seven months of the year 69,423 tons.

Sultanas.

The prospects as regards this commodity tend rather to grow worse, and even if fair supplies were available from the usual centres, which will certainly not be the case as regards Turkey, it is scarcely likely that any considerable quantity will reach the United Kingdom, in view of the great competition that is to be expected, particularly from Central Europe.

Coffee.

A hardening tendency is noticeable due to the influence of the export trade, and prices will, in all probability, advance in the near future. 7,643 bags were offered at auction this week, including 541 bags of East Indian, which brought 153s. 6d. to 155s. for export, and 1,587 bags of Costa Rica, which realised 148s. 6d. to 162s. for good to fine bold, and 150s. for medium. The futures market is little changed.

Sugar.

There has been a steady demand from home manufacturers and for export, and prices remain firm with a hardening tendency. During July imports amounted to 4,719,000 cwt., leaving a substantial balance over the demand, and stocks in hand in London at the end of the month amounted to 7,910,000 cwt. A considerable demand has been noted for the new Java crop, and prices are 3s. to 4s. in advance of those that have been paid for the old crop. Sugar feed for cattle has made £14 10s. per ton, and good cane molasses has realised £11 15s.

Seeds.

Imports of oilseeds in July, included 22,270 tons of cotton seed, 28,736 tons of linseed, and 9,429 tons of rape seed. Prices are nominally unchanged. The quotation for Calcutta to London is £53 for August-September, Bombay £54 10s. The cotton seed market is firmer, and the new Egyptian crop, which will be harvested next month, is quoted for October shipment at £29. Sesame is scarce, though arrivals are taking place at Marseilles.

Oil Cakes, etc.

A fair demand is shown for coconut cake at 420s., and for ground nut cake at 420s. to 460s. Egyptian cotton seed oil has been done at 110s., and Indian at 105s., while buyers have been in evidence for other varieties.

The traffic receipts of the Smyrna-Aidin Railway for the week ended August 9 were £6.047.

Sudan Produce.

Gum.

The C.E.B. report for June states that the exports of gum during the month were 1,263,911 kilos of hasheb of the value of £E36,235; 20,559 kilos of bleached of the value of £E708; and 144,780 kilos of talh, of the value of £E2,960 via Port Sudan, and 42,669 kilos of hasheb of the value of £E1,213, 10,071 kilos of bleached of the value of £E347, and 18,541 kilos of talh of the value of £E363, via Halfa. The total exports from January to June amounted to 5,503,001 kilos of the value of £E163,954, of which the exports to Great Britain were valued at £E96,369.

Kordofan Province.—The amount of gum sold in El Obeid market during June was 1,935 kantars, as against 18,105 kantars during the same month last year, the average price being £E1,202 m.ms. per kantar of 100 rottles. Arrivals from Nahud were 2,143 kantars, as against 3,202 kantars last year. At Rahad 41 kantars were sold at prices ranking from £E1.100 m.ms. to £E0.950 m.ms. per kantar, as against 46 kantars during the same month last year.

Cotton.

Red Sea Province, Toker.—The total cotton crop amounted only to 9,653 kantars of 315 rottles. The average price for the year was £E7,875 m.ms. per kantar of 315 rottles, and the whole crop was worth about £E75,812. The quality of the cotton was good, and fully justified the price obtained.

IMPERIAL OTTOMAN BANK.

Mr. Arthur Nias, Director-General of the Imperial Ottoman Bank at Constantinople, has tendered his resignation for reasons of health, and will retire from this post on November 30. He will be succeeded by Mr. L. Steeg, who has been Director-General Adjoint since 1913. Lieut.-Colonel J. Proctor, who has been connected in various capacities with the bank in London and Manchester since 1910, will replace Mr. Steeg as Director-General Adjoint. During the war Colonel Procter served with the King's Royal Rifles in France, and commanded a battalion of the Somerset Light Infantry in Mesopotamia. He attained the rank of Brevet Lieut-Colonel, and was mentioned in despatches for services in the field.

The returns of the Egyptian Markets, Ltd., for the week ended August 14 were:—Cattle markets, £349; general markets, £482; total for week, £831; total for year, £36,609. The figures for the corresponding week in 1918 ended August 15 were:—Cattle markets, £393; general markets, £433; total, £826; total for year, £32,428.

COMPANY MEETINGS.

Egyptian Delta Light Railways.

The annual ordinary general meeting of the Egyptian Delta Light Railways, Ltd., was held at Winchester House, Old Broad Street, E.C., on August 21, Mr. Montague Sharpe presiding.

The Secretary (Mr. F. T. Horne) having read the notice convening the meeting and the auditors' report,

The Chairman said that he very much regretted that Sir William C. Garstin, their chairman, was not present to take the chair. He had had a great deal to do, and he was overworked, and it was the desire of his colleagues that he should go away and take a good rest. This he had done, and he was sure they would all hope he would come back with renewed health and vigour. The chairman then proceeded to read Sir William Garstin's speech, which ran as follows:—

"Gentlemen, with your permission I will take as read the directors' report for the year ending March 31 last and the accounts circulated therewith. When I last addressed you I spoke hopefully regarding the outlook in Egypt and the prospects of our undertaking in that country. When hostilities were suspended we felt warranted in the belief that we should be able to report to you exceptionally good results of the year's working. This belief was maintained throughout the winter, in spite of rumours of unrest and agitation. It was not until March 10 that the blow fell which shattered our optimism and brought home to us the conviction that a grave situation was arising. On the date in question the first disturbances occurred in Cairo. On March 17 the company's train service was entirely suspended. For some days the wreckage of the company's property continued. It is a satisfaction to know that, as a whole, our native staff behaved loyally—some, indeed, of them behaved splendidly. From our European staff we, of course, expected nothing else, but they one and all kept their heads, and worked in our interests with a courage and coolness that were beyond all praise.

"At one time great anxiety was felt regarding the situation at Mit Ghamr, where our main railway workshops are situated. As a matter of fact, a very determined attack was made upon these shops; an attack which lasted several days. Thanks to the courage and resourcefulness of Mr. McKay, our chief locomotive superintendent, who organised measures for their defence by his staff, the attack failed. He was aided in his efforts by the Egyptian Mamur el Markaz, who formed a vigilance committee of the more respectable inhabitants of the town, but it was mainly due to Mr. McKay's efforts that we suffered no serious damage in this most important centre of our work.

"I have already mentioned that traffic on our lines was entirely suspended from March 17. This suspension was maintained until May 5, when a restricted service was resumed, under the orders of the military authorities. The service was gradually increased, and practically full services were running from the following dates:—Behera district, May 11; Gharbieh district, May 28; Eastern district, May 20. It was not, however, until June 4 that the complete timetable was resumed.

"We have not as yet received the detailed figures of our total losses, but they are approximately as follows:—Loss of earnings from the commencement of riots, £46,000; estimated damage to our property, £47,200, making a total of £93,200. The Egyptian Government has been officially notified that the company is claiming compensation for damage to its property and for loss of receipts owing to the stoppage of the service.

The Dividend.

"We are able to recommend the payment of the full dividend on our Preference shares, namely, 5½ p.c.—this after increasing our general reserve to £40,000. We can then add £3,774 to the balance to be carried forward to the current year's accounts. The directors' report which accompanies the accounts will have shown you that our expenses last year were some £23,863 higher than in the year preceding. It also shows that we carried nearly a million fewer passengers, and that we lifted nearly 50,000 tons less in the shape of goods. These decreases were entirely due to the war, and, in spite of them, our earnings for the year under discussion increased by some £73,523, and our net earnings by £49,660. Rates and fares on all railways in Egypt were raised generally with a view to enabling them to meet the increased expenditure due to the war. You will remember that, under our present modified conditions of working, we are bound to take to account an average of 64 per cent. of our gross receipts for the upkeep and improvement of our property. In the year under review we only expended 55.33 per cent. of our gross receipts upon the above items. We have consequently passed to the credit of our general reserve sufficient to provide for our liability for last year on this account. In this connection I will repeat what I told you last year, namely, that we fully realise that we shall have ere long to face renewal and repair work of some magnitude, which has necessarily been deferred during the war. We shall undertake this work as soon as circumstances permit of our doing so, but there is no doubt that, at all events for some years to come, we shall have to pay high prices both for labour and materials.

Labour Unrest.

"I now come to a matter which has caused the board much thought and a considerable amount of anxiety. I refer to the unrest in the labour world. Egypt has not escaped from its influence, notwithstanding the prosperous conditions generally existing in that country. The labourer in Egypt is aware that his fellow-workers in other lands are clamouring for shorter hours of labour and for increased rates of pay. The prices of food and of necessities have risen during the war by over 100 per cent., and the purchasing power of money has correspondingly decreased. It is small wonder, then, that the workman in Egypt thinks that he is entitled to an improvement in his position. I fear that there is little doubt that the propaganda of the Socialists or Bolsheviks, that have been so extensively circulated throughout Europe, have reached the East and have had some effect there. I have already told you that the board granted an extra war bonus to the staff in the summer of last year. This had a good effect for a time, but during the winter months a certain amount of fresh agitation was reported to us by our general manager. Thanks to the tact and firmness of our general manager, Mr. Smith, to whom great praise is due for the manner in which he handled the situation, no actual strike has as yet taken place among our workmen. A long list of demands for what they assert to be a redress of their grievances has been forwarded by the workmen's committee and submitted to the board for consideration by Mr. Smith. He and his traffic superintendents have studied these claims and given their opinion on each one in detail. The board has very carefully considered them, and has come to the conclusion that the greater portion of these demands are far from unreasonable—considering the existing situation—and that they should be granted. Those which would in any way tend to lower the standard of our discipline must, of course, be rejected. The granting of these demands must necessarily mean a considerable increase in our annual expenditure; but most of them it would be very unwise to refuse.

"I have now to mention a matter affecting this board. The directors are one and all anxious to secure the services of Mr. F. G. Bonham Carter, who, as a member in Egypt of the combined firm of Price, Waterhouse and Peat, has rendered to this company very valuable assistance, and has become intimately acquainted with our circumstances. He left Egypt to join the Army, and has decided not to return to that country. We feel that he will greatly strengthen our board by joining it. To provide for this addition to our numbers it will be necessary to increase the sum allotted for directors' fees—namely, £2,000—by £250. I hope you will then agree to this increase."

The report and dividend were unanimously approved.

The chairman then moved that Mr. F. G. Bonham-Carter, who was recommended by the board for election, should be elected a director. This was seconded by Mr. Walter Home, C.I.E., and carried unanimously.

On the motion of the chairman, seconded by the Hon. W. B. L. Barrington, the remuneration of the board was increased from £2,000 per annum to £2,250 per annum.

The directors retiring by rotation, Mr. Montague Sharpe and the Hon. W. B. L. Barrington, were re-elected; and Messrs. Meredith and Company were re-appointed auditors. A hearty vote of thanks to the board and the staff, moved by Mr. J. W. Cooper, and seconded by Mr. John Stone, and carried unanimously, brought the meeting to a conclusion.

Lord Rathmore, whose death has just taken place, was president of the Council of the Ottoman Railway from Smyrna to Aidin, and for some years, was a director of the Suez Canal Company.

At the request of the Government of India, Sir Hubert Llewellyn Smith, Permanent Secretary to the Board of Trade, is about to proceed to India with a view to reporting on the existing organisation for dealing with trade and the measures necessary to be taken to extend and improve it.

Professor Patrick Geddes, the authority on town-planning, has been engaged by the International Zionist Commission to co-operate with Dr. Weizmann, head of the British Zionist Commission, in planning the New Jerusalem and its proposed university. He is leaving immediately for Palestine and will prepare a report on Zionist colonies in Palestine—in Haifa, Jaffa, etc. Professor Geddes will also, during the cold season, carry out the Indian town-planning work on which he was previously employed.

ECONOMIC CONDITIONS IN TURKEY.

The following are extracts from recent reports received by the Imperial Ottoman Bank :—

DAMAS, August 9.

Wool continues to arrive from the interior and to be sold at the rate of £E8½ the kilo. There have been no exports of this commodity during the month. It is more and more evident that the shearings of this region are short by 50 per cent. of the production of a normal year before the war.

About 50,000 salted guts have been exported, chiefly for America, and a small part for Marseilles.

The stocks of cotton goods and woollen stuffs are much increased, and are in excess of local requirements. Prices are correspondingly affected, and tend to fall. Prices here are 5 per cent. lower than in Europe, and from 10 to 15 per cent. lower than in Egypt, taking into account the expense of freight and customs dues.

OURFA, August 8.

The harvesting of wheat and barley has been continued during July, and the estimates of the yield are so far confirmed. Agricultural labour is not only very expensive, but also insufficient, and certain villages in this region have not yet been able to get on with the hay harvest. The maize harvest, which falls due within two months, promises to be good; it would have been excellent but for the hot spell which prevailed here during the past month.

The commercial position in July was satisfactory. As regards imports, there have been several arrivals from Aleppo of cotton goods and English manufactures; these goods are beginning to accumulate because of the fall in prices and of the sale at low prices which takes place normally at this time of the year. Colonial produce, and specially sugar, has been also imported on a large scale.

With respect to exports, the embargo on butter having been raised, that article has been the subject of important transactions. The export of wool in large quantities continues to Beyrout and Alexandretta. Other commodities of this district (gall-nuts, skins, gum tragacanth, cattle, etc.) despatched to Aleppo and Aintab, have been readily disposed of at good profits. One might mention specially the despatch of thirty packages of old carpets of all kinds.

Revenues are increasing, thanks to the tithes on cereals, which are beginning to flow in again without difficulty. The provincial exchequer is satisfactorily situated, and the payment of State employees is not subjected to delays.

The cost of living is continually rising. Certain articles of import have increased in price by 100 per cent. since May, while the increase in general is at least from 25 to 30 per cent. on the prices obtaining in June.

FRENCH COMMERCIAL MISSION TO SYRIA.

The mission sent to Syria by the Chamber of Commerce of Marseilles and Lyons has returned after visiting Cilicia, Syria, and Palestine. Information gathered by the mission, says a Reuter message, tends to show that from an economic standpoint the conception of Syria without a hinterland is indefensible, as a littoral without an interior is certain to be reduced to a state of impotency. The mission holds the belief that by the application of modern methods Syria can be made nearly as fertile as Egypt. The reported mineral deposits of petroleum, coal, etc., seem, however, to be a complete illusion.

MORUMS ORIENTAL STORES, LTD.

At the present time when the great scope for British trade enterprise in the Near East is gradually being realised in this country, and projects are being set on foot throughout the regions bounded by Tangier and Teheran, it is interesting to place on record some brief account of an illuminating instance of British initiative and energy in that region—the more notable since it took place during the war when conditions were as unfavourable as they well could be for commercial developments. The reference is to the establishment of Morums Oriental Stores, or, more correctly speaking, the re-establishment of the business formerly known as Steins Oriental Stores, Ltd., by Mr. W. E. Morum, of Messrs. Morum Bros., Aldermanbury, and Mr. Frank Young, of Messrs. Young and Rochester, Ltd., Love Lane, London. Mr. J. H. Perkiman, who spent his life in Egypt, and came to this country in 1912, was helpful to no small extent in the purchase of the business by Messrs. Morum and Young, and his inclusion on the board of directors of the company will undoubtedly prove beneficial.

On the outbreak of the war the Egyptian Government took over enemy controlled businesses, and while the decision was arrived at to liquidate enemy concerns Steins was too large an organisation to be so dealt with, for its termination would have entailed the unemployment of large numbers of men and women, and would also have had no slight effect on the system for distributing wearing apparel and other necessary commodities in Egypt. For nearly two years Steins was kept open under a Controller appointed by the British military authorities in Egypt; and then it was decided to sell it to British or Allied capitalists, and thus it came into the hands of Messrs. Morum and Young.

The enterprise to which Messrs. Morum and Young thus committed themselves in taking over six large stores which had in the past been supplied with goods mainly from Austria and Germany was in the circumstances no light undertaking. The end of the war was not in sight; it was impossible to arrive at any certain estimate of post-war trade conditions in the Near East, and, above all, there was the immediate and most pressing question of meeting the requirements of customers at a time when the problem of obtaining supplies was growing more and more difficult.

This extremely uncertain outlook in no way dismayed Messrs. Morum and Young; they tackled the problem energetically, and in the result achieved the full measure of success which their enterprise so richly deserved. Steins, which from a most romantic beginning—its founder is said to have begun business by purchasing pins or braces or some such trifles—had become a large and flourishing business, was replaced by Morums, which in turn has grown out of all resemblance to its predecessor, its development in war time having been little less than miraculous. The Egyptian side of the business has been extended until Morums Oriental Stores have come to occupy a position in that country which many similar establishments in this country would regard with envy. Outside Egypt, Palestine and Syria present a field of special promise, and here Morums Oriental Stores are now firmly established, and are laying the foundations for great future developments. How it came that branches were opened at Jaffa and Jerusalem deserves to be mentioned. Profiteering in those centres had reached an alarming pitch, and Morums, who had been requested to advance into Palestine and Syria as the troops did, opened stores there, and were successful in putting an end to the profiteering. Naturally, as a result the stores stand high in the favour of the local inhabitants, and the future of the undertaking in those parts is assured. This expansion means the increase in the opening for British goods in the Near East, because Morums Oriental Stores, Ltd., draw their supplies from this country, and already have brought over one million pounds' worth of business to these shores. They are, in short, pioneers of British trade enterprise in their particular sphere, and their progress will mean a corresponding increase in British commerce. It will be remembered that the business was formed into a public company in June this year, with a capital of £500,000, consisting of 200,000 ordinary shares and 300,000 preference shares.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news, received from the Director-General of Commercial Intelligence, Calcutta, dated August 20:—

Nearly general rain throughout, but more required parts of Assam. Monsoon likely to remain normal during the week. General progress and distribution very satisfactory, but somewhat insufficient Hyderabad and Deccan. Fine weather needed Central India and north of Central Provinces. Floods have done some damage in Burma and to maize in Bihar.

Bombay Cotton Market irregular. Fully good broach quoted Rs.492 August and Rs.524 April-May. New crop transactions commenced August 16. Piece-goods Market steady. Calcutta Jute Market very steady. Hessians slack. Sackings dull; little doing.

Golakgunge Kumargram Alipur Duars Railway survey by Eastern Bengal State Railway, sixty-two miles sanctioned.

THE ATHENS EXHIBITION.

King Alexander of Greece has graciously consented to open the Exhibition of British Manufactures organised by the Federation of British Industries in Athens. The exact date that will fit in with his Majesty's engagements is not yet known, but it is expected that it will be Sunday, October 19. This will be the public "gala" opening, but the exhibits will be arranged and the exhibition open to trade visitors on the date already fixed—October 13 (October 1 O.S.).

Apart from business the exhibition promises to be the great social event of the Athens season. Nothing approaching the exhibition in importance and size has ever been held in Greece, and its novelty, together with the high patronage it is receiving, will make it the daily meeting place of Greek society. This will have its due effect on the business side of the exhibition and will add greatly to the opportunities of exhibitors for making acquaintances and friendships valuable in the future.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market has continued rather firmer but business has been slow in developing, and sellers in most quarters have not met with very much encouragement, there being a tendency in certain sections for engagements to run down. A good deal of uncertainty exists as to the future course of events both as regards prices and financial matters in this country. Egyptian cotton futures in Liverpool have hardened since a week ago chiefly in sympathy with the upward movement in American qualities. There is not any new feature as to the prospects for the crop in Egypt. In yarns made from Egyptian cotton demand continues very quiet. During the last few weeks spinners have met with a very poor turnover and order lists are distinctly lighter than a month ago. There is still plenty of work to go on with however for producers in this department. A fair amount of inquiry has come through in cloth for Egypt and the Near East and small sales in the aggregate total to moderate dimensions, but there has not been any heavy buying. Satisfactory advices are being received as to clearances in the outlets of the Levant. There have been attempts at transactions in cloth for India, but the results have not been very encouraging, most of the offers being impracticable. Some fair lines have been put through for China in grey shirtings and fancies. Business has also been done in standard makes for Java and Singapore. Rather irregular operations have transpired in home trade fabrics. Some manufacturers have been rather more inclined to meet buyers in price. American yarns have been in slightly improved demand, but sales of importance have been isolated. Producers of wefts continue to lose ground there now being plentiful supplies of 42's. Not much has been done in shipping descriptions. Spinners hold big contracts for the Levant.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to June 30, 1919 (new style, January 14 to July 13, 1919):—

—		Monopolies, tobacco, stamps, stamped paper and Naxos emery.	Piraeus Customs.
Gross receipts Jnne, 1919		Drachmæ. 3,974,152	Drachmæ. 5,093,872
Do. do. 1918		2,632,293	2,160,000
Estimated receipts for 6 months (Law of Control		14,450,000	5,350,000
Actual do. do. 1919		22,767,019	23,053,257
" " 1918		17,945,350	14,244,000
Difference between estimated & actual receipts for 6 months	1919	+ 8,317,019	+ 17,703,257
	1918	+ 3,495,350	+ 8,894,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

The removal of restrictions against selling from abroad—except in the case of enemy-owned stock—has caused a good deal of irregularity in our market this week, and some weakness. As a result Egyptian Unifieds and 3½ per Cent. Preference stocks are both 1½ down at 81½ and 69 respectively.

In Bank shares Egypt has given some support, and a very fair business has been done in Nationals, which have remained firm; but Agriculturals are 3-16 down at 5 15-16.

Among Railways Delta Lights are about unchanged at 6 7-8 xd.

In Land shares Foreign Trusts are 6d. down at 14s. owing to small selling from Egypt. Gharbieh Lands have dropped ¼ to 2¼, and New Egyptians are 6d. lower at 22s. Sudan Plantations finish ¼ up at 8¼ after having been considerably higher. Sidi Salems are 1-16 lower at 2 3-8, and Union Foncières are fractionally lower at 3 5-8.

In the miscellaneous group Alexandria Waters are 1-16 off at 11 7-8. Salts and Sodas show a similar decline at 3 after being lower. Khedivial Mails are ¼ down at 5 5-8, but buyers are very scarce.

In Oil shares Anglo-Egyptians B, after being up to 5 5-8, finish 3-16 lower at 5 9-32. Both Roumanian Consols and Traians close about 9d. down round 20s. and 11s. 3d.

In Greek securities the 1881 and 1884 loans are both 2 points lower at 71. Monopolies have dropped a point at 56½, and "Currant Bonds" are rather inclined to be offered in the neighbourhood of 92 xd.

COMPANY RESULTS, Etc.

A general meeting of Ciments d'Egypte will be held at Brussels on September 1.

The directors of the Jetinga Valley Tea Company recommend a final dividend of 7½ per cent., making 10 per cent. for the year, together with a bonus of 2½ per cent., both free of income-tax, on the ordinary shares for the year ended December 31 last.

Madras Railway Annuities.—Registration books will be closed from September 3 to September 30, inclusive.

National Bank of Egypt.—An interim dividend of 8s. per share is payable on September 4.

The British India trade returns for July show that the imports have decreased by £1,732,000 and that the exports have increased by £5,027,000 as compared with last year.

The final general memorandum on the wheat crop of India shows a decrease of 33 per cent. in the area cultivated, and a 24 per cent. decrease in the yield as compared with last year.

NOTES OF THE WEEK.

Anxiety in France regarding the future of Syria appears to be increasing rapidly, and the most ardent admirer of France would find it difficult to maintain that it is likely to be allayed by the tone of the French Press when dealing with the subject. Many an Englishman on reading what the Paris journals have to say on the matter must have rubbed his eyes and wondered whether we were back in pre-Fashoda, Muskat-gun-running days. That things should have been allowed to come to such a pass is as incomprehensible as it is deplorable. If they are allowed to drift farther in the same direction Frenchmen and Englishmen alike will surely insist upon finding out where the responsibility lies, and upon the responsible parties being called to strict account.

In re-stating French aims and ambitions in regard to Syria, the French Press has done a real service to the Alliance, for good understanding is no less necessary to friendship than good will. In regard to British desires and intentions, however, we venture to say that Paris appears to be quite needlessly uneasy; while as to the causes of the present lack of enthusiasm for a French mandate in Syria, we have heard reasons which appear to be sedulously ignored across the Channel. This lack of enthusiasm is attributed by Paris either to "British intrigue"—which we take to mean underhanded action taken by British agents with the approval of our Government—or to the "intrigues" of British officials on the spot, apparently acting on their own initiative and responsibility. The former charge may surely be dismissed at once: it was not in order to intrigue against France in Syria (or elsewhere) to-day that Great Britain ranged herself alongside her in August, 1914; and moreover we most assuredly do not desire to saddle ourselves with any responsibility for Syria. The second charge is too vague and of too general a character to be readily met; but if specific instances of any British officials acting improperly, in the manner suggested, are brought forward they will undoubtedly be dealt with in the right manner and the right place, to the satisfaction of our French friends.

It is quite possible that misplaced zeal, or an error of judgment here or there may have given rise to the misunderstanding now rife in Paris, but they would not account for the cooling off of the feeling for France which is noticeable to-day in Syria. The French are naturally and rightly proud of what they have done for that country and its people, but in recent years they have not been the only workers in this field. The Americans, with their great college at Beyrout, have been at least as prominent; and though one section of Syrian opinion has remained strongly Francophil others have either never been Francophil or have become less ardently so of late. During the war there were certain incidents which undoubtedly did not enhance French prestige. To one of these—the discovery of a list of prominent supporters of the "Arab Movement" in the French Consulate at Beyrout—we have already referred. If France wishes to have the whole truth regarding the present state of feeling in Syria towards her she would do well to inquire into rumours regarding the conduct of her troops at certain coast towns and on the march towards Aleppo. She will then be in a better position to estimate at their true value tales of "British intrigue." Meanwhile the comments of the French Press upon the arrest of that very versatile person the Emir Said show how badly Paris requires enlightening on the present state of affairs in Syria.

As recent communications from our Belgrade Correspondent have indicated, the various political parties and groups in Yugoslavia are finding it difficult to lay aside entirely memories of old differences; and the result is a regrettable lack of stability, which may very easily react against the country's best interests. According to telegrams from Belgrade, the position of Dr. Davidovitch's newly formed Cabinet was already regarded as highly insecure at the end of last week, and it was considered quite possible that it might come to grief over the debate on the Budget for September and October. Its life, in fact, appears to be at the mercy of an Opposition which is unlikely to show mercy very long, even if it refrained from administering the *coup de grace* immediately. Under such conditions it must obviously be extremely difficult for the Socialist Democratic Ministers to do their best work for the country. Since the Prime Minister made strenuous efforts to widen the basis on which he constructed his Cabinet, by inviting the co-operation of other parties, and since he failed, it is difficult for outsiders to see what course is now left to him and his friends but to "carry on" as long as possible, and thus place on their opponents the responsi-

Digitized by Google

bility for any unpleasant consequences of allowing the interests of party to come before the interests of the nation.

It looks at present as if President Wilson may have very hard work to persuade America to accept what is understood to be his policy for the Near East, and as if Armenia will suffer as a consequence. As far as it is possible to judge from the leading American papers, the weight of popular opinion in the States seems to be against accepting the mandate for Armenia upon any conditions, though here and there there is a hint that it might be done in, say, six months' time. Meanwhile Americans seems to be of opinion that Great Britain should continue to police Armenia—at any rate, until its ultimate fate is settled. But whatever may happen, the United States, we are told by one journal, at least, cannot be expected to take up the burden. For the sake of Armenia we can only repeat our hope that Americans who have a first-hand acquaintance with the Near East will be able to convert their countrymen to that more altruistic spirit which was in evidence a little while ago; but we are bound to acknowledge that the prospect does not look very promising.

That our fears regarding the effect of the abandonment of the Military Courts in Egypt were not groundless is shown by the fact that since their abolition twenty-eight witnesses for the prosecution in the recent murder trials are reported to have been assassinated. Such a state of affairs cannot long be tolerated, even in Egypt, and it would certainly justify the prompt restoration of the Military Courts, which might do what the native officials are either unwilling or unable to do—give the country some sense of justice and security. The Cairo correspondent of *The Times* reports: "The licence indulged in by the Arabic Press here since the abolition of the censorship throws into the shade the wildest days of the *Lewa* and Sheikh Aziz Shawish." Relaxation of control has probably been misunderstood once more in Egypt, and regarded as a sign of weakness. In any case, it can hardly be said to have been attended by the success that was anticipated from it.
